PREFACE TO THE FOURTH EDITION

India is passing through a critical phase of serious environmental degradation; natural resources are getting depleted; rivers, lakes and other water bodies have become polluted; the water table is going down and wastes are being produced faster than they can be re-used or disposed off properly. The green cover is receding and the cities are choking with air pollution and waste dumps. People and all other living beings are under a constant threat because of pollution causing serious irreparable damage to the entire eco-system.

To meet out the ecological, biological and environmental imbalances, resolutions of Earth Summit, Report of World Health Organisation and United Nations General Assembly have emphasised for research throughout the world on various problems of human environment, atmosphere, climatic change, vector control, sea pollution, global carbondioxide emissions, degradation of ozone layer, noise pollution, industrial pollution, etc. Technologies have been developed to prevent the drastic increase in pollution. Many rehabilitation schemes have been started by different government and non-government organisations, committed to preserving, restoring and carefully using the earth's resources.

In India, for the protection of environment which includes water, air, land and soil, forests, lakes, rivers, sea, wild life and other living creatures and the interrelationship which exists amongst and in between these elements *vis-a-vis* human beings and other living creatures, plants, forests, and micro-organisms, etc., three Acts have been placed on the statute books and rules framed thereunder : Water (Prevention and Control of Pollution) Act, 1974; Air (Prevention and Control of Pollution) Act, 1981; Environment (Protection) Act, 1986 and other allied laws. In addition to number of amendments incorporated to the codified portion of Air, Water, Environment protection and other allied laws already covered in last edition, have been updated by recent notifications on Central Acts provided by the Central Pollution Control Board and State amendments. Fresh topics which had been left over or which till the previous edition were not in existence, but pertained to pollution laws have been dealt with. Some of the most prominent and relevant topics are as follows:—

1. *Scheme on Labelling of Environment Friendly Products (Eco-Mark)—As many as 20 in number have been added as separate Part III-3.*
2. *Montreal Protocol—As Part III-4.*
3. *Bio-Medical Waste (Management and Handling) Rules, 1998—As Part III-5.*
4. *The Hazardous Micro-Organisms and Genetically Modified Organisms (Manufacture, Use, Import, Export and Storage) Rules, 1999—As Part III-8.*
5. *Chemical Accidents (Emergency Planning, Preparedness and Response) Rules, 1996—As Part III-9.*
6. *National Environment Tribunal Act, 1995—As Part III-10.*
7. *The National Environment Appellate Authority Act, 1997—As Part III-11.*

8. *The National Environment Appellate Authority (Appeal) Rules, 1997—As Part III-12*
9. *The National Environment Appellate Authority (Salary, Allowances and Conditions of Service of Members) Rules, 1998—As Part III-13.*
10. *The National Environment Appellate Authority (Salary, Allowances and Conditions of Service of Chairperson and Vice-Chairperson) Rules, 1998—As Part III-14*
11. *The National Environment Appellate Authority (Financial and Administrative Powers) Rules, 1998—As Part III-15.*
12. *The Indian Forests Act, 1927—As Part III-16.*
13. *The Forest (Conservation) Act, 1980—As Part III-17.*
14. *The Forest (Conservation) Rules, 1981—As Part III-18.*
15. *The Wild Life (Protection) Act, 1972—As Part III-19.*
16. *Wild Life (Protection) Rules, 1995—As Part III-20*
17. *Wild Life (Specified Plants-Conditions for Possession by Licensee) Rules, 1995—As Part III-21.*
18. *Wild Life (Specified Plant Stock Declaration) Central Rules, 1995—As Part III-22*
19. *The Wild Life (Protection) Licencing (Additional Matters for Consideration) Rules, 1983—As Part III-23.*
20. *The Wild Life (Transactions and Taxidermy) Rules, 1973—As Part III-24*
21. *The Wild Life (Stock Declaration) Central Rules, 1973—As Part III-25*
22. *The Recognition of Zoo Rules, 1992—As Part III-26.*
23. *National Zoo Policy, 1998—As Part III-27.*
24. *The Public Liability Insurance Act, 1991—As Part III-28.*
25. *The Public Liability Insurance Rules, 1991—As Part III-29.*
26. *A brief resume of Analogous Statutory Provisions on Environmental Pollution Laws as Part IV covering as many as 22 Chapters.*
27. *Miscellaneous topics under Part V have been rewritten to the adaptations of modern norms, problems and solutions under various seperate Chapters i.e., Water; Coast; Air; Noise; Dust; Land; Urban Waste Management; Hazardous Wastes and their Disposal; Classification of Industries for Consent Management; Industrial Solid Wastes — Their Sources, Characterisation and Effects on Environment; Standards for Liquid Effluents, Gaseous Emissions, Automobile Exhausts, Noise and Ambient Air Quality, International Forest Management; Energy and its Environmental Sanitation; Policy Statement for Abatement of Pollution and Biodiversity.*
28. *Number of State Rules on Air and Water have been given in previous editions. Some State Rules which could not be covered in the previous edition have been incorporated in present edition.*
29. *The latest Notification dated 14.2.2000 on "The Noise Pollution (Regulation & Control) Rules, 2000" has also been added in Part-V of the book.*

Comprehensive coverage of number of decisions rendered by the Apex Court and High Courts on the pollution laws and the amendments, notifications, Government orders, etc which have substantially metamorphosed the law. This edition has been thoroughly revised with painstaking care in the light of the existing laws.

A well planned elaborate, alphabetically arranged Subject Index—thorough and exhaustive, provides valuable aid to the busy reader in instantly locating the reference he may like to seek. A keenly arranged Table of Cases, well equipped with up-to-date case laws from various prominent journals of India has enhanced the utility of the commentary.

Thorough acquaintance with various provisions of Pollution Laws is absolutely essential not only for the members of the Bench and the Bar and the Pollution Control Boards, but also for industries in the private and public sectors, local bodies, corporations, municipalities, transporters, shipowners, factories and all those who are expected to take effective measures to check pollution in their respective spheres. It is hoped that this encyclopedic work on Pollution Laws will benefit its readers.

MAHA SHIVRATRI
(4th March, 2000)

M.C. MEHTA

PREFACE TO THE THIRD EDITION

Environmental pollution now constitutes one of the biggest hazards as has been seen from the Bhopal Tragedy. Heavy Industrialisation, population explosion and ever increasing urbanisation, apart from multifold increase in automobiles have resulted in the problem assuming staggering proportions

For protection of environmental pollution which includes water, air, land and soil, forests, lakes, rivers, sea and wild-life and other living creatures and the inter-relationship which exists amongst and in between these elements *vis-a-vis* human beings and other living creatures, plants, forests, property and micro-organism etc., the following three Acts have been placed on the statute books and Rules framed thereunder :

(*i*) Water (Prevention and Control of Pollution) Act, 1974.

(*ii*) Air (Prevention and Control of Pollution) Act, 1981, and

(*iii*) Environment (Protection) Act, 1986

Thorough acquaintance with various provisions of these three Acts is absolutely essential not only for the members of the Bench and the Bar, as well as the Pollution Boards, but also for the industries in private and public sectors, Local Bodies, factories, Corporations and Municipalities, transporters, shipowners, etc., who are also expected to take effective measures to check pollution in their respective spheres

The above three Acts have been amended from time to time to meet the needs of various situations. Apart from various amendments, the definition of "occupier" has been widened under Air (Prevention and Control of Pollution) (Amendment) Act, 1987 (47 of 1987) and Water (Prevention and Control of Pollution) (Amendment) Act, 1988 (53 of 1988) in conformity with the definitions given in Environment (Protection) Act, 1986 (29 of 1986). It is noteworthy that now the definition under all the three Acts is verbatim and the same is reproduced hereunder :

> "'Occupier' in relation to any factory or premises, means the person who has control over the affairs of the factory or the premises, and includes, in relation to any substance, the person in possession of the substance".

Here it is noteworthy that the word "person" has been defined in the Environment (Protection) Rules, 1986 which reads thus :

> "'Person' in relation to any factory or premises means a person or occupier or his agent who has control over the affairs of the factory or premises and includes in relation to any substance, the person in possession of the substance".

For comparative study, we have dealt with the definition of "occupier" as it stands today in the Factories Act, 1948. This definition of "occupier" under the Factories Act, 1948, has also been widened by the Factories (Amenment) Act, 1987 (20 of 1987) which reads as under :

> "'Occupier' of a factory means the person who has ultimate control over the affairs of the factory :

Provided that—

(*i*) in the case of a firm or other association of individuals, any one of the individual partners or members thereof shall be deemed to be the occupier;

(*ii*) in the case of a company, any one of the directors shall be deemed to be the occupier;

(*iii*) in the case of a factory owned or controlled by the Central Government or any State Government or any local authority, the person or persons appointed to manage the affairs of the factory by the Central Government, the State Governemnt or the Local Authority, as the case may be, shall be deemed to be the occupier

Provided further that in the case of a ship which is being repaired, or on which maintenance work is being carried out, in a dry dock which is available for hire—

(1) The owner of the dock shall be deemed to be the occupier for the purposes of any matter provided for by or under—

(*a*) Section 6, Sec. 7, Sec. 7-A, Sec. 7-B, Sec 11 or Sec 12,

(*b*) Section 17, in so far as it relates to the providing and maintenance of sufficient and suitable lighting in or around the dock.

(c) Section 18, Sec. 19, Sec. 42, Sec 46, Sec. 47 or Sec 49 in relation to the workers employed on such repair or maintenance

(2) The owner of the ship or his agent or master or other officer in-charge of the ship or any person who contracts with such owner, agent or master or officer-in-charge to carry out the repair or maintenance work shall be deemed to be the occupier for the purposes of any matter provided for by or under Sec 13, Sec 14, Sec 16 or Sec 17 (save as otherwise provided in this proviso), or Chapter IV (except Sec 27), or Sec. 43, Sec. 44, or Sec. 45, Chapter VI, Chapter VII, Chapter VIII or Chapter IX or Sec 108, Sec 109 or Sec 110 in relation to-

(*a*) the workers employed directly by him, or by or through any agency, and

(*b*) the machinery, plant or premises in use for the purpose of carrying out such repair or maintenance work by such owner, agent, master or other officer-in-charge or person".

Pollution and its hazards have been examined in the book from several angles. Even industry-wise and item-wise the problem of pollution and its affects are examined. Relevant rules and standards framed by some of the States as well as of some foreign countries find appropriate place in the book to make it self-contained. Offences by Companies have been examined in detail.

Earlier the environment-related legislation, which lay scattered in about 40 Central and State Acts of our country, has also been surveyed and reviewed with relevant case-law to help the readers in interpreting the allied provisions under the said three Acts, namely :

(*i*) Water (Prevention and Control of Pollution) Act, 1974

PREFACE TO THE THIRD EDITION

(ii) Air (Prevention and Control of Pollution) Act, 1981; and

(iii) Environment (Protection) Act, 1986

It has been scientifically established now that Water, Air and Environmental Pollution, apart from being a source of various diseases [illegible] case of some kinds of polluted water, also adversely affect the fertility of the [illegible].

Wide powers have been conferred on the authorities under these Acts which includes the power to entry and inspection for various purposes, [illegible] procedure prescribed in the Act and power to take samples of effluents etc. for analysis, prescribed procedure to be followed in connection therewith. Stringent punishment and penalties have been provided for contravention of the various provisions of these Acts, viz., imprisonment running upto several years and heavy fines.

Noise pollution is another important topic which has been examined in the book.

Modesty forbids us from laying any lofty claim about the quality of the book. Suffice it to say that the last edition was best quoted with approval by the Hon'ble Spreme Court of India in two of its land-mark Judgments viz. M.C. Mehta v. *Union of India* A.I.R. 1988 S.C. 1115 at page 1123 and M.C. *Mehta v. Union of India* A.I.R. 1988 S.C. 1037 at pages 1039-1040. In this third edition, an attempt has been made to enrich the book with up to-date case-law. Technical information about various hazards and chemicals, etc., has also been discussed apart from legal provisions in order to serve as a reference book and also as a handy manual for the day-to-day use of the Bench and the Bar, the Pollution Boards, Company Directors, Secretaries, Managers and other officers, Corporations, Municipal Committees, Factories, Industries, both in private and public sectors as well as the Local Bodies, Agriculturists and Farm-owners and research scholars and for all citizens in general.

To err is human and perfection is THY name. In spite of best care and caution, sometimes errors and omissions do manage to creep in. Our patrons will kindly bear with us for any discrepancy, if so found. Further our patrons will be really placing us under deep debt of gratitude if such errors, omissions or discrepancies are brought to our notice so that they my be suitably dealt with in future.

1st January, 1990 REVISING AUTHOR

PREFACE TO THE SECOND EDITION

Environmental pollution now constitutes one of the biggest hazards, it is the biggest hazard, not only to human existence but also to the existence of all the gifts that nature has so kindly bestowed on mankind. Heavy industrialization and ever-increasing urbanisation have resulted in the problem assuming staggering proportions.

Unless immediate and urgent steps are taken to put a top to the environmental pollution, a very bleak and terrible future awaits the humanity.

In the past also provisions were made in different laws of almost all the civilized countries to meet the problem of environmental pollution, but they were found practically ineffective. Similarly, our country too had a large list of Environment Related Legislation enumerated below.

SELECTIVE LIST OF ENVIRONMENT RELATED LEGISLATION

CENTRAL ENACTMENTS

1. *Water Pollution*
    - 1.1 The River Boards Act, 1956.
    - 1.2 The Merchant Shipping (Amendment) Act, 1970.
    - 1.3 The Water (Prevention and Control of Pollution) Act, 1974.
    - 1.4 The Water (Prevention and Control of Pollution) Cess Act, 1977
2. *Air Pollution*
    - 2.1 The Indian Boiler's Act, 1923.
    - 2.2 The Mines and Minerals (Regulation and Development) Act, 1947
    - 2.3 The Factories Act, 1948.
    - 2.4 The Industries (Development and Regulation) Act, 1951
    - 2.5 The Air (Prevention and Control of Pollution) Act, 1981
3. *Radiation*
    - 3.1 The Atomic Energy Act, 1962
    - 3.2 The Radiation Protection Rules, 1971
4. *Pesticides*
    - 4.1 The Poison Act, 1919.
    - 4.2 The Factories Act, 1948.
    - 4.3 The Insecticides Act, 1968.
5. *Others*
    - 5.1 The Indian Fisheries Act, 1897.
    - 5.2 The Indian Forest Act, 1927.
    - 5.3 The Prevention of Food Adulteration Act, 1954.
    - 5.4 The Ancient Monuments and Archaeological Sites and Remains Act, 1958.
    - 5.5 The Wild Life (Protection) Act, 1972.
    - 5.6 The Urban Land (Ceiling and Regulation) Act, 1976.

PREFACE TO THE SECOND EDITION

STATE ENACTMENTS

1 *Water Pollution*

  1.1 The Orissa River Pollution Prevention Act, 1953; and

  1.2 The Maharashtra Prevention of Water Pollution Act, 1969.

2. *Smoke Control*

  2.1 The Bengal Smoke Nuisance Act, 1905.

  2.2 The Bombay Smoke Nuisance Act, 1912.

  2.3 The Gujarat Smoke Nuisance Act, 1963

3. *Pest Control*

  3.1 The Mysore Destrustive Insects and Pests Act, 1917.

  3.2 The Andhra Pradesh Agricultural Pest and Disease Act, 1919.

  3.3 The Assam Agricultural Pests and Disease Act, 1954.

  3.4 The U.P. Agricultural Disease and Pests Act, 1954.

  3.5 The Kerala Agricultural Pests and Diseases Act, 1958.

4. *Land Utilization and Land Improvement*

  4.1 The Bihar Waste Lands (Reclamation, Cultivation and Improvement) Act, 1946.

  4.2 The Andhra Pradesh Improvement Schemes Act, 1949.

  4.3 The Acquisition of Land for Flood Control and Prevention of Erosion Act, 1955.

  4.4 The Delhi Restriction of Uses of Land Act, 1964.

Ultimately, the problem attracted the attention of the United Nations Organization and it held various conference of member nations to find out ways and means to tackle the situation. The Stockholm Conference in 1972 chalked out a detailed plan on the subject. Water Pollution, Air Pollution and Noise Pollution are the three most important branches of environmental pollution and many nations brought out legislations touching all these three categories.

In India, even though the problem is not so acute as in the fully industrialized-developed countries, yetinasmuch as the developmental process in our country is one the rapid march, the problem has started showing its ugly fact. Even our sacred rivers like Ganga and Yamuna often appear in the news, under pollution head. It has also new been scientifically established that some kinds of polluted water can also adversely affect the fertility of the soil. Air Pollution apart from being a source of various diseases is also threatening the very existence of ancient and historical monuments.

In pursuance of the recommendations of the Stockholm Conference in 1972, India came out with an independent legislation on Water Pollution under the caption "The Water (Prevention and Control of Pollution) Act, of 1974" and in 1981 on Air Pollution known as "The Air (Prevention and Control of Pollution) Act".

Both the Acts have made provisions for establishment of Central and State Boards for prevention and control of water and air pollution. Wide powers have been conferred upon these Boards, for example, power to obtain information, power to take samples, power of entry and inspection, power to get the samples analysed, etc.

Stringent penalties have been provided for infringement of the provisions of the Acts, for example, Section 25 of the Water (Prevention and Control of Pollution) Act, 1974, provides for imprisonment for a minimum term of six months, but which may extend up to 7 years and with fine A thorough acquintance with the various provisions of the two Acts are absolutely essential not only for the members of the Bar and Bench but also for the Industries, Factories, Corporations and Municipalities, etc., who are expected to take effective measures to check pollution in their respective spheres.

The Water (Prevention and Control of Pollution) Act, 1974, was amended in 1978 by Act No. 44 of 1978. The Amendment Act initially applied to the State of Assam, Haryana and West Bengal and to the Union Territories, but it was provided that it shall apply to such other States which adopt the Amendment Act by resolution passed in that behalf under Cl. (*i*) of Art 252 of the Constitution read with Cl. (2) thereof. In fact, many more States have already adopted these Acts by now. Consequently, the Act has been published in its amended form The provisions of the original Act which have been modified by the Amendment Act, are, however, also being given separately, in their unamended form, so that the book may serve everyone; irrespective of the fact whether the particular State has or has not adopted the Amendment Act. In this view of the matter, it was found unnecessary to print the Amenment Act of 1978 separately.

In the first edition, both the Acts on Air and Water Pollution were presented with illuminating notes. But after the Bhopal Tragedy, suggestions were received that apart from the legal provisions under the twin Acts, the problem of pollution may be examined—Industry-wise and item-wise for properly understanding the hazards of pollution and their treatment To carry out the suggestions of our patrons, the subject has been given a thorough study and re-examined in this 2nd Edition which is being now printed. For easy reference, edition is suitably divided into several parts. The provisions of the Pollution Laws under the twin Acts, find place in one part and the Rules in the other part

In other parts the pollution and its hazards have been examined from all angles and wherever found necessary, a comparative study of the foreign contents has also been given. Even industry-wise and item-wise the problem of pollution and its effects are examined in one of the parts of the book

Our country has yet to formulate a statute on the equally important problem of noise pollution. It has been scientifically established beyond question that the noise pollution has its equally dangerous effects on human beings as also on the entire animal world and even vegetable kingdom.

Our thanks are due to Dr. Pramod Singh, Lecturer and author of "Environmental Pollution and Management" for his contributing useful materials in the technical part of this book.

To err is human, hence errors or omissions found in the book may kindly be communicated to use so that they are taken care of in the next edition.

It is hoped that this book will not only be found as a guide but will serve as reference book and legal manual for the day-to-day use of the Courts, Lawyers, Company Secretaries, Corporations and Municipal Committees, Factories and Industries, students and research scholars as well as the public at large.

PART IV

A BRIEF RESUME OF ANALOGOUS STATUTORY PROVISIONS ON ENVIRONMENTAL POLLUTION LAWS

Introduction ... 1031

I. The Atomic Energy Act, 1962 ... 1035

II. Coast Guard Act, 1978 ... 1040

III. Code of Civil Procedure, 1908 ... 1041

IV. The Constitution of India ... 1045

V. Code of Criminal Procedure, 1973 ... 1059

VI. The Consumer Protection Act, 1986 ... 1068

VII. Indian Easements Act, 1882 ... 1071

VIII. Essential Commodities Act, 1955 ... 1085

IX. The Elephants' Preservation Act, 1879 ... 1086

X. The Employment of Manual Scavengers and Construction of Dry Latrines (Prohibition) Act, 1993 ... 1087

XI. The Epidemic Diseases Act, 1897 ... 1090

XII. Factories Act, 1948 ... 1091

XIII. Fisheries Act, 1897 ... 1113

XIV. The General Clauses Act, 1897 .. 1114

XV. The Insecticide Act, 1968 ... 1116

XVI. The Merchant Shipping Act, 1958 .. 1126

XVII. Motor Vehicles Act, 1988 .. 1140

XVIII. Municipalities Act ... 1142

XIX. The Police Act, 1861 ... 1146

XX. The Prevention of Food Adulteration Act, 1954 ... 1148

XXI. Indian Penal Code, 1860 ... 1153

XXII. Specific Relief Act, 1963 ... 1172

PART V

MISCELLANEOUS

CHAPTER I

WATER POLLUTION PROBLEMS—ITS CAUSES, EFFECTS AND GENERAL TREATMENT METHODS

Synopsis

1. Pollution problems ... 1176

2.(*i*) Major sources of water pollution ... 1176

  (*a*) Domestic Sewage ... 1176

  (*b*) Industrial waste water ... 1176

Synopsis Page

(*ii*) Industrial water, major parameters ... 1176

3. River pollution in India ... 1178

(*i*) Major rivers in India ... 1178

(*ii*) Peninsular rivers ... 1179

(*iii*) Coastal rivers ... 1180

(*iv*) Other inland rivers ... 1180

4. Polluted river stretches ... 1181

5. River Basins .. 1183

(*a*) Major Basins ... 1183

(*b*) Medium and Minor Basins ... 1183

6. Siltation ... 1184

7. Central Pollution Control Board's role in river pollution prevention ... 1184

8. Primary water quality criteria for various uses of fresh waters, as laid down by CPCB ... 1185

9. Pollution ... 1185

10. Problem of water scarcity ... 1186

11. Pollutional effects ... 1186

12. Effect on public health and safety ... 1186

13. Effect on acquatic and other life ... 1187

Table—Some Compounds Toxic to Fish ... 1188

14. Damage to property ... 1189

15. Other economic loss ... 1189

16. Intangible loss ... 1190

17. Hydraulic overload ... 1190

18. Settleable solids overload ... 1190

19. Organic overload ... 1190

20. Chemical effects ... 1191

21. Biological effects ... 1191

22. Toxic effects in secondary treatment ... 1192

23. Pollutional effects in sludge digestion ... 1192

24. Pollutional effects of industrial wastes ... 1192

25. Classification of water pollution ... 1193

Synopsis Page

I. Physical pollution
    (*a*) Temperature ... 1193
    (*b*) Turbidity ... 1193
    (*c*) Suspended matter ... 1193
    (*d*) Colour ... 1193
    (*e*) Foam or froth ... 1193
    (*f*) Radio-activity ... 1193
II. Chemical pollution
    (*a*) Inorganic pollution ... 1194
    (*b*) Organic pollution ... 1194
III. Physiological pollution ... 1194
IV. Biological pollution ... 1195
26. Pollutional effects on fish, plant and human life ... 1195
27. Effects on plant and animal life ... 1195
28. Effects of pollution in water to be used for different purposes ... 1196
29. Effects of industrial wastes of sewerage system ... 1196
    1. Fertilizer Ammonia—Industrial waste water major parameters ... 1196
    2. Pulp and paper .. 1196
    3. Tannery ... 1196
    4. Petro-chemical ... 1196
    5. Electroplating ... 1196
    6. Textile ... 1196
    7. Sugar ... 1196
30. Hazards to personnel ... 1197
31. Flammable and explosive wastes ... 1197
32. Toxic materials ... 1197
33. Damage to sewers ... 1198
34. Hydraulic effects ... 1198
35. Chemical effects ... 1198
36. Waste and waste treatment ... 1199
37. Primary treatment methods ... 1200

Synopsis Page

- (1) Physical Treatment ... 1200
  - (*a*) Screens ... 1200
  - (*b*) Comminutor devices ... 1200
  - (*c*) Grit chambers ... 1200
  - (*d*) Pre-aeration ... 1201
  - (*e*) Plain sedimentation unit ... 1201
  - (*f*) Oil and grease removal ... 1201

38. Scum is not allowed to accumulate ... 1202
39. Efficiency of plain sedimentation ... 1202
40. Chemical treatment ... 1202
41. Chemical coagulation or chemical sedimentation ... 1202
42. Removal of dissolved pollutants by chemical precipitation ... 1202
43. Introduction to secondary treatment—Biological principles of waste treatment ... 1203
44. Aerobic decomposition ... 1204
45. Anaerobic decomposition ... 1204
46. Introduction to tertiary treatment ... 1204
47. Chemical precipitation ... 1205
48. Seperation beds ... 1205
49. Intermittent sand filters ... 1205
50. Rapid sand filters ... 1205
51. Slow sand filters ... 1205
52. Treatment by oxidation ... 1206
53. Microstrainer ... 1206
54. Introduction to anaerobic treatment methods ... 1206
55. Lagoons ... 1207
56. Anaerobic lagoon ... 1208
57. Anaerobic digestion ... 1208
58. Aerobic methods of treatment of industrial wastes ... 1209
59. Trickling filters ... 1209
60. Standard filters ... 1210
61. High rate trickling filters ... 1210

Synopsis Page
62. Activated sludge process ... 1210
63. Low cost waste treatment methods ... 1211
Table—Estimate of treatment units ... 1211
64. Waste stabilization ponds ... 1211
65. Aerobic ponds ... 1211
66. Anaerobic ponds ... 1211
67. Facultative ponds . 1211
68. Aerated lagoons ... 1212
69. Oxidation ditch ... 1212
70. Quality of treated effluents ... 1213
Table—Quantity of Water from Renovation system for production of potable water ... 1213

CHAPTER II

COMMUNITY WATER SUPPLY AND WATER SUPPLY STANDARDS

1. Introduction ... 1215
2. Water pollution ... 1216
3. Affect of water supplies on health . 1216
4. Classification of water-related infections ... 1216
Table—Classification of infectous diseases in relation to water supplies ... 1217
5. Water-borne diseases ... 1218
6. Water-washed diseases ... 1219
7. Water-based diseases ... 1220
8. Water related insect vectors of disease ... 1220
9. Water pollution control methods ... 1220
10. The need for data on community water supply ... 1221
11. Water supply technology ... 1222
(*i*) Technical design ... 1222
(*ii*) Leakage in the distribution system ... 1222
(*iii*) Quality aspects and surveillance ... 1222
(*iv*) Standards for drinking water quality ... 1222
(*v*) Standards for raw-water quality ... 1223

Synopsis Page

(*vi*) Standards for new materials ... 1223

(*vii*) Control applications ... 1223

12. Characteristics of good quality water ... 1223

13. Drinking water standards ... 1223

14. Water quality standards ... 1224

Table—Exising standards Governing the use of Renovated Water in Agriculture ... 1225

15. Typical characteristics ... 1226

Table—World Health Organization Drinking Water Standards ... 1226

Table—Quality of water from various sources ... 1227

16. Standard plate count and raw water classification ... 1228

Table—Typical Sewage Analysis ... 1229

17. Bio-monitoring ... 1229

18. Why to do Bio-monitoring .. 1229

19. Bio-monitoring parameter ... 1230

20. Where to do Bio-Monitoring ... 1230

21. Artifical substream for Bio-Monitoring ... 1230

22. Application of artificial substratum for Bio-monitoring of water bodies ... 1231

23. Biological Water Quality Criteria for evaluation of water bodies ... 1231

Table—Criteria for Biological water Quality valuation ... 1231

CHAPTER III

SAMPLE AND SAMPLING OF WATER, SEWAGE AND INDUSTRIAL WASTES, THEIR REGULATIONS AND STANDARDS

1. Sample and sample of water, sewage and industrial sewage water ... 1233

I. For chemical analysis ... 1234

II. For bacteriological analysis ... 1234

(*a*) Sampling from taps ... 1234

(*b*) Sampling direct from a source ... 1234

Synopsis Page

(c) For biological analysis ... 1235

III. Industrial waters and sewage effluents samples ... 1235

2. Indian standards for inland surface waters subject to pollution ... 1236
3. Indian standards for disposal of industrial effluents ... 1236
4. Indian standards for effluents of the electroplating industry ... 1237
5. Indian standards for specific tolerances for effluents of straw board industries ... 1237
6. Indian standards for tolerance limits for sewage effluents discharge into inland surface water ... 1237
7. Indian standards for specific tolerance for effluents of distilleries ... 1237
8. Tolerances for water for processed food industry ... 1237
9. Limits for discharging effluents in inland water fixed up by U.P. Water Pollution Control Board ... 1237
10. Classification of pollutants ... 1237
11. Indian Standards ... 1237
12. Tolerance limits for inland surface waters ... 1238
13. Effluent Standards—Recommendations by U.S. National Committee ... 1238

Table—Example of Maximum Permissible Concentrations of Isotopes in Water and Air ... 1239

14. Standards of water quality ... 1241
15. Permits ... 1241
16. Enforcement ... 1241
17. Administrative powers ... 1242
18. Recommended limits by Technical Commission on polluton of water surfaces ... 1242
19. Radioactivity ... 1243

CHAPTER IV

COASTAL POLLUTION

1. Introduction ... 1246
2. Costal Vs. Open Ocean ... 1247

Table—Ocean Areas, Types of Pollutants and Effects on on uses and their Duration ... 1248

Synopsis Page

3. The coast ... 1249
4. Coastal problems in global perspective ... 1249
5. The coast and the seas around India ... 1249
6. Classification on the basis of water uses ... 1250
   Map : Designated Best Use Classes ... 1250
   — Sources of Coastal Pollution at Fixed Location ... 1251
   — Coastal Pollution Generation ... 1251
7. Coastal Monitoring Programme ... 1252
8. Objectives of the programme ... 1252
9. Monitoring stations ... 1252
10. Some Highlights of the observation ... 1253
    (*a*) Salinity ... 1253
    (*b*) Dissolved Oxygen (D.O.) ... 1253
    (*c*) Nutrients ... 1253
    (*d*) Bacteria ... 1253
11. Major coastal problems ... 1253
12. Status of coastal pollution ... 1254
13. Coastal pollution—Critical issues ... 1256
14. Pollution control mechanism and conservation of coastal area ... 1256
15. National programmes ... 1257
16. National Mangrove Programme ... 1257
17. National Coral Reef Programme ... 1257
18. Pollution Standards and Reference Materials .. 1257
19. Large Marine Ecosystem (LME) Concept ... 1257
20. International Society for Mangrove Ecosystem (ISME) ... 1258
21. London Dumping Convention (LDC) 1972, renamed London Convention (LC) 1972 ... 1258
22. Global warming and sea-level rise ... 1258
23. Relative sea-level change : Global Vs. Local ... 1259
24. Government initiatives ... 1259
25. Four categories ... 1260
26. Problem soap suds ... 1261

Synopsis Page

27. Oil hazard ... 1262
28. Eco-friendly way ... 1263
29. Radioactive wastes ... 1264

CHAPTER V

AIR POLLUTION—PROBLEMS, CAUSES AND EFFECTS

1. Introduction ... 1266
2. What is air pollution ... 1266
3. Concept of air pollution ... 1267
4. Ambient Air Quality ... 1268
5. Evidences of air pollution ... 1268
   Table—Approximate constitution of the atmosphere at 10°C and normal pressure ... 1269
   Table—Major Air Pollution Episodes ... 1270
6. Classification of air pollutants ... 1270
   I. Aerosols ... 1270
      (a) Smog ... 1270
      (b) Smoke ... 1271
      (c) Ash ... 1271
      (d) Fumes ... 1271
      (e) Mists ... 1271
      (f) Dust ... 1271
   II. Odoors ... 1272
   III. Gases ... 1272
      (a) Sulphur dioxide ... 1272
      (b) Nitrogen oxides ... 1272
      (c) Ozone ... 1272
      (d) Carbon Monoxide ... 1272
      (e) Hydrocarbons ... 1272
      (f) Inorganic acids ... 1272
      (g) Organic acid ... 1272
      (h) Fluorine ... 1273
   IV. Comparison of combustion pollutants ... 1273
   V. Emissions from Mobile Sources ... 1273

Synopsis Page

VI. Classification of air pollution sources and emissions ... 1274

7. What air pollution does ... 1275

8. Sources of Pollution ... 1275

(A) Natural sources ... 1275

(*i*) Cosmic rays ... 1275

(*ii*) Environmental radiations ... 1275

(*a*) Terrestrial radiations ... 1275

(*b*) Atmospheric radiations ... 1275

(*iii*) Internal radiation ... 1275

(*iv*) Dust storm ... 1276

(*v*) Forest fire ... 1276

(B) Man made sources ... 1276

(*i*) X-Rays ... 1276

(*ii*) Radioactive fallout ... 1276

(*iii*) Domestic appliances ... 1276

(*iv*) Industrial pollutants ... 1276

(*a*) Cement industries ... 1276

(*b*) Thermal power plant ... 1277

(*c*) Steel industries ... 1277

(*d*) Fertilizer industries ... 1277

(*e*) Refinery industry ... 1277

(*f*) Sulphuric acid and phosphatic fertilizer industries ... 1277

(*g*) Petroleum refineries ... 1278

(*v*) Automobile pollution ... 1278

(1) Major Pollutants ... 1278

(2) Air pollution with special reference to motor vehicles ... 1279

(3) Automobiles as a source of air pollution ... 1280

Table—Air quantities in 10 Indian Cities ... 1288

(*vi*) Pollution due to agricultural activities ... 1290

(*vii*) Pollution due to combustion or incineration ... 1290

(*viii*) Noise pollution sources ... 1291

(*ix*) Miscellaneous sources ... 1291

9. Effects of air pollution ... 1294

SUPPLEMENT
TO
COMMENTARIES ON
WATER & AIR POLLUTION AND ENVIRONMENT (PROTECTION) LAWS
(VOL. 1)

THE HAZARDOUS WASTE (MANAGEMENT AND HANDLING) AMENDMENT RULES, 2000

S.O. 24 (E), dated 6th January, 2000.[1]—In exercise of the powers conferred by Secs. 6, 8, 25 of the Environment (Protection) Act, 1986 the Central Government hereby notifies the amendments to the Hazardous Wastes (Management and Handling) Rules, 1989.

1. (1) These rules may be called the Hazardous Wastes (Management and Handling) Amendment Rules, 2000.

(2) They shall come into force on the date of their publication in the Official Gazette.

2. In the Hazardous Wastes (Management and Handling) Rules, 1989 (hereinafter referred to as the said rules), in Rule 2,—

(*a*) after the words "These rules shall apply to," the words "the handling of" will be *inserted;*

(*b*) after the words "as specified in", the word "schedule" shall be *substituted* by the word "schedules".

3. In Rule 3 of the said rules,—

(*a*) for sub-rule (*i*), the following sub-rule shall be *substituted,* namely :—

"(*i*) Hazardous Wastes means,—

(*a*) Waste substances which are generated in the process indicated in Column 2 of Sch. 1 and consists of wholly or partly of the waste substances referred to in Column 3 of the same Schedule;

(*b*) Waste substances which consists wholly or partly of substances indicated in Sch. 2, unless the concentration of the substances is less than the limit indicated in the same Schedule; and

(*c*) Waste substances indicated in Part A, List 'A' and List 'B' of Schedule 3 applicable only to Rules 12, 13 and 14 unless they do not possess any of the hazardous characteristics in Part B of the same Schedule.

(*b*) after sub-rule (*p*), the following sub-rules, shall be *inserted,* namely :—

---

[1] Published in the *Gazette of India Extraordinary,* Part. II, Sec. 3 (*ii*), dated 6th January, 2000 (w.e.f. 6th January, 2000).

"(*q*) "disposal" means deposit, treatment, storage and recovery of any hazardous wastes;

(*r*) "manifest" means transporting document originated and signed by the occupier in accordance with Rules 7 (4) and 7 (5);

(*s*) "State Government" means State Government and in relation to Union Territory the Administrator thereof appointed under Article 239 of the Constitution;

(*t*) "storage" means keeping hazardous wastes for a temporary period, at the end of which the hazardous waste is treated and disposed of;

(*u*) "transport" means movement of hazardous waste by air, rail, road or water;

(*v*) "transporter" means a person engaged in the off-site transportation of hazardous waste by air, rail, road or water;

(*w*) "treatment" means a method, technique or process, designed to change the physical, chemical or biological characteristics or composition of any hazardous waste so as to render such wastes harmless;

(*x*) "environmentally sound management of hazardous wastes" means taking all steps to ensure that the hazardous wastes are managed in a manner which will protect human health and the environment against the adverse effects which may result from such wastes;

(*v*) "illegal traffic" means any transboundary movement of hazardous wastes as specified in Rule 15;"

(*c*) sub-rule (*q*) shall be re-lettered as sub-rule '(z)'."

4. In Rule 4 of the said rules,—

(*a*) for the heading "4. Responsibility of the occupier for handling of wastes", the words, "4. Responsibility of the occupier and operator of a facility for handling of the wastes" shall be *substituted;*

(*b*) for sub-rule (1), the following sub-rule shall be *inserted,* namely :—

"(1) The occupier and the operator of a facility shall be responsible for proper collection, reception, treatment, storage and disposal of hazardous wastes listed in Sch. 1, 2 and 3."

(*c*) after sub-rule (2), the following sub-rule shall be *inserted,* namely :—

"(3) It shall be the responsibility of the occupier and the operator of a facility, to take all steps to ensure that the wastes listed in Schedules 1, 2 and 3 are properly handled, and disposed of without any adverse effects to the environment".

5. After Rule 4, the following rule shall be *inserted,* namely :—

"4-A. Duties of the occupier and operator of a facility.—It shall be the duty of the occupier and the operator of a facility to take adequate steps while handling hazardous waste to,—

(*i*) contain contaminants and prevent accidents and limit their consequences on human and the environment; and

(*ii*) provide persons working on the site with information, training and equipment necessary to ensure their safety.

4-B. Duties of the Authority.—Subject to the provisions of these rules, the authority shall also perform duties as specified in Column 3 of Sch. 4".

6. In Rule 5 of the said rules,—

(*a*) In sub-rules (2), (3) (4) and (7) for the words "State Pollution Control Board" the words "Member-Secretary, State Pollution Control Board or any officer designated by the Board" shall be *substituted;*

(*b*) in sub-rule (2) and sub-rule (3) after the words "Form 1" the following shall be *inserted,* namely :—

"along with a sum of rupees seven thousand five hundred only for processing application for authorization and analysis fee, if required, as prescribed under the Environment (Protection) Act, 1986";

(*c*) after sub-rule (4), the following sub-rule shall be *inserted,* namely :—

"(4-A) The authorisation application complete in all respects shall be processed by the State Pollution Control Boards within ninety days of the receipt of such application";

(*d*) in sub-rule (6)(*i*) for the words "a period of two years from" the words "for a period of five years from" shall be *substituted;*

(*e*) after sub-rule (7), the following sub-rule shall be *inserted,* namely:—

"(8) The Member-Secretary, State Pollution Control Board or any officer designated by the Board shall renew the authorisation granted under sub-rule (6), after examining each case on merit, subject to the following,—

(*i*) on submission of annual returns by the occupier or operator of facility in Form 4;

(*ii*) on steps taken, wherever feasible, for reduction in the waste generated or recycled or reused;

(*iii*) on fulfilment of conditions prescribed in the authorisation regarding management in an environmentally sound manner of wastes; and

(*iv*) on remittance of a processing application fee and analysis fee, as the case may be,".

7. In Rule 7 of the said rules,—

(*a*) for sub-rule (1), the following shall be *substituted,* namely :—

"(1) The occupier or operator of a facility shall ensure that the hazardous wastes are packaged, based on the composition in a manner suitable for handling, storage and transport and the labelling and packaging shall be easily visible and be able to withstand physical conditions and climatic factors;"

(*b*) or sub-rule (2), the following sub-rule shall be *substituted*, namely :—

"(2) Packaging, labelling and transport of hazardous wastes shall be in accordance with the provisions of the rules made by the Central Government under the Motor Vehicles Act, 1988 and other guidelines issued from time to time";

(*c*) after sub-rule (2), the following sub-rules shall be *inserted*, namely :—

"(3) All hazardous waste containers shall be provided with a general label as given in Form 8".

(4) No transporter shall accept hazardous wastes from an occupier for disposal unless it is accompanied by five copies of the manifest (Form 9) as per the colour codes. The transporter shall give a copy of the manifest signed and dated to the occupier and retain the remaining four copies to be used as prescribed in sub-rule (5).

(5) Occupier shall provide the transported with six copies of the manifest as per the colour codes indicated below :

Copy 1 (White)	forwarded to the Pollution Control Board by the occupier
Copy 2 (Light Yellow)	signed by the transporter and retained by the occupier
Copy 3 (Pink)	retained by the operator of a facility
Copy 4 (Orange)	returned to the transporter by the operator of facility after accepting waste
Copy 5 (Green)	forward to Pollution Control Board by the operator of facility after disposal
Copy 6 (Blue)	returned to the occupier by the operator of the facility after disposal

(6) The occupier shall obtain necessary no-objection certificate from State Pollution Control Boards in the respective states involved in case of any inter and intra-State transport of hazardous wastes.

(7) The occupier shall provide the transporter with relevant information in Form 10, regarding the hazardous nature of the wastes and measures to be taken in case of an emergency."

8. In the said rules, from Rule 8, the following rule, shall be *substituted*, namely :—

"**8. Disposal Sites.**—(1) The occupier or any operator of a facility shall be responsible for identifying sites for establishing hazardous wastes disposal facility;

(2) The State Government, operator of a facility or any association of occupiers shall identify sites for common hazardous wastes disposal facility in the state;

(3) The State Government, occupier or any association shall after preliminary impact assessment studies identify possible sites for disposal facility. They shall then undertake an Environmental Impact Assessment of these sites for selecting an appropriate site for hazardous waste disposal facility;

(4) The occupier or any association after identification as prescribed in sub-rule (3) shall inform the State Government to take necessary action for notifying of the site;

(5) The State Government shall after identification or on receipt of information regarding identification by such occupier or any such association shall cause a public notice inviting objections and suggestions within thirty days;

(6) The State Government shall on receipt of any objection conduct a public hearing as per the procedure notified for Environmental Impact Assessment;

(7) The State Government shall then, acquire or inform such occupier or any such association to acquire the site before notifying the same. It shall also undertake to compile and publish periodically an inventory of such disposal sites in the State;".

9. After Rule 8 of the said rules, the following rules shall be *inserted*, namely, :—

"**8-A. Design and setting up of disposal facility.**—(1) The occupier, any association or operator of a facility, as the case may be shall design and set up disposal facility as per the guidelines issued by the Central Government or the State Government as the case may be;

(2) the occuier, any association or operator, shall before setting up a disposal facility get the design and the layout of the facility approved by the State Pollution Control Board;

(3) The State Pollution Control Board shall monitor the setting up and operation of a facility regularly.

8-B. Operation and closure of landfill site.—(1) The occupier or the operator as the case may be, shall be responsible for safe and environmentally sound operation of the facility as per design approved under Rule 8-A by the State Pollution Control Board;

(2) The occupier or the operator shall ensure that the closure of the landfill is as per the design approved under Rule 8-A by the State Pollution Control Board."

10. For Rule 11 of the said rules, the following rule shall be *substituted*, namely :—

"**11. Import and Export of Hazardous Wastes for dumping and disposal.**—Import of hazardous wastes from any country to India and export of hazardous wastes from India to any country for dumping or disposal shall not be permitted.".

11. After Rule 11, the following rules shall be *inserted*, namely :—

"**12. Import and Export of Hazardous Wastes for recycling and reuse.**—(1) Import and/or export of hazardous wastes Rule 3(*i*)(*c*) shall only be permitted as raw material for recycling or reuse;

(2) The Ministry of Environment and Forests shall be the nodal Ministry to deal with transboundary movement of hazardous waste;

(3) For regulation of export and import the authorities mentioned in Schedule 4 shall be responsible;

(4) The decision of the Central Government in respect of grant of permission for import or export shall be final;

(5) Any occupier importing or exporting hazardous waste shall provide detailed information in Form 7-A to the Customs authorities;

(6) Any occupier exporting or importing hazardous waste from or to India shall comply with the articles of the Basel Convention to which the Central Government is a signatory."

13. Import of Hazardous Waste.—(1) Every occupier importing hazardous waste shall apply to the State Pollution Control Board, one hundred twenty days in advance in Form 6 for permission to import along with a minimum fee of rupees thirty thousand payable to Ministry of Environment and Forests, Government of India for imports up to five hundred metric tonnes and for every additional five hundred metric tonnes or part thereof of waste imported an additional sum of rupees five thousand will be payable;

(2) The State Pollution Control Board shall examine the application received from the occupier within thirty days and forward the application with recommendation and requisite stipulations for safe transport, storage and processing, to the Ministry of Environment and Forests;

(3) The Ministry of Environment and Forests, Government of India will examine the application received from the State Pollution Control Board and after satisfying itself will grant permission for imports subject to the following :—

(*a*) environmentally friendly/appropriate technology used for re-processing;

(*b*) the capability of the importer to handle and reprocess hazardous wastes in an environmentally sound manner;

(*c*) presence of adequate facility for treatment and disposal of wastes generated; and

(*d*) approvals, no objection certificates and authorisations from all concerned authorities; and

(*e*) remittance of a processing application fee;

(4) The Ministry of Environment and Forests, Government of India, shall forward a copy of the permission granted, to the Central Pollution Control Board, the State Pollution Control Board and the concerned Port and Customs authorities for ensuring compliance of the conditions of imports and to take appropriate steps for safe handling of the waste at the time of off-loading;

(5) An application for licence to the Directorate General of Foreign Trade for import shall be accompanied with the permission granted by the Ministry of Environment and Forests, Government of India under sub-rule (3) to the importer and an authenticated copy of Form 7 of the Exporter under sub-rule (3) of Rule 14;

(6) The Port and Custom authorities shall ensure that the shipping document is accompanied with an authenticated copy of Form 7 and the test report from an accredited laboratory of analysis of the hazardous waste shipped;

(7) The occupier having valid permission to import shall inform the State and Central Pollution Control Board and the Port authorities of the arrival of the consignment of hazardous wastes ten days in advance;

(8) The occupier importing hazardous waste shall maintain the records of hazardous waste imports as specified in Form 6-A and the record so maintained shall be available for inspection.

14. Export of Hazardous Waste.—(1) The exporting country or the exporter as the case may be, of hazardous waste shall apply ninety days in advance in Form 7 to the Ministry of Environment and Forests, Government of India, seeking permission for the proposed export and transboundary movement;

(2) The Ministry of Environment and Forests, Government of India, on receipt of such Form 7 from an exporter or an exporting country shall examine the case on merit and grant or refuse permission for export to India;

(3) The Ministry of Environment and Forests, shall communicate the grant of permission by authentication on Form 7 to the exporter and the exporting country and endorse a copy of the same to the Central Pollution Control Board and the State Pollution Control Board;

(4) The exporter shall ensure that no consignment is shipped prior to the requisite authentication being received. The exporter shall also ensure that the shipping document is accompanied with Form 7-A, and authenticated copy of Form 7 and an authenticated copy of the test report from an accredited laboratory of analysis of the hazardous wastes;

(5) The occupier, exporting hazardous waste to any other country shall seek permission from the competent authority of that country prior to any shipment;

(6) Every occupier exporting hazardous waste shall inform the Central Government of the permission sought for exporting, permission granted for export and details of the export in Form 7.

15. Illegal Traffic.—(1) The movement of hazardous wastes from or to the country shall be considered illegal :

(*i*) if it is without prior permission of the Central Government; or

(*ii*) if the permission has been obtained through falsification, mis-representation of fraud; or

(*iii*) it does not conform to the shipping details provided in the document;

(2) In case of illegal movement, the hazardous wastes in question :

(*i*) shall be shipped back within thirty days either to the exporter or to the exporting country;

(*ii*) shall be disposed of within thirty days from the date of off-loading subject to inability to comply with sub-rule (2) (*i*) above.

(3) In case of illegal transboundary movement of hazardous wastes; the occupier exporting hazardous waste from the country or the exporter exporting hazardous waste to the country and importer importing hazardous waste into the country shall ensure that the wastes in question is safely stored and shipped or disposed off in an environmentally sound manner within thirty days from the date of off-loading;

(4) The exporting country shall bear the costs incurred for the disposal of such wastes.

16. Liability of the occupier, transporter and operator of a facility.—(1) The occupier, transporter and operator of a facility shall be liable for damages caused to the environment resulting due to improper handling and disposal of hazardous waste listed in Schedules 1, 2 and 3;

(2) The occupier and operator of a facility shall also be liable to reinstate or restore damaged or destroyed elements of the environment;

(3) The occupier and operator of a facility shall be liable to pay a fine as levied by the State Pollution Control Board with the approval of the Central Pollution Control Board for any violation of the provisions under these rules.

17. Transitional provisions.—Where,—

(*a*) On the date of coming into operation of these rules, an occupier handling hazardous wastes who is required to comply with the provisions of these rules, it will be sufficient compliance if the occupier and the authorities do so within three months after the date of coming into force of these rules,

(*b*) State Pollution Control Boards and Pollution Control Committees are required to oversee the compliance.".

***12.** For Rule 18 of the said rules, the following rule shall be *substituted*, namely :—

"**18. Appeal.**—(1) An appeal shall lie, against any order of grant or refusal of an authorisation by the Member-Secretary, State Pollution Control Board or any officer designated by the Board to the Secretary, Department of Environment of the State Government by whatever name called.

(2) Every appeal shall be in writing and shall be accompanied by a copy of the order appealed against and shall be presented within thirty days of the receipt of the order passed.".

13. In Form 1 of the said rules, at the bottom of Item 8, the following words shall be *inserted*, namely,—

"Place : Signature
Date : Designation".

14. In Form 2 of the said rules, for the words "(Authorisation for operating a facility for collection, reception, treatment, storage, transport and disposal of hazardous wastes)" the words "Form for Grant of authorisation for occupier or operator handling hazardous wastes," shall be *substituted*.

---

* Rule 12 of the amendment Rule, 2000 is missing due to error of the printing, therefore, Rules 13 to 20 of the Amendment Rules, 2000 corrected as Rules 12 to 19.

15. In Form 3 of the said rules, after Item 7 which relates to heading "data on environmental surveillance", the following shall be *inserted*,—

"8. Details of the hazardous wastes reused and recycled—

Date	Total quantity of hazardous waste generated	Details of hazardous waste minimisation activity	Material received	Final quantity of waste generated	Net reduction in waste generation quantity and percentage

Place : Signature :
Date : Designation"

16. In Form 4 of the said rules, a the bottom of Item 3, the following words shall be *inserted*, namely—

"Place : Signature
Date . Designation"

17. In Form of the said rules, after Item 7. "The steps" taken to prevent the recurrence of such an accident", the following shall be *inserted*, namely—

"Place : Signature
Date : Designation"

18. For Form 6 of the said rules, the following forms shall be *substituted*, namely:—

FORM 6

[*See* rule 13 (1)]

Application for importing hazardous/recyclable wastes as raw materals

From ....
. . . .
....

To be Mailed by Importer

To :

The Member-Secretary,
State Pollution Control Board,
....

Sir,

I/we apply for 'No Objection' of authorisation under sub-rule (1) of Rule 13 of the Hazardous Wastes (Management & Handling) Rules, 1989, amended in 1999 for importing/ exporting hazardous/recyclable wastes to use as raw materials

For Office use only

1. Code No.
2. Whether the unit is situated in a critically polluted area as identified by the Ministry of Environment and Forests

To be filled in by Applicant

Part 1

(To be filled by exporter or a person authorized by the exporter)

1. Name and Address of the Exporter
2. Details of material (hazardous wastes in the form of raw material) to be exported.

S. No.	Particulars	Six digit Code No.*	Purity expected	Quantity	Whether any special handling requirement ?

3. The material permitted shall be fully insured for transit as well as for any accidental occurrence and its clean-up operation.
4. The exported material shall be taken back, if it creates a genuine environmental hazard or shall take all such measures to treat and dispose in an environmentally benign manner up to the satisfaction of concerned SPCB. All such costs involved in such operation shall be borne by Exporter and/or Importer

PART 2

(To be filled in by Importer)

1. Name and Address :
2. Whether Authorisation is obtained in Form 2 on : Yes/No
   application made in Form 1 (enclose copy)
3. Details of material to be imported

S. No.	Particulars	Six digit Code No*	Purity expected	Quantity	Whether any special handling requirement ?

*(Here enter as reference nomenclature, the equivalent six digit code no from European Waste Catalogue EWC, issued pursuant to the Article 1 (*a*) of Council Directive 75/442/EEC on waste or its equivalent as the case may be.)

4. Whether you have received such imported hazardous wastes in the form of raw materials in the past and if yes give details

S No.	Name of Material	Country of Export	Year	Quantity in tonnes

5. Whether the importer has :
   (a) Adequate facility to handle imported hazardous waste in the form of his raw material, if yes, furnish details Yes / No

(*b*) Adequate facility to handle the hazardous wastes generated by the use of such imported hazardous wastes in the form of his raw material Yes/No

(*c*) Requisite laboratory testing facility Yes/No

6. Break-up of the imported material

(*a*) The total quantity applied for . ... T

(*b*) Out of (*a*) above, how much quantity after initial in situ purification, will be available as raw material..... .... T

(*c*) Out of (*b*) above, how much quantity will be converted to be the useful product or co-product .. . . T

7. Means of Transport (Road, Rail, inland waterway, sea, air) including country of export, transit and import, also point of entry and exit where these have been designated.

8 Information on special handling requirements including emergency provision in case of accident

(Attach separate sheet)

9 Undertaking :

I hereby solemnly undertake that

1. The full consignment shall be cleared in one lot by arranging authorised transporter under my supervision with due prior intimation to the Board. District Collector and Police Station and the imported material shall be admitted in an enclosure especially provided in the premises.

2 The material permitted shall be fully insured for transit as well as for any accidental occurrence and its clean-up operation

3. The record of consumption and fate of the imported material shall be monitored and report sent to the Board every fortnight.

4. At every step of consumption of 25, 50, 75 and 100% of the imported material, the situation in the store shall be shown to the Board authority at our cost.

5. The hazardous wastes which gets generated in our premises by the use of imported hazardous wastes in the form of raw material, shall be treated and disposed of and only as per conditions of authorisation.

6. I/We agree to share the cost and joint to exporter in undertaking the measures as per undertaking given by Exporter at Part A Column No. 12 (3) of this Form 6.

7. I am aware that there are significant penalties for submitting a false certificate/ undertaking/disobedience of the rules and lawful orders including the possibility of fine and imprisonment

FORM 6-A

[*See* rule 13 (8)]

(Format for maintaining records of hazardous waste imported and exported)

1 Name and address of the importer

2 Date and reference number of issuance of permission to import hazardous wastes

3. Description of hazardous waste
   - (*a*) Physical form .
   - (*b*) Chemical form
   - (*c*) Total volume and weight (in kg) :
   - (*d*) Test report as per Rule 13 (6)

4 Description of storage, treatment and reuse of hazardous waste .
   - (*a*) Date :
   - (*b*) Method of Storage
   - (*c*) Method of treatment and reuse (give details) :

---

19. For Form 7 the said rules, the following form shall be *substituted*, namely :—

FORM 7

[*See* rule 13 (5) & (6)]

Transboundary Movement of Waste—Notification

List of abbreviations used in the Movement Document

RECOVERY OPERATIONS (Block 9)

R1	Used as a fuel (other than in direct incineration) or other means to generate energy
R2	Solvent reclamation/regeneration
R3	Recycling/reclamation of organic substances which are not used as solvents
R4	Recycling/reclamation of metals and metal compounds
R5	Recycling/reclamation of other inorganic materials
R6	Regeneration of acids or bases
R7	Recovery of components used for pollution abatement
R8	Recovery of components from catalysts
R9	Used oil re-refining or other reuses of previously used oil

R10 Land treatment resulting in benefit to agriculture or ecological improvement

R11 Uses of residual materials obtained from any of the operations numbered R1 to R10

R12 Exchange of wastes for submission to any of the operations numbered R1 to R11

R13 Accumulation of material intended for any operation numbered R1 to R12

MEANS OF TRANSPORT (Block 8-10)

R = Road
T = Train/Rail
S = Sea
A = Air
W = Inland Waterways

PACKAGING TYPES (BLOCK 16)

1. Drum
2. Wooden barrel
3. Jerrican
4. Box
5. Bag
6. Composite packaging
7. Pressure receptacle
8. Bulk
9. Other (specify)

PHYSICAL CHARACTERISTICS (Block 12)

1. Powdery/powder
2. Solid
3. Viscous/paste
4. Sludge
5. Liquid
6. Gaseous
7. Other (specify)

H NUMBER AND UN CLASS (Block 17)

UN Class	H No.	Designation
1	H1	Explosive
3	H3	Inflammable liquids
4.1	H4.1	Inflammable solids
4.2	H4.2	Substances or wastes liable to Air spontaneous combustion
4.3	H4.3	Substances or wastes which, in W contact with water emit inflammable gases
5.1	H5.1	Oxidizing
5.2	H5.2	Organic peroxides
6.1	H6.1	Poisonous (acute)
6.2	H6.2	Infectious substances
8	H8	Corrosives
9	H10	Liberation of toxic gases in contact with air or water
9	H11	Toxic (delayed or chronic)
9	H12	Ecotoxic
9	H13	Capable, by any means, after disposal of yielding another material e.g. leachate, which possesses any of the characteristics listed above.

List of abbreviations used in the notification

RECOVERY OPERATIONS (Block 9)	
R1	Use as a fuel (other than in direct incineration) or other means to generate energy
R2	Solvent reclamation/regeneration
R3	Recycling/reclamation of organic substances which are not used as solvents
R4	Recycling/reclamation of metals and metal compounds
R5	Recycling/reclamation of other inorganic materials
R6	Regeneration of acids or bases
R7	Recovery of components used for pollution abatement
R8	Recovery of components from catalysts
R9	Used oil re-refining or other reuses of previously used oil
R10	Land treatment resulting in benefit to agriculture or ecological improvement
R11	Uses of residual materials obtained from any of the operations numbered R1 to R10
R12	Exchange of wastes for submission to any of the operations numbered R1 to R11
R13	Accumulation of material intended for any operation numbered R1 to R12.

MEANS OF TRANSPORT
(Block 10)
R = Road
T = Train/Rail
S = Sea
A = Air
W = Inland waterways

PHYSICAL CHARACTERISTICS (Block 13)
1. Powdery/powder
2. Solid
3. Viscous/paste
4. Sludgry
5. Liquid
6. Gaseous
7. Other (specify)

PACKAGING TYPES
(Block 11)
1 Drum
2. Wooden barrel
3 Jerrican
4. Box
5. Bag
6. Composite packaging
7. Pressure receptacle
8. Bulk
9. Other (specify)

H NUMBER (Block 17) & UN CLASS (Block 18)		
UN Class	H Number	Designation
1	H1	Explosive
3	H3	Inflammable Liquids
4.1	H4.1	Inflammable solids
4.2	H4.2	Substances or wates liable to spontaneous combustion
4.3	H4.3	Substances or wastes which, in contact with Water, emit inflammable Gases
5.1	H5.1	Oxidizing
5.2	H5.2	Organic peroxides
6.1	H6.1	Poisonous (acute)
6.2	H6.2	Infectious substances
8	H8	Corrosives
9	H10	Liberation of toxic gases in contact with air or water
9	H11	Toxic (delayed or chronic)
9	H12	Ecotoxic
9	H13	Capable by any means after disposal of yielding another material e g leachate, which possesses any of the characteristics listed above
Y numbers (Block 16) refer to categories of waste listed in Annex. I and II of the Basel Convention, as well as more detailed information can be found in an Instruction Manual available from the Secretariat of the Basel Convention.		
25 SPECIFIC CONDITIONS ON CONSENTING TO THE MOVEMENT		

*20. For Schedule of the said rules, the following Schedules shall be *inserted*, namely,—

SCHEDULE 1

[*See* rule 3 (*i*) (*a*)]

List of Processes Generating Hazardous Wastes

S No	Processes		Waste streams
1	Petrochemical processes and pyrolytic operations	1.1	Oven debris
		1.2	Oil-containing bleaching earth
		1.3	Acid tar
		1.4	Sulphur-containing residue from sulphur removal
		1.5	oil-containing sludge
		1.6	oil emulsion
		1.7	oil-containing acid

---

*Only applicable to Cupola's of capacity more than two metric tonnes

S. No	Processes		Waste streams
		1.8	tar residue made with coal tar
		1.9	sludge from waste water purification
		1.10	residual liquid and paste-like organic substances made with aromatic, aliphatic and naphenic hydrocarbons
		1.11	residue from alkali wash of fuels
2	Natural gas production	2.1	mercury-containing sludge
		2.2	mercury-containing filter material
		2.3	sulphur-containing residues
3	Production or use of zinc, zinc oxide	3.1	zinc ashes
3 bis	Production and use of copper oxide, copper including Electro-refining and Electro-winning operations	3.1bis	Dust and residues from gas cleaning system of copper smelters
		3.2bis	Spent electrolytic solutions from copper, electro-refining and electro-winning operations
		3.3bis	Wastes sludges, excluding anode slimes from electrolyte purification systems
		3.4bis	Other exhaust dust.
4.	Production or use of lead	4.1	lead ashes
		4.2	lead slags
		4.3	lead-containing filter material
5	Production or use of cadmium	5.1	cadmium-containing filter material
6	Production or use of arsenic	6.1	arsenic-containing filter material
7.	Production of cast iron	7.1	cupola oven dust*
8.	Production of crude iron and steel with oxy-steel converters or electro-ovens	8.1	Process dust
		8.2	Benzol Acid Sludge
9	Production of aluminium (primary or secondary production)	9.1	filtered material
		9.2	cathode residues
		9.3	oven debris
10	Non-ferro metallurgical processes	10.1	heavy metal-containing oven debris arsenic chalk
11	Hardening of steel	11.1	Cyanide, nitrate, or nitrite-containing sludge
		11.2	hardening salt
12	Production of asbestos or asbestos-containing materials and or products	12.1	asbestos-containing residue
13	Production of chlorine by means of mercury/diaphragm-electrolyses process	13.1	Asbestos-containing discards
		13.2	Mercury bearing sludge
14	Phenol production	14.1	Phenol mixture
15	Metalworking	15.1	Selenium-containing metal waste
		15.2	Beryllium-containing metal waste
16	Metal surface treatment, such as etching, staining, polishing, galvanising, cleaning, degreasing and hot dip galvanising	16.1	Acid, acid residue or acid mixture
		16.2	Alkali, alkali residue or alkali mixture
		16.3	Galvanic bath and (half) concentrate made will sulphide, chromium (VI),

S. No.	Processes		Waste streams
			cyanide, copper, zinc, cadmium, nickel or tin
		16.4	Halogen-free sludge from a bath which used organic solvents
		16.5	Halogen-containing sludge from a bath with organic solvents
		16.6	Phosphating sludge
		16.7	Halogen-containing organic degreasing bath
		16.8	sludge from staining bath
17.	Treatment of galvanising and similar with baths and water purification in metal surface treatment	17.1	metal hydroxide sludge chromium, cadmium copper, zinc, nickel or silver
		17.2	heavy metal-containing eluate from ion exchangers
		17 3	heavy metal-containing half-concentrates from membrane systems
18	Production of acids and fertilizer	18.1	acid-containing residues
		18 2	Spent catalyst
		18 3	Sulphur containing residue
19	Production or use of solvents	19.1	contaminated halogen-free aromatic, aliphatic or napthenic solvents
		19.2	contaminated halogen-free solvents made with phenols, ketones, ethers, acetates, alcohols or glycols
		19.3	contaminated halogen-containing aromatic, aliphatic or napthenic solvents
		19.4	contaminated halogen-containing solvents made with phenols
		19.5	contaminated solvents or mixtures of solvents made with organic nitrogen containing aromatics, napthenes of aliphatics
		19 6	contaminated solvents or mixtures of solvents made with organic sulphur compounds
		19.7	distillation residue
20.	Removal of coatings from ships, bridges and locks, electricity pylons and road markings by blasting	20 1	blasting material contaminated with coating residues
21.	Production or use of coatings paints, lacquers, varnishes and plastics, and of inks	21.1	residues of coatings or such as inks if not completely hardened
		21.2	sludge from waste water purification in production processes

S. No.	Processes		Waste streams
22	Production or use of glues, cements, adhesive and resins	22.1	glue, cement of adhesive residue (not made with vegetable or animal materials) if not completely dried out
		22.2	resin oil residue
22bis	Production or use of dyes, dye-intermediates and pigments	22.1bis	Process sludge
		22.2bis	Sludge from waste water treatment
23	Production or use of latex	23 1	latex or latex emulsion residue if not completely polymerised or coagulated
24.	Production or use of paint removers	24 1	paint remover residue
25.	Printing and copying with liquid toner	25.1	printing ink residue
		25.2	silkscreen printing ink residue
		25.3	lacquer residue
		25.4	liquid toner residue
		25.5	residue of cleaning agents made with organic solvents
		25.6	etching fluid residue
		25.7	dispersive oil residue
		25.8	oxidising agent residue
26.	Production or use of photo-chemicals	26.1	developer residue
		26.2	fixer residue
		26.3	bleaching fixer residue
27.	Production or use of organic peroxides	27.1	organic peroxide residue
28.	Production or use of halogen-containing hydrocarbons or of aromatic, aliphatic or napthenic hydrocarbons	28.1	residue of fluid or pasty organic materials made with halogen-containing hydrocarbons
		28.2	residue of fluid or pasty organic materials made with aromatic, aliphatic or napthenic hydrocarbons
29.	Production or use of organic, nitrogen or oxygen compunds	29.1	residue of fluid or pasty organic materials made with oxygen compounds, organic nitrogen or oxygen compounds (other than vegetable or animal carbohydrates, proteins, fats and fatty acids)
30.	Production or use of materials made with silicones	30.1	silicone oil residue
		30.2	silicone containing residues
31.	Production of canvas and textiles	31.1	textile chemical residue
32.	Production or use of plastics or raw materials for them	32.1	halogen free residue of additives for plastics (e.g. dyestuffs, stabilisers, or flame retardants)
		32.2	halogen containing residue of additives for plastics
		32.3	halogen free residue of plasticisers for plastics

S. No.	Processes		Waste streams
		32.4	halogen-containing residue of plasticisers for plastics
		32.5	residue from the preparation of vinylchloride monomer
		32.6	residue from the preparation of acrylonitrile monomer
		32.7	residue of liquid or pasty rubber emulsion or rubber solution if not polymerised
		32.8	sludge from waste water purification from rubber production if not polymerised
		32.9	PVC-containing residues if not polymerised
33	Production of cosmetics	33.1	Residue of chemical raw materials and additives (other than vegetable and animal carbohydrates, proteins, fats and fatty acids)
34.	Production of pharmaceuticals	34.1	Residues from the production of medicines (other than vegetable and animal carbohydrates, proteins, fats and fatty acids)
35.	Production, formulation of pesticides	35.1	pesticide residues
		35.2	sludge from waste water treatment
		35.3	hexa or hexa-containing residue made with hexa-chlorocyclohexane or hexachloro-benzene
		35.4	residues from the use of pesticides
36.	Production, formulation or use of wood preservatives	36.1	production and formulation residue
		36.2	sludge from the waste water purification
		36.3	residue from the use of wood preservatives
		36.4	wood alkali bath
37.	Cleaning, emptying and maintenance of tanks and separators of vessels vehicles and of mobile and stationary storage tanks, washing water	37.1	oil-containing cargo residue, washing water and sludge
		37.2	chemical containing cargo residue and sludge
		37.3	oil-water sludge mixture and oil-containing air filters from oil, fat, sludge or petrol separation
38.	Cleaning of barrels which have held chemical substances	38.1	chemical containing residue from barrel cleaning
		38.2	sludge from waste water purification
39.	Purification procession for air and water	39.1	sludge from waste water treatment from artificial fertilizer production
		39.2	sludge from the treatment of waste water containing hydrofluoric acid

S. No.	Processes		Waste streams
		39.3	heavy metal containing residue from used-ion exchange material in the water purification
		39.4	flue gas cleaning residue
40.	Purification procession for organic water	40.1	filters and filter material which have organic liquids on them, e.g. mineral oil, synthetic oil and organic chlorine compounds
41.	Waste treatment processes, e.g. incineration, distillation and separation and concentration techniques	41.1	sludge from the incineration of exclusively chemical waste
		41.2	fly ash from incineration of hazardous waste, except exclusively communal sewage sludge, flue gas cleaning residue
		41.3	battery acid
		41.4	distillation residue from the work-up of contaminated halogen free organic solvents
		41.5	distillation residue from the work-up of contaminated halogen containing organic solvents
42.	Tanning of leather	42.1	Chromium (*vi*) bearing residue
		42.2	Chromium bearing sludge
43	Performance of maintenance and repair work on vehicles and	43.1	oil-containing sludge and oil emulsion filters and filter material which have organic
		43.2	liquids on them, e g mineral oil, synthetic oil and organic chlorine compounds
44	Every action relating to and every use of lubricating and system oil	44 1	spent oil
		44.2	other spent lubricating and system oil

SCHEDULE 2

[*See* rule 3(*i*) (*b*)]

List of Waste Substances with Concentration Limits*

Classes

Class A: *Concentration limit . 50 mg/kg*

A1	Antimony and antimony compounds
A2	Arsenic and arsenic compounds
A3	Beryllium and cadmium compounds
A4	Cadmium and beryllium compounds
A5	Chromium (VI) compounds
A6	Mercury and mercury compounds
A7	Selenium and selenium compounds
A8	Tellurium and tellurium compounds
A9	Thallium and thallium compounds

---

* All on dry weight basis.

A10	Inorganic cyanide compounds (cyanides)
A11	Metal carbonyls
A12	Napthalene
A13	Anthracene
A14	Phenanthrene
A15	Chrysene, benzo(*a*) anthracene, fluoranthene, benzo(*a*) pyrene, benzo(*K*) fluoranthene, indeno(1, 2, 3-ed) pyrene and benzo (ghi) perylene
A16	Halogenated fused aromatic rings, e.g. polychlorobiphenyls plus derivatives
A17	Halogenated aromatic compounds
A18	Benzene
A19	Dieldrin, aldrin and endrin
A20	Organotin compounds

Class B : *Concentration limit : 5000 mg/kg*

B1	Chromium (III) compounds
B2	Cobalt compounds
B3	Copper compounds
B4	Lead and lead compounds
B5	Molybdenum compounds
B6	Nickel compounds
B7	Tin compounds
B8	Vanadium compounds
B9	Tungsten compounds
B10	Silver compounds
B11	Organic halogen compounds
B12	Organic phosphorus compounds
B13	Organic peroxides
B14	Organic nitro-and nitroso-compounds
B15	Organic azo-and-azo-oxy compounds
B16	Nitriles
B17	Amines
B18	(Iso-and thio-) cyanates
B19	Phenol and phenolic compounds
B20	Merceptans
B21	Asbestos
B22	Drilling, cutting, grinding and rolling oil or emulsions thereof
B23	Halogen-silanes
B24	Hydrazine(s)
B25	Fluorine
B26	Chlorine
B27	Bromine
B28	White phosphorus

B29	Ferro-silicon and alloys
B30	Manganese-silicon
B31	Halogen containing substances which produce acidic vapours on contact with damp air or water, e.g. silicon tetrachloride, aluminium chloride, titanium tetrachloride.

Class C *Concentration limit : 20,000 mg/kg*

C1	Ammonia and ammonium compounds
C2	Inorganic peroxides
C3	Barium compounds, except barium sulphate
C4	Fluorine compounds
C5	Phosphorus compounds, except the phosphates of aluminum, calcium and iron
C6	Bromates, (hypo)bromites
C7	Chlorates, (hypo)chlorites
C8	Aromatic compounds
C9	Organic silicon compounds
C10	Organic sulphur compounds
C11	Iodates
C12	Nitrates, nitrites
C13	Sulphides
C14	Zinc compounds
C15	Salts of per-acids
C16	Acid halides, acid amides
C17	Acid anhydrides

Class D : *Concentration limit 50,000 mg/kg*

D1	Sulphur
D2	Inorganic acids
D3	Metal bisulphates
D4	Oxides and hydroxides except those of : hydrogen, carbon, silicon, iron, aluminium, titanium, manganese, magnesium, calcium
D5	Aliphatic and napthenic hydrocarbons
D6	Organic oxygen compounds
D7	Organic nitrogen compounds
D8	Nitrides
D9	Hydrides

Class E *Regardless of concentration limit*

E1	Highly flammable substances
E2	Substances which generate dangerous quantities of highly flammable gases on contact with water or damp air.

SCHEDULE 3

[*See* rule 3 (*i*) (*c*)]

(PART A)

Lists of Waste to be Applicable only for Imports and Exports

List A

Basel No.	OECD No.	Description of material	Annex I	Annex III	Customs Code
A1		**Metal and Metal bearing wastes**			
A1010		**Metal waste and waste consisting of alloys of the following metals, but excluding such wastes specified on List B**			
A1010	AA100	# Mercury (see A1030)	Y 29	6.1, 11, 12	ex 2620.90
A1010	AA070	* Beryllium (see B1020)	Y 20	6.1, 11, 12	ex 2620.90
A1010	AA090	# Arsenic (see A 1020)	Y 24	6.1, 11, 12	ex 2620.90
A1010	AA070	* Selenium (see B1020)	Y 25	6.1, 11, 12	ex 2620.90
A1010	AA070	Cadmium (see B1020)	Y 26	6.1, 11, 12	ex 2620.90
A1010	AA070	Antimony (see B1020)	Y 27	6.1, 11, 12	ex 2620.90
A1010	AA070	Tellurium (see B1020)	Y 28	6.1, 11, 12	ex 2620.90
A1010	AA080	* Thallium (see A1030)	Y 30	6.1, 11, 12	ex 2620.90
A1020		**Waste having as constitutents or contaminants, excluding metal wastes in massive form**			
A1020	AA070	Beryllium; beryllium compounds (see B1020)	Y 20	6.1, 11, 12	ex 2620.90
A1020	AA070	Selenium; selenium compounds (see B1020)	Y 25	6.1, 11, 12	ex 2620.90
A1020	AA070	Cadmium, cadmium compounds (see B1020)	Y 26	6.1, 11, 12	ex 2620.90
A1020	AA070	Antimony; antimony compounds (see B1020)	Y 27	6.1, 11, 12	ex 2620.90
A1020	AA070	Tellurium; tellurium compounds (see B1020)	Y 28	6.1, 11, 12	ex 2620.90
A1020	AA030	Lead; Lead compounds (see B 1020)	Y 31	6.1, 11, 12	ex 2620.20
		End of A 1020			
A1030		**Waste having as constituents or contaminants**			

Basel No.	OECD No.	Description of material	Annex I	Annex III	Customs Code
A1030	AA090	Arsenic; arsenic compounds (see A1030)	Y 24	6.1, 11, 12	ex 2804.80
A1030	AA080	Thallium; thallium compounds (see A1030)	Y 30	6.1, 11, 12	ex 8112.91
A1030	AA100	Mercury; mercury compounds (see A1030)	Y 29	6.1, 11, 12	ex 2805.40
A1040		**Wastes having as constituents any of the following**			
A1040		Metal carbonyls	Y 19	6.1, 11, 12	
A1040	AA070	* Hexavalent chromium compounds	Y 21	6 1, 11, 12	
		End of A 1040			
A1050	AA120	Galvanic sludges	Y 17	6.1, 12	
A1060	AA130	Liquors from the picking of metals	Y 17	6.1, 12	
A1070	AA140	Leaching residues from zinc processing, dusts and sludges such as jarosite, hematite, goethite, etc.	Y 23	12	
A1080	AA020	Waste zinc residues not included on List B containing lead and cadmium in concentrations sufficient to exhibit hazardous characteristics indicated in Part B of this Schedule. (See B 1080 and B 1100)	Y 23	4.3, 12	ex 2620 19 ex 2620 1 ex 2817
A1090		Ashes from the incineration of insulated copper wire	Y 22	12	
A1100		Dust and residues from gas cleaning systems of copper smelters	Y 18 Y 22	12	ex 2620.30
A1110		Spent electrolytic solutions from copper electrorefining and electrowinning operations	Y 22	12	ex 2620.30
A1120		Wastes sludges, excluding anode slimes, from electrolyte purification systems in copper electrorefining and electrowinning operations	Y 18 Y 22	12	ex 2620.30
A1130		Spend etching solutions containing dissolved copper	Y 22	12	ex 3824.90

Basel No.	OECD No	Description of material	Annex I	Annex III	Customs Code
A1140		Wastes cupric chloride and copper cyanide catalyst	Y 22		ex 2620 30
A1150	AA161	Precious metal ash from incineration of printed circuit boards not included on List 'B'			ex 7112.10
A1160	AA170	Lead acid batteries, whole or crushed	Y31	6.1, 11, 12	
A1170		Unsorted waste batteries excluding mixutres of only List B batteries. Waste batteries not specified on List B containing Schedule 2 constituents to an extent to exhibit hazard characteristics indicated in Part B of this Schedule (See B 1090)	Y 26 Y 29 Y 31	6,1, 11, 12	ex 8548 10 ex 8548.90
A1180		Electrical and electronic assemblies or scrap containing components, such as accumulators and other batteries included on List B, mercury switches, glass from cathode-ray tubes and other activated glass and PCB capacitors, or contaminated with Schedule 2 constituents (e.g. cadmium, mercury, lead, polychlorinated biphenyl) to an extent that they exhibit hazardous characteristics indicated in Part B of this Schedule (See B 1110)			
A2		**Wastes containing principally inorganic constituents, which may contain metals and organic materials**			
A2010	AB040	Glass waste from cathode ray tubes and other activated glass	Y 31	6.1, 11, 12	ex 7001.00
A2020		Waste inorganic fluorine compounds in the form of liquids or sludges but excluding such wastes specified on List B	Y 32		

Basel No.	OECD No.	Description of material	Annex I	Annex III	Customs Code
A2030		Wastes catalysts but excluding such wastes specified on List B	Y 31		
A2040		Waste gypsum arising from chemical industry processes, when containing Schedule 2 constituents to the extent that it exhibits hazardous characteristics. Indicated in Part B of this Schedule.			
A2050	RB010	*Wastes Asbestos (dust and fibres)	Y 36		
A2060	AB010	Coal fired power plant fly ash containing Schedule 2 constituents in concentrations sufficient to exhibit hazardous characteristics indicated in Part B of this Schedule			
A3		**Wastes containing principally organic constituents, which may contain metals and inorganic materials**			
A3010	AC010	Waste from the production or processing of petroleum coke and bitumen	Y 11		ex 2713 90
A3020	AC 030	Waste mineral oils unfit of their originally intended use	Y 8		2710.00 3823.90
A3030	AC040 AC030	Wastes that contain, consist of or are contaminated with leaded anti-knock compound sludges or leaded petrol (gasoline) sludges	Y 31		
A3040	AC050	Thermal (heat transfer) fluids			
A3050	AC090	Wastes from production, formulation and use of resins, latex, plasticisers, glues/adhesives			
A3060	AC100	(Waste) Nitrocellulose	Y 15		3925.90
A3070	AC110	(Waste) Phenol, phenol compounds including chlorophenol in the form of liquids or sludges	Y 39		

Basel No.	OECD No.	Description of material	Annex I	Annex III	Customs Code
A3080	AC130	Ethers not including those specified on list B			
A3090		Leather dust, ash, sludges and flours when containing hexavalent chromium compounds or biocides (See B3100)	Y 21, Y4		4110.00
A3100		Wastes paring and other waste of leather or of composition leather, not suitable for the manufacture of leather articles, containing hexavalent chromium compounds or biocides	Y 21, Y4		
A3110		Fellmongery wastes containing hexavalent chromium compounds or biocides or infectious substances	Y 21, Y4		
A3120	AC190	Fluff; light fraction from shredding (automobile)			
A3130	AC200	Waste organic phosphorous compounds			
A3140	AC210	(Waste) non-halogenated (organic) solvents (but excluding such wastes specified on List B)	Y 42		
A3150	AC220	Waste halogenated organic solvents	Y 41		
A3160	AC230	Waste halogenated or unhalogenated non-aqueous distillation residues arising from organic solvent recovery operations	Y 18		
A3170	AC240	Wastes arising from the production of aliphatic halogenated hydrocarbons (such as chloromethanes, dischloroethane, vinyl chloride, allyl chloride and epichlorhydrin)	Y 45		
A3180	AC120 RA010	Wastes, substances and articles containing, consisting of or contaminated with polychlorinated biphenyls (PCB) and/or	Y10, Y45		2620.90 2903.69 3823.90

Basel No.	OECD No.	Description of material	Annex I	Annex II	Customs Code
		polychlorinated terphenyls (PCT) and/or polychlorinated naphthalenes (PCN) and/or polybrominated biphenyls (PBB), including any other polybrominated analogues of these compounds, at a concentration level of 50 mg kg or more.			
A3190	RA020	Waste tarry residues (excluding asphalt cements) arising from refining, distillation and any pyrolytic treatment of organic materials	Y 11		
	AC250	Surface active agents (surfactants)			
	AC260	Liquid pig manure, faeces			
	AC270	Sewage sludge			
A4	**AD**	**Wastes which may contain either inorganic or organic constitutents**			
A4010	AD010	Wastes from the production and, preparation, and use of pharmaceutical products	Y 2		
A4020		Clinical and related wastes; that is wastes arising from medical, nursing, dental, veterinary, or similar practices, and wastes generated in hospitals or other facilities during the investigation or treatment of patients, or research projects	Y 1		
A4030	AD020	*Wastes from the production, formulation and use of biocides and phyto-pharmaceuticals, including waste pesticides and herbicides which are off-specification, out-dated, and/or unfit for their originally intended use	Y 4		
A4040	AD030	Wastes from the manufacture, formulation, and use of wood preserving chemicals	Y 5, Y 22, Y 24		

Basel No.	OECD No	Description of material	Annex I	Annex III	Customs Code
A4050	AD040	Wastes that contain, consist of, or are contaminated with any of the following . • Inorganic cyanides, excepting precious metal-bearing residues in solid form containing traces of inorganic cyanides. • Organic cyanides	Y 33, Y 7, Y 38 Y 38		
A4060	AD060	Waste Oils/water, hydrocarbons/water mixtures, emulsions	Y 9		
A4070	AD070	Wastes from the production, formulation and use of inks, dyes, pigments, paints, lacquers, varnish	Y12		
A4080		Waste of an explosive nature	Y15		
A4090	AB110 AD110	Wastes acidic or basic solutions	Y 34 Y 35		
A4100		Wastes from industrial pollution control devices for cleaning of industrial off-gases	Y 18		
A4110	RC010	Wastes that contain, consist of or are contaminated with any of the following : • Any congenor of polychlorinated dibenzo-furan • Any congenor of polychlorinated dibenzo-dixoin	Y 43		
A4120		Wastes that contain, consist of or are contaminated with peroxides			
A4130		Waste packages and containers containing Schedule 2 substances in concentrations sufficient to exhibit hazardous characteristics indicated in part B of this Schedule			
A4140		Waste consisting of or containing off specification or out-dated chemicals listed in			

Basel No.	OECD No	Description of material	Annex I	Annex III	Customs Code
		Schedule 2 in concentration sufficient to exhibit hazard characteristics indicated in Part B of this Schedule			
A4150		Waste chemical substances arising from research and development or teaching activities which are not identified and/or are new and whose effects on human health and/or the environment are not known			
A4160		Spent activated carbon not resulting from the treatment of potable water and processes of the food industry and vitamin production			ex 2803

Prohibited for imports *vide* notification dated 26th December, 1996.

SCHEDULE 3

(Part B)

List of Hazardous Characteristics

H1 *Explosive*

An explosive substance or waste is a solid or liquid substance or waste (or mixture of substances or wastes) which is in itself capable by chemical reaction of producing gas at such a temperature and pressure and at such speed as to cause damage to the surroundings

H3 *Flammable liquids*

The word "flammable" has the same meaning as "inflammable". Flammable liquids are liquids, or mixture of liquids, or liquids containing solids in solution or suspension (for example, paints, varnishes, lacquers, etc , but not including substances or wastes otherwise classified on account of their dangerous characteristics) which give off a flammable vapour of temperatures of not more than 60 5 degrees centigrade, closed-cup test, or not more than 65.6 degrees centigrade, open-cup test. (Since the results of open-cup tests and of closed-cup tests are not strictly comparable and even individuals results by the same test are often variable, regulations varying from the above figures to make allowance for such differences would be within the spirit of this definition.)

H4.1 *Flammable solids*

Solids, or waste solids, other than those classed as explosives, which under conditions encountered in transport are readily combustible, or may cause or contribute to fire through friction; self-reactive and related substances which are liable to undergo a strongly exothermic reaction.

H4.2 *Substances or wastes liable to spontaneous combustion*

Substances or wastes which are liable to spontaneous heating under normal conditions encountered in transport, or to heating up on contact with air, and being then liable to catch fire.

H4 3 *Substances or wastes, in contact with water emit flammable gases*

Substances or wastes which, by interaction with water, are liable to become spontaneously flammable or to give off flammable gases in dangerous quantities

H5.1 *Oxidizing*

Substances or wastes which, while in themselves not necessarily combustible, may, generally by yielding oxygen causes, or contribute to, the combustion of other materials.

H5.2 *Organic Peroxides*

Organic substances or wastes which contain the bivalent-O-O-structure are thermally unstable substances which may undergo exothermic self-accelerating decomposition.

H6.1 *Poisonous (Acute)*

Substances or wastes liable either to cause death or serious injury or to harm health if swallowed or inhaled or by skin contact.

H6.2 *Infectious substances*

Substances or wastes containing viable micro organisms or their toxins which are known or suspected to cause disease in animals or humans.

H8 *Corrosives*

Substances or wastes which, by chemical action, will cause severe damage when in contact with living tissues, or, in the case of leakage, will materially damage or even destroy, other goods or the means of transport, they may also cause other hazards.

H10 *Liberation of toxic gases in contact with air or water*

Substances or wastes which, by interaction with air or water, are liable to give off toxic gases in danagerous quantities.

H11 *Toxic (delayed or chronic)*

Substances or wastes which, if they are inhaled or ingested or if they penetrate the skin, may involve delayed or chronic effects, including carcinogenicity

H12 *Ecotoxic*

Substances or wastes which if released present or may present immediate or delayed adverse impacts to the environment by means of bioaccumulation and/or toxic effects upon biotic systems

H13 Capable, by any means, after disposal, of yielding another material, e g., leachate which possesses any of the characteristics listed above.

SCHEDULE 4

[*See* rule 12 (3)]

S. No.	Authority(ies)	Duties and corresponding Rule
1.	2	3
1.	Ministry of Environment and Forests under the Environment (Protection) Act, 1986	(*i*) Identification of hazardous wastes as per Rule 3 (*ii*) Permission to exporters as per Rule 14 (3) (*iii*) Permission to importer as per Rule 13 (3)
2	Central Pollution Control Board constituted under the Water Act (Prevention & Control of Pollution), 1974	(*i*) Coordinate activities of the State Pollution Control Boards and ensure implementation of the conditions of imports (*ii*) Monitor the compliance of the conditions of authorisation, import and export (*iii*) Conduct training courses for authorities dealing with management of hazardous wastes (*iv*) Recommend standards for treatment, disposal of waste, leachate and specifications of materials

1.	2	3
		(*v*) Recommend procedures for characterization of hazardous waste.
3.	State Pollution Control Boards constituted under the Water Act (Prevention & Control of Pollution), 1974	(*i*) Grant and renew authorisation under Rule 5 (4) and Rule 8. (*ii*) Monitor the compliance of the various provisions and conditions of authorisation. (*iii*) Forward the application for imports submitted by the importers as per Rule 13 (1) (*iv*) To review matters pertaining to identification and notification of disposal sites
4.	Directorate General of Foreign Trade constituted under the Foreign Trade (Development & Regulation) 1992	(*i*) Grant licence as per Rule 13 (5). (*ii*) Refuse licence for hazardous wastes prohibited for imports under the Environment (Protection) Act, 1986.
5.	Port Authorities and Customs Authorities under the Customs Act, 1962	(*i*) Verify the documents as per Rule 13 (6). (*ii*) Inform the Ministry of Environment & Forests, Govt. of India of any illegal traffic as per Rule 15 (*iii*) Analyse wastes permitted for imports and exports (*iv*) Train officials on the provisions of the Hazardous Wastes Rules and in analysis of hazardous wastes

THE BIO-MEDICAL WASTE (MANAGEMENT AND HANDLING) (AMENDMENT) RULES, 2000

S.O. 201 (E), dated 6th March, 2000.[1]—In exercise of the powers conferred by Secs., 6, 8, and 25 of the Environment (Protection) Act (29 of 1986), the Central Government hereby makes the following rules further to amend the Bio-Medical Waste (Management and Handling) Rules, 1998, namely :—

1. (1) These rules may be called the Bio-Medical Waste (Management and Handling) (Amendment) Rules, 2000.

(2) They shall come into force on the date of their publication in the Official Gazette.

2. In the Bio-Medical Waste (Management and Handling) Rules, 1998 for Schedule VI, the following Schedule VI shall be *substituted,* namely :—

"SCHEDULE VI

(*See* rule 5)

Schedule for Waste Management Facilities Like Incinerator/Autoclave/Microwave System

A Hospitals and nursing homes in towns with population of 30 lakhs and above	By 30th June, 2000 or earlier
B Hospitals and nursing homes in towns with population of below lakhs	
(*a*) with 500 beds and above	By 30th June, 2000 or earlier
(*b*) with 200 beds an above but less than 500 beds	By 31st December, 2000 or earlier
(*c*) with 50 beds and above but less than 200 beds	By 31st December, 2001 or earlier
(*d*) with less than 50 beds	By 31st December, 2002 or earlier
C All other institutions generating biomedical waste not included in A and B above.	By 31st December, 2002 or earlier

[1] Published in the *Gazette of India, Extraordinary,* Part II, Sec. 3 (*i*), dated 7th March, 2000 (w.e.f. 7th March, 2000).

THE MUNICIPAL SOLID WASTES (MANAGEMENT AND HANDLING) RULES, 2000

S.O. 908 (E), dated 25th September, 2000[1].—Whereas the draft of the Municipal Solid Wastes (Management and Handling) Rules, 1999 were published under the notification of the Government of India in the Ministry of Environment and Forests Number S.O. 783 (E), dated the 27th September, 1999 in the *Gazette of India*, Part II, Sec. 3, sub-section (*ii*) of the same date inviting objections and suggestions from the persons likely to be affected thereby, before the expiry of the period of sixty days from the date on which the copies of the Gazette containing the said notification are made available to the public;

And whereas copies of the said Gazette were made available to the public on the 5th October, 1999;

And whereas the objections and suggestions received from the public in respect of the said draft rules have been duly considered by the Central Government;

Now, therefore, in exercise of the powers conferred by Secs. 3, 6 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following rules to regulate the management and handling of the municipal solid wastes, namely :

1. Short title and commencement.—(1) These rules may be called the **Municipal Solid Wastes (Management and Handling) Rules, 2000.**

(2) Save as otherwise provided in these rules, they shall come into force on the date of their publication in the official Gazette

2. Application.—These rules shall apply to every municipal authority responsible for collection, segregation, transportation, processing and disposal of municipal solid wastes.

3. **Definitions.**—In these rules, unless the context otherwise requires,—

(*i*) "anaerobic digestion" means a controlled process involving microbial decomposition of organic matter in the absence of oxygen;

(*ii*) "authorization" means the consent given by the Board or Committee to the "operator of a facility".

(*iii*) "biodegradable substance" means a substance that can be degraded by micro-organisms;

(*iv*) "biomethanation" means a process which entails enzymatic decomposition of the organic matter by microbial action to produce methane rich biogas;

(*v*) "collection" means lifting and removal of solid wastes from collection points or any other location;

---

[1] Published in the *Gezette of India, Extraordinary*, Part II, Sec. 3 (ii), dated 3rd October, 2000 (w.e.f. 3rd October, 2000).

(*vi*) "composting" means a controlled process involving microbial decomposition of organic matter;

(*vii*) "demolition and construction waste" means wastes from building materials debris and rubble resulting from construction, re-modelling repair and demolition operation;

(*viii*) "disposal" means final disposal of municipal solid wastes in terms of the specified measures to prevent contamination of groundwater, surface water and ambient air quality;

(*ix*) "form" means a form appended to these rules;

(*x*) "generator of wastes" means persons or establishments generating municipal solid wastes;

(*xi*) "landfilling" means disposal of residual solid wastes on land in a facility designed with protective measures against pollution of groundwater, surface water and air fugitive dust, wind blow-litter, bad odour, fire hazard, bird menace, pests or rodents, greenhouse gas emissions, slope instability and erosion;

(*xii*) "leachate" means liquid that seeps through solid wasters or other medium and has extracts of dissolved or suspended material from it;

(*xiii*) "lysimeter" is a device used to measure rate of movement of water through or from a soil layer or is used to collect percolated water for quality analysis;

(*xiv*) "municipal authority" means Municipal Corporation, Municipality, Nagar Palika, Nagar Nigam, Nagar Panchayat, Municipal Council including notified area committee (NAC) or any other local body constituted under the relevant statutes and, where the management and handling of municipal solid waste is entrusted to such agency;

(*xv*) "municipal solid waste" includes commercial and residential wastes generated in a municipal or notified areas in either solid or semi-solid from excluding industrial hazardous wastes but including treated bio-medical wastes;

(*xvi*) "operator of a facility" means a person who owns or operates a facility for collection, segregation, storage, transportation, processing and disposal of municipal solid wastes and also includes any other agency appointed as such by the municipal authority for the management and handling of municipal solid waste, in the respective areas;

(*xvii*) "pelletisation" means a process whereby pellets are prepared which are small cubes or cylindrical pieces made out of solid wastes and includes fuel pellets which are also referred as refuse derived fuel;

(*xviii*) "processing" means the process by which solid wastes are transformed into new or recycled products;

(*xix*) "recycling" means the process of transforming segregated solid wastes into raw materials for producing new products, which may or may not be similar to the original products;

(*xx*) "schedule" means a schedule appended to these rules;

(*xxi*) "segregation" means to separate the municipal solid wastes into the groups of organic, inorganic, recyclables and hazardous wastes;

(*xxii*) "state board or the committee" means the State Pollution Control Board of a State, or as the case may be, the Pollution Control Committee of a Union Territory;

(*xxiii*) "storage" means the temporary containment of municipal solid wastes in a manner so as to prevent littering, attraction to vectors, stray animals and excessive foul odour;

(*xxiv*) "transportation" means conveyance of municipal solid wastes from place to place hygienically through specially designed transport system so as to prevent foul odour, littering, unsightly conditions and accessibility to vectors;

(*xxv*) "vadose water" water which occurs between the ground, surface and the water table that is the unsaturated zone;

(*xxvi*) "vermicomposting" is a process of using earthworms for conversion of biodegradable wastes into compost.

4. Responsibility of municipal authority.—(1) Every municipal authority shall, within the territorial area of the municipality, be responsible for the implementation of the provisions of these rules, and for any infrastructure development for collection, storage, segregation, transportation, processing and disposal of municipal solid wastes.

(2) The municipal authority or an operator of a facility shall make an application in Form I, for grant of authorization for setting up waste processing and disposal facility including landfills from the State Board or the Committee in order to comply with the implementation programme laid down in Sch. I.

(3) The municipal authority shall comply with these rules as per the implementation schedule laid down in Sch. I.

(4) The municipal authority shall furnish its annual export in Form-II,

(*a*) to Secretary-incharge of the Department of Urban Development of the concerned State or as the case may be of the Union Territory, in case of a metropolitan city; or

(*b*) to the District Magistrate or the Deputy Commissioner concerned in case of all other towns and cities,

with a copy to the State Board or the Committee on or before the 30th day of June every year.

5. Responsibility of the State Government and the Union Territory Administrations.—(1) The Secretary- incharge of the Department of Urban Development of the concerned State or the Union Territory, as the case may be, shall have the overall responsibility for the enforcement of the provisions of these rules in the metropolitan cities.

(2) The District Magistrate or the Deputy Commissioner of the concerned district shall have the overall responsibility for the enforcement of the provisions of these rules within the territorial limits of their jurisdiction.

6. Responsibility of the Central Pollution Control Board and the State Board or the Committee.—(1) The State Board or the Committee shall monitor the compliance of the standards regarding groundwater, ambient air, leachate quality and the compost quality including incineration standards as specified under Schs. II, III, and IV.

(2) The State Board or the Committee, after the receipt of application from the municipal authority or the operator of a facility in From I, for grant of athorization for setting up waste processing and disposal facility including landfills, shall examine the proposal taking into consideration the views of other agencies like the State Urban Development Department the Town and Council Planning Department, Air Port or Air Base Authority, the Ground Water Board or any such other agency prior to issuing the authorization.

(3) The State Board or the Committee shall issue the authorization in Form III to the municipal authority or an operator of a facility within forty-five days stipulating compliance criteria and standards as specified in Schs. II, III and IV including such other conditions, as may be necessary.

(4) The authorization shall be valid for a given period and after the validity is over, a fresh authorization shall be required.

(5) The Central Pollution Control Board shall co-ordinate with the State Boards and the Committees with particular reference to implementation and review of standards and guidelines and compilation of monitoring data.

7. Management of municipal solid wastes.—(1) Any municipal solid waste generated in a city or a town, shall be managed and handled in accordance with the compliance criteria and the procedure laid down in Sch. II.

(2) The waste processing and disposal facilities to be set up by the municipal authority on their own or through an operator of a facility shall meet the specification and standards as specified in Schs. III and IV.

8. Annual Reports.—(1) The State Boards and the Committees shall prepare and submit to the Central Pollution Control Board an annual report with regard to the implementation of these rules by the 15th September every year in Form IV.

(2) The Central Pollution Control Board shall prepare the consolidated annual review report on management of municipal solid wastes and forward it to the Central Government along with its recommendation before the 15th December every year.

9. Accident Reporting.—When an accident occurs at any municipal solid wastes collection, segregation, storage, processing, treatment and disposal facility or landfill site or during the transportation of such waste, the municipal authority shall forthwith report the accident in Form V to the Secretary incharge of the Urban Development Department in metropolitan cities, and to District Collector or Deputy Commissioner in all other cases.

SCHEDULE I

[*See* Rules 4(2) and (3)]

IMPLEMENTATION SCHEDULE

Serial No.	Compliance Criteria	Schedule
1.	Setting up of waste processing and disposal facilities	By 31-12-2003 or earlier
2.	Monitoring the performance of waste processing and disposal facilities	Once in six months
3.	Improvement of existing landfill sites as per provisions of these rules	By 31-12-2001 or earlier
4.	Identification of landfill sites for future use and making site (s) ready for operation	By 31-12-2002 or earlier

SCHEDULE II

[*See* Rules 6(1) and(3), 7(1)]

MANAGEMENT OF MUNICIPAL SOLID WASTES

Sl. No.	Parameters	Compliance Criteria
1.	Collection of municipal solid wastes	1. Littering of municipal solid waste shall be prohibited in cities, towns and in urben areas notified by the State Governments. To prohibit littering and facilitate compliance, the following steps shall be taken by the municipal authority, namely— (i) Organising house-to-house collection of municipal solid wastes through any of the methods, like community bin collection (central bin), house-to-house collection, collection on regular pre-informed timings and scheduling by using bell ringing of musical vehicle (without exceeding permissible noise levels); (*ii*) Devising collection of waste from slums and squatter areas or localities including hotels, restaurants, office complexes and commercial areas;

Sl. No.	Parameters	Compliance Criteria
		(*iii*) Wastes from slaughter house, meat and fish markets, fruits and vegetable markets, which are biodegradale in nature, shall be managed to make use of such wastes; (*iv*) Bio-medical wastes and industrial wastes shall not be mixed with municipal solid wastes and such wastes shall follow the rules separately specified for the purpose; (*v*) Collected waste from residential and other areas shall be transferred to community bin by hand-driven containerised carts or other small vehicles; (*vi*) Horticultural and construction or demolition wastes or debris shall be separately collected and disposed of following proper norms. Similarly, wastes generated at dairies shall be regulated in accordance with the State laws; (*vii*) Waste (garbage, dry leaves) shall not be burnt; (*viii*) Stray animals shall not be allowed to move around waste storage facilities or at any other place in the city or town and shall be managed in accordance with the State laws. 2. The municipal authority shall notify waste collection schedule and the likely method to be adopted for public benefit in a city or town. 3. It shall be the responsibility of generator of wastes to avoid littering and ensure delivery of wastes in accordance with the collection and segregation system to be notified by the municipal authority as per Para 1(2) of this Schedule.
2.	Segregation of municipal solid wastes	In order to encourage the citizens, municipal authority shall organise awareness programmes for segregation of wastes and shall promote recycling or reuse of segregated meterials. The municipal authority shall undertake phased programme to ensure community participation in waste segregation. For this purpose, regular meetings at

Sl. No.	Parameters	Compliance Criteria
		quarterly intervals shall be arranged by the municipal authorities with representatives of local resident welfare associations and non-governmental organizations.
3.	Storage of municipal solid wastes	Municipal authorities shall establish and maintain storage facilities in such a manner as they do not create unhygienic and insanitary conditions around it. Following criteria shall be taken into account while establishing and maintaining storage facilities, namely— (*i*) Storage facilities shall be created and established by taking into account quantities of waste generation in a given area and the population densities. A storage facility shall be so placed that it is accessible to users; (*ii*) Storage facilities to be set up by municipal authorities or any other agency shall be so designed that wastes stored are not exposed to open atmosphere and shall be aesthetically acceptable and user-friendly; (*iii*) Storage facilities or "bins" shall have "easy to operate" design for handling, transfer and transportation of waste. Bins for storage of bio-degradable wastes shall be painted green, those for storage of recyclable wastes shall be painted white and those for storage of other wastes shall be painted black; (*iv*) Manual handling of waste shall be prohibited. If unavoidable due to constraints, manual handling shall be carried out under proper precaution with due care for safety of workers.
4.	Transportation of municipal solid wastes	Vehicles used for transportation of wastes shall be covered. Waste should not be visible to public, not exposed to open environment preventing their scattering. The following criteria shall be met, namely:— (*i*) The storage facilities set up by municipal authorities shall be daily attended for clearing of wastes. The bins or containers wherever placed shall be cleaned before they start overflowing;

Sl. No.	Parameters	Compliance Criteria
		(ii) Transportation vehicles shall be so designed that multiple handling of wastes, prior to final disposal, is avoided.
5.	Processing of municipal solid wastes	Municipal authorities shall adopt suitable technology or combination of such technologies to make use of wastes so as to minimize burden on landfill. Following criteria shall be adopted, namely— (i) The biodegradable wastes shall be processed by composting, vermicomposting, anaerobic digestion or any other appropriate biological processing for stabilization of wastes. It shall be ensured that compost or any other end product shall comply with standards as specified in Sch. IV; (ii) Mixed waste containing recoverable resources shall follow the route of recycling. Incineration with or without energy recovery including pelletisation can also be used for processing wastes in specific cases. municipal authority or the operator of a facility wishing to use other state-of-the-art technologies shall approach the Central Pollution Control Board to get the standards laid down before applying for grant of authorisation.
6.	Disposal of municipal solid wastes	Land filling shall be restricted to non-biodegradable, inert waste and other waste that are not suitable either for recycling or for biological processing. Land filling shall also be carried out for residues of waste processing facilities as well as pre-processing rejects from waste processing facilities. Land filling of mixed waste shall be avoided unless the same is found unsuitable for waste processing. Under unavoidable circumstances or till installation of alternate facilities, land-filling shall be done following proper norms. Landfill sites shall meet the specifications as given in Sch. III.

SCHEDULE III

[*See* Rules 6(1) and (3), 7(2)]

SPECIFICATIONS FOR LANDFILL SITES

Site Selection

1. In areas falling under the jurisdiction of "Development Authority" , it shall be the responsibility of such Development Authority to identify the landfill sites and hand over the sites to the concerned municipal authority for development, operation and maintenance. Elsewhere, this responsibility shall lie with the concerned municipal authority.
2. Selection of landfill sites shall be based on examination of environmental issues. The Department of Urban Development of the State or the Union territory shall co-ordinate with the concerned organisations for obtaining the necessary approvals and clearances.
3. The landfill site shall be planned and designed with proper documentation of a phased construction plan as well as a closure plan.
4. The landfill sites shall be selected to make use of nearby wastes processing facility. Otherwise, wastes processing facility shall be planned as an intergral part of the landfill site.
5. The existing landfill sites which continue to be used for more than five years, shall be improved in accordance of the specifications given in this Schedule.
6. Biomedical wastes shall be disposed of in accordance with the Bio-medical Wastes (Management and Handling) Rules, 1998 and hazardous wastes shall be managed in accordance with the Hazardous Wastes (Management and Handling) Rules, 1989, as amended from time to time.
7. The landfill site shall be large enough to last for 20-25 years.
8. The landfill site shall be away from habitation clusters, forest areas, water bodies, monuments, National Parks, Wetlands and places of important cultural, historical or religious interest.
9. A buffer zone of no-development shall be maintained around landfill site and shall be incorporated in the Town Plainning Department's land-use plans.
10. Landfill site shall be away from airport including airbase. Necessary approval of airport or airbase authorities prior to the setting up of the landfill site shall be obtained in cases where the site is to be located within 20 km of an airport or airbase.

Facilities at the Site

11. Landfill site shall be fenced or hedged and provided with proiper gate to monitor incoming vehicles or other modes of transportation.

12. The landfill site shall be well protected to prevent entry of unauthorised persons and stray animals.

13. Approach and other internal roads for free movement of vehicles and other machinery shall exist at the landfill site.

14. The landfill site shall have wastes inspection facility to monitor wastes brought in for landfill, office facility for record keeping and shelter for keeping equipment and machinery including pollution monitoring equipments.

15. Provisions like weigh bridge to measure quantity of waste brought at landfill site, fire protection equipments and other facilities as may be required shall be provided.

16. Utilities such as drinking water (preferably bathing facilities for workers) and lighting arrangements for easy landfill operations when carried out in night hours shall be provided.

17. Safety provisions including health inspections of workers at landfill site shall be periodically made.

Specifications for land filling

18. Wastes subjected to land filling shall be compacted in thin layers using landfill compactors to achieve high density of the wastes. In high rainfall areas where heavy compactors cannot be used, alternative measures shall be adopted.

19. Wastes shall be covered immediately or at the end of each working day with minimum 10 cm of soil, inert debris or construction material till such time waste processing facilities for composting or recycling or energy recovery are set up as per Schedule I.

20. Prior to the commencement of monsoon season, an intermediate cover of 40-65 cm thickness of soil shall be placed on the landfill with proper compaction and grading to prevent infiltration during monsoon. Proper drainage beams shall be constructed to divert run-off away from the active cell of the landfill.

21. After completion of landfill, a final cover shall be designed to minimise infiltration and erosion. The final cover shall meet the following specifications, namely:—

    (*a*) The final cover shall have a barrier soil layer comprising of 60 cms of clay or amended soil with permeability coefficient less than 1x 10^{-7} cm/sec.

    (*b*) On top of the barrier soil layer, there shall be a drainage layer of 15 cm.

    (*c*) On top of the drainage layer, there shall be a vegetative layer of 45 cm to support natural plant growth and to minimise erosion.

Pollution prevention

22. In order to prevent pollution problems from landfill operations, the following provisions shall be made, namely :—

    (*a*) Division of storm water drain to minimise leachate generation and prevent pollution of surface water and also for avoiding flooding and creation of marshy conditions;

    (*b*) Construction of a non-permeable lining system at the base and walls of waste disposal area. For landfill receiving residues of waste processing facilities or mixed waste or waste having contamination of hazardous materials (such as aerosols, bleaches, polishes, batteries, waste oils, paint products and pesticides) minimum liner specifications shall be a composite barrier having 1.5 mm high density polyethylene (HDPE) geomembrance, or equivalent, overlying 90 cm of soil (clay or amended soil) having permeability coefficient not greater than 1×10^{-7} cm/sec. The highest level of water table shall be at least two meter below the base of clay or amended soil barrier layer;

    (*c*) Provisions for management of leachates collection and treatment shall be made. The treated leachates shall meet the standards specified in Schedule IV;

    (*d*) Prevention of run-off from landfill area entering any stream, river, lake or pond.

Water Quality Monitoring

23. Before establishing any landfill site, baseline data of groundwater quality in the area shall be collected and kept in record for future reference. The groundwater quality within 50 metres of the periphery of landfill site shall be periodically monitored to ensure that the groundwater is not contaminated beyond acceptable limit as decided by the Ground Water Board or the State Board or the Committee. Such monitoring shall be carried out to cover different seasons in a year that is, summer, monsoon and post-monsoon period.

24. Usage of groundwater in and around landfill sites for any purpose (including drinking and irrigation) is to be considered after ensuring its quality. The following specifications for drinking water quality shall apply for monitoring purpose, namely:—

S. No.	Parameters	IS 10500 : 1991 Desirable limit (mg/l except for pH)
1.	Arsenic	0.05
2.	Cadmium	0.01
3.	Chromium	0.05

(1)	(2)	(3)
4.	Copper	0.05
5.	Cyanide	0.05
6.	Leade	0.05
7.	Mercury	0.001
8.	Nickel	—
9.	Nitrate as NO_3	45.0
10.	pH	6.5-8.5
11.	Iron	0.3
12.	Total hardness (as $CaCO_3$)	300.0
13.	Chlorides	250
14.	Dissolved solids	500
15.	Phenolic compounds (as C_6H_5OH)	0.001
16.	Zinc	5.0
17.	Sulphate (as SO_4)	200

Ambient Air Quality Monitoring

25. Installation of landfill gas control system including gas collection system shall be made at landfill site to minimize odour generation, prevent off-site migration of gases and to protect vegetation planted on the rehabilitated landfill surface.

26. The concentration of methane gas generated at landfill site shall not exceed 2 per cent of the lower explosive limit (LEL).

27. The landfill gas from the collection facility at a landfill site shall be utilized for either direct thermal applications or power generation, as per viability. Otherwise, landfill gas shall be burnt (flared) and shall not be allowed to directly escape to the atmosphere or for illegal tapping. Passive venting shall be allowed if its utilisation or flaring is not possible.

28. Ambient air quality at the landfill site and at the vicinity shall be monitored to meet the following specified standards, namely:—

S. No.	Parameters	Acceptable levels
(1)	(2)	(3)
(*i*)	Sulphur dioxide	120 $\mu g/m^3$ (24 hours)
(*ii*)	Suspended Particulate Matter	500 $\mu g/m^3$ (24 hours)
(*iii*)	Methane	Not to exceed 25 per cent of the lower explosive limit (equivalent to 650 mg/m^3)

(1)	(2)	(3)
(iv)	Ammonia daily average (Sample duration 24 hrs)	0.4 mg/m^3 (400 µg/m^3)
(v)	Carbon monoxide	1 hour average : 2 mg/m^3 8 hour average : 1 mg/m^3

29. The ambient air quality monitoring shall be carried out by the concerned authority as per the following schedule, namely:—

    (a) Six times in a year for cities having population of more than fifty lakhs;

    (b) Four times in a year for cities having population between one and ten lakhs;

    (c) Two times in a year for town or cities having population between one and ten lakhs.

Plantation at landfill Site

30. Vegetative cover shall be provided over the completed site in accordance with the following specifications, namely:—

    (a) Selection of locally adopted non-edible perennial plants that are resistant to drought and extreme temperatures shall be allowed to grow;

    (b) The plants grown be such that their roots do not penetrate more than 30 cms. This condition shall apply till the landfill is stabilised;

    (c) Selected plants shall have ability to thrive on low-nutrient soil with minimum nutrient addition;

    (d) Plantation to be made in sufficient density to minimise soil erosion.

Closure of Landfill Site and Post-care

31. The post-closure care of landfill site shall be conducted for at least fifteen years and long term monitoring or care plan shall consist of the following, namely:—

    (a) Maintaining the integrity and effectiveness of final cover, making repairs and preventing run-on and run-off from eroding or otherwise damaging the final cover;

    (b) Monitoring leachate collection system in accordance with the requirement;

    (c) Monitoring of groundwater in accordance with requirements and maintaining groundwater quality;

    (d) Maintaining and operating the landfill gas collection system to meet the standards.

32. *Use of closed landfill sites after fifteen years of post-closure* monitering can be considered for human settlement or otherwise only after ensuring that gaseous and leachate analysis comply with the specified standards.

Special provisions for hilly areas

33. Cities and towns located on hills shall have location-specific methods evolved for final disposal of solid wastes by the municipal authority with the approval of the concerned State Board or the Committee. The municipal authority shall set up processing facilities for utilization of biodegradable organic wastes. The inert and non-biodegradable waste shall be used for building roads or filling-up of appropriate areas in hills. Because of constraints in finding adequate land in hilly areas, wastes non-suitable for road-lying or filling up shall be disposed of in specially designed landfills.

SCHEDULE IV

[*See* Rules 6(1) and (3), 7(2)]

STANDARDS FOR COMPOSTING, TREATED LEACHATES AND INCINERATION

1. The waste processing or disposal facilities shall include composting, incineration, pelletisation, energy recovery or any other facility based on state-of-the-art technology duly approved by the Central Pollution Control Board.
2. In case of engagement of private agency by the municipal authority, a specific agreement between the municipal authority and the private agency shall be made particularly, for supply of solid waste and other relevant terms and conditions.
3. In order to prevent pollution problems from compost plant and other processing facilities, the following shall be complied with, namely:—

   (*i*) The incoming waste at sit shall be maintained prior to further processing. To the extent possible, the waste storage area should be covered. If, such storage is done in an open area, it shall be provided with impermeable base with facility for collection of leachate and surface water run-off into lined drains leading to a leachate treatment and disposal facility;

   (*ii*) Necessary precautions shall be taken to minimise nuisance of odour, flies, rodents, bird menace and fire hazard;

   (*iii*) In case of breakdown or maintenance of plant, waste intake shall be stopped and arrangements be worked out for diversion of wastes to the landfill site;

   (*iv*) Pre-process and post-process rejects shall be removed from the processing facility on regular basis and shall not be allowed to pile at the site. Recyclables shall be routed through appropriate vendors. The non-recyclables shall be sent for well designed landfill site(s);

(*v*) In case of compost plant, the window area shall be provided with impermeable base. Such a base shall be made of concrete or compacted clay, 50 cm thick, having permeability coefficient less than 10^{-7} cm/sec. The base shall be provided with 1 to 2 per cent slope and circled by lined drains for collection of leachate or surface run-off;

(*vi*) Ambient air quality monitoring shall be regularly carried out particularly for checking odour nuisance at down-wind direction on the boundary of processing plant;

(*vii*) In order to ensure safe application of compost, the following specifications for compost quality shall be met, namely:—

Parameters	Concentration not to exceed* (mg/kg dry basis, except pH value and C/N ratio)
Arsenic	10.00
Cadmium	5.00
Chromium	50.00
Copper	300.00
Lead	100.00
Mercury	0.15
Nickel	50.00
Zinc	1000.00
C/N ratio	20-40
pH	5.5-8.5

*Compost (final produc) exceeding the above stated concentration limits shall not be used for food crops. However, it may be utilized for purposes other than growing food crops.

4. The disposal of treated leachates shall follow the following standards, namely:—

S. No.	Parameters	Standards (Mode of Disposal)		
		Inland surface water	Public sewers	Land disposal
1.	Suspended solids, mg/l. max	100	600	200
2.	Dissolved solids (inorganic) mg/l, max	2100	2100	2100

(1)	(2)	(3)	(4)	(5)
3.	pH value	5.5 to 9.0	5.5 to 9.0	5.5 to 9.0
4.	Ammonical nitrogen (as N), mg/l, max	50	50	—
5.	Total Kjeldahl nitrogen (as N), mg/l max	100	—	—
6.	Biochemical oxygen demand (3 days at 27°C) max (mg/l)	30	350	100
7.	Chemical oxygen demand, mg/l, max	250	—	—
8.	Arsenic (as As), mg/l, max	0.2	0.2	0.2
9.	Mercury (as Hg), mg/l, max	0.01	0.01	—
10.	Lead (as Pb), mg/l, max	0.1	1.0	—
11.	Cadmium (as Cd), mg/l, max	2.0	1.0	—
12.	Total Chromium (as Cr), mg/l, max	2.0	2.0	—
13.	Copper (as Cu), mg/l, max	3 0	3.0	—
14.	Zinc (as Zn), mg/l, max	5.0	15	—
15.	Nickel (as Ni), mg/l, max	3.0	3.0	—
16.	Cyanide (as CN), mg/l, max	0.2	2.0	0.2
17.	Chloride (as Cl), mg/l, max	1000	1000	600
18.	Fluoride (as F), mg/l, max	2.0	15	—
19.	Phenolic compounds (as C_6H_5OH mg/l, max)	1.0	5.0	—

Note: While discharging treated leachates into inland surface waters, quantity of leachates being discharged and the quantity of dilution water available in the receiving water body shall be given due consideration.

5. The incinerators shall meet the following operating and emission standards, namely:—

A. Operating Standards

(1) The combustion efficiency (CE) shall be at least 99.00%

(2) The combustion efficiency is computed as follows :

$$CE = \frac{\%\, CO_2}{\%CO_2 + \%CO} \times 100$$

B. Emission Standards

Parameters	Concentration mg/Nm^3 at (12% CO_2 correction)
(1) Particulate matter	150
(2) Nitrogen Oxides	450
(3) HCl	50
(4) Minimum stack height shall be 30 metres above ground	
(5) Volatile organic compounds in ash shall not be more than 0.01%	

Note: (1) Suitably designed pollution control devices shall be installed or retrofitted with the incinerator to achieve the above emission limits, if necessary

(2) Wastes to be incinerated shall not be chemically treated with any chlorinated disinfectants

(3) Chlorinated plastics shall not be incinerated

(4) Toxic metals in incineration ash shall be limited within the regulatory quantities as specified in the Hazardous Wastes (Management and Handling) Rules, 1989 as amended from time to time

(5) Only low sulphur fuel like LDO, LSHS Diesel shall be used as fuel in the incinerator

FORM I

[*See* Rules 4(2) & 6(2)]

APPLICATION FOR OBTAINING AUTHORIZATION

To,

The Member-Secretary

....

....

1. Name of the municipal authority/Name of the agency appointed by the municipal authority :
2. Correspondence address :
   Telephone No. :
   Fax No. :
3. Nodal Officer & designation (Officer authorized by the municipal authority or agency responsible for operation of processing or disposal facility) :

4. Authorization applied for (Please tick mark)
    (*a*) Setting up and operation of waste processing facility
    (*b*) Setting up and operation of disposal facility

5. Detailed proposal of waste processing/disposal facility (to be attached) to : include
    5.1 Processing of waste
        (*i*) Location of site
        (*ii*) Name of waste processing technology
        (*iii*) Details of processing technology
        (*iv*) Quantity of waste to be processed per day
        (*v*) Site clearance (from local authority)
        (*vi*) Details of agreement between municipal authority and operating agency
        (*vii*) Utilization programme for waste processed (Product utilization)
        (*viii*) Methodology for disposal of waste processing rejects (quantity and quality)
        (*ix*) Measures to be taken for prevention and control of environmental pollution
        (*x*) Investment on Project and expected returns
        (*xi*) Measures to be taken for safety of workers working in the plant
    5.2 Disposal of waste
        (*i*) Number of sites indentified
        (*ii*) Layout map of site
        (*iii*) Quantity of waste to be disposed per day
        (*iv*) Nature and composition of waste
        (*v*) Details of methodology or criteria followed for site selection
        (*vi*) Details of existing site under operation
        (*vii*) Methodology and operational details of landfilling
        (*viii*) Measures taken to check environmental pollution

FORM II

[*See* Rule 4(4)]

FORMAT OF ANNUAL REPORT TO BE SUBMITTED BY THE MUNICIPAL AUTHORITY

(*i*) Name to City/Town.......................... (*ii*) Population........................

Name of municipal body and Address..

....

(*iii*) Telephone No. : ....

Fax : ....

(*iv*) Name of Incharge dealing with municipal..

solid wastes ....

with designation ....

1. Quantity and composition of solid wastes

(*i*) Total quantity of wastes generated per day..................................

(*ii*) Total quantity of wastes collected per day..................................

(*iii*) Total quantity of wastes processed for:

(*a*) Composting : ....

(*b*) Vermiculture : ....

(*c*) Pellets : ....

(*d*) Others, if any, please specify : ....

(*iv*) Total quantity of waste disposed be landfilling : ....

(*a*)	No. of landfill sites used	:	....	
(*b*)	Area used	:	....	
(*c*)	Whether Weigh-bridge facilities available	:	Yes	No
(*d*)	Whether area so fenced	:	Yes	No
(*e*)	Lighting facility on site	:	Yes	No
(*f*)	Whether equipment like Bulldozer, Compactors etc. available (Please specifiy)	:	....	
(*g*)	Total manpower available on site	:	....	
(*h*)	Whether covering is done in daily basis	:	Yes	No
(*i*)	Whether covering material is used	:	....	
	and whether it is adequately available		....	
(*j*)	Provisions for gas venting provided	:	Available (Yes/No)	Not available
(*k*)	Provision for leachate collection	:	Provisions made	Provisions not made

2. Storage facilities

(*i*) Area covered for collection of wastes : ....

(*ii*) No. of houses covered : ....

(iii) Whether house-to-house collection is: ....
practised (if yes, Whether done by ....
Municipality or through Private ....
Agency or Non-Governmental
Organisation)

(iv) Bins :

		Specification (Shape & Size)	Existing Numbers	Proposed for future
(a) RCC Bins (Capacity)	:			
(b) Trolleys (Capacity)	:			
(c) Containers (Capacity)	:			
(d) Dumber Placers	:			
(e) Others, please specify	:			

(iv) Whether all bins/collection spots are attended for daily lifting of garbage : Yes No

(v) Whether lifting of garbage from dustbins is manual or machanical *i.e.* for example by using of frontend loaders (Please tick mark) : Manual Loader Others (Please specify)

3. Transportation

		Existing number	Actually Required/ Proposed
(i) Truck:			
(ii) Truck-Tipper	:		
(iii) Tractor-Trailer	:		
(iv) Refuse-collector	:		
(v) Dumber-placers	:		
(vi) Anımal Cart	:		
(vii) Tricycle	:		
(viii) Others (please specify)	:		

4. Whether any proposal has been made to improve solid wastes management practices ....
....
....

5. Are any efforts made to call for private firms etc. to attempt for processing of waste utilising technologies like:

	Waste Utilisation Technology	Proposals	Steps taken Quantity to be processed)
(i) Composting :			
(ii) Vermiculture :			
(iii) Pelletisation :			
(iv) Others, if any, please specify :			

6. What provisions are available and how these are implemented to check unhygienic operations of:

   (i) Dairy related activities :

   (ii) Slaughter houses and unauthorised slaughtering :

   (iii) Malba (construction debris): lifting

   (iv) Encroachment in Parks, Footpaths etc. :

7 How many slums are identified and whether these are provided with sanitation facilities:

8. Are municipal magistrates appointed for taking penal action : Yes No

   [If yes, how many cases registered and settled during last three years (give year-wise details)]

9. Hospital waste management

   (i) How many Hospitals/ Clinics under the control of the Corporation :

   (ii) What methods are followed for disposal of bio-medical wastes? :

   (iii) Do you have any proposal for setting up of common treatment facility for disposal of bio-medical wastes :

   (iv) How many private Nursing Homes, Clinics etc. are operating in the city/town and what steps have been taken to check disposal of their wastes :

Dated : Signature of Municipal Commissioner

FORM III

[*See* Rule 6(3)]

FORMAT FOR ISSUE OF AUTHORISATION

File No : ....

Date : ....

To,

....

....

....

Ref. Your application number ....dt..............................

The...........State Pollution Control Board/Pollution Control Committee after examining the proposal hereby authorises...........having their administrative office at..............to set up and operate waste processing/waste disposal facility at......on the terms and conditions (including the standards to comply) attached to this authorization letter.

1. The validity of this authorization is till ....After the validity renewal of authorization is to be sought.

2. The...........State Pollution Control Board/Pollution Control Committee may, at any time, revoke any of the conditions applicable under the authorization and shall communicate the same in writing.

3. Any violation of the provision of the Municipal Solid Wastes (Management and Handling) Rules, 2000 will attract the penal provision of the Environment (Protection) Act, 1986 (29 of 1986).

(Member-Secretary)
State Pollution Control Board/
Pollution Control Committee

Place:

FORM IV

[*See* Rule 8(1)]

FORMAT OF ANNUAL REVIEW REPORT TO BE SUBMITTED BY THE STATE POLLUTION CONTROL BOARD/COMMITTEES TO THE CENTRAL POLLUTION CONTROL BOARD

To,

The Chairman,
Central Pollution Control Board
(Ministry of Environment and Forests),
Government of India,
'Parivesh Bhawan', East Arjun Nagar,
Delhi-110032

1. Name of the State/Union Territory :
2. Name & Address of the State Pollution Control Board/Pollution Control Committee
3. Number of municipal authorities responsible for management of municipal solid wastes in the State/Union territory under these rules
4. A summary statement on progress made by municipal authorities in respect of implementation of Sch. I [Rule 4(3)] : Please attach as Annexure-I
5. A summary statement on progress made by municipal authorities in respect of implementation of Sch. II [Rules 6(1) and (3), 7(1)] : Please attach as Annexure-II
6. A summary statement on progress made by municipal authorities in respect of implementation of Sch. III [Rules 6(1) and (3), 7(2)] : Please attach as Annexure-III
7. A summary statement on progress made by municipal authorities in respect of implementation of Sch. IV [Rules 6 (1) and (3), 7 (2)] : Please attach as Annexure-IV

Date :
Place :

Chairman or the Member-Secretary
State Pollution Control Board/
Pollution Control Committee

THE OZONE DEPLETING SUBSTANCES (REGULATION AND CONTROL) RULES, 2000

S.O. 670 (E), dated 19th July, 2000[1].—Whereas the draft Ozone Depleting Substances (Regulation) Rules, 2000 were published, under the notification of the Government of India in the Ministry of Environment and Forests, Number S.O. 69 (E), dated the 25th January, 2000, in the *Gazette of India, Extraordinary,* Part II, Sec. 3, sub-section *(ii)* at pp. 39-96 on the same date, inviting objections and suggestions from all persons likely to be affected thereby, before the expiry of the period of forty-five days from the date on which the copies of the Gazette containing the said notification are made available to the public.

And whereas copies of the said Gazette were made available to the public on 26th January, 2000.

And whereas the objections and suggestions received from the public in respect of the said draft rules have been duly considered by the Central Government;

Now, therefore, in exercise of the powers conferred by Secs. 6, 8 and 25 of the Environment (Protection) Act, 1986, the Central Government hereby makes the following rules for regulating ozone depleting substances, namely :—

1. Short title and commencement.—(1) These rules may be called the Ozone Depleting Substances (Regulation and Control) Rules, 2000.

(2) They shall come into force on the date of their publication in the official Gazette.

2. Definitions.—In these rules unless the context otherwise requires,—

(*a*) "Act" means the Environment (Protection) Act, 1986 (29 of 1986);

(*b*) "authority" means an authority mentioned in columns (4) and (6) of Sch. V;

(*c*) "base level" means the quantity of ozone depleting substance produced or consumed, as the case may be, in the year or average of the years listed in column (3) of Sch. II and Sch. III;

(*d*) "consumption" with respect to any ozone depleting substance means the amount of that substance produced in India in addition to the amount imported, less the amount exported;

(*e*) "calculated level of production, sale, import or export", as the case may be, means level determined by multiplying quantity of the ozone depleting substance by its ozone depleting potential specified in column (5) of Sch. I;

---

[1] Published in the *Gazette of India, Extraordinary,* Part II, Sec. 3 (*ii*), dated 8th November, 2000 (w.e.f. 8th November, 2000).

(*f*) "calculated level of consumption" shall be determined by adding together calculated levels of production and imports and subtracting calculated level of exports;

(*g*) "Group" means collection of one or more ozone depleting substances as specified in column (4) of Sch. I;

(*h*) "manufacture" in relation to any ozone depleting substance includes—

  (*i*) any process or part of a process for making, altering, finishing, packing, labelling, blending or otherwise treating or any ozone depleting substance with a view to sell, distribute or use but does not include the repacking or breaking up of any ozone depleting substance in the ordinary course of retail business; and

  (*ii*) any process in which a preparation containing ozone depleting substance is formulated;

(*i*) "ozone depleting substance" means the ozone depleting substances specified in column (2) of Sch. I, whether existing by itself or in a mixture, excluding any such substance or mixture (blend) which is in a manufactured product other than a container used for the transportation or storage of such substance;

(*j*) "parties{ means, unless the text otherwise indicates, parties to the protocol;

(*k*) "pre-shipment applications" are those treatments applied directly preceding and in relation to export, to meet the phytosanitary or sanitary requirements of the importing country or existing phytosanitary or sanitary requirements of the exporting country;

(*l*) "production" in relation to any ozone depleting substance means the manufacture of an ozone depleting substance from any raw material or feedstock chemicals, but does not include—

  (*i*) the manufacture of a substance that is used and entirely consumed (except for trace quantity) in the manufacture of other chemicals; or

  (*ii*) quantities which are produced incidentally in the manufacture of other chemical substances; or

  (*iii*) quantities which are recycled or reused; or

  (*iv*) quantities which are destroyed by techologies to be specified by the Central Government;

(*m*) "protocol" means the Montreal Protocol on Substances that Deplete the Ozone Layer, adopted on 16th September 1987;

(*n*) "quarantine applictions", with respect to Group VIII of Sch. I ozone depleting substance, are treatments to prevent the introduction, establishment and or spread of quarantine pets (including diseases), or to ensure their control as specified by the Central Government;

(*o*) "recovery" means collection and storage of ozone depleting substances from machinery, equipment, or containment vessel during servicing or pior to disposal;

(*p*) "reclamation" means reprocessing and upgrading of a recovered ozone depleting substance through such methods of filtering, drying, distillation and, or chemical treatment in order to restore the substance to a specified standard of performance;

(*q*) "schedule" means a schedule annexed to these rules.

3. **Regulation of production and consumption of ozone depleting subsances.**—(1) No person shall produce or cause to produce any ozone depleting substance after the date specified in column (5) of Sch. V unless he is registered with the authority specified in column (4) of that Schedule :

Provided that for the twelve month period commencing on the date specified in column (6) of Schedule II, and in each twelve month period thereafter, no person shall produce or cause to be produced any group of ozone depleting substances in excess of the corresponding percentage of his calculated base level of production specified in column (4) of that Schedule :

Provided further that calculated level of consumption of such substances in India shall, as a percentage of calculated level of consumption in base years does not exceed the number specified in column (5) of Sch. II.

(2) No person shall produce or cause to produce ozone depleting substances specified as Group I and Group III in column (4) of Sch. I during the period from 1st August, 2000 to 1st January, 2010 in excess of the quantity specified in column (4) of Sch. III and the calculated level of consumption of such substances in India shall as a percentage of calculated level of consumption in base year does not exceed the number specified in column (5) of that Schedule.

(3) A person having received financial assistance from the Multilateral Fund in accordance with Arts. 10 and 10-A of photocol to which the Central Government is a party for gradual reduction of production of ozone depleting subtances specified as Group I and Group III in column (4) of Sch. I shall, limit the production of ozone depleting substance as specified in Group I and Group III in column (4) of Sch. I in each year from 1st Agugust, 2000 to January 1, 2010 to quantities specified in column (4) for each year given in column (6) of Sch. III as per the agreement approved, by the Executive Committee of the Multilateral Fund.

(4) In order to implement the agreement, referred to in sub-rule (3), the Central Government shall introduce implementation modalities, such as, quota system for producing Chloroflurocarbons and the non-compliance with such modalities shall resut in consequential penalties laid out in the agreement.

4. Prohibition on export to or import from countries not specified in Sch. VI.—No person shall import or cause to import from or export or cause to export to any country not pecified in Schedule VI any ozone depleting substance after the commencement of these rules.

5. Ozone depleting substances are to be exported to or imported from countries specified in Sch VI under a licence.—(1) No person shall import or cause to import from or export or cause to export to, any country specified in Sch. VI, any ozone depleting substance unless he obtains a licence issued by the authority.

(2) No licence shall be issued under sub-rule (1) unless the said authority is satisfied that the grant of licence shall not cause calculated level of consumption of that group of ozone depleting substances (except Group I and Group III given in column (4) of Sch. I in the relevant twelve month period, as a percentage of corresponding calculated consumption in base years, to exceed the number specified in column (5) of Sch. II.

(3) No licence shall be issued under sub-rule (1) unless the said authority is satisfied that the grant of licence shall not cause calculated level of consumption of ozone depleting substance given in Group I and Group III in column (4) of Sch. I in the relevant twelve months period as specified in column (6) of Sch. III, as a percentage of calculated consumption in base years to exceed the number specified in column (5) of that Schedule

(4) The calculated base level of consumption and the calculated base level of production for India as a whole for each group of ozone depleting substances shall be notified by the Central Government.

6. Regulation of the sale of ozone depleting subtances.—(1) No person shall either himself or by any other person on his behalf or enterprise sell, stock or exhibit for sale or distribute any ozone depleting substance after the date specified in column (5) of Sch. V unless he is registered with the authority specified in column (4) of that Schedule :

Provided that no person or enterprise shall sell ozone depleting substances specified in column (3) of Sch. IV for activities specified in column (2) of that Schedule unless the person engaged in that activity has got himself registered with the authority and has given a declaration in accordance with these rules and the person selling ozone depleting substances has verified particulars of the registration given in the declaration with the certificate of registration as per procedure specified in Part II of Sch. XII :

Provided further that after the date specified in column (4) of Sch. IV, no person or enterprise shall sell, stock, distribute or exhibit or cause to be sold, stocked, distributed or exhibited ozone depleting substances specified in column (3) for activities specified in column (2) of that Schedule.

(2) No person shall either himself or by any person on his behalf, or enterprise sell, stock or exhibit for sale of distribute any ozone depleting substance to any person or enterprise who has informed the Central Government that he or that enterprise shall not use the specified ozone depleting substances in manufacturing or other activities after the date specified by such person or as the case may be, the enterprise.

(3) The Central Government shall notify the list of persons, ozone depleting substances and dates informed to it under sub-rule (2).

7. Regulation on the purchase of ozone depleting substances.—No person shall either himself or by any person on his behalf or enterprise, purchase ozone depleting substances specified in column (3) of Sch. IV from any person for making stock or for using such ozone depleting substances for activities specified in column (2) of that Schedule unless he has given the declaration specified in Part I of Sch. XII to the seller of such substances within the time period specified in Serial Number 4 of column (5) of Sch. V.

8. Regulation on the use of ozone depleting substance.—(1) No person or enterprise shall engage in any activity specified in column (2) of Schedule IV that uses ozone depleting substances specified in column (3) of that Schedule after the date specified in column (5) of Sch. V unless he is registered with the authority specified in column (4) of that Schedule.

(2) No person shall engage in any activity specified in column (2) of Sch. IV using ozone depleting substances specified in column (3) of that Schedule after the date specified in column (5) of Sch. V unless the products are labelled to indicate the ozone depleting substance they contain.

(3) No person shall engage in any activity specified in column (2) of Sch. IV using ozone depleting substances specified in column (3) after the date specified in column (4) of that Schedule.

(4) No person shall engage in any activity specified in column (2) of Sch. IV without using label indicating absence of use of ozone depleting substance mentioned in column (3) after the date specified in column (4) of that Schedule.

(5) A person, having received financial and technical assistance from the Multilateral Fund in accordance with the Articles 10 and 10-A of the Montreal Protocol on Substances that Deplete the Ozone Layer, to which the Central Government is a Party for phasing out of ozone depleting substances specified in column (2) of Schedule II used in activities specified in column (2) of Sch. IV, either himself or by any person on his behalf or through any enterprise, shall not engage in such activity as specified in column (2) of Sch. IV using ozone depleting substances specified in column (3) of the Schedule, after the date of completion of the conversion work or signing of the Handing Over Protocol, or the submission of the completion report to change from ozone depleting substance technology to non-ozone depleting substance technology and the said date be registered with the authority specified in column (4) of the Schedule V.

(6) Any person or enterprise having received, financial assistance from the Multilateral Fund in accordance with the Arts. 10 and 10-A of the Montreal Protocol on Substances that Deplete the Ozone Layer shall submit an affidavit or declaration with the authority specified in column (4) of Sch. V stating that replaced equipment, resulted from completion of conversion process from ozone depleting substance technology to non-ozone depleting substance technology, have ben destroyed, dismantled, rendered unusable and that no ozone depleting substance should be used after the date of the completion of project and the said date be registered with the authority specified in the column (4) of the Sch. V.

9. Prohibition on new investments with ozone depleting substances.— (1) No person shall establish or expand or cause to establish or expand any manufacturing facility for production of any ozone depleting substance after the date specified in column (7) of Schs. II and III.

(2) No person shall establish or expand or cause to establish or expand any manufacturing facility, with a view to manufacturing products which contain, or are made with, any ozone depleting substance after the date specified in column (8) of Schs. II and III.

(3) A person having received financial and technical assistance from the Multilateral Fund in accordance with the Arts. 10 and 10-A of the Montreal Protocol on Substances that Deplete the Ozone Layer for phasing out of ozone depleting substances specified in column (2) of Schedule II used in activities specified in column (2) of Sch. IV to which the Central Government is a Party, shall not establish or expand or cause to establish or expand the manufacturing facility for production of any ozone depleting substance or with a view to manufacturing products which contain or are made with any ozone depleting substances after the approval of the project for conversion and date of completion of the conversion work from the ozone depleting substance technology to non-ozone depleting substance technology.

10. Regulation of import, export an sale of products made with or containing zone depleting substances.—(1) No person shall import or cause to import any product specified in column (2) of Sch. VII which are made with or contain ozone depleting substances specified in column (3) after the date specified in column (4) of that Schedule unless he obtains a license issued by the authority :

Provided that such products which do not contain such ozone depleting substances shall carry a label to that effect before its import is allowed after the date specified in Column 4 of Sch. VII.

(2) No person or enterprise shall export or cause to export any product specified in column (2) of Sch. VII unless such product carries a label specifying whether or not the product has been made with or contains, as the case may be, ozone depleting substances specified in column (3) of that Schedule, after the date specified in column (5) of that Schedule.

(3) No person shall either himself or by any other person or enterprise on his on his behalf sell, stock or exhibit for sale or distribute any product resulting out of activties, or provide services, specified in column (2) of Sch. IV using ozone depleting substances specified in column (3) after the date specified in column (4) of that Schedule.

11. Regulation on reclamation and destruction of ozone depleting substances.—(1) No person shall reclaim or cause to reclaim any ozone depleting substance after the date specified in column (5) of Sch. V unless he has registered with the authority specified in column (4) of that Schedule.

(2) No person shall destroy or cause to destroy any ozone depleting substance after the date specified in column (5) of Sch. V unless he has registered with the authority specified in column (4) of that Schedule.

12. Regulation on manufacture, import and export of compressors.—(1) No person shall manufacture, import or export compressors after the date specified in column (5) of Sch. V unless he is registered with the authority specified in column (4) of that Schedule.

13. Procedure for registration, cancellation of registration and appeal against such orders.—(1) The procedure for registration and conditions of registration under various provisions of these rules shall be as specified in Sch. IX.

(2) The registering authority shall not register if he is not satisfied that the procedure for registration or conditions of registration are fulfilled.

(3) The registering authority shall cancel the registration if he is satisfied that condition (s) of registration have been violated.

(4) The registering authority shall give the concerned person an opportunity of being heard before passing orders under sub-rules (2) and (3) and the orders shall be made in writing.

(5) An appeal against an order of the registering authority shall lie with the authority specified in column (6) of Sch. V within thirty days of communication of such order.

(6) The registration shall be valid for the period specified in Sch IX and its renewal shall be necessary.

(7) The procedure for and conditions of renewal of registration shall be the same as applicable to registration.

14. Monitoring and reporting requirements.—(1) Every person who produces, imports, exports or sells any ozone depleting substance shall maintain records and file reports in the manner specified in Part I of Sch. X.

(2) Every perosn stocking or purchasing any ozone depleting substance for use in activities specified in column (2) of Schedule IV shall maintain records and file reports in the manner specified in Part II of Sch. X.

(3) Every person who has received technical or financial assistance from

any international organisation or any financial assistance, which includes concession or exemption from payment of duties, from the Central Government, shall maintain records and file reports in the manner specified in Part III of Sch. X and the list of such persons shall be notified by the Central Government.

(4) Every person who has facility to reclaim an ozone depleting substance shall maintain records and file reports in the manner specified in Part IV of Sch. X.

(5) Every person who has facility to destroy any ozone depleting substance shall maintain records and file reports in the manner specified in Part V of Sch X.

(6) Every person who manufactures, imports, exports or sells compressors shall maintain records and file reports in the manner specified in Part VI of Sch. X.

(7) The records maintained in accordance with the above sub-rules shall be made available for inspection as specified in Part VII of Sch. X.

15. Exemption.—(1) Nothing contained in these rules shall apply to applications or circumstances specified in Sch. VIII.

SCHEDULE I

[*See* Rules 2 (*e*), (*n*), 3 (2) and (3), 5 (3)]

LIST OF OZONE DEPLETING SUBSTANCES

Sl.No.	Name of Ozone Depleting Substance	Chemical Composition of Ozone Depleting Substance	Group	Ozone Depleting Potential
(1)	(2)	(3)	(4)	(5)
1.	CFC-11	Trichlorofluoromethane ($CFCl_3$)	I	1.0
2.	CFC-12	Dichlorodifluoromethne (CF_2Cl_2)	I	1.0
3.	CFC-13	Trichlorotrifluoroethane ($C_2F_3Cl_2$)	I	0.8
4.	CFC-114	Dichlorotetrafluoraethane ($C_2F_4Cl_2$)	I	1.0
5.	CFC-115	Chloropentafluoroethane (C_2F_5Cl)	I	0.6
6.	Halon-1211	Bromochlorodifluoromethane (CF_2BrCl)	II	3.0
7.	Halon-1301	Bromotrifluoromethane (CF_3Br)	II	10.0
8.	Halon-2402	Dibromotetrafluoroethane ($C_2F_4Br_2$)	II	6.0
9.	CFC-13	Chlorotrifluoromethane (CF_3Cl)	III	1.0
10.	CFC-111	Pentachlorofluoroethane (C_2FCl_5)	III	1.0
11.	CFC-112	Tetrachlordifluoroethane ($C_2F_2Cl_4$)	III	1.0
12.	CFC-211	Heptachlorofluoropropane (C_3FCl_7)	III	1.0
13.	CFC-212	Hexachlorodifluoropropane ($C_3F_2Cl_4$)	III	1.0
14.	CFC-213	Pentachlorotrifluoropropane ($C_2F_3Cl_5$)	III	1.0

(1)	(2)	(3)	(4)	(5)
15.	CFC-214	Tetrachlorotetrafluoropropane ($C_3F_4Cl_4$)	III	1.0
16.	CFC-215	Trichloropentafluoropropane ($C_3F_5Cl_3$)	III	1.0
17.	CFC-216	Dichlorophexafluoropropane ($C_3F_6Cl_2$)	III	1.0
18.	CFC-217	Chloroheptafluoropropane (C_3F_6Cl)	III	1.0
19.	Carbon tetrachloride	Tetrachloromethane (CCl_4)	IV	1.1
20.	Methyl chloroform	1, 1, 1-Trichloroethane ($C_2H_3Cl_3$)	V	0.1
21.	HCFC-21	Dichlorofluoromethane ($CHFCl^2$)	VI	0.04
22.	HCFC-22	Dichlorodifluoromethane (CHF_2Cl_2)	VI	0.055
23.	HCFC-31	Chlorofluoromethane (CH_2FCl)	VI	0.02
24.	HCFC-121	Tetrachlorodifluoroethane ($C_2HF_2Cl_4$)	VI	0.04
25.	HCFC-122	Trichlorodifluoroethane ($C_2HF_2Cl_3$)	VI	0.08
26.	HCFC-123	2, 2-dichloro-1, 1, 1-trifluoroethane ($C_2HF_3Cl_2$)	VI	0.06
27.	HCFC-123a	1, 2-dichloro-1, 1, 2-trifluoroethane ($CHCl_2CF_3$)	VI	0.02
28.	HCFC-124	2-chloro-1, 1, 2-trifluoroethane (C_2HF_4Cl))	VI	0.04
29.	HCFC-124a	2-chloro-1, 1, 2, 2-trifluoroethane ($CHFClCF_3$)	VI	0.022
30.	HCFC-131	Trichlorofluoroethane ($C_2H_2FCl_3$)	VI	0.05
31.	HCFC-132	Dichlorodifluoroethane ($C_2H_2F_2Cl_2$)	VI	0.05
32.	HCFC-133	Chlorotrifluoroethane ($C_2H_3F_3Cl$)	VI	0.06
33.	HCFC-141	Dichlorofluoroethane ($C_2H_3FCl_2$)	VI	0.07
34.	HCFC-141b	1, 1-dichloro-1-fluoroethane (CH_2CFCl_2)	VI	0.11
35.	HCFC-142	Chlorodifluoroethane ($C_2H_3F_2Cl$)	VI	0.07
36.	HCFC-142b	1-chloro-1, 1-difluoroethane (C_3CF_2Cl)	VI	0.065
37.	HCFC-151	Chlorofluoroethane (C_2H_4FCl)	VI	0.005
38.	HCFC-221	Hexachlorofluoropropane (C_3HFCl_6)	VI	0.07
39.	HCFC-222	Pentachlorodifluoropropane ($C_3HF_2Cl_5$)	VI	0.09
40.	HCFC-223	Tetrachlorotrifluoropropane ($C_3HF_4Cl_3$)	VI	0.08
41.	HCFC-224	Trichlorotetrafluoropropane ($C_3HF_4Cl_3$)	VI	0.09
42.	HCFC-225	Dichloropentafluoropropane ($C_3HF_5Cl_2$)	VI	0.07

* Save for any Chlorofluorocarbon production/consumption that may be agreed by the Parties to meet essential uses for India

SCHEDULE IV

[*See* Rule 6 (1), 7, 8(1), (2), (3), (4) and (5), 9 (3), 10 (3)]

REGULATION ON CONSUMPTION OF OZONE DEPLETING SUBSTANCES ON END USE BASIS

Sl. No.	Name of Activities	Name of Group of Ozone Depleting Substances	Phaseout Date*
(1)	(2)	(3)	(4)
1.	Manufacture of Aerosol products or pressurised dispensers (excluding metered dose inhalers for medicinal purpose)	Group I	1st January, 2003
2.	Manufacture of Polyol for foam products	Group I	1st January, 2003
3.	Manufacture of foam products including foam part of Domestic Refrigerator	Group I	1st January, 2003
4.	Manufacture of Fire Extinguishers or Fire Extinguishing Systems	Group II	1st January, 2001**
5.	Manufacture of Mobile Air-Conditioners and charging at Automobile industry	Group I	1st January, 2003

(1)	(2)	(3)	(4)
6.	Manufacture of other Refrigeration and Air conditioning products (excluding compressors)	Group I	1st January, 2003
7	Manufacture of different products	Group I, III, IV & V	1st January, 2010
8	Servicing of fire extinguishers and fire extinguishing systems	Group II	1st January, 2010**
9	Manufacture of Metered Dose inhalers for medicinal purposes	Group I	1st January, 2010
10.	Manufacture of different products	Group VI	1st January, 2040
11.	Use of methyl bromide except pre-shipment & quarantine	Group VII	1st January, 2015

* The phasecout date for person or enterprise who has received financial assistance for switching over to non-ozone depleting substance technology or to establish or to expand new capacity with non-ozone depleting substance technology is the date of completion of the conversion project or the date given in column (4) of Sch. IV whichever is earlier.

** Except for essential use certified by the essential use panel

SCHEDULE V

[*See* Rules 2 (*b*), 3 (1), 6 (1), 7, 8 (1), (2), (5) & (6), 11 (1), (2), 12 (1), 13 (5)]

LIST OF AUTHORITIES, THEIR FUNCTIONS AND LAST DATE FOR REGISTRATION

PART-I, FOR OZONE DEPLETING SUBSTANCES OTHER THAN GROUP VIII OF SCH. I

Sl. No. (1)	Rule No. (2)	Function (3)	Name of Authority (4)	Last date for Registration (5)	Name of Appellate Authority (6)
1	3(1)	Registration of producers of Ozone Depleting Substances	An officer not below the rank of a Deputy Secretary in the Ministry of Environment and Forests	Three months after commencment of the rules	Secretary, Ministry of Environment and Forests
2	3, 4, 5 10 (1) 10 (2)	Licence to import/export of products made with or containing Ozone Depleting Substances and Ozone Depleting Substances	Director General of Foreign Trade	..	...
3	6 (1)	Registration of traders/delears/wholesalers/sellers of Ozone Depleting Substances	(*i*) An officer of the particular Producers not below the rank of a Manager, if the Ozone Depleting Substances has been produced in India (*ii*) An officer of the particular Importer not below the rank of a	One year after the comencement of these rules	An officer not below the rank of a Deputy Secretary in the Ministry of Environment and Forests

(1)	(2)	(3)	(4)	(5)	(6)
			Manager, if the Ozone Depleting Substances has been imported.		
4.	8(1)	Registration of persons/enterprises engaged in activities specified in column (2 of Sch. IV (whose capital investment is less than Rs. 1 crore)	Officer-in-charge of the office of Small Industries Services Institute in respective jurisdiction under Small Industries Development Organisation under the Ministry of Small Scale, Agro and Rural Industries	One year after the commencement of these rules	An officer not below the rank of a Deputy Secretary in the Ministry of Environment and Forests
		Registration of persons engaged in activities in column (2) of Sch. IV (whose capital investment is more than Rs. 1 crore)	An officer not below the rank of a Deputy Secretary in the Ministry of Environment and Forests	One year after the commencement of these rules	Secretary, Ministry of Environment and Forests
5.	11(1)	Registration of persons having facilities to reclaim Ozone Depleting Substances	Officer-in-charge of the office of Small Industries Services Institute in respective jurisdiction under Small Industries Development Organisation under the Ministry of Small Scale, Agro and Rural Industries	One year after the commencement of these rules	An officer not below the rank of a Deputy Secretary in the Ministry of Environment and Forests
6	11(2)	Registration of persons having facilities to destroy Ozone Depleting Substances	Officer-in-charge of the office of Small Industries Services Institute in respective jurisdiction under Small Industries Development Organisation under the Ministry of Small Scale, Agro and Rural Industries	One year after the commencement of these rules	An officer not below the rank of a Deputy Secretary in the Ministry of Environment and Forests
7	12	Registration of manufacturers, improters and exportes of compressors (whose capital investment is less than Rs. 1 crore)	Officer-in-charge of the office of Small Industries Services Institute in respective jurisdiction under Small Industries Development Organisation under the Ministry of Small Scale, Agro and Rural Industries	One year after the commencement of these rules	An officer not below the rank of a Deputy Secretary in the Ministry of Environment and Forests
		Registration of manufacturers, importers and exports of compressors (whose capital investment is more than Rs. 1 crore)	An officer not below the rank of Deputy Secretary in the Ministry of Environment and Forests	One year after the commencement of these rules	Secretary, Ministry of Environment and Forests

PART-II—FOR SCH. I, GROUP VIII OZONE DEPLETING SUBSTANCE

SCHEDULE VII

[*See* Rule 10 (1), (2)]

REGULATION ON IMPORT AND EXPORT PRODUCTS CONTAINING OZONE DEPLETING SUBSTANCES

Sl No	Name of Product	Name of Group of Ozone Depleting Substances	Date Regulation on Imports becomes effective	Date Regulation on Exports becomes effective
(1)	(2)	(3)	(4)	(5)
1	Automobile and truck air-conditioning units (whether incorporated in vehicle or not)	Group 1	Six months after these rules come into force	Six months after these rules come into force
2.	Domestic and commercial refrigeration and air-conditioning/heat pump equipment *e.g.* — Refrigerators — Freezers — Dehumidifiers — Water (Coolers	Group I, Group VI	Six months after these rules come into force	Six months after these rules come into force

(1)	(2)	(3)	(4)	(5)
	— Ice machines			
	— Air-conditioning and heat pump units			
	— Compressors			
3	Aerosol products, except medical aerosols	Group I	-do-	-do-
4	Portable fire extinguishers/System Cylinder	Group II	-do-	-do-
5.	Insulation boards, panels and pipe covers	Group I	-do-	-do-
6.	Pre-polymers	Group I, Group VI	-do-	-do-

Note :

1. Sl No 2, column (2) products include insulating material of the product

2 All products mentioned above are excluded from the purview of this Schedule which transported in consignments of personal or household effects or in similar non-commercial situations normally exempted from customs attention.

SCHEDULE VIII

[*See* Rule 15]

EXEMPTION

(*i*) Use of Methyl Bromide, the ozone depleting substance covered in Group VIII of Sch. I, in quarantine and pre-shipment applications.

(*ii*) Ozone depleting substance which are used in laboratory or for analytical purposes subject to following conditions :—

(*a*) Laboratory uses include equipment calibration; use as extraction solvents, diluents, or carriers for chemical analysis; biochemical research; inert solvents for chemical reactions, as a carrier or laboratory chemical and other critical analytical and laboratory purposes.

(*b*) Ozone depleting substances should have been manufactured to the following purities :

CTC (regent grade)	99.5
1, 1, 1-trichloroethane	99.0
CFC-11	99.5
CFC-13	99.5
CFC-12	99.5
CFC-113	99.5
CFC-114	99.5

Other w/Boiling P>20°C	99.5
Other w/Boiling P < 20°C	99.0

(*c*) These pure ozone depleting substances can be subsequently mixed by manufacturers, agents, or distributors with other chemicals, as is customary for laboratory and analytical uses.

(*d*) These high purity ozone depleting substance and mixtures containing ozone depleting substances shall be supplied only in re-closable containers or high pressure cylinders smaller than three litres or in 10 millilitre or smaller glass ampoules, marked clearly as ozone depleting substances, restricted to laboratory use and analytical purposes and specifying that used or surplus ozone depleting substances should be collected and recycled, if practical. The ozone depleting substances should be destroyed if recycling is not practical.

(*iii*) Import, export, and production of Group IV, Sch. I ozone depleting substances is excluded from the definition of consumption if such imports and production meant to be used in manufacture of ozone depleting substances specified in Group I of Sch. I.

(*iv*) Import and export of any recovered or reclaimed ozone depleting substances is excluded from the definition of consumption.

(*v*) Sub-rule (1) of Rule 10 shall not apply to non-commercial sale of products which have been used for at least one year.

(*vi*) Any rule in public interest with specific aproval of the Central Government.

(*vii*) Use of Group II substances of Sch. I for essential critical application shall as Defence Air Craft, Battle tank and Aviation Industries to be certified by an essential use panel.

SCHEDULE IX

[*See* Rule 13 (1), 13 (6)]

Part I

Procedure for Registration

1. Application for registration of producers of ozone depleting substances under sub-rule (1) of Rule 3 shall be made in Form 9 of Sch. XI.

2. Application for registration of sellers of ozone depleting substances under sub-rule (1) of Rule 6 shall be made in Form 10 of Sch. XI.

3. Application for registration of persons under sub-rule (1) of Rule 8 shall be made in Form 11 of Sch. XI.

4. Application for registration of persons reclaiming ozone depleting

substances under sub-rule (1) of Rule 11 shall be made in Form 14 of Sch. XI.

5. Application for registration of persons destroying ozone depleting substances under sub-rule (2) of Rule 11 shall be made in Form 14 of Sch. XI.

6. Aplication for registration of persons manufacturing, importing or exporting compressors shall be made in Form 13 of Sch. XI.

7. A Certificate of Registration shall be issued by the registering authority to those persons who have been registered in accordance with these rules.

8. The Certificate of Registration shall contain the following information :—
   (*a*) Name of registering authority.
   (*b*) Registration number.
   (*c*) Information contained in application for registration (excluding enclosure).
   (*d*) Signature and seal of registering authority.

Part II

Conditions of Registrations/Renewal

1. The "Certificate of Registration" shall be kept at the "Registered Office" and shall be producted at any reasonable time or reproduced at any reasonable time on request before an Officer of the concerned authority not below in rank to a Section Officer to the Government of India or, in respect of registration under sub-rule (1) of Rule 6 an Assistant Manager in the concerned producing enterprise.

2. The registration shall not be done, and shall cease to be valid, if the person to be registered or registered is in violation of these rules.

3. Registration under sub-rule (1) of Rule 6 shall also be subject to commercial decision of the authority mentioned in column (4) of Sch. V, excluding such registration in respect of ozone depleting substances specified in Group VIII of Sch. I.

4. Notwithstanding generally of provision of Paragraph 2 above, registration shall not be renewed unless the applicant has complied with all the reporting requirements under these rules.

5. Validity of registration under these rules shall be for a period of eighteen months from the date of registration. Its renewal can be done anytime after twelve months from the date of registration/renewal. The renewal will also be valid for eighteen months.

SCHEDULE X

[*See* Rule 14 (1), (2), (3), (4), (5), (6) & (7)]

Part I

A. Records to be maintained

Records regarding production of ozone depleting substances

(1) Dated records and related documents in respect of each producing plant, of—

(*a*) The actual quantity of each ozone depleting substances produced;

(*b*) The actual quantity of each ozone depleting substance used as feedstock; and

(*c*) Information specified in 2 (*b*) and 2 (*c*) below, Records regarding sale and offer for sale of ozone depleting substances.

(2) Dated records and related documents in respect of—

(*a*) the actual quantity of each ozone depleting substances purchased;

(*b*) the actual quantity of each ozone depleting substances sold within India, the name and address of the recipient of the each shipment and the purpose for which ozone depleting substances was purchased by the recipient. These purpose to be maintained are :

(*i*) Manufacture of Aerosols.

(*ii*) Manufacture of foam products.

(*iii*) Manufacture of fire extinguishers and fire extinguishing systems.

(*iv*) Manufacture of Mobile Air-conditioners.

(*v*) Manufacture of other Refrigeration and Air-conditioning products

(*vi*) Solvents used.

(*vii*) Exempted use.

(*viii*) Selling.

(*x*) Others (please specify).

Records regarding exports of Ozone

(3) Dated records and related documents containing information in respect of each column of Form 3 or 4, as the case may be, of Sch. XI.

Records regarding imports of ozone depleting substances

(4) Dated records and related documents containing information in respect of each column of Form 5 or 6, as the case may be, of Sch. XI.

Record and related document regarding manufacture import and export of compressor

(5) Dated records and related document containing information in respect of each column of Form 12 or 13, as the case may be, of Sch. XI.

Declaration signed by the recipient in Form 12 of Sch. XI.

B. Reports to be submitted

(1) Report on production of ozone depleting substances as per Form 1 of Sch. XI.

(2) Report on imports of ozone depleting substances as per Form 2 of Sch. XI.

(3) Report on exports of ozone depleting substances as per Form 3 of Sch. XI.

(4) Report on sales of ozone depleting substances as per Form 4 of Sch. XI.

(5) Reports mentioned in Sl. No. 1 to 3 above shall be submitted to the Ministry of Environment and Forests. Report mentioned in Sl. No. 4 above shall be submitted to the registering authority specified in column (4) of Sch. V, who will submit complied version of the reports, duly countersigned will also be submitted by such authority to the Ministry of Environment and Forests in hard copy as well as in floppy on request.

Part II

A. Records to be maintained

Records regarding purchase of ozone depleting substances for use in activities specified in column (2) of Sch. IV

(1) Dated records of:—

(*a*) The actual quantity of each ozone depleting substances purchased from an Indian supplier and the name and address of the Indian supplier;

(*b*) The actual quantity of each ozone depleting substances used separately for each plant and each activity.

B. Records to be submitted

(1) Report on purchase of ozone depleting substances as per Form 5 of Schedule XI.

(2) These reports shall be submitted to the concerned registering authority specified in column (4) of Sch. V, who will submit compiled

version of the report to the Ministry of Environment and Forests. Individual reports will also be submitted by such authority to the Ministry of Environment and Forests on request.

Part III

A. Records to be maintained

Records regarding purchase of non-ozone depleting substances by beneficiary companies for use in manufacture of products

(1) Dated records and related documents in respect of :—

(1) Actual quantity of each non-ozone depleting substances purchased and the name and address of supplier;

(2) Actual quantity of each non-ozone depleting substances used in manufacturing operations separately for each plant and each manufacturing.

B. Reports to be submitted

(1) Report on use of non-ozone depleting substances by beneficiary companies as per Form 6 of Sch. XI.

(2) These reports shall be submitted to the concernd authority specified in column (4) of Sch. V, who will submit complied version of the report to the Ministry of Environment and Forests. Individual reports will also be submitted by such authority to the Ministry of Environment and Forests on request.

Part IV

A. Records to be maintained

Records regarding reclamation

(1) Dated records and related documents in respect of—

(*a*) the actual quantity of each ozone depleting substances recovered; the name and address of the individual or company from which the ozone depleting substances is recovered and the name and address, if different of the site at which the ozone depleting substances is reclaimed :

(*b*) the actual quanity of each ozone depleting substances reclaimed.

B. Reports to be submitted

(1) Report on reclamation of ozone depleting substances as per Form 7 of Sch. XI.

(2) These reports shall be submitted to the Ministry of Environment and Forests through the concerned registering authority specified in column (4) of Sch. V.

Part V

A. Records to be maintained

Records regarding destruction

(1) Dated records of:—

(*a*) the actual quantity of each ozone depleting substances destroyed on the basis of destruction efficiency of the facility employed.

B. Reports to be submitted

(1) Report on destruction of ozone depleting substances as per Form 8 of Sch. XI.

(2) These reports shall be submitted to the Ministry of Environment and Forests through the concerned registering authority specified in column (4) of Sch. V.

Part VI

A. Records to be maintained

Records regarding manufacture, import and export of compressor

(1) Dated records and related documents containing information in respect of each column of Form 12 of Sch. XI.

B. Reports to be submitted

(1) Report on manufacture, import, export and sale of compressor and use of refrigerants in compressors sold as per Form 12 of Sch. XI.

(2) These reports shall be submitted to the concerned registering authority specified in column (4) of Sch. V, who will submit complied version of the report to the Ministry of Environment and Forests. Individual reports will also be submitted by such authority to the Ministry of Environment and Forests on request.

Part VII

Production of records

(1) Records being maintained pursuant to requirements of Rule 13 shall be available for inspection at any reasonable time on request by an officer of the registering authority specified in column (4) of Sch. V, not below in rank to a Section Officer to the Government of India. However, persons who are engaged in selling any locality produced ozone depleting substances, except ozone depleting substances specified in Group VIII of Sch. I, shall make records available by inspection at any reasonable time on request by an officer of the concerned producing enterprise not below in rank to Assistant Manager or on

request by an officer of the Ministry of Environment and Forests not below in rank to a Section Officer.

SCHEDULE XI

Form 1 Page 1

Report on production of Ozone Depleting Substances

FREQUENCY OF REPORT : ANNUALLY

Last date for submission of report : Within 60 days of end of the year

Name of company : Period of report January-December 19

Name of Group of Ozone Depleting Substances	Name of Depleting substances	Ozone	Total Quantity produced for All uses*2	Quantities produced for exempted uses within India*3		Quantity produced for supply to countries listed in Parts I and II of Sch VI
				Quantity produced for feedstock within India	Quantity produced for other exempted use within India	
Group I	CFC13 (CFC-11)					
	CFC (12) (CFC-12)					
	C2F4C12 (CFC-114)					
	C2F5Cl (CFC-15)					
	Total					

Form 1 Page 2

Verification

I .... S/o ....
do hereby solemnly verify that to the best of my knowledge and belief the information given above and the annexure and statements any accompanying it are correct and complete.

I further declare that I am submitting and verifying the information given above in my capacity as .... and that I am competent to do so.

Place .... Signature * ....

Date .... with Seal

Note :*1. Please *see* Schedule I for complete list of ozone depleting substances.

*2. Total production should be given without any deductions. The Ministry of Environment and Forests would make the necessary deductions in accordance with the definition in Rule 2.

*3. Plese *see* Rule 2 (*k*) and give the total quanity used within India as feedstock and quantity exempted under Rule 16 from local production.

*4. The above Form including the verification portion must be signed in case of an individual by the individual himself or a person duly authorized by him in case of Hindu undivided family by the Karta : in case of a partnership firm by the managing partner in case of a company, by a person duly authorized in that behalf by the Board of Directors and in any other case by a person in-charge of or responsible for the conduct of the business.

Form 2 Page 1

Date on imports of Ozone Depleting Substances

REQUENCY OF REPORT : QUARTERLY

Last date for submission of report : Within 30 days of end of the quarter

Name of Company :.............................. Period of report :

Name of ozone depleting substances *1 : ....

(In metric tonnes)

Verification

I declare that the enterprise/firm mentioned in Serial No. 1 above has not applied for registration under sub-rule (1) of Rule 6 of the Ozone Depleting Substances (Regulation and Control) Rules, 2000 with any other registering authority.

I .... S/o ....
do hereby solemnly verify that to the best of my knowledge and belief the information given above and the annexure and statements any accompanying it are correct and complete.

I further declare that I am submitting and verifying the information given above in my capacity as .... and that I am competent to do so.

Place .... Signature *2 ....
Date .... with Seal

Notes : *1. Products to include one of the following :

(*i*) Aerosols (excluding metered dose inhalers for medicinal purposes).

(*ii*) Foam Products;

(*iii*) Fire Extinguishers or fire extinguishing systems;

(*iv*) Mobile Air-Conditioners;

(*v*) Other Refrigeration & Air-conditioning products (excluding compressors),

(*vi*) Products where ozone depleting substances are used as solvents;

(*vii*) Metered Dose Inhalers for medicinal purpose.

*2. The above form including the verification portion must be signed in case of an individual, by the individual himself or a person duly authorized by him : in case of Hindu undivided family, by the Karta : in case of a partnership firm, by the managing partner, in case of a company, by a person duly authorized in that behalf by the Board of Directors and in any other case, by a person in charge of or responsible for the conduct of the business.

Part B

Activities relating to servicing of fire extinguishers or fire extinguishing systems

1. Name of the enterprise/firm :
2. Address of Registered Office (including Tehsil, District, State) :
3. Date of Registration and the name of Act under which registered (A copy of registration to be attached.) :
4. Servicing fire extinguishers : Yes/No
5. Servicing fire extinguishing systems : Yes/No
6. Address of servicing outlet :
7. Date of commencement of servicing activities :
8. Name of Proprietor/Chief Executive Committee :
9. Please enclose a copy of the latest Annual report, Audited Balance Sheet and Profit and Loss Account of the enterprise or Income Tax Assessment Order.

Signature of the applicant *1

Verification

I ....S/o ....
do hereby solemnly verify that to the best of my knowledge and belief the information given above and the annexure and statements any accompanying it are correct and complete.

I further declare that I am submitting and verifying the information given above in my capacity as .... and that I am competent to do so.

Place .... Signature *3 ....
Date .... with Seal

Notes : *1. Purpose are :

(*i*) Manufacture of aerosols (excluding metered dose inhalers for medicinal purposes).

(*ii*) Manufacture of Foam products.

(*iii*) Manufacture of Fire extinguishers and Fire extinguishing systems.

(*iv*) Manufacture of Mobile Air-Conditioners.

(*v*) Manufacture of other Refrigerations & Air-Conditioning products (excluding compressors).

(*vi*) Solvents used.

(*vii*) Exempted use.

(*viii*) Selling.

(*ix*) Servicing of fire extinguishers of fire extinguishing systems (applicable for Group II ODS).

(*x*) Manufacture of metered dose inhalers for medicinal purposes.

(*xi*) Manufacture of compressors.

(*xii*) Others—specify (excluding servicing).

*2. Use a separate form for quantities of ozone depleting substances for which the Central Government has granted exemption from these rules.

*3 The above form including the verification portion must be signed in case of an individual, by the individual himself or a person duly authorized by him : in case of Hindu undivided family, by the Karta : in case of a partnership firm, by the managing partner, in case of a company, by a person duly authorized in that behalf by the Board of Directors and in any other case, by a person in charge of or responsible for the conduct of the business.

Part II

A person purchasing ozone depleting substances will produce a copy of certificate of registration issued under sub-rule (1) of Rule 8 before the person selling such ozone depleting substances along with the declaration specified in Part I above. The copy of such certificate of registration should have been duly attested in case other Company Secretary or a full time Director of the company, in case of a partnership firm by the Managing partner and in any other case by Public Notary or a Gazetted Government Officer. The person selling ozone depleting substances shall verify particulars given in Serial numbers 2, 3 and 4 of declaration specified in Part I above with the corresponding particulars mentioned in the certificate of registration.

THE BATTERIES (MANAGEMENT AND HANDLING) RULES, 2001

S.O. 432 (E), dated 16th May, 2001.—Whereas a notification of the Government of India in the Ministry of Environment and Forests was published in the *Gazette of India, Extraordinary*, Part II., Sec. 3, sub-section (*ii*), *vide* No. S.O. 491(E), dated 24th May, 2000 and corrigendum published in the *Gazette of India, Extraordinary*, Part II, Sec 3, sub-section (*ii*), *vide* No. S.O. 593(E). dated 23rd June, 2000, under powers conferred by Secs. 6, 8 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), inviting objections from persons likely to be affected, within a period of sixty days from the date of publication of the said notification with regard to the Government's intention to notify the Batteries (Management and Handling) Rules, 2000;

And, whereas all objections received have been duly considered by the Central Government;

Now, therefore, in exercise of the powers conferred by Secs. 6, 8 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby notifies the Batteries (Management and Handling) Rules, 2001.

1. Short title and commencement.—(1) These rules may be called the Batteries (Management and Handling) Rules, 2001.

(2) They shall come into force on the date of their publication in the Official Gazette.

2. Application.—These rules shall apply to every manufacturer, importer, reconditioner, assembler, dealer, recycler, auctioneer, consumer and bulk consumer involved in manufacture, processing, sale, purchase and use of batteries or components thereof.

3. Definitions.—In these rules, unless the context otherwise requires,—

(*a*) 'Act' means the Environment (Protection) Act, 1986 (29 of 1986);

(*b*) 'assembler' means a person who manufactures lead acid batteries by assembling various components;

(*c*) 'auction' means bulk sale of used lead acid batteries or components (s) thereof by invitation of tenders or auction, contract or negotiation by individual (s), companies or Government Departments;

(*d*) 'auctioneer' means a person (s) who auctions used lead acid batteries or components thereof;

(*e*) 'battery' means lead acid battery which is a source of electrical energy and contains lead thereof;

(*f*) 'bulk consumer' means a consumer such as Central or State

---

1. Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 16th May, 2001 (w.e.f. 16th May, 2001).

Government Departments of Railways, Defence, Telecom, Posts and Telegraph, State Road Transport Undertakings, State Electricity Boards and others who purchase batteries through Central 'rate' or running contract centrally placed on behalf of individual departments or user units under their jurisdiction;

(*g*) 'components' means lead bearing components of a lead acid battery;

(*h*) 'consumer' means a person using lead acid batteries excluding bulk consumers;

(*i*) 'dealer' means a person who sells and receives lead acid batteries or components thereof to and from the consumers or other dealers or retailers on behalf of the manufacturers, importers, assemblers and reconditioners or otherwise;

(*j*) 'designated collection centre' means a collection centre established, individually or jointly by one or more manufacturers or importers, assemblers and reconditioners in pursuance of their responsibilities under Rule 4 of these rules;

(*k*) 'importer' means a person who imports new lead acid batteries or components containing lead thereof for the purpose of sale;

(*l*) 'manufacture' in relation to any factory manufacturing lead acid batteries or components thereof means a person or Chief Executive Officer (CEO) of the company who has control over the affairs of the factory or the premises for sale and collection of lead acid batteries or components thereof;

(*m*) 'original equipment manufacturer' means manufacturer of equipment or product using lead acid batteries as a component;

(*n*) 'reconditioner' means a person involved in repairing of lead acid batteries for selling the same in the market;

(*o*) 'recycler' means an occupier who processes used lead acid batteries or components thereof for recovering lead;

(*p*) 'registered recyler' means a recycler registered with the Ministry of Environment and Forest or an agency designated by it for reprocessing used lead acid batteries or components thereof;

(*q*) 'State Board' means the concerned State Pollution Control Board or the Pollution Control Committee as the case may be;

(*r*) 'used batteries' means used, damaged and old lead acid batteries or components thereof; and

(*s*) the words not defined in these rules will have the same meaning as defined in the Environment (Protection) Act, 1986 and the rules framed thereunder.

4. Responsibilities of manufacturer, importer, assembler and re-conditioner.—It shall be the responsibility of a manufacturer, importer, assembler and re-conditioner to—

(*i*) ensure that the used batteries are collected back as per the Schedule against new batteries sold excluding those sold to original equipment manufacturer and bulk consumer (s);

(*ii*) ensure that used batteries collected back are of similar type and specifications as that of the new batteries sold;

(*iii*) file a half-yearly return of their sales and buy-back to the State Board in Form I latest by 30th June and 31st December of every year..

(iv) set up collection centres either individually or jointly at various places for collection of used batteries from consumers or dealers;

(*v*) ensure that used batteries collected are sent only to the registered recyclers;

(*vi*) ensure that necessary arrangements are made with dealers for safe transportation from collection centres to the premises of registered recyclers;

(*vii*) ensure that no damage to the environment occurs during transportation;

(*viii*) create public awareness through advertisements, publications, posters or by other means with regard to the following—

(*a*) hazard of lead;

(*b*) responsibility of consumers to return their used batteries only to the dealers or deliver at designated collection centres; and

(c) addresses of dealers and designated collection centres.

(*ix*) use the international recyling sign on the batteries;

(*x*) buy recycled lead only from registered recyclers; and

(*xi*) bring to the notice of the State Board or the Ministry of Environment and Forests any violation by the dealers.

5. Registration of Importers.—The importer shall get himself registered with the Ministry of Environment and Forests or an agency designated by it by submitting details in Form II.

6. Customs clearance of imports of new lead acid batteries.—Customs clearance of imports shall be contingent upon—

(i) valid registration with the Reserve Bank of India (with Importer's Code Number);

(*ii*) one time registration with the Ministry of Environment and Forests or an agency designated by it in Form II;

(*iii*) undertaking in Form III; and

(*iv*) a copy of the latest half-yearly return in Form IV.

7. Responsibilities of dealer.—It shall be the responsibility of a dealer to—

(*i*) ensure that the used batteries are collected back as per the Schedule against new batteries sold;

(*ii*) give appropriate discount for every used battery returned by the consumer;

(*iii*) ensure that used batteries collected back are of similar type and specifications as that of the new batteries sold;

(*iv*) file half-yearly returns of the sale of new batteries and buy-back of old batteries to the manufacturer in Form V by 31st May and 30th November of every year;

(v) ensure safe transportation of collected batteries to the designated collection centers or to the registered recyclers; and

(v*i*) ensure that no damage is caused to the environment during storage and transportation of used batteries.

8. Responsibilities of recycler.—Each recycler shall—

(*i*) apply for registration to the Ministry of Environment and Forests or an agency designated by it if not applied already, by submitting information in Form VI;

(i*i*) ensure strict compliance of the terms and conditions of registration; however, those already registered with the Ministry of Environment and Forests or an agency designated by it for reprocessing used batteries would be bound by the terms and conditions of such registration;

(ii*i*) submit annual return as per Form VII to the State Board;

(*iv*) make available all records to the State Board for inspection;

(*v*) mark 'Recycled' on lead recovered by reprocessing; and

(*vi*) create public awareness through advertisements, publications, posters or others with regard to the following—

(*a*) hazards of lead; and

(*b*) obligation of consumers to return used batteries only to the registered dealers or deliver at the designated collection centres.

9. Procedure for registration/renewal of registration of recyclers.—(1) Every recycler of used lead acid batteries shall make an application in Form VI along with the following documents to the Joint Secretary, Ministry of Environment and Forests or any officer designated by the Ministry or an agency designated by it for grant of registration or renewal—

(*a*) a copy of the valid consents under Water (Prevention and Control of Pollution) Act, 1974, as amended and Air (Prevention and Control of Pollution) Act, 1981, as amended;

(*b*) a copy of the valid authorisation under Hazardous Wastes (Management and Handling) Rules, 1989 as amended;

(*c*) a copy of valid certificate of registration with District Industries Centre; and

(*d*) a copy of the proof of installed capacity issued by either State Pollution Control Board/District Industries Centre.

(2) The Joint Secretary, Ministry of Environment and Forests or any officer designated by the Ministry or an agency designated by it shall ensure that the recyclers possess appropriate facilities, technical capabilities, and equipment to recycle used batteries and dispose of hazardous waste generated;

(3) The Joint Secretary, Ministry of Environment and Forests or any officer designated by the Ministry or an agency designated by it shall take decision on application for registration within 120 days of receipt of application form with complete details;

(4) The registration granted under this rule shall be in Force for a period of two years from the date of issue or from the date of renewal unless suspended or canceled earlier;

(5) An application for the renewal of registration shall be made in Form VI at least six months before its expiry. The Joint Secretary, Ministry of Environment and Forests or any officer designated by the Ministry or an agency designated by it shall renew the registration of the recycler granted under sub-rule (4) of this rule, after examining each case on merit;

(6) The Joint Secretary, Ministry of Environment and Forests or any officer designated by the Ministry or an agency designated by it may, after giving reasonable opportunity to the applicant of being heard, refuse to grant registration;

(7) The Joint Secretary, Ministry of Environment and Forests or any officer designated by the Ministry or an agency designated by it may cancel or suspend a registration issued under these rules, if in his/her opinion, the registered recycler has failed to comply with any of the conditions of registration, or with any provisions of the Act or rules made thereunder after giving him an opportunity to explain and after recording the reasons therefor;

(8) It shall be the responsibility of the State Boards to monitor the compliance of conditions prescribed while according registration; and

(9) An appeal shall lie against any order of suspension or cancellation or refusal of registration passed by the Joint Secretary to the Ministry of Environment and Forests or any officer designated by the Ministry or an agency designated by it. The appeal shall be in writing and shall be accompanied with a copy of the order appealed against and shall be presented within 30 days of passing of the order.

10. Responsibilities of consumer or bulk consumer.—(1) It shall be the responsibility of the consumer to ensure that used batteries are not disposed of in any manner other than depositing with the dealer, manufacturer, importer, assembler, registered recycler, reconditioner or at the designated collection centres.

(2) It shall be the responsibility of the bulk consumer to—

(*i*) ensure that used batteries are not disposed of in any manner other than by depositing with the dealer/manufacturer/registered recycler/importer/reconditioner or at the designated collection centres; and

(*ii*) file half-yearly return in Form VIII to the State Board.

(3) Bulk consumers or their user units may auction used batteries to registered recyclers only.

11. Responsibilities of auctioneer.—The auctioneer shall—

(*i*) ensure that used batteries are auctioned to the registered recyclers only;

(*ii*) file half-yearly returns of their auctions to the State Boards in Form-IX; and

(*iii*) maintain a record of such auctions and make these records available to the State Board for inspection.

12. Prescribed Authority.—The prescribed authority for ensuring compliance of the provisions of these rules shall be the State Board. And, it shall file an annual compliance status report to the Central Pollution Control Board by 30th April of every year.

13. Duties of Central Pollution Control Board.—The Central Pollution Control Board shall compile and publish the data received every year from the State Boards. It shall review the compliance of the rule periodically to improve the collection and recycling of used lead batteries and apprise the Ministry of Environment and Forests, Government of India.

14. Computerisation of Records and Returns.—Ministry of Environment and Forests or an agency designated by it shall develop a system for computerised tracking of—

(i) distribution and sale of batteries;

(*ii*) collection, auction, transport and re-processing of used batteries;

(*iii*) sale of re-processed lead by registered recyclers; and

(*iv*) sale of lead from all domestic producers or importers.

SCHEDULE

[*See* rules 4 (*i*) and 7 (*i*)]

Sl. No.	Year	Number of used batteries to be collected back
(*i*)	During first year of implementation of rules	50% of new batteries sold
(*ii*)	During second year of implementation of rules	75% of new batteries sold
(*iii*)	After second year of implementation of rules	90% of new batteries sold

FORM-I

[*See* rule 4 (*iii*)]

Form for Filing Returns of Sales of New Batteries and Collection of Used Batteries

[To be submitted by manufacturer/assemble/reconditioner by 30th June (for the period October-March and 31st December (for the period April-September) every year]

1.	Name and address of the manufacturer/assembler/reconditioner	
2.	Name of the authorised person and complete address with telephone and fax numbers	
3.	Total number of new batteries sold during the period October-March/April-September in respect of the following categories *Category* (i) Automotive (*a*) four wheeler (*b*) two wheeler (*ii*) Industrial (*a*) UPS (*b*) Motive power (*c*) Stand-by (*iii*) Other (inverters, etc.) *Number of batteries sold to* (*i*) dealers (*ii*) bulk consumers (*iii*) OEM	(*i*) No. of Batteries (*ii*) Approximate weight (in Metric Tonnes)

	(*iv*) any other party for replacement should be indicated separately	
4.	Name and full address of the designated collection centres	
5.	Total number of used batteries of different categories as at Sl. No. 3 Collected and sent to the registered recyclers*	

*Enclose the list of recyclers to whom batteries have sent for recycling.

Place............

Date............

Signature of the Authorised Person

Form For Registration of Importer of New Lead Batteries/Primary Lead

(To be submitted in triplicate to the Ministry of Environment and Forests)

1.	Name and address of the importer	
2.	Import/Export License No.	
3.	Name of person/owner/occupier as the case may be	

Date............

Place............

Signature of the Importer

FORM-III

[*See* rule 6 (*iii*)]

[*To be submitted by importer of new lead acid batteries)*

Undertaking

To

The Member-Secretary,
State Pollution Control Board

1. I............................of M/s........................hereby submit that I am in the process of importing........................(MT) of new lead acid batteries.

2. I undertake that I shall collect back the used batteries as per the schedule prescribed by the Government from time to time in lieu of the new batteries imported and sold, and shall send these only to the registered

recyclers. I further undertake that I shall submit half-yearly returns as per item (*iii*) of Rule 6 to the State Board and abide by their directions, if any.

Date :.............

Place :............. Signature of the Importer

Cope to : The concerned Customs Authority

FORM-IV

[*See* rule 6 (*iv*)]

From for Filing Returns of Sales of Lead Acid Batteries

[*To be submitted by the Importer of new lead acid batteries by 30th June (for the period October-March) and 31st December (For the period April-September) every year*]

1.	Name and address of the Importer	
2.	Name and address of the authorised person with telephone and fax number	
3.	Number of batteries imported during the period from October to March and April to September	
4.	Number of new batteries sold during the period October-March/April-September in respect of the following categories *Category* (*i*) Automotive (*a*) four wheeler (*b*) two wheeler (*ii*) Industrial (*a*) UPS (*b*) Motive Power (*c*) Stand-by (*iii*) Others *Number of batteries sold to* (*i*) dealers (*ii*) bulk consumers (*iii*) OEM	(*i*) No. of Batteries (*ii*) Approximate weight (in Metric Tonnes)

	(*iv*) any other party for replacement	
5.	Name and full address of the designated collection centre	
6.	Total number of used batteries of different categories as at Sl. No. 4 collected and sent to the registered recyclers*	

*Enclose a complete list.

Place..........

Date.......... Signature of the Authorised Person

FORM-V

[*See* rule 7 (*iv*)]

Form for Filing Returns of Sale of New Batteries and Collection of Old Batteries

[*To be submitted by dealers to the manufacturers by 31st May (for sale during October-March) and 30th November (for sale during April-September) every year*]

1.	Name and address of the dealer	
2.	Name of authorised person and full address with Telephone and fax number	
3.	Number of new batteries sold during the period from October March/April September in respect of the following categories : *Category* (*i*) Automotive (*a*) four wheeler (*b*) two wheeler (*ii*) Industrial (*a*) UPS (*b*) Motive Power (*c*) Stand-by (*iii*) Others *Number of batteries sold* (*i*) as replacement of used batteries	(*i*) No. of Batteries (*ii*) Approximate weight (in Metric Tonnes)

	(*ii*) to bulk consumers (*iii*) to OEM (*iv*) to any other party	
4.	Total number of used batteries of different categories as at Sl. No. 3 collected and sent to the registered recyclers*/designated collection centre/manufacturers	

*Enclose the list of recyclers to whom batteries have been sent for recycling.

Place.................

Date................. Signature of the Authorised Person

	(*a*) Waste generation	
	(*b*) Details of collection, treatment	
	(*c*) Disposal (including point of final discharge)	
	(*i*) Please provide details of the disposal facility	
	(*ii*) Whether facilities provided are in compliance of the conditions issued by the SPCB in Authorisation	
	(*iii*) Please attach analysis report of characterisation of hazardous waste generated (including leachate test if applicable)	
18.	Details of waste proposed to be taken in auction or import, as the case may be, for use as raw material	1. Name— 2. Quantity required/— 3. Position in List A/List B as per Basel Convention (BC)— 4. Nature as per Annexure III of BC—
19.	Occupational safety and health aspects	Please provide details of facilities provided
20.	Remarks	
	(*i*) Whether industry has provided adequate pollution control system/equipment to meet the standards of emission/effluent	Yes/No If yes, please furnish details

	(*ii*) Whether industry is in compliance with conditions laid down in the Hazardous Waste Authorisation	Yes/No
	(*iii*) Whether Hazardous Waste Collection and Treatment, Storage and Disposal Facility (TSDE) are operating satisfactorily	Yes/No
	(*iv*) Whether condition exist or likely to exist of the material being handled/processed of posing immediate or delayed adverse impacts on the environment	Yes/No
	(*v*) Whether conditions exist or is likely to exist of the material being handled/processed by any means capable of yielding another material *e.g.* leachate which may possess eco-toxicity	Yes/No
21.	(*i*) cost of the unit (*ii*) cost of pollution control equipment including environmental safeguard measures (*a*) Capital : (*b*) Recurring :	
22.	Any other information : (*i*) (*ii*) (*iii*)	

I hereby declare that the above statements/informations are true and correct to the best of my knowledge and belief.

Date : Signature

Place : Name

Designation

FORM-VII

[*See* rule 8 (*iii*)]

Form for Filing Returns by Recyclers of Used Batteries

[*To be submitted by recyclers by 30th June and 31st December of every year*]

1. Name and address of the recycler	
2. Name of the authorised person and full address with telephone and fax number	
3. Installed annual capacity to recycle used battery scrap (in MTA)	
4 Total quantity of used battery scrap purchased from/sent for processing during the period from October-March/April-September	(i) Quantity of used batteries sent by/purchased from the manufacturers— (*ii*) Quantity of used batteries purchased from the dealers— (*iii*) Quantity of used batteries purchased from the auctioneers— (*iv*) Quantity of used batteries obtained from any other source—
5 Quantity of lead recovered from the used battery scrap (in MTA)	
6. Quantity of recycled lead sent back to	(*i*) the manufacturer of batteries— (*ii*) other agencies*—

*Enclose list of other agencies.

Place.............. Signature of the Authorised Person

Date..............

FORM-VIII

[*See* rule 10(2) (*ii*)]

Form for Return for Bulk Consumers of Batteries

[*To be submitted by the bulk consumer to the State Board by 30th June (for the period October-March) and 31st December (for the period April-September) ever year*]

1. Name and address of the bulk consumer	
2. Name of the authorised person and full address with telephone and fax number	

3.	Number of new batteries of different categories purchased from the manufacturer/importer/dealer or any other agency during October-March and April-September		
	Category :	(*i*) No. of Batteries	(*ii*) Approximate weight (in Metric Tonnes)
	(*i*) Automotive		
	(*a*) four wheeler		
	(*b*) two wheeler		
	(*ii*) Industrial		
	(*a*) UPS		
	(*b*) Motive Power		
	(*c*) Stand-by		
	(*iii*) Others		
4.	Number of used batteries of categories mentioned in Sl. No. 3 and Tonnage of scrap sent to manufacturer/dealer/importer/registered recycler/or any other agency to whom the used batteries scrap was sent		

Place............

Date............. Signature of the Authorised Person

*Enclose list of manufacturer/dealer/importer/registered recyclers/or any other agency to whom the used batteries scrap was sent.

FORM-IX

[*See* rule 11 (*ii*)]

Form for filing returns by Auctioneer of Used batteries

[*To be submitted by the auctioneer to State Board by 30th June and 31st December of every year*]

1. Name and address of the auctioneer	
2. Name of the authorised person and full address with telephone and fax number	
3. Number of used batteries and total Tonnage (of MT) available during the period form October-March and April-September	

4. Sources of the used battery scrap	
5. Number of used batteries and total Tonnage (of MT) auctioned during the period from October-March and April-September	
6. Number of used batteries and total Tonnage (of MT) sent to the registered recyclers*	

*Enclose a list...

Place............

Date.............

THE ENVIRONMENT (PROTECTION) AMENDMENT RULES, 2000

G.S.R. 742 (E), dated 25th September, 2000[1].—In exercise of the powers conferred by Secs. 6 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following rules further to amend the Environment (Protection) Rules, 1986, namely :—

1. (1) These rules may be called the Environment (Protection) Amendment Rules, 2000.

(2) Save as otherwise provided in this notification, they shall come into force on the date of their publication in the official Gazette.

2. In the Environment (Protection) Rules, 1986.—(1) In Schedule I, after Serial Number 89 relating to noise standards for the fire crackers and the entries relating thereto, the following serial numbers and entries shall be inserted, namely :—

"90. Standards for Coal Mines

1. **Air Quality Standards.**— The Suspended Particulate Matter (SPM), Respirable Particulate Matter (RPM), Sulphur Dioxide (SO_2) and Oxides of Nitrogen (NO_x) concentration in downwind direction considering predominant wind direction, at a distance of 500 meters from the following dust generating sources shall not exceed the standards specified in the Tables I, II and III given below:—

Dust Generating Sources.—Loading or unloading, Haul road, coal transpiration road, Coal Handling Plant (CHP), Railway sliding, Blasting, Drilling, Overburden dumps, or any other dust generating external sources like coke ovens (hard as well as soft), briquette industry, nearby road etc.

---

[1] Published in the *Gazette of India, Extraordinary*, Part II, Sec. 3 (i), dated 25th September, 2000 (w.e.f. 25th September, 2000).

Table I

Category	Pollutant	Time Weighted average	Concentration in Ambient Air	Method of Measurement
1	2	3	4	5
I New Coal Mines (Coal) Mines commenced operation after the date of publication of this notification)	Suspended Particulate Matter (SPM)	Annual Average* 24 hours**	360 $\mu g/m^3$ 500 $\mu g/m^3$	— High Volume Sampling (Average flow rate not less then 1.1 m^3/minute)
	Repairable Particulate Matter (size less than 10 μm) (RPM)	Annual Average* 24 hours**	180 $\mu g/m^3$ 250 $\mu g/m^3$	Repairable Particulate Matter sampling and analysis
	Sulphur Dioxide (SO_2)	Annual Average* 24 hours**	80 $\mu g/m^3$ 120 $\mu g/m^3$	1 Improved west and Gaeke method 2. Ultraviolet fluorescence
	Oxide of Nitrogen NO_2	Annual as 24 hours**	80 $\mu g/m^3$ Average* 120 $\mu g/m^3$	1. Jacob & Hochheier Modified (Na-Arsenic) Method 2. Gas phase Chemilumines

Table II

Category	Pollutant	Time weighted average	Concentration in Ambient Air	Method of Measurement
1	2	3	4	5
II Existing coal field/mines given below . Karanpura, Ramgarh, Giridih, Rajhara, Wardha, Nagpur, Silewara, Pench Kanhan, Patharkhera, Umrer Korba, Chirimiri, Central India Coalfields (including Baikunthpur, Bisrampur), Singrauli, Ib Valley, Talcher, Godavary Valley and any other	Suspended coal Matter (SPM)	Annual Particulate 24 hours**	430 $\mu g/^3$ Average 600 $\mu g/m^3$	— High Volumes Sampling (Average flow rate not less than 1.1 m^3/minute)
	Respirable Particulate matter (size less than 10 μm) (RPM)	Annual Average* 24 hours**	215 $\mu g/m^3$ 300 $\mu g/m^3$	Respirable Particulate Matter sampling and analysis
	sulphur Dioxide (SO_2)	Annual Average* 24 hour**	80 $\mu g/m^3$ 120 $\mu g/m^3$	1. Improved west and Gaeke method 2. Ultraviolet fluorescence
	Oxide of Nitrogen as NO_2	Annual Average* 24 hours**	80 $\mu g/m^3$ 120 $\mu g/m^3$	1 Jacob & Hochheiser Modified (Na-Arsenic) Method 2. Gas phase Chemiluminescence

Table III

Category	Pollutant	Time weighted Average	Concentration in Ambient Air	Method of Measurement
1	2	3	4	5
III Coal mines located in the coal fields of — Jharia — Raniganj — Bokaro	Suspended Particulates Matter (SPM)	Annual Average 24 hours**	500 $\mu g/m^3$ 700 $\mu g/m^3$	— High Volume Sampling (Average flow rate not less than 1.1 m^3/minute)
	Respirable Particulate Metter (size less than 10 μm) (RPM)	Annual Average* 24 hours**	250 $\mu g/m^3$ 300 $\mu g/m^3$	Respirable Particulate Matter sampling and analysis
	sulphur Dioxide (SO_2)	Annual Average* 24 hours**	80 $\mu g/m^3$ 120 $\mu g/m^3$	1. Improved west and Gaeke method 2. Ultraviolet fluorescence
	Oxide of Nitrogen as NO_2	Annual Average* 24 hours**	80 $\mu g/m^3$ 120 $\mu g/m^3$	1. Jacob & Hochheiser Modified (Na-Arsenic) Method 2 Gas phase Chemiluminescence

Note :

* Annual Arithmetic mean for the measurements taken in a year, following the guidelines for frequency of sampling laid down in Cl 2.

** 24 hourly/8 hourly values shall be met 92% of the time in a year. However, 8% of the time it may exceed but not on two consecutive days.

Unauthorised construction shall not be taken as a reference of nearest residential or commercial place for monitoring.

In case any residential or commercial or industrial place falls within 500 meters of any dust generating sources, the National Ambient Air Quality Standards notified under Schedule VII shall be applicable.

2. *Frequency of Sampling*

— Air quality monitoring at a frequency of once in a fortnight at the dust generating sources given in Cl. 1 shall be carried out.

— As a result of monthly monitoring, if it is found that the value of the pollutant is less than 50% of the specified standards for three consecutive months, then the sampling frequency may be shifted to two days in a quarter year (3 months).

— In case, the value has exceeded the specified standards, the air quality sampling shall be done twice a week. If the results of four consecutive of pollutants is within the specified standards, then fortnight monitoring may be reverted to.

3. *Effluent Standards.*—The standards for effluent discharge into sewer or steam or land, are given below :

pH	— 5.5 to 9.0
Chemical Oxygen Demand (COD)	— 250 mg/1
Total Suspended Solid (TSS)	— 100 mg/1 200 mg/1 (Land for irrigation)
Oil & Grease (O and G)	— 10 mg/1

(Monitoring frequency of these parameters shall be once in a fortnight.)

Optional parameters : All other parameters indicated in the general standards for discharge of environment pollutants under Schedule VI, shall be in addition to the effluent standards under Clause 3.

(Monitoring frequency shall be once in a year for the optional parameters.)

4. Noise Level Standards

	6.00 a.m. — 10.00 p.m.	10.00 p.m. — 6.00 a.m.
Noise level	Leq 75 dB (A)	Leq 70 dB (A)

(Monitoring frequency for noise level shall be once in fortnight.)

Occupational exposure limit of noise specified by Director-General of Mines Safety (DGMS) shall be complied with by the coal mines.

91. Noise Limit for Generator Sets run with Petrol or Kerosene

1. *Noise limit.*—Noise limit for new generator sets run with petrol or kerosene shall be as given below :

	Noise Limit from	
	September 1, 2001	September 1, 2002
Sound Power Level LwA	90 dBA	86 dBA

2. *Applicability.*—These rules shall apply to all new generator sets using petrol or kerosene as fuel, manufactured in or imported into India :

Provided that these rule shall not apply to :

(*a*) Any genset manufactured or imported for the purpose of exports outside India, or

(*b*) The genset is intended for the purpose of sample only and not for sale in India.

3. *Requirement of certification.*—Every manufacture or importer (hereinafter referred to as "supplier") of genset (hereinafter referred to as "product") to which these rules apply must have a valid certificate of type approval for all the product models being manufactured or imported after the specified dates.

4. *Verification of conformity of production (COP).*—Every supplier shall subject its products to the verification for conformity of production, by certification body specified in Clause 8, every year.

5. Sal*e of generator sets not complying with these rules*.—The sale of a product model, not having valid type approval certificate, or not complying with the noise limits, as determined by the verification for conformity of production, shall be prohibited, in India.

6. Re*quirement of conformance labelling.*—(1) The supplier of the 'product' must affix a conformance label on the product meeting the following requirements :

(*a*) The label shall be durable and legible.

(*b*) The label shall be affixed on a part necessary for normal operation of the 'product' and not normally requiring replacement during the 'product' life.

(2) The conformance label must contain the following information :

(*a*) Name and address of the supplier (if the address is described in the owners manual, it may not be included in the label.)

(*b*) Statement that "this product conforms to the Environment (Protection) Rules, 1986.

(*c*) Type approval certificate number and time phase (*i.e.* September 2001 or September 2002).

7. *Nodal agency.*—(1) The Central Pollution Control Board shall be the nodal agency for implementation of these rules.

(2) In case of any dispute or difficulty in implementation of these rules the matter shall be referred to the nodal agency.

(3) The nodal agency shall constitute a Standing Committee to advise it on all matters; including the disputed matters, related to the implementation of these rules.

8. *Certification body.*—The following agencies are authorised for type approval and for verification conformity of production.

(1) Automotive Research Association of India. Pune;

(2) National Physical Laboratory, New Delhi;

(3) Naval Science and Technology Laboratory, Visakhapatnam;

(4) Fluid Control Research Institute, Palghat; and

(5) National Aerospace Laboratory, Bangalore,

9. *Compliance and testing procedure.*—The compliance and testing procedure shall be prepared and published by Central Pollution Control Board, with the help of the certification agencies.

92. Standards for Effluents from Textile Industry

Parameter	Concentration not to exceed, milligram per litre (mg/1), except pH
pH	5.5-9.0
Total suspended solids	100
Bio-chemical oxygen demand (BOD)	30
Chemical oxygen demand (COD)	250
Total residual chlorine	1
Oil and grease	10
Total chromium as Cr	2
Sulphide as S	2
Phenolic compounds as C_6H_5OH	1

Note :

1. Where the treated effluent is discharged into municipal sewer leading to terminal treatment plant, the BOD may be relaxed to 100 mg/1 and COD to 400 mg/1.
2. The quantity of effluent (litre per kilogram of product) shall not exceed 100, 250 and 80 in composite cotton textile industry, composite woolen textile industry and textile processing industry, respectively.

93. Primary Water Quality Criteria for Bathing Waters

In a water body or its part, water is subjected to several types of uses. Depending on the types of uses and activities, water quality criteria have been specified to determine its suitability for a particular purpose. Among the various types of uses there is one use that demands highest level of water quality or purity and that is termed as "Designated Best Use" in that stretch of water body. Based on this, water quality requirements have been specified for different uses in terms of primary water quality criteria. The primary water quality criteria for bathing water are specified along with the rationale in Table 1.

Table 1

Primary Water Quality Criteria for Bathing Water

(Water used for organised outdoor bathing)

Criteria		Rationale
1. Fecal Coliform MPN/100 ml :	500 (desirable) 2500 (Maximum permissible)	To ensure low sewage contamination. Fecal Coliform and Fecal Streptococci are considered as they reflect the bacterial pathogenicity.
2. Fecal Streptococci	100 (desirable)	The desirable and permissible limits are suggested to allow for fluctuation

MPN/100 ml :	500 (Maximum permissible)	in environmental conditions such as seasonal change, changes in flow conditions etc.
2. pH :	Between 6.5-8.5	The range provide protection to the skin and delicate organs like eyes, nose, ears etc. which are directly exposed during outdoor bathing.
3. Dissolved Oxygen :	5 mg/1 or more	The minimum dissolved oxygen concentration of 5 mg/1 ensures reasonable freedom from oxygen consuming organic pollution immediately upstream which is necessary for preventing production of anaerobic gases (obnoxious gases) from sediment.
4. Biochemical Oxgen demand 3 day, 27° C	3 mg/1 or less	The Biochemical Oxygen Demand of 3 mg/1 or less of the water ensures reasonable freedom from oxygen demanding pollutants and prevent production of obnoxious gases."

(2) In Sch. VI, in Part-E relating to Noise Standards, after "A" relating to Noise Limits for Automobiles, the following shall be inserted, namely :—

"AA. *Noise limits for vehicles with effect from the 1st January, 2003.*—The following noise limits for vehicles shall be applicable from the 1st day of January, 2003. The test method to be followed shall be IS : 3028-1998.

Sl. No.	Type of vehicle	Noise Limits from 1st January, 2003, dBA
1.	Two wheeler	
	Displacement up to 80 cm^3	75
	Displacement more than 80 cm^3 but up to 175 cm^3	77
	Displacement more than 175 cm^3	80
2.	Three wheeler	
	Displacement up to 175 cm^3	77
	Displacement more than 175 cm^3	80
3.	Passengar car	75
4.	Passenger or commercial vehicle	
	Gross vehicle weight up to 4 tonne	77
	Gross vehicle weight more than 4 tonne but up to 12 tonne	80
	Gross vehicle weight more than 12 tonne	82

The existing limits on pass-by noise shall continue with the test method IS 3028-1998 till 1st January, 2003."

THE ENVIRONMENT (PROTECTION) AMENDMENT RULES, 2001

G.S.R. 72 (E), dated 6th February, 2001.—In exercise of the powers conferred by Secs. 6 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following rules further to amend the Environment (Protection) Rules, 1986, namely :—

1. (1) These rules may be called the Environment (Protection) Amendment Rules, 2001.

(2) They shall come into force on the date of their publication in the official Gazette.

2. In Schedule I,—In Serial No, 74 relating to Emission Standards for brick kilns, for the existing Paragraph III, the following shall be substituted, namely—

> "III. Existing moving chimney bull's trench kilns shall be dispensed with by 30th June, 2001 and no moving chimney kilns shall be allowed to come up :
>
> Provided that only those brick kilns shall be given extension of time who shall furnish affidavits to the concerned authority in the State giving approval for brick kilns to the effect that the prescribed standards shall be complied by them by 30th June, 2001; and no further extension of time shall be sought by them ·
>
> Provided further that the units shall submit a bank guarantee for the amount specified below, to the respective State Pollution Control Board for completion the conversion within the prescribed time frame and in case of non-compliance of the said directions, the amount of bank guarantee shall be forfeited.

—	Large scale brick kilns (more than 30,000 bricks per day)	Rs. 30.000
—	Medium scale brick kilns (between 15,000 to 30,000 bricks per day)	Rs. 20,000
—	Small scale brick kilns (less than 15,000 bricks per day)	Rs. 10,000."

---

1. Published in the *Gazette of India, Extraordinary,* Part II, Sec. 3 (*i*), dated 7th February, 2001 (w.e.f. 7th February, 2001).

THE ENVIRONMENT (PROTECTION) 2ND AMENDMENT RULES, 2001

G.S.R. 407, (E) dated 31st May, 2001[1].—In exercise of the powers conferred by Secs. 6 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following rules further to amend the Environment (Protection) Rules, 1986, namely :—

1. (1) These rules may be called the Environment (Protection) 2nd Amendment Rules, 2001.

(2) They shall come into force on the their publication in the official Gazette.

2. In the Environment (Protection) Rules, 1986, in sub-rule (8) of Rule 3, for the words, letters and figures "On and from the 1st day of June, 2001", the words, letters and figures "On and from the 1st day of June, 2001" shall be substituted.

LATEST NOTIFICATIONS UNDER THE ENVIRONMENT (PROTECTION) ACT, 1986

G.S.R. 66 (E), dated 24th January, 2000.[2]— Whereas a notification in exercise of the decision recorded in Paragraph 5 of the Resolution of the Government of India in the Ministry of Environment and Forests, vide GSR 85 (E), dated 21st February, 1991 inviting objections from concerned quarters within a period of sixty days from the date of publication of the said notification against intention for prescribing the criteria for labeling ofFINISHED LEATHER as environment friendly was published by the Ministry of Environment and Forests in G.S.R. No. 353(E), dated 23rd June, 1998.

And whereas all objections received within the said period of sixty days have been examined. Now, therefore, the Central Government notifies the criteria for FINISHED LEATHER as Environment Friendly Products as under :

1. *General Requirement* ·

   1.1. The manufacturers shall produce consent clearance as per provisions of the Water (Prevention and Control of Pollution) Act, 1974, and the Air (Prevention and Control of Pollution) Act, 1981, alongwith the authorisation for Hazardous Waste Management, if required under the Environment (Protection) Act, 1986 for seeking Eco-mark certification from the Bureau of Indian Standards.

   1.2. The product packaging shall display in brief the criteria based on which the product has been labelled environment friendly.

---

[1] Published in the *Gazette of India, Extraordinary*, Part II, Sec. 3(*i*), dated 31st May, 2001 (w.e.f. 31st May, 2001)

[2] Published in the *Gazette of India, Extraordinary*, Part II, Sec. 3(*i*), dated 27th January, 2000.

1.3. The material used for product packaging shall be recyclable or reusable or biodegradable.

2. *Product Specific Requirements :*

Sl. No.	Parameters*	Limits	Test method, as per
1.	pH of aqueous extract of leather	Not less than 3.5 and if less than 3.5, the pH difference on dilution by a factor of 10 (differential number), should not be more than 0.6	LC : 18 of IS 582 : 1970
2.	Formaldehyde, mg/kg. Max	200	**
3.	Pentachlorophenol (PCP), mg/kg, Max	5#	IS 14575 : 1998
4.	Aryl amines released from Azo-dyes (Sum parameters) ***, mg/kg, Max	30#	**
5.	Hexavalent Chromium, mg/kg, Max	3	**

* The Eco-mark for leather certifies that only Eco-related parameters are assured and the quality related parameters are through self-declaration complying buyer's requirements. In such cases, the finished leather shall carry only Eco-logo (without ISI mark.) In case the buyer's requirement calls for conformity to Indian Standards, the manufacturer that have to apply for BIS Standard mark also.

** Indian Standards on the methods of test are being developed by BIS in line with acceptable international norms.

*** The list of Aryl Amines is appended in Appendix-A.

Prevailing detectable limits.

3. Bureau of Indian Standards shall formulate/incorporate optional standards for Environment Friendly characteristics.

4. The criteria are subject to review after three years from the date of its publication in the Gazette of India. However, the Steering Committee is empowered to review the criteria earlier as and when need arises.

APPENDIX-A

List of Aryl Amines

1. 4-Aminodiphenlyl
2. Benzidine
3. 4-Chloro-toluidine
4. 2-Napthylamine
5. p-Chloraniline
6. 2, 4-Diaminoanisole
7. 4, 4-Diaminodiphenylmethane
8. 3,3-Dichlorobenzidine
9. 3, 3-Dimethoxy-benzidine
10. 3, 3-Dimethylbenzidine
11. 3, 3-Dimethyl-4, 4-diaminodiphenylmethane
12. p-Cresidin (2-Methoxy 5-methylaniline)
13. 4, 4-Methylene-bis (2-chloraniline)
14. 4, 4-Oxdianiline
14. 4, 4-Thiodianiline
16. o-Toluidine
17. 2, 4-Toluenediamine
18. 2, 4, 5-Trimethylaniline

S.O. 900 (E), dated 29th September, 2000.[1]—Whereas by notification of the Government of India in the Ministry of Environment and Forests Number S.O. 114(E), dated the 19th February, 1991 (hereinafter referred to as the said notification), the Central Government declared Coastal Stretches as Central Regulation Zone and restrictions were imposed on the setting up and expansion of industries, operations and processes etc., in the said zone;

And whereas, the Union territory of the Andaman and Nicobar Islands Administration had drawn attention of the Central Government to the difficulties being faced by the local people due to restrictions on mining of sand in the Coastal Regulation Zone in the aid territory;

And whereas, the issue has been examined by the Government of India in the Ministry of Environment and Forests;

And whereas, the Central Government is of the opinion that the said notification should be amended..

2. Now, therefore, in exercise of the powers conferred by sub-section (1) and clause (*v*) of sub-section (2) of Sec. 3 of the Environment (Protection) Act, 1986 (29 of 1986) read with sub-rules (3) and (4) of Rule 5 of the Environment (Protection) Rules, 1986, the Central Government hereby makes the following amendments in the said notification, namely :—

(*a*) In Paragraph 2, in sub-paragraph (*ix*) in the proviso :—

(*i*) for the figures, letters and words "30th day of September, 2000", the figures, letters and words "30th day of September, 2001" shall be substituted; and

---

[1] Published in the *Gazette of India, Extraordinary*, Part II, Sec. 3 (*ii*), dated 29th September, 2000.

(*ii*) for the words and figures "requirements of 1999-2000 and 2000-2001 annual plans" the word and figures "requirements of 2000-2001 and 2001-2002 annual plans" shall be substituted.

(*b*) In Annexure-I, in heading — CRZ-IV Andaman and Nicobar Islands, in sub-item (*b*) of item (*iv*), for the figures, letters and words "30th day of September, 2000" the figures, letters and words "30th day of September, 2001" shall be substituted.

* * *

S.O. 119 (E), dated 13th December, 2000.[1]—Whereas by notification of the Government of India in the Ministry of Environment and Forests, No. S.O. 60(E), dated the 27th January, 1994 (hereinafter referred to as the said notification) issued under sub-section (1) and clause (*v*) of sub-section (2) of Sec. 3 of the Environment (Protection) Act, 1986 (29 of 1986) (hereinafter referred to as the said Act) read with Cl. (*d*) of sub-rule (3) of Rule 5 of the Environment (Protection) Rules, 1986 (hereinafter referred to as the said rules), the Central Government imposed certain restrictions and prohibitions on the expansion and modernisation of any activity or the undertaking of any project, unless environment clearance has been granted by the Government;

And whereas, sub-rule (4) of Rule 5 of the said rules provides that, whenever it appears to the Central Government that it is in public interest to do so, it may dispense with the requirement of notice under Cl. (*a*) of sub-rule (3) of Rule 5 of the said rules;

And whereas, the Central Government is of the opinion that it is in public interest to dispense with the requirement of notice under Cl. (*a*) of sub-rule (3) of Rule 5 of the said rules for amending the notification;

Now, therefore, in exercise of the powers conferred by sub-section (1) and Cl. (*v*) of sub-section (2) of Sec. 3 of the said Act read with sub-rule (4) of Rule 5 of the said rules, the Central Government hereby makes the following further amendments in the said notification, namely :—

In the said notification,—

(*i*) in Paragraph 3, after Item 'c' the following item shall be inserted :—

(*d*) defence related road construction projects in border areas.".

* * *

S.O. 1129(E), dated 18th December, 2000.[2]—In exercise of the powers conferred by sub-section (3) of Sec. 3 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following amendment in the notification of the Government of India, in the Ministry of Environment and Forests Number S.O. 884(E), dated the 19th December, 1996, namely :—

In the said notification in Paragraph 1, for the words "four years", the words "four years and six months" shall be substituted.

S.O. 329 (E), dated 12th April, 2001.[1]—Whereas by the notification of the Government of India in the Ministry of Environment and Forests Number S.O. 114(E), dated the 19th February, 1991 (hereinafter referred to as the said notification), the Central Government declared Coastal Stretches as Coastal Regulation Zone (CRZ) and restrictions were imposed on the setting up and expansion of industries, operations and processes in the said zone;

And whereas objections raised by the petitioner in the High Court of Delhi in Civil Writ Petition No. 4198 of 1998 relating to delegation of powers have been duly considered by the Central Government;

And whereas issues relating to delegation of powers have been examined by the Central Government in the Ministry of environment and forests;

And whereas the Central Government that also considered the requirement of projects relating to Department of Atomic Energy and pipelines, conveying systems including transmission lines and other faceless essential for activities permissible under the notification in the CRZ areas :

And whereas the Central Government deems it necessary to harmonise the existing provisions of the notification;

And whereas the Central Government is of the opinion that it is necessary and expedient in the public interest too amend the said notification;

And whereas sub-rule (4) of Rule 5 of the Environment (Protection) Rules, 1986 provides that, "Notwithstanding anything contained in sub-rule (3), whenever it appears to the Central Government that it is in public interest to do so, it may dispense with the requirement of notice under Cl. (*a*) of sub-rule (3) of the said rules;";

---

[1] Published in the *Gazette of India, Extraordinary*, Part II, Sec. 3 (*ii*), dated 12th April, 2001.

And whereas the Central Government is of the opinion that is in public interest to dispense with the requirement of notice under Cl. (*a*) sub-rule (3) of Rule 5 for amending the said notification;

Now, therefore, in exercise of the powers conferred by sub-section (1) and Cl. (*v*) of sub-section (2) of Sec. 3 of the Environment (Protection) Act, 1986 (29 of 1986) read with sub-rules (3) and (4) of Rule 5 of the Environment (Protection) Rules, 1986, the Central Government hereby makes the following further amendment in the aforesaid notification.

2. In the said Notification, in Paragraph 2,—

(1) for sub-paragraph (*i*), the following shall be substituted, namely :—

"(*i*) setting up of new industries and expansion of existing industries, except (*a*) those directly related to water front or directly needing foreshore facilities and (*b*) Projects of Department of Atomic Energy;";

(2) in sub-paragraph (*ii*), for the existing proviso, the following shall be substituted, namely :—

"Provided that, facilities for receipt and storage of petroleum products and Liquefied Natural Gas as specified in Annexure-III appended to the notification and facilities for regasification of Liquefied Natural Gas, may be permitted within the said Zone in areas not classified as CRZ-I (*i*), subject to implementation of safety regulations including guidelines issued by the Oil Industry Safety Directorate in the Government of India, Ministry of Petroleum and Natural Gas and guidelines issued by the Ministry of Environment and Forests and subject to such further terms and conditions for implementation of ameliorative and restorative measures in relation to the environment and Forests and subject to such further terms and conditions for implementation of ameliorative and restorative measures in relation to the environment as may be stipulated by the Government of India in the Ministry of Environment and Forests;";

(3) for sub-paragraph (*viii*), the following shall be substituted, namely :—

"(*viii*) Land reclamation, bunding or disturbing the natural course of sea water except those required for construction or modernisation or expansion of ports, harbours, jetting, wharves, quays, slipways, bridges and sea-links and for other facilities that are essential for activities permissible under the notification or for control of coastal erosion and maintenance or clearing of waterways, channels and ports or for prevention of sandbars or for tidal regulators, storm water drains or for structures for prevention of salinity ingress and sweet water recharge :

Provided that reclamation for commercial purposes such as shopping and housing complexes, hotels and entertainment activities shall not be permissible;";

(4) for sub-paragraph (*ix*), the following shall be substituted, namely :—

"(*ix*) Mining of sands, rocks and other substrata materials, except (*a*) those rare minerals not available outside the CRZ areas and (*b*) exploration and extraction of Oil and Natural Gas;";

(5) for sub-paragraph (*xi*), the following shall be substituted, namely :—

"construction activities in CRZ-I except as specified in Annexure-I of this notification;".

3. In Paragraph 3, in sub-paragraph (2),—

(1) for sub-clause (*i*), the following sub-clause shall be substituted, namely :—

"(*i*) Construction activities related to projects of Department of Atomic Energy or Defence requirements for which foreshore facilities are essential such as slipways, jetties, wharves, quays; except for classified operational component of defence projects for which a separate procedure shall be followed. (Residential buildings, office buildings, hospital complexes, workshops shall not come within the definition of operational requirements except in very special case and hence shall not normally be permitted in the CRZ);";

(2) for sub-clause (*ii*), the following sub-clause shall be substituted, namely :—

"(*ii*) Operational constructions for ports and harbours and light houses and constructions for activities such as jetties, wharves, quays and slipways, pipelines, conveying systems including transmission lines;";

(3) in sub-clause (*ii*) existing provisos shall be omitted.

4. In Annexure-I, in Paragraph 6 in sub-paragraph (2),—

(1) Under heading CRZ-I, the following shall be substituted, namely :—

"No new construction shall be permitted in CRZ-I except (*a*) Projects relating to Department of Atomic Energy and (*b*) Pipelines, conveying systems including transmission lines and (*c*) Facilities that are essential for activities permissible under CRZ-I. Between the LTL and the HTL, activities as specified under Paragraph 2 (*xii*) may be permitted. In addition, between LTL and HTL in areas which are not ecologically sensitive and important, the following may be permitted : (*a*) Exploration and extraction of Natural Gas, (*b*) Activities as specified under proviso of sub-paragraph (*ii*) of Paragraph 2, and (*c*) Construction of dispensaries, schools, public rain shelters, community toilets, bridges, roads, jetties, water supply, drainage, sewerage which are required for traditional inhabitants of the Sunderbans Bio-sphere Reserve Area, West Bengal, on a case to case basis, by the West Bengal State Coastal Zone Management Authority.".

5. In Annexure-III,—

(1) in the heading, for the words "Port Areas", the words "Coastal Regulation Zone except CRZ-I-(*i*) " shall be substituted.

(2) after item (*xiii*), the following shall be inserted at the end, namely :—

"(*xiv*) Liquefied Natural Gas (LNG).".

6. Environmental clearance accorded by the Ministry of Surface Transport from 9th July, 1997 till the publication of this notification are valid. All proposals for environmental clearance pending with the Ministry of Surface Transport stand transferred to Ministry of Environment and Forests from the date of publication of this notification.

S.O. 535 (E), dated 18th June, 2001[1].—In exercise of the powers conferred by sub-section (3) of Sec. 3 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following amendment in the notification of the Government of India, in the Ministry of Environment and Forests, Number S.O. 884(E), dated the 19th December, 1996, namely :—

In the said notification in Paragraph I, for the words "four years six months", the words "five years" be substituted.

CHAPTER I

UNITED NATIONS ON POLLUTION

Resolution of United Nations General Assembly on problems of human environment.

The Economic and Social Council of the United Nations passed a resolution No. 1346 (XLV) on the 30th July, 1968 on the question of convening an International Conference on problems of human environment. This was followed by a resolution No. 2398 (XXIII) passed on the 3rd December, 1968 by the United Nations General Assembly. The resolution runs thus :

"The General Assembly,

Noting that the relationship between man and his environment is undergoing profound changes in the wake of modern scientific and technological developments;

Aware that these developments, while offering unprecedented opportunities to change and shape the environment of man to meet his needs and aspirations, also involve grave dangers, if not properly controlled;

Noting in particular the continuing and accelerating impairment of the quality of the human environment caused by such factors as air and water pollution erosion and other forms of solid deterioration, waste, noise and the secondary effects of biocides, which are accentuated by rapidly increasing population and accelerating urbanization;

Concerned about the consequent effect on the condition of man, his physical, mental and social well-being, his dignity and his enjoyment of basic human rights, in developing as well as developed countries;

Convinced that increased attention to the problems of the human environment is essential for sound economic and social development;

Expressing the strong hope that the developing countries will, through appropriate international co-operation, derive particular benefit from the mobilization of knowledge and experience about the problems of the human environment, enabling them, *inter alia*, to forestall the occurrence of many such problems;

Having considered Economic and Social Council Resolution 1346 (XLV) of 30th July, 1968 on the question of convening an international conference on the problems of the human environment;

Bearing in mind the important work on some problems of the human environment at present being undertaken by organizations in the United Nations systems, in particular the United Nations (including the Economic Commission for Europe), the International Labour Organization, the Food and Agriculture Organization of the United Nations, the United Nations Educational, Scientific and Cultural Organization, the World Health Organization, the World Meterological Organisation, the Inter-Government Maritime Consultative Organisation and the International Atomic Energy Agency, as referred to in the report of the Secretary-General on activities of United Nations Organisations and programmes relevant to the human environment,

Aware of the important work being done on the problems of the human environment by Governments as well as by Inter-Governmental organizations such as the Organization of African Unity and Non-governmental organizations, such as, the International Union for Conservation of Nature and Natural Resources, the International Council of Scientific Unions and the International Biological Programme;

Bearing in mind the recommendations of the Inter-Governmental Conference of Experts on the Scientific Basis for Rational Use and Conservation of the Resources of the Biosphere, convened by the United Nations Educational, Scientific and Cultural Organization with the participation of the United Nations, the Food and Agriculture Organization of the United Nation and the World Health Organization;

Convinced of the need for intensified action at the national, regional and international level in order to limit and where possible, eliminate the impairment of the human environment and in order to protect and improve the natural surrounding in the interest of man;

Desiring to encourage further work in this field and to give it a common outlook and direction;

Believing it desirable to provide a framework for comprehensive consideration within the United Nations of the problems of the human environment in order to focus the attention of Governments and public opinion on the importance and urgency of this question and also to identify those aspects of it that can only or best be solved through international co-operation and agreement;

1. *Decide;* in furtherance of the objectives set out above to convene in 1972 a United Nations Conference on the Human Environment;

2. *Requests* the Secretary-General in consultation with the Advisory Committee on the Application of Science and Technology to Development, to submit to the General Assembly at its twenty-fourth session, through the Economic and Social Council at its forty-seventh session, a report concerning :

(*a*) the nature, scope and progress of work at present being done in the field of the human environment;

(*b*) the main problems facing developed and developing countries in this area, which might with particular advantage be considered at such a conference, including the possibilities for increased international co-operation, expecially as they relate to economic and social development in particular of the developing countries;

(*c*) possible methods of preparing for the Conference and the time necessary for such preparations;

(*d*) a possible time and place for the Conference;

(*e*) the range of financial implications for the United Nations of the holding of the Conference.

3. Further requests the Secretary-General, in preparing the report, to consult Governments of States, Members of the United Nations and members of the specialized agencies and of the International Atomic Energy Agency and appropriate organizations of the United Nations system and to draw on contributions from appropriate inter-governmental and non-governmental organizations".

In pursuance of this resolution, the Secretary-General submitted a report which came up for consideration by the General Assembly at its 24th Regular Session and on 15th December, 1969 it passed the following resolution :

"The General Assembly,

Resolution on report of Secretary-General on problems of human environment.

In pursuance of its decision in resolution 2398 (XXIII) of 3rd December, 1968 to convene in 1972 a United Nations Conference on the Human Environment and to begin immediately preparation for the Conference;

Having considered with appreciation the report of the Secretary-General called for in the above mentioned resolution;

Having considered the relevant chapter of the report of the Economic and Social Council;

Taking into account the recommendation of the Economic and Social Council in the matter;

Having taken cognizance of the note by the Secretary-General of 21st October, 1969.

Reaffirming the importance and urgency of the problems of the human environment and underlining the necessity for complete preparatory arrangements for the 1972 United Nations Conference on the Human Environment to become operative as soon as possible;

Recognizing the important work on the problems of the human environment that is at present being undertaken and planned by the organizations in the United Nations system, other inter-governmental organizations, non-governmental organizations and national Governments.

1. *Endorses* in general the proposals contained in the report of the Secretary-General regarding the purposes and objectives of the United Nationals Conference on the Human Environment;

2. *Affirms* that it should be the main purpose of the Conference to serve as a practical means to encourage, and to provide guidelines for, action by Governments and international organizations designed to protect and improve the human environment, and to remedy and prevent its impairment, by means of international co-operation, bearing in mind the particular importance of enabling developing countries to forestall the occurrence of such problems;

3. *Entrusts* to the Secretary-General the overall responsibility for organizing and preparing for the Conference, bearing in mind the view expressed during the debates of the forty-seventh session of the Economic and Social Council and the twenty-fourth session of the General Assembly;

4. *Establishes* a Preparatory Committee for the United Nations Conference on the Human Environment consisting of highly qualified representatives nominated by the Governments of Argentine, Brazil, Canada, Costa Rica, Cyprus, Czechoslovakia, France, Ghana, Guinea, India, Iran, Italy, Jamaica, Japan, Mauritius, Mexico, the Netherlands, Nigeria, Singapore, Sweden, Togo, The Union of Soviet Socialist Republics, the United Arab Republic, the United Kingdom of Great Britain and Northern Ireland, the United States of America, Yugoslavia and Zambia—to advise the Secretary General;

5. *Requests* the Secretary-General to set up immediately a small conference secretariat, by drawing with the agreement of the specialized agencies concerned, particularly upon regular staff of the United Nations system, and to appoint at the appropriate time, a Secretary-General of the Conference;

6. *Further requests* the Secretary-General to pursue the consultations on the preparations for the Conference, undertaken by him in accordance with the General Assembly Resolution 3298 (XXIII), to take account of the results of other international conference such as the Conference on the Problems of Environment organized by the Economic Commission for Europe and scheduled to take place at Prague in 1971, and to drawn on contributions from appropriate inter-governmental and non-governmental organizations;

7. *Invites* the specialized agencies, the International Atomic Energy Agency, and the Advisory Committee on the Application of Science and Technology to Development to collaborate closely with the Secretary-General in the preparation for the Conference and to assist, as appropriate, in the work of the Preparatory Committee;

8. *Invites* the inter-governmental and non-governmental organizations concerned to lend every possible assistance in the preparations for the Conference;

9. *Requests* the Secretary-General, in collaboration with the Preparatory Committee, to take the necessary steps, as part of the preparations for the Conference, to bring to public attention the nature and importance of the problems of the human environment;

10. *Believes it essential* that all participation countries be enabled to take an active part in the preparation for the Conference and the Conference itself, and requests the Secretary-General, to investigate what concrete steps could be taken to this end;

11. *Notes* the outline of the range of the possible financial implications for the United Nations of the holding of the Conference presented in Secretary-General's reports and requests the Secretary-General, in the light of the views expressed during the debates of the forty-seventh session of the Economic and Social Council and the twenty-fourth session of the General Assembly, to make all efforts to reduce the costs of the Conference;

12. *Decides* that the Conference should be of two week's duration and requests the Secretary-General to take full account of this fact in preparing for the Conference;

13. *Believes* that, in order for the Conference to achieve its objectives, it is essential that its agenda be selective, its organizational structure be simple and efficient and that the documentation be kept reasonably limited;

14. *Accepts with appreciation* the invitation of the Government of Sweden to hold the Conference in Sweden in June, 1972;

15. *Requests* the Secretary-General to submit and brief progress report to the General Assembly at its twenty-fifth session through the Economic and Special Council at its forty-ninth session;

16. *Decides* to consider the progress of the preparatory work and to take the necessary further decisions at its twenty-fifth and twenty-sixth session".

Also on 15th December, 1969 at the 1834th plenary meeting, the General Assembly, without objection, adopted the following decision on the recommendation of the Second Committee (A/7866) :

"The General Assembly decides that any interested Member State not appointed to the Preparatory Committee for the United Nationals Conference on the Human Environment may designate highly qualified representatives to act as accredited observers at sessions of the Committee, with the right to participate in its discussions".

Proclamation of United Nations Conference on Human Environment.

The United Nations Conference on Human Environment took place at Stockholm from the 5th to 16th June, 1972 and the following proclamation was made :

"1. Man is both creature and moulder of his environment which gives him physical sustenance and affords him the opportunity for intellectual, moral, social and spiritual growth. In the long and tortuous evolution of the human race on this planet a stage has been reached when through the rapid acceleration of science and technology, man has acquired the power to transform his environment in countless ways and on an unprecedented scale. Both aspects of man's environment, the natural and the man-made, are essential to his well-being and to the enjoyment of basic human rights—even the right to life itself.

2. The protection and improvement of the human environment is a major issue which affects the well-being of peoples and economic development throughout the world; it is the urgent desire of the peoples of the whole world and the duty of all Governments.

3. Man has constantly to sum up experience and go on discovering, inventing, creating and advancing. In our time man's capability to transform his surroundings, if used wisely, can bring to all peoples the benefits of development and the opportunity to enhance the quality of life. Wrongly or heedlessly applied, the same power can do incalculable harm to human beings and the human environment. We see around us growing evidence of man-made harm in many regions of the earth : dangerous levels of pollution in water, air, earth and living beings; major and undesirable disturbances to the ecological balance of the biosphere; destruction and depletion of irreplaceable resources; and gross deficiencies harmful to the physical, mental and social health of man, in the man-made environment; particularly in the living and working environment.

A point has been reached in history when we must shape our actions throughout the world with a more prudent care for their environmental consequences. Through ignorance or indifference we can do massive and irreversible harm to the earthly environment on which our life and well-being depend. Conversely, through fuller knowledge and wiser action, we can achieve for ourselves and our posterity a better life in an environment more in keeping with human needs and holes. There are broad vistas for the enhancement of environmental quality and the creation of a good life. What is needed in as enthusiastic but calm state of mind and intense but orderly work. For the purpose of attaining freedom in the world of nature, man must use knowledge to build in collaboration with nature a better environment. To defend and improve the human environment for present and future generations has become an imperative goal for mankind—a goal to be pursued together with, and in harmony with, the established and fundamental goals of peace and of world-wide economic and social development.

To achieve this environmental goal will demand the acceptance of responsibility by citizens and communities and by enterprises and institutions at every level, all sharing equitably in common efforts. Individuals in all walks of life as well as organizations in many fields, by their values and the sum of their actions, will shape the world environment of the future. Local and National Governments will bear the greatest burden for large-scale environmental policy and action within their jurisdictions. International co-operation is also needed in order to raise resources to support the developing countries carrying out their responsibilities in this field. A growing class of environmental problems, because they are regional or global in extent or because they affect the common international realm, will require extensive co-operation among nations and action by international organizations in the common interest. The Conference calls upon the Governments and peoples to exert common effort for the preservation and improvement of the human environment, for the benefit of all the people and for their posterity".

Common conventions of nations on the issue of pollution etc.

The proclamation also contained certain common conventions of the participant nations and made certain recommendations on development and environment. The common convictions stated include the conviction that the discharge of toxic substances or of other substances and the release of heat in such quantities or concentrations as to exceed the capacity of environment to render them harmless must be halted in order to ensure that serious or irreversible damage is not inflicted upon eco-system, that States shall take all possible steps to prevent pollution of the seas so that hazards to human health, harm to living resources and marine life, damage to the amenities or interference with other legitimate uses of seas is avoided that the environmental polices would enhance and not adversely affect the present and further development potential of development countries, that science and technology as part of their contributions to economic and social development must be applied with identification, avoidance and control of environmental risks and the solution of environmental problems and for the common good of mankind that States have the responsibility to ensure that activities of exploitation of their own resources within their jurisdiction are controlled and do not cause damage to the environment of the States or areas beyond the limit of national jurisdiction, that it will be essential in all cases to consider the systems of values prevailing in each country and the extent of the applicability of standards which are valid for the most advanced countries but which may be inappropriate and of unwarranted social cost and that man and his environment must be spared the effects of nuclear weapons and all other means of mass destruction. These are only some of the statements of principles proclaimed by the Stockholm Conference. Some of the important recommendations made by the Stockholm Conference are : That the appropriate regional organizations give full consideration to the following steps :

(*a*) Preparing short-term and long-term plans at regional, sub-regional and sectoral levels for the study and identification of the major environmental problems faced by the countries of the region concerned as well as the special problems of the last-developed countries of the region and of countries with coastlines and inland lakes and rivers exposed to the risk of marine and other forms of pollution;

(*b*) evaluating the administrative, technical and lefial solutions to various environmental problems in terms of both preventive and remedial measures, taking into account possible alternative and/or multi-disciplinary approaches to development;

(*c*) preparation, within the framework of international agreement, of legislative measures designed to protect marine (and fresh-water) fisheries resources within the limits of their national jurisdiction.

Governments are to take the necessary steps to ensure :

(*a*) That all countries present at the Conference agree not to invoke environmental concerns as a pretext for discriminatory trade policies or for reduced access to markets and recognize further that the burdens of the environmental policies of the industrialized countries should not be transferred, either directly or indirectly, to the developing countries. As a general rule, no country should solve or disregard its environmental problems at the expense of other countries;

(*b*) that where environmental concerns lead to restrictions on trade, or to stricter environmental standards with negative effects on exports, particularly from developing countries, appropriate measures for compensation should be worked out within the frame work of existing contractual and industrial arrangements and any new such arrangements that can be worked out in the future;

(*c*) that the General Agreement of Tariffs and Trade, among other international organizations, could be used for the examination of the problems, specifically through the recently established Group on Environmental Measures and International Trade and through its general procedure for bilateral and multilateral adjustment of differences;

(*d*) that whenever possible (that is, in cases which do not require immediate discontinuation of imports), countries should inform their trading partners in advance about the intended action in order that there might be an opportunity to consult within the GATT Group on Environmental Measures and International Trade, among other international organizations. Assistance in meeting the consequences of stricter environmental standards ought to be given in the form of financial or technical assistance for research ought to be given in the form of financial or technical assistance for research with a view to removing the obstacles that the produces of developing countries have encountered;

(*e*) that all countries agree that uniform environmental standards should not be expected to be applied universally by all countries with respect to given industrial processes or products except in those cases where environmental disruption may constitute a concern to other countries. In addition, in order to avoid an impairment of the access of the developing countries to the markets of the industrialized countries because of differential product standards, Governments should aim at world-wide harmonization of such standards environmental standards should be established, at whatever levels are necessary, to safeguard the environment, and should not be directed towards gaining trade advantages;

(*f*) that the Governments and the competent international organizations keep a close watch on medium and long-term trends in international trade and take measures with a view to promoting :

(*i*) the exchange of environmental protection technologies;

(*ii*) international trade in natural products and commodities which compete with synthetic products that have a greater capacity for pollution.

That the Secretary-General ensure :

(*a*) that appropriate steps shall be taken by the existing United Nations organizations to identify the major threats to exports, particularly those of developing countries, that arise from environmental concerns, their character and severity, and the remedial action that may be envisaged;

(*b*) that the United Nations systems, in co-operation with other governmental and non-governmental agencies working in this field, should assist Governments to develop mutually acceptable common international environmental standards on products which are considered by Governments to be of significance in foreign trade. Testing and certification procedures designed to ensure that the productions conform to these standards should be such as to avoid arbitrary and discriminatory actions that might affect the trade of developing countries.

In *International Law of Pollution*, by James Barros and Doulas M. Jhonston at pages 304, 305 and 306, it was stated :

(*a*) The Secretary-General in co-operation with other international bodies as appropriate, should examine the extent to which the problems of pollution could be ameliorated by a reduction in the current levels of production and in the future rate of growth of the production of synthetic products and substitutes which, in their natural form, could be produced by developing countries and make recommendations for national and international action;

(*b*) That Governments of the developing countries consider fully the new opportunities that may be offered to them to establish industries and/or expand existing industries in which they may have comparative advantages because of environmental considerations, and that special care be taken to apply the appropriate international standards on environment in order to avoid the creation of pollution problems in developing countries;

(*c*) That the Secretary-General, in consultation with appropriate international agencies, undertake a full review of the practical implications of environmental concerns in relation to distribution of future industrial capacity and, in particular, to ways in which the developing countries may be assisted to take advantage of opportunities and to minimise risks in this area. It being recognized that it is in the interest of mankind that the technologies for protecting and improving the environment be employed universally, it is recommended that the Secretary-General be asked to undertake studies in consultation with Governments and appropriate international agencies, to find means by which environmental technologies may be made available for adoption by developing countries under terms and conditions that encourage their wide distribution without constituting an unacceptable burden to developing countries.

That the Secretary-General, in collaboration with appropriate international agencies, take steps to ensure that the environmental considerations of an international nature related to the foregoing recommendations be integrated into the review and appraisal of the International Development Strategy for the Second Development Decade in such a way that the flow of international aid to developing countries is not hampered. Recommendations for national action, proposed by the Secretary-General of the Conference, shall be referred to take into account in the review and appraisal process during the consideration of matters for national action as included in the International Development Strategy. It should further be ensured that the pre-occupation of developed countries with their own environmental problems should not effect the flow of assistance to developing countries, and that this flow should be adequate to meet the additional environmental requirements of such countries.

CHAPTER II

UNITED NATIONS CONVENTION ON CLIMATE CHANGE

The Parties to this Convention

Acknowledging that change in the Earth's climate and its adverse effects are a common concern of humankind,

Concerned that human activities have been substantially increasing the atmospheric concentrations of greenhouse gases, that these increases enhance the natural greenhouse effect, and that this will result on average in an additional effect that this will result on average in an additional warming of the Earth's surface and atmosphere and may adversely affect natural ecosystems and humankind,

Noting that the largest share of historical and current global emissions of greenhouse gases has originated in developed countries, that per capita emissions in developing countries are still relatively low and that the share of global emissions originating in developing countries will grow to meet their social and development needs,

Aware of the role and importance in terrestrial and marine ecosystems of sinks and reservoirs of greenhouse gases,

Noting that there are many uncertainties in predictions of climate change, particularly with regard to the timing, magnitude and regional patterns thereof,

Acknowledging that the global nature of climate change calls for the widest possible cooperation by all countries and their participation in an effective and appropriate international response, in accordance with their common but differentiated responsibilities and respective capabilities and their social and economic conditions,

Recalling the pertinent provisions of the Declaration of the United Nations Conference on the Human Environment, adopted at Stockholm on 16 June, 1972,

Recalling that States have, in accordance with the Charter of the United Nations and the principles of international law, the sovereign right to exploit their own resources pursuant to their own environmental and developmental policies, and the responsibility to ensure that activities within their jurisdiction or control do not cause damage to the environment of other States or of areas beyond the limits of national jurisdiction,

Reaffirming the principle of sovereignty of States in international cooperation to address climate change,

Recognising that States should enact effective environmental legislation, that environmental standards, management objectives and priorities should reflect the environmental and developmental context to which they apply, and that standards applied by some countries may be inappropriate and of unwarranted economic and social cost to other countries, in particular developing countries,

Recalling the provisions of the General Assembly resolution 44/228 of 22nd December, 1989 on the United Nations Conference on Environment and Development; and resolutions 43/53 of 6 December, 1988, 44/207 of

22nd December, 1989, 45/212 of 21 December, 1990 and 46/169 of 19 December, 1991 on protection of global climate for present and future generations of mankind,

Recalling also the provisions of the General Assembly resolution 44/206 of 22 December, 1989 on the possible adverse effects of sea level rise on islands and coastal areas particularly low lying coastal areas and the pertinent provisions of the General Assembly resolution 44/172 of 19 December, 1989 on the implementation of the Plan of Action to Combat Desertification,

Recalling further the Vienna Convention for the Protection of the Ozone Layer, 1985 and the Montreal Protocol on Substances that Deplete the Ozone Layer, 1987 as adjusted and amended on 29 June, 1990,

Noting the Ministerial Declaration of the Second World Climate Conference adopted on 7 November, 1990,

Conscious of the valuable analytical work being conducted by many States on climate change and of the important contributions of the World Meteorological Organisation, the United Nations Environment Programme and other organs, organisations and bodies of the United Nations system, as well as other international and inter governmental bodies, in the exchange of results of scientific research and the coordination of research,

Recognising that steps required to understand and address climate change will be environmentally, socially and economically most effective if they are based on relevant scientific, technical and economic considerations and continually re-evaluated in the light of new finding in these areas,

Recognising that various actions to address climate change can be justified economically in their own right and can also help in solving other environmental problems,

Recognising also the need for developed countries to take immediate action, in a flexible manner on the basis of clear priorities, as a first step towards comprehensive response strategies at the global, national and where agreed, regional levels that take into account all greenhouse gases, with due consideration of their relative contributions to the enhancement of the greenhouse effect,

Recognising further that low lying and other small island countries and low lying coastal, arid and semi-arid areas or areas liable to floods, drought and desertification and developing countries with fragile mountainous ecosystems are particularly vulnerable to the adverse effects of climate change,

Recognising the special difficulties of those countries, especially developing countries, whose economies are particularly dependent on fossil fuel production, use and exploitation, as a consequence of action taken on limiting greenhouse gas emissions,

Affirming that responses to climate change should be coordinated with social and economic development in an integrated manner with a view to avoiding adverse impacts on the latter, taking into full account the legitimate priority needs of developing countries for the achievement of sustained economic growth and the eradication of poverty, *Recognising* that all countries, especially developing countries, need access to resources required to achieve sustainable social and economic development and that, in order for developing countries to progress towards that goal, their energy consumption will need to grow taking into account the possibilities for achieving greater energy efficiency and for controlling greenhouse gas emissions in general, including through the application of new technologies on terms which make such an application economically and socially beneficial,

Determined to protect the climate system for present and future generations.

Have agreed as follows :

Article 1. Definitions

For the purposes of this Convention :

1. "Adverse effects of climate change" means changes in the physical environment or biota resulting from climate change which have significant deleterious effects on the composition, resilience or productivity of natural and managed ecosystems or on the operation of socio-economic systems or on human health and welfare.
2. "Climate change" means a change of climate which is attributed directly or indirectly to human activity that alters the composition of the global atmosphere and which is in addition to natural climate variability observed over comparable time periods.
3. "Climate system" means the totality of the atmosphere, hydrosphere, biosphere and geosphere and their interactions.
4. "Emissions" means the release of greenhouse gases and/or their precursors into the atmosphere over a specified area and period of time.
5. "Greenhouse gases" means those gaseous constituents of the atmosphere, both natural and anthropogenic, that absorb and re-emit infrared radiation.
6. "Regional economic integration organisation" means an organisation constituted by sovereign States of a given region which has competence in respect of matters governed by this Convention or its protocols and has been duly authorised, in accordance with its internal procedures, to sign, ratify, accept, approve or accede to the instruments concerned.
7. "Reservoir" means a component or components of the climate system where a greenhouse gas or a precursor of a greenhouse gas is stored.
8. "Sink" means any process, activity or mechanism which removes a greenhouse gas, an aerosol or a precursor of a green house gas from the atmosphere.
9. "Source" means any process or activity which releases a greenhouse gas, an aerosol or a precursor of a greenhouse gas into the atmosphere.

Article 2. Objective

The ultimate objective of this Convention and any related legal instruments that the Conference of the Parties may adopt is to achieve, in accordance with the relevant provisions of the Convention, stabilisation of greenhouse gas concentrations in the atmosphere at a level that would prevent dangerous anthropogenic interference with the climate system. Such a level should be achieved within a time frame sufficient to allow ecosystems to adapt naturally to climate change, to ensure that food production is not threatened and to enable economic development to proceed in a sustainable manner.

Article 3. Principles

In their actions to achieve the objective of the Convention and to implement its provisions, the Parties shall be guided, *inter alia*, by the following :

1. The Parties should protect the climate system for the benefit of present and future generations of humankind, on the basis of equity and in accordance with their common but differentiated responsibilities and respective capabilities. Accordingly, the developed country Parties should take the lead in combating climate change and the adverse effects thereof.
2. The specific needs and special circumstances of developing country Parties, especially those that are particularly vulnerable to the adverse effects of climate change, and of those Parties, especially developing country Parties, that would have to bear a disproportionate or abnormal burden under this Convention, should be given full consideration.
3. The Parties should take precautionary measures to anticipate, prevent or minimise the causes of climate change and mitigate its adverse effects. Where there are threats of serious or irreversible damage, lack of full scientific certainty should not be used as a reason for postponing such measures, taking into account that policies and measures to deal with climate change should be cost-effective so as to ensure global benefits at the lowest possible cost. To achieve this, such policies and measures should take into account different socio-economic contexts, be comprehensive, cover all relevant sources, sinks and reservoirs for greenhouse gases and adaptation, and comprise all economic sectors. Efforts to address climate change may be carried out cooperatively by interested Parties.
4. The Parties have a right to, and should, promote sustainable development. Policies and measures to protect the climate system against human-induced change should be appropriate for the specific conditions of each Party and should be integrated with national development programmes, taking into account that economic growth is essential for adopting measures to address climate change.
5. The Parties should cooperate to promote a supportive and open

international economic system that would lead to sustainable economic growth and development in all Parties, particularly developing country Parties, thus enabling them better to address the problems of climate change. Measures taken to combat climate change, including unilateral ones, should not constitute a means of arbitrary or unjustifiable discrimination or a disguised restriction on international trade.

Article 4. Commitments

1. All Parties, taking into account their common but differentiated responsibilities and their specific national and regional development priorities, objectives and circumstances, shall :

(*a*) Develop, periodically update, publish and make available to the Conference of the Parties in accordance with Article 12, national inventories of emissions from sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, using comparable methodologies to be agreed upon by the Conference of the Parties;

(*b*) Formulate, implement, publish and regularly update national and, where appropriate, regional programmes containing measures to mitigate climate change by addressing anthoropogenic emissions, by sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, and measures to facilitate adequate adaptation to climate change;

(*c*) Promote and cooperate in the development, application and diffusion, including transfer of technologies, practices and processes that control, reduce or prevent anthropogenic emissions of greenhouse gases in all relevant sectors, including the energy, transport, industry, agriculture, forestry and waste management sectors;

(*d*) Promote sustainable management and promote and co-operate in the conservation and enhancement, as appropriate, of all sinks and reservoirs of all greenhouse gases not controlled by the Montreal Protocol, including biomass, forests and oceans as well as other terrestrial, coastal and marine ecosystems;

(*e*) Cooperate in preparing for adaptation to the impacts of climate change : develop and elaborate appropriate and integrated plans for coastal zone management, water resources and agriculture, and for the protection and rehabilitation of areas, particularly in Africa, affected by drought and desertifications, as well as floods;

(*f*) Take climate change considerations into account, to the extent feasible, in their relevant social, economic and environmental policies and actions and employ appropriate method for example impact assessments, formulated and determined nationally, with a view to minimising adverse effects on the economy, on public health and on the quality of the environment of projects or measures undertaken by them to mitigate or adapt to climate change;

(*g*) Promote and cooperate in scientific, technological, technical, socio-economic and other research, systematic observation and development of data archives related to the climate system and intended to further the understanding and to reduce or climate the remaining uncertainties regarding causes, effects, magnitude and timing of climate change and the economic and social consequences of various response strategies;

(*h*) Promote and cooperate in the full, open and prompt exchange of relevant scientific, technological, technical, socio-economic and legal information related to the climate system and climate change, and to the economic and social consequences of various response strategies;

(*i*) Promote and cooperate in education, training and public awareness related to climate change and encourage the widest participation in this process, including that of non-governmental organisations; and

(*j*) Communicate to the Conference of the Parties, information related to implementation, in accordance with Article 12.

2. The developed country Parties and other Parties included in Annex I commit themselves specifically as provided for in the following :

(*a*) Each of these parties shall adopt national policies and take corresponding measures on the mitigation of climate change, by limiting its anthropogenic emissions of greenhouse gases and protecting and enhancing its greenhouse gas, sinks and reservoirs. These policies and measures will demonstrate that developed countries are taking the lead in modifying longer-term trends in anthropogenic emissions consistent with the objective of this Convention, recognising that the return by the end of the present decade to earlier levels of anthropogenic emissions of carbon dioxide and other greenhouse gases not controlled by the Montreal Protocol would contribute to such modification, and taking into account the differences in these Partie's starting points and approaches, economic structures and resource bases, the need to maintain strong and sustainable economic growth, available technologies and other individual circumstances, as well as the need for equitable and appropriate contributions by each of these Parties to the global effort regarding that objective. These Parties may implement such policies and measures jointly with other Parties and may assist other Parties in contributing to the achievement of the objective of the Convention and, in particular that of this subparagraph;

(*b*) In order to promote progress to this end, each of these Parties shall communicate, within six months of the entry into force of the Convention for it and periodically thereafter, and in accordance with Article 12, detailed information on its policies and measures referred to in subparagraph (*a*) above, as well as on its resulting projected emissions from sources and removals by sinks of greenhouse gases for the period referred to in that subparagraph, with the aim of returning individually or jointly to their 1990 levels these anthoropogenic emissions of carbon dioxide and other greenhouse gases. This information will be reviewed by the Conference of the Parties, at its first session and periodically thereafter, in accordance with Article 7;

(*c*) Calculations of emissions by sources and removals by sinks of greenhouse gases for the purposes of subparagraph (*b*) above should take into account the best available scientific knowledge, including the effective capacity of sinks and the respective contributions to global warming of such gases. The Conference of the Parties shall consider and agree on methodologies for these calculations at its first session and review them regularly thereafter;

(*d*) The Conference of the Parties shall, at its first session, review the adequacy of subparagraphs (*a*) and (*b*) above. Such review shall be carried out in the light of the best available scientific information and assessment on climate change and its impacts, as well as relevant technical, social and economic information. Based on this review, the Conference of the Parties shall take appropriate action, which may include the adoption of amendments to the commitments in subparagraphs (*a*) and (*b*) above. The Conference of the Parties, at its first session, shall also take decisions regarding criteria for joint implementation as indicated in subparagraph (*a*) above. A second review of subparagraphs (*a*) and (*b*) shall take place not later than 31st December, 1998, and thereafter at regular intervals determined by the Conference of the Parties, until the objective of the Convention is met;

(*e*) Each of these Parties shall :

(*i*) coordinate as appropriate with other such Parties, relevant economic and administrative instruments developed to achieve the objective of the Convention; and

(*ii*) identity and periodically review its own policies and practices which encourage activities that lead to greater levels of anthropogenic emissions of greenhouse gases not controlled by the Montreal Protocol than would otherwise occur;

(*f*) The Conference of the Parties shall review, not later than 31st December, 1998, available information with a view to taking decisions regarding such amendments to the lists in annexes I and II as may be appropriate, with the approval of the Party concerned;

(*g*) Any Party not included in annex I may, in its instrument of ratification, acceptance, approval or accession, or at any time thereafter, notify the Depositary that it intends to be bound by subparagraphs (*a*) and (*b*) above. The Depositary shall inform the other signatories and Parties of any such notification.

3. The developed country Parties and other developed Parties included in annex II shall provide new and additional financial resources to meet the agreed full costs incurred by developing country Parties in complying with their obligations under Article 12, paragraph 1. They shall also provide such financial resources, including for the transfer of technology, needed by the developing country Parties to meet the agreed full incremental costs of implementing measures that are covered by paragraph 1 of this Article and that are agreed between a developing country party and the international entity or entities referred to in Article 11, in accordance with that Article. The implementation of these commitments shall take into account the need for adequacy and predictability in the flow of funds and the importance of appropriate burden sharing among the developed country Parties.

4. The developed country Parties and other developed Parties included in annex II shall also assist the developing country parties that are particularly vulnerable to the adverse effects of climate change in meeting costs of adaptation to these adverse effects.

5. The developed country Parties and other developed Parties included in annex II shall take all practicable steps to promote, facilitate and finance, as appropriate, the transfer of, or access to, environmentally sound technologies and know-how to other Parties, particularly developing country Parties, to enable them to implement the provisions of the Convention. In this process, the developed country Parties shall support the development and enhancement of endogenous capacities and technologies of developing country Parties. Other Parties and organisations in a position to do so may also assist in facilitating the transfer of such technologies.

6. In the implementation of their commitments under paragraph 2 above, a certain degree of flexibility shall be allowed by the Conference of the Parties to the Parties included in annex I undergoing the process of transition to a market economy, in order to enhance the ability of these Parties to address climate change, including with regard to the historical level of anthropogenic emissions of greenhouse gases not controlled by the Montreal Protocol chosen as a reference.

7. The extent to which developing country Parties will effectively implement the commitments under the Convention will depend on the effective implementation by developed country Parties of their commitments under the Convention related to financial, resources and transfer of technology and will take fully into account that economic and social development and poverty eradication are the first and overriding priorities of the developing country Parties.

8. In the implementation of the commitments in this Article, the Parties shall give full consideration to what actions are necessary under the Convention, including actions related to funding, insurance and the transfer of technology, to meet the specific needs and concerns of developing country Parties arising from the adverse effects of climate change, and/or the impact of the implementation of response measures, especially on :

(*a*) Small island countries;

(*b*) Countries with low-laying coastal areas;

(*c*) Countries with arid and semi-arid areas, forested areas and areas liable to forest decay;

(*d*) Countries with areas prone to natural disasters;

(*e*) Countries with areas liable to drought and desertification;

(*f*) Countries with areas of high urban atmospheric pollution;

(*g*) Countries with areas with fragile ecosystems including mountainous ecosystems;

(*h*) Countries whose economies are highly dependent on income generated from the production, processing and export, and/or on consumption of fossil fuels and associated energy-intensive products; and

(*i*) Land-locked and transit countries.

Further, the Conference of the Parties may take actions, as appropriate, with respect to this paragraph.

9. The Parties shall take full account of the specific needs and special situations of the least developed countries in their actions with regard to funding and transfer of technology.

10. The Parties shall, in accordance with Article 10, take into consideration in the implementation of the commitments of the Convention the situation of Parties, particularly developing country Parties, with economies that are vulnerable to the adverse effects of the implementation of measures to respond to climate change. This applies notably to Parties with economies that are highly dependent on income generated from the production, processing and export, and/or consumption of fossil fuels and associated energy-intensive products and/or the use of fossil fuels for which such Parties have serious difficulties in switching to alternatives.

Article 5. Research and Systematic Observation

In carrying out their commitment under Article 4, paragraph 1 (*g*), the Parties shall :

(*a*) Support and further develop, as appropriate, international and intergovernmental programmes and networks or organisations aimed at defining, conducting, assessing and financing research, data collection and systematic observation, taking into account the need to minimise duplication of effort;

(*b*) Support international and intergovernmental efforts to strengthen systematic observation and national scientific and technical research capacities and capabilities, particularly in developing countries, and to promote access to and the exchange of data and analyses thereof obtained from areas beyond national jurisdiction; and

(*c*) Take into account the particular concerns and needs of developing countries and cooperate in improving their endogenous capacities and capabilities to participate in these efforts referred to in subparagraphs (*a*) and (*b*) above.

Article 6. Education, Training and Public Awareness

In carrying out their commitments under Article 4, paragraph 1(*i*), the Parties shall :

(*a*) Promote and facilities at the national and, as appropriate, subregional and regional levels, and in accordance with national laws and regulations and within their respective capacities;

 (*i*) The development and implementation of education and public awareness programmes on climate change and its effects;

 (*ii*) Public access to information on climate change and its effects;

 (*iii*) Public participation in addressing climate change and its effects and developing adequate responses; and

 (*iv*) Training of scientific, technical and managerial personnel.

(*b*) Cooperate in and promote, at the international level, and, where appropriate, using existing bodies;

 (*i*) The development and exchange of educational and public awareness material on climate change and its effects; and

 (*ii*) The development and implementation of education and training programmes, including the strengthening of national institutions and the exchange or secondment of personnel to train experts in this field, in particular for developing countries.

Article 7. Conference of the Parties

1. A conference of the Parties is hereby established.

2. The Conference of the Parties as the supreme body of this Convention shall keep under regular review the implementation of the Convention and any related legal instruments that the Conference of the Parties may adopt, and shall make, within its mandate, the decisions necessary to promote the effective implementation of the Convention. To this end, it shall;

(*a*) Periodically examine the obligations of the Parties and the institutional arrangements under the Convention, in light of the objective of the Convention, the experience gained in its implementation and the evolution of scientific and technological knowledge;

(*b*) Promote and facilitate the exchange of information on measures adopted by the Parties to address climate change and its effects, taking into account the differing circumstances, responsibilities and capabilities of the Parties and their respective commitments under the Convention.

(*c*) Facilitate, at the request of two or more Parties, the coordination of measures adopted by them to address change and its effects, taking into account the differing circumstances, responsibilities and capabilities of the Parties and their respective commitments under the Convention;

(*d*) Promote and guide, in accordance with the objective and provisions of the Convention, the development and periodic refinement of comparable methodologies, to be agreed on by the Conference of the Parties, *inter alia* for preparing inventories of greenhouse gas emissions by sources and removal by sinks, and for evaluating the effectiveness of measures to limit the emissions and enhance the removal of these gases.

(*e*) Assess, on the basis of all information made available to it in accordance with the provisions of the Convention, the implementation of the Convention by the Parties, the overall effects of the measures taken pursuant to the Convention, in particular environmental, economic and social effects as well as their cumulative impacts and the extent to which progress towards the objective of the Convention is being achieved;

(*f*) Consider and adopt regular reports on the implementation of the Convention and ensure their publication;

(*g*) Make recommendations on any matters necessary for the implementation of the Convention;

(*h*) Seek to mobilise financial resources in accordance with Article 4, paragraphs 3, 4 and 5, and Article 11;

(*i*) Establish such subsidiary bodies as are deemed necessary for the implementation of the Convention,

(*j*) Review reports submitted by its subsidiary bodies and provide guidance to them;

(*k*) Agree upon and adopt by consensus, rules of procedure and financial rules for itself and for any subsidiary bodies;

(*l*) Seek and utilise, where appropriate, the services and cooperation of, and information provided by, competent international organisations and inter-governmental and non-governmental bodies; and

(*m*) Exercise such other functions as are required for the achievement of the objective of the Convention as well as all functions assigned to it under the other Convention.

3. The Conference of the Parties shall; at its first session, adopt its own rules of procedures as well as those of the subsidiary bodies established by the Convention, which shall include decision-making procedures for matters not already covered by decision-making procedures for matter not already covered by decision-making procedures stipulated in the Convention. Such procedures may include specified majorities required for the adoption of particular decisions.

4. The first session of the Conference of the Parties shall be convened by the interim secretariat referred to in Article 21 and shall take place not later than one year after the date of entry into force of the Convention. Thereafter, ordinary sessions of the Conference of the Parties shall be held at least every year unless otherwise decided by the Conference of the Parties.

5. Extraordinary sessions of the Conference of the Parties shall be held at such other times as may be deemed necessary by the Conference, or at the written request of any Party, provided that, within six months of the request being communicated to the Parties by the secretariat, it is supported by at least one-third of the Parties.

6. The United Nations, its specialised agencies and the International Atomic Energy Agency, as well as any State member thereof or observer thereto not Party to the Convention, may be represented at sessions of the Conference of the Parties as observers. Any body or agency, whether national or international, governmental or non-governmental, which is qualified in matters covered by the Convention, and which has informed the secretariat of its wish to be represented at a session of the Conference of the Parties as an observer, may be so admitted unless at least one-third of the Parties present object. The admission and participation of observers shall be subject to the rules of procedure adopted by the Conference of the Parties.

Article 8. Secretariat

1. A secretariat is hereby established.

2. The functions of the secretariat shall be :

(*a*) To make arrangements for sessions of the Conference of the Parties and its subsidiary bodies established under the Convention and to provide them with services as required;

(*b*) To compile and transmit reports submitted to it;

(*c*) To facilitate assistance to the Parties, particularly developing country Parties, upon request. In the compilation and communication of information required in accordance with provisions of the Convention;

(*d*) To prepare reports on its activities and present them to the Conference of the Parties;

(*e*) To ensure the necessary coordination with the secretariats of other relevant international bodies;

(*f*) To enter, under the overall guidance of the Conference of the Parties, into such administrative and contractual arrangements as may be required for the effective discharge of its functions; and

(*g*) To perform the other secretariat functions specified in this Convention and in any of its Protocols and such other functions as may be determined by the Conference of the Parties.

3. The Conference of the Parties, at its first session, shall designate a permanent secretariat and make arrangements for its functioning.

Article 9. Subsidiary Body for Scientific and Technological Advice

1. A subsidiary body for scientific and technological advice is hereby established to provide the Conference of the Parties and, as appropriate, its other subsidiary bodies with timely information and advice on scientific and technological manners relating to the Convention. This body shall be open to participation of all the Parties and shall be multi-disciplinary. It shall

government representatives competent in the relevant field of expertise. It shall report regularly to the Conference of the Parties on all aspects of its work.

2. Under the guidance of the Conference of the Parties, and drawing upon existing competent international bodies, this body shall :

(*a*) Provide assessments of the state of scientific knowledge relating to climate change and its effects;

(*b*) Prepare scientific assessments on the effects of measures taken in the implementation of the Convention;

(*c*) Identify innovative, efficient and state-of-the-art technologies and know-how and advise on the ways and means of promoting development and/or transferring such technologies;

(*d*) Provide advice on scientific programmes, international cooperation in research and development related to climate change, as well as on ways and means of supporting endogenous capacity building in developing countries; and

(*e*) Respond to scientific, technological and methodological questions that the Conference of the Parties and its subsidiary bodies may put to the body.

3. The functions and terms of reference of this body may be further elaborated by the Conference of the Parties.

Article 10. Subsidiary Body for Implementation

1. A subsidiary body for implementation is hereby established to assist the Conference of the Parties in promoting and reviewing the effective implementation of the Convention. This body shall be open to participation by all Parties and comprise government representatives who are experts on matters related to climate change. It shall report regularly to the Conference of the Parties on all aspects of its work.

2. Under the guidance of the Conference of the Parties, this body shall :

(*a*) Consider the information communicated in accordance with Article 12, paragraph 1, to assess the overall aggregated effect of the steps taken by the Parties in the light of the latest scientific assessments concerning climate change;

(*b*) Consider the information communicated in accordance with Article 12, paragraph 2, in order to assist the Conference of the Parties in carrying out the reviews required by Article 4, paragraph 2(*d*); and

(*c*) Assist the Conference of the Parties, as appropriate, in the preparation and implementation of its decisions.

Article 11. Financial Mechanism

1. A mechanism for the provision of financial resources on a grant or concessional basis, including for the transfer of technology, is hereby defined. It shall function under the guidance of and be accountable to the Conference of the Parties, which shall decide on its policies, programme priorities and eligibility criteria related to this Convention. Its operation shall be entrusted to one or more existing international entities.

2. The financial mechanism shall have an equitable and balanced representation of all Parties within a transparent system of governance.

3. The Conference of the Parties and the entity or entities entrusted with the operation of the financial mechanism shall agree upon arrangements to give effect to the above paragraphs, that shall include the following :

(*a*) Modalities to ensure that the funded projects to address climate change are in conformity with the policies, programme priorities and eligibility criteria established by the Conference of the Parties;

(*b*) Modalities by which a particular funding decision may be reconsidered in light of these policies, programme priorities and eligibility criteria;

(*c*) Provision by the entity or entities of regular reports to the Conference of the Parties on its funding operations, which is consistent with the requirement for accountability set out in para. 1 above; and

(*d*) Determination in a predictable and identifiable manner of the amount of funding necessary and available for the implementation of this Convention and the conditions under which the amount shall be periodically reviewed.

4. The Conference of the Parties shall make arrangements to implement the above mentioned provisions at its first session, reviewing and taking into account the interim arrangements referred to in Article 21, Paragraph 3, and shall decide whether these interim arrangements shall be maintained. Within four years thereafter, the Conference of the Parties shall review the financial mechanism and take appropriate measures.

5. The developed country Parties may also provide and developing country Parties avail themselves of financial resources related to the implementation of this Convention through bilateral, regional and other multilateral channels.

Article 12. Communication of Information Related to Implementation

1. In accordance with paragraph 1 of the Article 4, each Party shall communicate to the Conference of Parties, through the secretariat, the following elements of information :

(*a*) A national inventory of anthropogenic emissions from sources and removals by sinks of all greenhouse gases not controlled by the Montreal Protocol, to the extent its capacities permit, using comparable methodologies to be promoted and agreed upon by the Conference of the Parties;

(*b*) A general description of steps taken or envisaged by the Party to implement the Convention; and

(*c*) Any other information that the party considers relevant to the achievement of the objective of the Convention and suitable for inclusion in its communication, including if feasible, material relevant for calculations of global emission trends.

2. Each developed country Party and each other party included in

Annex I shall incorporate in its communication the following elements of information :

(*a*) A detailed description of the policies and measures that it has adopted to implement its commitment under subparagraphs 2(*a*) and 2(*b*) of Article 4;

(*b*) A specific estimate of the effects that the policies and measures referred to in subparagraph (a) immediately above will have an anthropogenic emissions from its sources and removals by its sinks of greenhouse gases during the period referred to in subparagraph 2(a) of Article 4.

3. In addition, each developed country Party and each other developed Party included in annex II shall incorporate details of measures taken in accordance with Article 4, paragraphs 3, 4 and 5.

4. Developing country Parties may, on a voluntary basis propose projects for financing, including specific technologies, materials, equipment, techniques or practices that would be needed to implement such projects, along with, if possible, an estimate of an incremental costs, of the reductions of emissions and incremental costs, of the reductions of emissions and increments of removals of the greenhouse gases, as well as an estimate of the consequent benefits.

5. Each developed country Party included in Annex I shall make its initial communication within six months of the entry into force of the Convention for that Party. Each Party not so listed shall make its initial communication within three years of the entry into force of the Convention for that Party, or of the availability of financial resources in accordance with paragraph 3 of Articles 4. Parties that are least developed countries may make their initial communication at their discretion. The frequency of subsequent communications by all Parties shall be determined by the Conference of the Parties, taking into account the differentiated time table set by this paragraph.

6. Information communicated by Parties under this Article shall be transmitted by the secretaries as soon as possible to the Conference of the Parties and to any subsidiary bodies concerned. If necessary the procedures for the communication of information may be further considered by the Conference of the Parties.

7. From its first session, the Conference of the Parties shall arrange for the provision to developing country Parties of technical and financial support, on request, in compiling and communicating information under this Article; as well as in identifying the technical and financial needs associated with proposed projects and response measures under Article 4. Such assistance may be provided by other Parties, by competent international organisations and by the secretariat, as appropriate.

8. Any group of Parties may, subject to guidelines adopted by the Conference of the Parties, and to prior notification to the Conference of the Parties, make a joint communication in fulfilment of their obligations under this Article, provided that such a communication includes information on the fulfilment by each of these parties of its individual obligations under this Convention.

9. Information received by the secretariat that is designated by a Party as confidential. In accordance with criteria to be established by the Conference of the Parties, shall be aggregated by the secretariat to protect its confidentiality before being made available to any of the bodies involved in the communication and review of information.

10. Subject to paragraph 9 above, and without prejudice to the ability of any Party to make public its communication at any time, the secretariat shall make communications by Parties under this Article publicly available at the time they are submitted to the Conference of the Parties.

Article 13. Resolution of Questions Regarding Implementation

The Conference of the Parties shall, at its first session, consider the establishment of a multilateral consultative process for the resolution of questions regarding the implementation of the Convention.

Article 14. Settlement of Disputes

1. In the event of a dispute between any two or more Parties concerning the interpretation or application of the Convention, the Parties concerned shall seek a settlement of the dispute through negotiation or any other peaceful means of their own choice.

2. When ratifying, accepting, approving or acceding to the Convention or at any time thereafter, a Party which is not a regional economic integration organisation may declare in a written instrument submitted to the Depositary, that, in respect of any dispute concerning the interpretation or application of the Convention, it recognises as compulsory *ipso facto* and without special agreement, in relation to any Party accepting the same obligation :

(*a*) Submission of the dispute to the International Court of Justice, and/or

(*b*) Arbitration in accordance with procedures to be adopted by the Conference of the Parties as soon as practicable in an annex on arbitration.

A Party which is a regional economic integration organisation may make a declaration with like effect in relation to arbitration in accordance with the producers referred to in subparagraph (b) above.

3. A declaration made under paragraph 2 above shall remain in force until it expires in accordance with its terms or until three months after written notice of its revocation has been deposited with the Depositary.

4. A new declaration, a notice of revocation or the expiry of a declaration shall not in any way affect proceedings pending before the International Court of Justice or the Arbitral Tribunal, unless the Parties to the dispute otherwise agree.

5. Subject to the operation of paragraph 2 above, if after 12 months following notification by one Party to another that a dispute exists between them, the Parties concerned have not been able to settle their dispute through the means mentioned in paragraph 1 above, the dispute shall be submitted, at the request of any of the Parties to the dispute, to conciliation.

6. A conciliation commission shall be created upon the request of one of the Parties to the dispute. The commission shall be composed of an equal

number of members appointed by each Party concerned and a chairman chosen jointly by the members appointed by each Party. The commission shall render a recommendatory award, which the Parties shall consider in good faith.

7. Additional procedures relating to conciliation shall be set out by the Conference of the Parties, as soon as practicable, in an annex on conciliation.

8. The provisions of this Article shall apply to any related legal instrument which the Conference of the Parties may adopt, unless the instrument provides otherwise.

Article 15. Amendments to the Convention

1. Any Party may propose amendments to the Convention.

2. Amendments to the Convention shall be adopted at an ordinary session of the Conference of the Parties. The text of any proposed amendment to the Convention shall be communicated to the Parties by the secretariat at least six months before the meeting at which it is proposed for adoption. The secretariat shall also communicate proposed amendments to the Signatories to the Convention and, for information, to the Depositary.

3. The Parties shall make every effort to reach agreement on any proposed amendment to the Convention by consensus. If all efforts at consensus have been exhausted, and no agreement reached, the amendments shall be adopted by a three-fourths majority vote of the Parties present and voting at the meeting. The adopted amendment shall be communicated by the secretariat to the Depositary, who will circulate it to all Parties for their acceptance.

4. Instruments of acceptance in respect of an amendment shall be deposited with the Depositary. An amendment adopted in accordance with paragraph 3 above, shall enter into force for those Parties have accepted it on the ninetieth day after the date of receipt by the Depositary of an instrument of acceptance by at least three-fourths of the Parties to the Convention.

5. The amendment shall enter into force for any other party on the ninetieth day after the date on which that Party deposits with the Depositary its instrument of acceptance of the said amendment.

6. For the purposes of this Article, 'Parties present and voting' means Parties present and casting an affirmative or negative vote.

Article 16. Adoption and Amendment of Annexes to the Convention

1. The Annexes to the Convention shall form an integral part thereof and, unless otherwise expressly provided, a reference to the Convention constitutes at the same time a reference to any Annexes thereto. Without prejudice to the provisions of Article 14, paragraphs 2(b) and 7, such Annexes shall be restricted to lists, forms and any other material of a descriptive nature that is of a scientific, technical, procedural or administrative character.

2. Annexes to the Conventions shall be proposed and adopted in accordance with the procedure set forth in Article 15, paragraphs 2, 3, and 4.

3. Annexes that have been adopted in accordance with paragraph 2 above, shall enter into force for all Parties to the convention six months after

the date of the communication by the Depositary to such Parties of the adoption of the Annex, except for those Parties that have notified the Depositary, in writing, within that period of their non-acceptance of the Annex. The Annex shall enter into force for Parties which withdraw their notification of non-acceptance on the ninetieth day after the date on which withdrawal of such notification has been received by the Depositary.

4. The proposal, adoption and entry into force of amendments to Annexes to the Convention shall be subject to the same procedure as that for the proposal, adoption and entry into force of Annexes to the Convention in accordance with paragraph 2 and 3 above.

5. If the adoption of an annex or an amendment to an annex involves an amendment to the Convention, that annex or amendment to an annex shall not enter into force until such time as the amendment to the Convention enters into force.

Article 17. Protocols

1. The Conference of the Parties may, at any ordinary session, adopt protocols to the Convention.

2. The text of any proposed protocol shall be communicated to the Parties by the secretariat at least six months before such a session.

3. The requirements for the entry into force of any protocol shall be established by that instrument.

4. Only Parties to the Convention may be Parties to a protocol.

5. Decisions under any protocol shall be taken only by the Parties to the protocol concerned.

Article 18. Right to Vote

1. Each Party to the Convention shall be have one vote, except as provided for in paragraph 2 below.

2. Regional economic integration organisations, in matters within their competence, shall exercise their right to vote with a number of votes equal to the number of their member States that are Parties to the Convention. Such an organisation shall not exercise its right to vote if any of its member States exercises its right, and vice versa.

Article 19. Depositary

The Secretary-General of the United Nations shall be the Depositary of the Convention and of Protocols adopted in accordance with Article 17.

Article 20. Signature

This Convention shall be open for signature by States that are Members of the United Nations or of any of its Specialised Agencies or that are Parties to the Statute of the International Court of Justice and by regional economic integration organisations at Rio de Janeiro, during the United Nations Conference on Environment and Development and thereafter at Under Nations Headquarters in New York from 20th June, 1992 to 19th June, 1993.

Article 21. Interim Arrangements

1. The secretariat functions referred to in Article 8 will be carried out on an interim basis by the secretariat established by the General Assembly of the United Nations in its resolution 45/212 of 21st December, 1990, until the completion of the first session of the Conference of the Parties.

2. The head of the interim secretariat referred to in paragraph 1 above will cooperate closely with the Intergovernmental Panel on Climate Change to ensure that the Panel can respond to the need for objective, scientific and technical advice. Other relevant scientific bodies could also be consulted.

3. The Global Environment Facility of the United Nations Development Programme, the United Nations Environment Programme and the International Bank for Reconstruction and Development shall be the international entity entrusted with the operation of the financial mechanism referred to in Article 11 on an interim basis. In this connection, the Global Environment Facility should be appropriately restructured and its membership made universal to enable it to fulfil the requirements of Article 11.

Article 22. Ratification, Acceptance, Approval or Accession

1. The Convention shall be subject to ratification, acceptance, approval or accession by States and by regional economic integration organisations. It shall be open for accession from the day after the date on which the Convention is closed for signature. Instruments of ratification, acceptance, approval or accession shall be deposited with the Depositary.

2. Any regional economic integration organisation which becomes a Party to the Convention without any of its member states being a Party shall be bound by all the obligations under the Convention. In the case of such organisations, one or more of whose member States is a Party to the Convention, the organisation and its member States shall decide on their respective responsibilities for the performance of their obligations under the Convention. In such cases, the organisation and the member States shall not be entitled to exercise rights under the Convention concurrently.

3. In their instruments of ratification, acceptance, approval or accession, regional economic integration organisations shall declare the extent of their competence with respect to the matters governed by the Convention. These organisations shall also inform the Depositary, who shall in turn inform the Parties, of any substantial modification in the extent of their competence.

Article 23. Entry into Force

1. The convention shall enter into force on the ninetieth day after the date of deposit of the fiftieth instrument of ratification, acceptance, approval or accession.

2. For each State or regional economic integration organisation that ratifies, accepts or approves the Convention or accedes therein after the deposit of the fiftieth instrument of ratification, acceptance, approval or accession, the Convention shall enter into force on the ninetieth day after the date of deposit by such State or regional economic integration organisation of its instrument of ratification, acceptance, approval or accession.

3. For the purposes of paragraphs 1 and 2 above, any instrument deposited by a regional economic integration organisation shall not be counted as additional to those deposited by member States of the organisation.

Article 24. Reservation

No reservations may be made to the Convention.

Article 25. Withdrawal

1. At any time after three years from the date on which the Convention has entered into force for a Party, that Party may withdraw from the Convention by giving written notification to the Depositary.

2. Any such withdrawal shall take effect upon expiry of one year from the date of receipt by the Depositary of the notification of withdrawal, or on such later date as may be specified in the notification of the withdrawal.

3. Any Party that withdraws from the Convention shall be considered as also having withdrawn from any protocol to which it is a Party.

Article 26. Authentic Texts

The original of the Convention, of which the Arabic, Chinese, English, French, Russian and Spanish texts are equally authentic, shall be deposited with the Secretary-General of the United Nations.

In Witness whereof the undersigned, being duly authorised to that effect, have signed this Convention.

Done at New York this 9th day of May, 1992[1].

CHAPTER III

EARTH SUMMIT

In June 1997, the world will complete five years since the United Nations Conference on Environment and Development at Rio de Janeiro — the largest ever gathering of world leaders that was billed as the "last chance to save the earth". A meet that is also referred to as the Earth Summit or the Rio Conference.

Now, the General Assembly of the United Nations, meeting five years after, will find that the performance rating of governmental action for a green world is next to zero. Neither the Governments of the North nor of the South have shown any commitment on green global issues.

The Framework Convention on Climate Change — opened for signatures in Rio to deal with the problem of global warming — has seen little action to set binding targets on controlling greenhouse gas emissions of the developed North; the Biodiversity Convention — established to safeguard the world's threatened biodiversity — has not yet been signed by the U.S., the world's largest user of biodiversity resources and knowledge; and Agenda 21 — the global action plan for environment — has gone largely unfounded. The total global funding for environment has, in fact, declined after Rio.

But before we sign a requiem for Rio it is important to understand what went wrong. Why is it that our leaders have not been able to meet the environmental challenge which threatens the survival of the globe ?

The first reason, clear to anyone who has followed the post-Rio intergovernmental dynamics, is that environmental negotiations have slowly turned into business transactions between unwilling partners. Governments took over the business of environment while the civil society, which led governments to take action in Rio, merely followed them in their inaction in the post-Rio days.

Cause without a concern

This "multi-governmentalisation" of the environmental agenda has been disastrous as it has become a cause without a concern. The civil society — the countless NGO groupings, citizens' coalitions and professional associations — has been reduced to reacting to different government positions at different times. They have failed to organise themselves to propose larger issues which should concern our governments and go beyond the intense negotiations that bureaucrats indulge over the fate of commas and full stops in intergovernmental documents.[1]

The Post-Rio Agenda

Humanity is facing an unedited chapter at the end of the millenium where globalisation is posing challenges that are being national or individual control.

Our world has become more interconnected and increasingly affected by global flows of information, capital and technology, as well as environmental change and cultural influence. Today, society is more aware of the risks and uncertainties of its own condition and future.

---

[1] Source : The Hindu Survey of the Environment, 1997, p. 7.

Five years after the United Nations Conference on Environment and Development in Rio de Janeiro in June 1992, also known as the Earth Summit, it is now evident that the policy and practical changes envisioned by the Rio accords must take place in a climate of unprecedented economic globalisation, to some extent underestimated by the UNCED process. A serious assessment in any sector is impossible without taking economic globalisation into account. Moreover, post-Rio economic forces seem, in practice, not compatible with the Rio consensus, despite their theoretical harmony.

Emergence of private sector

Globalisation has also brought about a radical change in the structure of power and the sociology of actors outside government. The transnational nature of the economy has empowered the private sector, particularly the multinational corporations who have more control than governments over financial flows, technology and information.

There is an increasing role of the private sector and a diminishing role of the public sector accompanied by the emergence of a very diverse third sector composed mainly by a more active civil society. However, there is a question as to how successful civil society, non-governmental organisations (NGOs) and small business can be in achieving the Rio vision in a world where the power has shifted to multinational corporations and international financial institutions.

This confronts society with a challenge of unprecedented proportions; society literally must mange collectively its own future in a globalised world. The traditional reliance on government action through regulatory and economic policy in areas such as environment is today weakening. Society is more aware that problems will not be solved by government or private action alone.

Citizens around the world are more concerned today about environmental problems than they were five years ago when public opinion forced major improvements in environmental protection. In spite of the preoccupation of their leaders with economic issues, citizens are even more likely today than five years ago to say that economic growth should be sacrificed, if necessary to ensure that the environment is protected.

More awareness

Citizens are also even more convinced that their health, and especially their children's health, is being harmed by environmental degradation and pollution. And they are sharply critical of both government and industry inaction.

As a response, people at all levels are searching for new modes of organisation and participation to cope with this reality. Gradually more and more people are realising the need to organise themselves and act collectively to influence social change.

In view of the above, five years after Rio, it is indispensable to consider the important work to implement Agenda 21 undertaken by non-State actors which is quite substantive and as important as the one developed by governments.

The Rio Summit

There were many expectations and hopes engendered by the Earth Summit. It represented a unique opportunity to put us on the pathway to a more secure, equitable, and sustainable future. The unprecedented level of involvement of those outside government was the key to its political significance.

Five documents were agreed at Rio : The Rio Declaration which consists of a political statement of 27 principles guiding environmental and development activities; a statement of principles on forestry, two conventions negotiated in parallel with the UNCED process (one on Biological Diversity and the other on Climate Change) and a comprehensive and far-ranging programme of action known as Agenda 21.

Agenda 21 was undoubtedly the main programmatic result establishing a negotiated framework for cooperative action between governments, agencies and programmes of the United Nations system, non-governmental organisations and the private sector.

Chapter 38 of Agenda 21 calls for the establishment of the Commission on Sustainable Development that should provide the active involvement of organs, programmes and organisations of the United Nations system, international financial institutions and other relevant intergovernmental organisations, and encourage the participation of non-governmental organisations, including industry and the business and scientific communities.

The most relevant functions of the Commission are : to monitor progress in the implementation of Agenda 21; to consider the information submitted by Governments, including their national reports; to review progress in the implementation of commitments contained in Agenda 21, such as those related to provision of financial resources and transfer of technology and to receive and analyse relevant inputs from competent non-governmental organisations, including the private and scientific sectors.

In its first meeting in 1993, the Commission regrouped the 40 chapters of Agenda 21 into nine clusters, the sectoral ones to be reviewed each year and those on cross-sectoral issues and the role of major groups to be analysed every year. In the first meeting, the Commission agreed on the procedures for such annual assessments and invited the participation of all relevant major groups and non-governmental organisations in an unprecedented manner within the United Nations.

Fresh look at mandate

The Commission has met four times and there is no doubt that it has become the most dynamic, innovative and effective Commission of ECOSOC. However, all agree that this year, in June 1997, its mandate should be renewed during the United Nations General Assembly Special Session to Review and Appraise the Implementation of Agenda 21, also called Earth Summit +5.

On this occasion governments will have to report their accomplishments in implementing Agenda 21 five years after Rio and make fundamental decisions to renew their commitment to sustainable development.

The CSD should refocus its future work towards monitoring emerging issues and critical trends; development of indicators of sustainability; improving cooperation and effective monitoring of international financial and economic sectors (almost absent in these four years); development of universal support for new and innovative financial mechanisms; and focusing on the political obstacles in discussing energy, sustainable production and consumption.

Some optimism

While global trends look bleak, there are signs of hope that can serve as a springboard for future initiatives to operationalise sustainable development. Relevant progress has occurred in the implementation of Agenda 21 and in these five years a wide range of experiences and practices have emerged. Many fora for coordination have been established in the emerging government system :

At the global level, the U.N. Commission on Sustainable Development has provided important openings for all the stakeholders to influence the global policy dialogue on sustainability;

Local and national councils for sustainable development has been formally created within governments where official representation of civil and economic society gives them a voice and a participation in the mobilisation and allocation of resources and deployment for joint action on sustainability programmes and projects;

Association and networks of stakeholders reach out more widely to share information, resources and build consensus and adopt common programmes;

In business, shareholders press corporations to adopt full transparency and subject themselves and their operations to external audit for sound ecological behavior in design, manufacturing process, marketing practice and recycling of products and packaging materials; and

Global electronic networks expand the possibilities for wider sharing of experiences, ideas, collaboration in action programmes.

The most successful part of Agenda 21 has undoubtedly been Section IV dealing with Major Groups. The different networks of Major Groups have made considerable progress in advancing the goals of Agenda 21.

Many business councils and associations have developed voluntary sustainability codes. Trade unions have developed local and national environmental and health committees. Research institutes have programmes to provide important data, analyses and policies. Science and technology organisations shape values and develop needed skills and expertise beamed specifically at addressing sustainability imperatives.

Civil society organisations and networks play a variety of role to inform, catalyse and promote the local, national and global public interest.

Chapter 28 of Agenda 21 states : "By 1996, most local authorities in each country should have undertaken a consultative process with their populations and achieved a consensus on a "local Agenda 21" for the(ir) community".

A recent survey conducted by the International Council for Local Environmental Initiatives (ICLEI) has revealed that :

More than 1,800 local governments in 64 countries are currently implementing Local Agenda 21, while 900 municipalities in 43 countries have Local Agenda 21 planning underway. This is being done according to the different realities and institutional contexts and often using different names for this initiative. Many of these experiences share the following components :

A mechanism to facilitate and institutionalise public participation in the preparation, implementation and monitoring of a sustainable development local action plan;

A comprehensive review of development issues, including a baseline data on economic, social and environmental issues against which change can be measured;

An action plan which sets specific targets for achievement and activities that different actors in the community should implement; and

A monitoring and reporting framework, including local performance indicators, which can be used by all the stakeholders to assess progress.

These local planning efforts are supported basically by enlightened local authorities that have developed campaigns and programmes to provide training and technical information.

National strategies

Chapter 8 of Agenda 21 recommends that each nation "should adopt a national strategy for sustainable development based on, *inter alia*, the implementation of decisions taken at the UNCED Conference, particularly in respect of Agenda 21. This strategy should build upon and harmonise the various sectoral economic, social and environmental policies and plans that are operating in the country".

A number of countries have responded to this commitment by preparing a strategy, a national Agenda 21 or an equivalent action plan. Before the Earth Summit, many developed and developing countries had already prepared, or were well advanced with some form of environmental plan or equivalent strategy process.

Different approaches

A range of different approaches have characterised the development of national plans and strategies. Around 100 countries have now prepared national substainable development strategies or National Environmental Action Plans. Three lessons from this process are :

- The fundamental importance of setting priorities, either on an economic or an ecological basis, is essential since financial and human resources are limited and governments can only respond realistically to a few targets,
- The need of developing national ownership, to create the political climate for effective action and policy change; and

- The development of associated participation by involving the public and relevant sectors of society.

In many cases, preparing the plan is the easiest part. However, setting up the institutional mechanisms to monitor and ensure the implementation of these programmes recognising that sustainable development should be everybody's business. Chapter 8 and 38 of Agenda 21 proposed the establishment of National Councils for Sustainable Development (NCSD) to allow for implementation of the Rio agreements with a participatory approach. In more than 80 countries, three kinds of structures can be found: governmental, non-governmental and mixed.

The third type appears to be the most effective since it ensures interaction and cooperative action. However, the conditions of success depend on the level of the membership of the council, the capability of the council to be part of decision-making and action and to go beyond an advisory role participation from the economic and social sectors at the highest level and the equilibrium between governmental, private sector and civil society forces.

The NCSDs are a new species of institutions evolving to fill a newly created niche, fragile, experimental and diverse. Today, the national councils are in a process of reviewing their roles as agents of change, as means of institutionalising citizen participation, as guarantors of the sustainable development agenda and as instruments to promote regional and global cooperation.

In the five years since UNCED, business has made great progress towards finding ways of implementing sustainable development. In the view of the World Business Council for Sustainable Development, a network of 120 international companies from 35 countries, "Agenda 21 lacks priorities and is more oriented to governments than business. Many enterprises and different sectors of business have had to set their own priorities, responding to their perceptions of their own positions and of market, social and policy realities".

Shift to a holistic view

In a recent report, the WBCSD reports that there has been an important shift from a fractured view of environment and development to a more holistic view that involves shifts from :

1. Seeing only costs and difficulties in the concept of sustainable development to seeing savings and opportunities,
2. End-of-pipe approaches to pollution in the use of cleaner, more efficient technology throughout entire production systems, and further, to seeing sustainable development as integral to business development,
3. Linear, "through-put" thinking and approaches to systems and recycling approaches, and
4. Narrow lobbying to more open discussion with stakeholders.

The WBCSD is supporting a global network of 15 national business councils and two regional business councils. Its objectives are : to provide business leadership; policy development; information on best practices; and global outreach.

The six areas of work include : trade and environment; sustainable production and consumption; climate change and energy issues; eco-efficiency; financial markets and natural resources.

Important examples include the automobile industry which is experimenting with new and less polluting means of locomotion and cars that can be disassembled and recycled and the plastic industry which is seeking new forms of home insulation to produce energy savings. More controversial cases include the biotechnology industry and the food industry in general.

Unfortunately many of these trends apply only to big companies. Small and medium-sized enterprises often lack the capital and room to improve. In this regard, the WBCSD is of the view that the impetus of improved government frameworks and of the larger companies may help them make the change happen.

The unprecedented participation of NGOs at UNCED has carried on into the Commission on Sustainable Development, providing incredible momentum to the work of this UN body. The NGOs organised themselves into a NGO Steering Committee which facilities the participation and work of many organisations from the North, South, East and West.

The presently exists a multitude of global organisations representing different sectors of society that over recent years have established powerful networks of international influences as effective delivery systems for the exchange of ideas relevant to sustainable development.

Networks of local authorities, parliamentarians, religious groups, business and industry, women, youth and indigenous people have taken serious steps to disseminate among their constituencies the Rio accords and progress in the implementation of relevant chapter of Agenda 21.

These groups have also used the information revolution as a powerful tool to influence new forms of democracy and social participation.

The emergence of powerful electronic mechanisms such as the Internet has created numerous opportunities for more horizontal communication as opposed to the traditional vertical structures of transmission. This has brought people closer to issues of sustainable development and environment, beyond institutional control of any kind. The nature of these new interactions among people and civil society organisations is creating the basis for global citizenship. The concept includes the notion of rights and responsibilities in relation to planetary problems.

Rethinking Rio

It is clear that the Earth Summit, the emergence of the new paradigm of sustainable development, the multiplicity of new actors and the significant changes in the global geo-political structure have substantially transformed the scope of the international agenda.

Nobody questions that Rio fostered a process of internalisation of the environmental concerns into the mandates of many international institutions. The Earth Summit also illuminated the fact that there can be no true social progress without economic development. However, some believe that in the five years since Rio we have missed the opportunity to change the course of development, basically because governments have failed to undertake and achieve deep changes in the prevailing economic system.

In these five years, there has been a considerable shift from multilateral cooperation to conditionality : a shift from the influence of the United Nations to a growing influence of Bretton Woods institutions. For example, the World Bank is mainstreaming the environmental dimensions into all of its operations with considerably more resources and political influence than the U.N. organisations and programmes.

The GEF with the partnering of the World Bank, UNDP and UNEP has set a new path of financing international cooperation on global environmental issues. In the international agenda there are important gaps, however, in the internalisation of environment. Such is the case of the World Trade Organisation (WTO).

Little progress

Both Agenda 21 and the Uruguay Round agreements which established the WTO call upon trade liberalisation and sustainable development to be mutually supportive.

Although after UNCED the economic and trade sector are more aware of the importance of the environmental agenda, little progress has been made in integrating environment in the work of WTO. Its Committee on Trade and Environment produced a report after two years of work which only registered the controversies and deep divergences which exist between trade and environment, without making constructive proposals for future integration of both themes.

The changes necessary in the operation of these large entities to articulate the dimensions of sustainable development, day-to-day and on-the-ground, have thus for not been forthcoming despite the considerable efforts of the Environment Department of The World Bank.

It would be unfair to blame the United Nations or the Bretton Woods organisations. These institution are only mirroring what happens at the country level. The main problem is that the policy makers at the national level from the finance, planning or development ministries have not been sufficiently involved and/or convinced of the need to change the path of development. They are manned mainly by economists who are not ready for policy innovation and try to combine regulatory mechanisms with fiscal policies.

Many countries lack a mature institutional base for an integrated management of environment and economics. Organisations outside government, mainly the private sector, are coming to grips with understanding that it is more cost-effective to incorporate the environment from the start and not as an "add-on" at the end of projects.

After UNCED many global conferences intended to produce similar political results on social development, population, women and development and urban affairs have been held.

No commitment

However, these post-UNCED global conferences proved that the political environment has changed considerably, that development assistance is dwindling and that the tendency of international cooperation is to produce consensus without building commitment. Agreements have been made, for example on poverty, on population and on gender issues. Documents have been signed, but real commitment does not seem to be present and little action follows. In all of these post-UNCED negotiations, the domination of powerful States and the fragmenting of the less powerful has become more and more the common denominator.

Everybody agrees that there can be no sustainable development without eradication of poverty and that more people live in poverty today than was the case at the time of the Rio Summit. Agenda 21 addressed poverty, yet in the follow-up to Rio, far too little attention has been given to poverty. Poverty was the centrepiece of the Social Summit. However, the follow-up through the Commission on Social development still needs to build true bridges with the Commission on Sustainable Development. A clear move towards eradication of poverty is one of the three unfulfilled commitments of the Rio consensus. The other two are : the new and additional financial resources and the transfer of technology in concessional terms.

In this regard, Mr. T.K.A. Nair, Secretary to the Government of India, made an important statement at the Rio+5 Forum in Rio de Janeiro, Brazil, in March 1997 : "Although the principle of common but differentiated reponsibilities for global environmental degradation have been accepted in Rio there is a growing feeling, specially among less privileged sections of the global community, that the momenturm of Rio has been lost. Shared responsibilities and partnerships remain the main challenges to ensure implementation of Agenda 21. The commitment developed countries had made at Rio with regard to the ODA target of 0.7 per cent. of GNP, is yet to be fulfilled. Though it was agreed that new and additional financial resources, which are both adequate and predictable, would be speedily made available, the continuing decline in ODA runs counter to the global partnership accepted at UNCED".

Common interests

"Providing developing countries with adequate resources will serve the common interests of all nations and of future generations. The reality today is that developing countries experience a net outflow of resources due to huge debt servicing. Another issue where no real progress has been made is the commitment of industrialised countries to facilitate transfer of environmentally sound technologies to developing countries on favourable terms. Without the provision of adequate financial resources and environmentally sound technologies on concessional and preferential terms, the entire thrust of the effort on sustainable development may appear as mere marketing strategies on behalf of holders of eco-efficient technologies and multinationals of developed countries".

This is why there are great expectations whether the Earth Summit +5 meeting will revitalise the Rio proces by restoring the sense of urgency in addressing global environmental problems and by reaffirming and reforming the important roles of the United Nation's bodies in addressing these challenges. Unquestionably, globalisation and the political, economic and social challenges of the post-Cold War period should be present in all deliberations as well as the redefinition of the role of non-State actors, including multinational corporations.

There is consensus that Agenda 21 and the other global accords should not be re-opened, not because they do not need improvenment but mainly because many believe that instead of going forward in its review there is a risk of going backwards. Earth Summit +5 must present an honest assessment of progress and failures since Rio and a re-assignment of tasks for the U.N. system entities.

U.N. reform

This is connected with the fact that this year the United Nations is undertaking the greatest reform since its creation. This reform is being coordinated by Mr. Maurice F. Strong, who was the Secretary-General of UNCED and the Chairman of the Earth Council, the latter a non-governmental organisation established to follow-up and monitor implementation of the Rio accords from the people's perspective.

Mr. Maurice F. Strong was also the Secretary-General of the Stockholm Conference which gave birth to UNEP. Due to the coincidence of the Special Session with the U.N. reform and the participation of Mr. Strong in the process, the U.N. reform team will review carefully UNEP's role *vis-a-vis* the Commission on Sustainable Development, the two convention governing bodies, the Global Environmental Facility, the World Trade Organisation and the World Bank.

The main focus of this part of the reform will probably be to help UNEP evolve into a strong global environmental authority that promotes the coherent implementation of the environmental dimension of sustainable development within the U.N. system and to provide the necessary political support to have UNEP as a global counterpart to the economic agencies mentioned above.

Another expectation is to have the Commission on Sustaiable Development operating more closely with the Commission on Social Development and to have them focus on the three dimensions of sustainablility and not only environment.

The essence of the overall U.N. reform should be to revitalise international multilateral cooperation in the context of a post-moden world that urgently needs more democratic, transparent and accountable mechanisms. The world needs a renewed U.N. that opens its processes to non-State actors and establishes the basis for a global citizenship in support for the General Assembly and other U.N. entities.

A shared responsibility between governments, multinational organisations and people can be the foundation for a new scheme of global governance that will preserve the ethical dimensions of humanity and move towards sustainable development.[1]

CHAPTER IV

WORLD HEALTH REPORT, 1996

The World Health Organisation describes the incidence of food, water, soil and insect-borne diseases and what can be done to reduce it. Almost half the world's population suffers from diseases associated with insufficient or contaminated water, and is at risk for water-borne diseases and food-borne diseases.

Food-borne, water-borne and soil-borne diseases—General

Water, food and soil are essential for life, but when contaminated they also transmit bacteria, viruses and parasites that cause some of the world's most menacing disease, such as diarrhoea, cholera, typhoid, intestinal worms, hepatitis and tetanus. The organisms that are the main causes of these diseases are ingested with water or food or conveyed to the mouth by contaminated fingers. Where there is no proper sanitation, they find their way to other water sources from which they again infect other people. Soil can also be the breeding ground for a wide range of infections to which children are particularly vulnerable, and for intestinal parasites.

Almost half the world's population suffers from diseases associated with insufficient or contaminated water, and is at risk from water-borne and food-borne diseases. Their vital importance as a public health problem is often overlooked, because their true incidence is difficult to evaluate and the severity of their health and economic consequences is often not fully understood.

Diseases are classified as water-borne or food-borne based on epidemiological evidence that implicates consumption or use of water and ingestion of a common food as the source of infection. They are perhaps the most widespread health problems in the contemporary world and an important cause of low or lack of economic productivity. They range in severity from mild indispositions to life-threatening illnesses.

Apart from their immediate effects, food-borne diseases may cause serious and chronic health problems. Some of these diseases—for instance, listeriosis—are particularly dangerous during pregnancy, as they may either be fatal to the foetus or cause severe deformities. In the latter case, the child runs a risk of severe congenial, cerebral or ocular damage.

Diseases caused by contaminated food and water

Diarrhoeal diseases caused more than 3 million deaths in 1995, of which more than 80 per cent. were among children under age five. About 50 per cent. of diarrhoeal deaths are due to acute watery diarrhoea, 35 per cent. to persistent diarrhoea, and 16 per cent. to dysentery.

It was long thought that contaminated water supplies were the main source of pathogens causing diarrhoea but it has now been shown that food has been responsible for up to 70 per cent. of diahoreal episodes. Infections due to pathogenic *E. coli* are the most common cause of diarrhoea. Weaning food contaminated with pathogenic *E. coli* causes up to 25 per cent. of all diarrhoeal episodes in infants and children, while campylobacteriosis and shigellosis account for another 5-15 per cent. and 10-15 per cent. respectively.

In 1993, the United States suffered the biggest outbreak of diarrhoea in its history. More than 400,000 people in the city of Milwaukee became ill for an average of 10 days with watery diarrhoea and more than 4,000 needed hospital treatment. The source was municipal water supplies contaminated with the parasite cryptosporidium parvum.

200 million infections

About 200 million people in Asia, Africa and Latin America have symptoms of the intestinal infection **giardiasis;** there are some 500,000 new cases a year, the vast majority of them among children. The infection cause acute and persistent diarrhoea, abdominal pain and rapid weight loss. Lack of sanitation and poor basic hygiene assist its spread. The main mode of transmission is in faecally-contaminated water, but food-borne and person-to-person spread also occur. The disease has become a serious problem in day-care centre in developed countries.

Epidemics of cholera and dysentery are frequent, striking adults as well as children. Cholera alone causes 120,000 deaths a year, and is particularly deadly in Africa, where epidemics have become more widespread and more frequent since the 1970s, the deaths rates among sufferers are generally the highest. Seventy-nine million people are estimated to be currently at risk of cholera infection in Africa. A substantial proportion of cases and deaths have been among the displaced and refugee population in Somalia and Zaire.

A pattern of global cholera epidemics—called pandemics—that literally circle the world is being repeated. At leave seven such pandemics have been recorded in the last 150 years. The seventh pandemic of the disease caused by Vibrio cholerae 01 bio-type El Tor, which started in 1961 and the spread to other countries in South and Central America. In 1993, cholera was reported as endemic in some 80 countries, affecting several hundreds of thousands of people. In an important number of cases, food has been found to be the vehicle for transmission.

A new strain of cholera, code-named 0139, emerged in India in 1992. It spread west to Pakistan and east to China, and in the early months of 1993 caused an estimated 100,000 cases and 1,000 deaths in southern Bangladesh. It has not spread rapidly since then, but remains a threat.

The economic impact of cholera epidemics, in losses of trade and tourism, can be enormous. For example, the 1991 epidemic in Peru cost that country a loss estimated at $ 770 million, almost a fifth of its total exports in a normal year.

Several countries, especially in Africa, have to cope with the emerging problem of recurrent epidemics of **bacillary dysentery.** The spread of epidemic dysentery started in 1979 in eastern Zaire and since then has invaded all African countries. For several months in 1994, dysentery was the main cause of death in refugee camps in Burundi, United Republic of Tanzania and Zaire. Epidemic dysentery also occurs in Asia and Latin America.

Epidemic Dysentery

The control of epidemic dysentery is complex because of the limited therapeutic options available. There is increasing resistance of

Shigella dysenteriae type 1 strains to the usually recommended antibiotics, including nalidixic acid. Alternative antibiotics are expensive.

Typhoid fever causes about 16 million cases and more than 600,000 deaths a year. Almost 80 per cent. of cases and deaths are in Asia, and most of the others occur in Africa and Latin America. The socio-economic impact of the disease is huge, because typhoid survivors take several months to recover and resume work. Since 1950, the organism's resistance to antibiotics has been a growing problem; by 1989 resistance was reported in a number of countries, particularly in Asia and the Middle East.

The **hepatitis** E virus, discovered in the United States in 1990, exists in many parts of the world, causing outbreaks of hepatitis in Asia, North Africa and Central America, particularly in countries where environmental sanitation in inadequate. The virus is probably a major cause of acute hepatitis in these countries, but does not lead to chronic disease. The infection is mainly transmitted by contaminated water, although person-to-person spread by the faecal-oral route is also likely. Preliminary evidence suggests that a hepatitis E vaccine could be developed in the not-too-distant future.

The problem of food-borne diseases is very serious in developing countries, but is not limited to them. The estimated annual incidence of food-borne diseases in the United States ranges from 6.5 million to 80 million cases. Surveys in several other industrialized countries suggest that annually, upto 10 per cent. of the population may be suffering from a food-borne disease.

Salmonellosis especially has increased tremendously industrialized countries on both side of the Atlantic over the past few years. In many countries, poultry meat, eggs and food containing eggs have been identified as the predominant sources of this pathogen. In certain countries, up to 60-100 per cent. of poultry meat is contaminated with species of Salmonella, and beef, frogs' legs, chocolate and milk have also been implicated. In 1985, some 170,000 to 200,000 persons were involved in an outbreak of salmonellosis in Chicago (United States) caused by contaminated pasteurised milk.

Hepatitis A is common all over the world: some 10 to 50 persons per 100,000 are affected annually. Shellfish grown in contaminated water have often been recognized as a source of this disease. An epidemic of shellfish-borne hepatitis A in China in 1988 affected some 292,000 persons (with 32 fatalities), and was related to consumption of contaminated clams. Food contaminated by food-handlers and not subsequently sufficiently heated may also transmit the disease. Many case of hepatitis A are known to be linked to restaurants.

Soil-borne infections

Diseases that come from the soil affect several million people annually. The most deadly of these diseases is neonatal tetanus, responsible for the deaths of at least 450,000 children every year, while intestinal worm infections are the most widespread.

Tetanus can affect all age groups but is a problem particularly for newborns and their mothers. It is a bacterial disease, but it does not spread from one individual to another. It occurs through the infection of a wound by the tetanus bacillus, the incubation period varying between 4 and 21 days.

Neonatal tetanus occurs as a result of contamination of the umbilical cord with tetanus spores at birth, caused by unsterile methods of handling or cutting the umbilical cord or dressing it with germladen substances such as ash, mud or animal dung (common practices in many area of developing countries). Treatment of neonatal tetanus is difficult and generally unsuccessful, and almost all newborn babies affected die. The disease can be prevented by immunising women of reproductive age (especially pregnant women) with tetanus toxoid and by ensuring hygienic delivery and cord care practices in institutions and at home.

In the early 1980's, between 800,000 and 1 million newborns were estimated to die of neonatal tetanus every year (up to 25 per cent. of infant deaths in many developing countries).

Public health problem

In 1989, WHO's Member countries decided to eliminate neonatal tetanus as a public health problem by aiming, to reduce its incidence to less than 1 case per 1,000 live births for each health district. If they succeed, 1 million newborn deaths and 50,000 maternal deaths due to tetanus will be avoided each year.

Of all soil-borne diseases, intestinal parasitic infections caused by worms account for by far the greatest proportion. Those caused by hookworm, roundworm and whipworm predominate. WHO estimates that as many as 3.5 billion people are infected by worms, and that at any time some 450 million people, most of them children, are ill as a result. The number of those affected is increasing, and cases occur in all WHO regions.

While most of these conditions amount to no more than diarrhoea and abdominal pain, they can be fatal. It is estimated that in 1995 hookworm infection killed 65,000 people and roundworms killed 60,000. Chronic infections impair the physical and mental growth, nutrition and development of children in general and girls and young women in particular.

The infections are spreading rapidly in slums, shanty towns and squatter-settlements in and around many cities in developing countries. Poor sanitation, and consequent contamination of the environment with human excreta are among the commonest hazards contributing to transmission. Soil is the breeding ground, when contaminated by infected individuals defecating on open spaces.

Preventing and controlling food-borne, water-borne, and soil-borne diseases

So much depends on how communities deal with human faeces. At least 2.5 billion people in developing countries lack an adequate system for disposing of their faeces. For the poor in many developing countries, faeces deposited near their homes constantly threaten household hygiene, by direct contact with people or by being inadvertently carried into homes and kitchens by children, domestic animals or insects. Domestic, neighbourhood or district water supplies such as well, tanks and reservoirs may be contaminated by poorly designed or maintained sewage disposal systems.

The cleanliness of the water is not the only issue; the importance of an adequate water supply for household hygiene cannot be overemphasised. Washing hands after defection and before preparing food 'is fundamental to controlling diseases, but even if this principle is understood fully, handwashing is impossible without sufficient water.

Improving the quality of drinking water, ensuring proper sewage disposal and providing more water for both personal and domestic hygiene are the keys to the prevention or control of major scourges such as diarrhoeal diseases (including cholera), typhoid, guinea-worm disease, schistosomiasis and giardiasis. The latest estimates, relating to the developing world for 1995, indicate that about 25 per cent. of the population do not have access to safe water, and over 66 per cent. lack adequate sanitation.

Cost-effective solutions

Technological advances in water supply, sanitation, drainage and solid waste management in recent year offer cost-effective solutions that can be adapted to local circumstances and can greatly improve health and environmental conditions. Personal hygiene is immensely important in the prevention of contamination of food and drinking water. The provision of a safe and adequate water supply requires partnership between communities and the organised public and private sectors, including NGO's. Government ministries concerned with education, development and industry have a major role to play. Communities can also take local initiatives for the provision of safe water, as demonstrated in Bolivia.

Deaths due to diarrhoeal diseases are particularly tragic because the great majority can be avoided by the prevention or treatment of dehydration, as the primary cause of death from acute diarrhoea is dehydration from the loss of fluids and electrolytes. Correct case management, both at home and in health facilities, can achieve immediate reduction in mortality from acute epidemic and non-epidemic diarrhoea in any age group.

This is achieved through the prevention of dehydration in the home by providing increases amounts of fluids and continuing to provide food or breast milk.

Oral therapy

Dehydration can be treated through the use of oral rehydration salts, and the use of intravenous fluids for severe dehydration. Antibiotics should be used only for dysentery and severe cases of cholera.

Outbreaks of giardiasis can also be prevented by adequate filtration and treatment of water supplies. The illness itself can be treated with drugs, but control measures have been hampered by lack of knowledge about the biology and natural history of the giardia organism. There is increasing evidence that its natural host is to be found among animals.

Cholera, which is definitely linked to poverty, is likely to occur when there is overcrowding coupled with lack of adequate sanitation and safe drinking water. Therefore the best long-term strategy to prevent cholera is elimination of the factors that favour its transmission, especially by improving water supplies and sanitation.

The treatment of patients with rehydration therapy is the cornerstone of public health efforts to reduce cholera deaths. During acute emergencies, providing clean drinking water, basic sanitation and safe disposal of human waste are high-priority preventive interventions. Immunisation is unlikely to be useful in epidemics.

Cleanliness in cooking

Safe drinking water systems and adequate sewage disposal facilities are essential for the prevention of typhoid. Scrupulous cleanliness is necessary in food preparation and handling, as is proper storage of salads and other food served cold.

A vaccine exists, but it does not give complete protection. Because of the increasing emergence of multiresistant bacterial strains, there is a greater need for longer-lasting, more effective vaccines. Research in this field is continuing.

The prevention and control of food-borne infections depends on improving the hygienic quality of raw food-stuffs at the agricultural level: applying food processing technologies such as pasteurization, sterilization, fermentation or irradiation; and, most critically, educating food-handlers in the principles of safe food preparation. Education of consumers and food-handlers is vital for the prevention of diarrhoeal diseases.

A vaccine for **hepatitis A** is available and is recommended for food-handlers. But because of its high cost, its uses has not been widely promoted.

Here too, intersectoral cooperation is essential. Without it, health promotion and disease prevention cannot make headway. The responsibility for providing safe food should be shared between governments and the food industry, from producers to retailers.

Tetanus can never be eradicated because the spores which cause it will always remain in the environment to pose the risk of infection But it can be eliminated as a public health problem — which means reducing its incidence to less than 1 case per 1,000 live births in each health district where it occurs. This requires immunisation of pregnant women and all women of childbearing age in high-risk areas. Hygienic child-birth practices are also a key element of prevention, and are being promoted through a WHO "clean delivery" campaign.

Babies born to immunised mother have a natural immunity to retains for up to 12 weeks. Women need two does of vaccine to gain up to three years protection, and five doses to cover all their child-bearing years of maximum immune response.

The probable number of women living in high-risk areas who need three doses — which give five years' protection — is 55 million. The estimated cost of immunising them all is 84 million — equal to 1.53 per women.

If world efforts to immunise infants with three doses of DPT are maintained, reinforcing infant immunisation with a fourth dose of DPT at 15 to 24 months prolongs tetanus immunity for another five year. A fifth dose of tetanus toxoid (given as Td of DT vaccine) at school entry will provide immunity for another 10 years. In additional doses when leaving school will ensure sufficient immunity for all childbearing-age years.

In a perfect world there would be adequate sanitation for all and should be for everybody. In the real world, neither applies, and controlling rather than eliminating soil-borne intestinal parasitic infections will remain the realistic goal until they do apply.

WHO promotes the regular use of single-dose, safe, cheap and effective drugs to combat the effects of intestinal worms infections. Research shows that in populations at risk, more of the worms are harboured by a small part of the population. This implies that it is most cost-effective to identify and treat the group that is most heavily infected.

Recent WHO studies in Zanzibar (United Republic of Tanzania) indicate that regular anthelminthic treatment with mebendazole (2.8 US cent a dose) significantly improves the iron status of schoolchildren.

In are where their is a high risk of hookworm infection and a where many women have anaemia, WHO recomends that specific anti-hookworm chemotherapy should be included in strategies designed to improve the health, development and nutritional status of girls and women.

Insect-borne diseases

Flourishing in conditions of heat and humidity, poverty and overcrowding, insects spread deadly and disabling diseases among almost half of the world's population. They prey particularly on small children, killing more than a million of them every year. They lay vast areas of land to waste, preventing productive settlement, destroying agricultural potential, and blighting whole communities and regions.

The mosquito : public health enemy number one

But of all insects that transmit disease, the mosquito represents by far the greatest menace. It remains mankind's most indomitable foe, resisting costly efforts to eradicate or even control it.

The mosquito is the vector for different disease such as malaria, dengue fever and yellow fever, which together cause several million deaths, and hundreds of millions of cases every year. Mosquitoes also spread lymphatic filarisis (elephantiasis), which infects about 120 million people: and Japanese encephalitis, which takes its biggest toll among children.

Varying habits

Different species of mosquito are involved in the transmission of different diseases, each with its own particular habits: some feed by day and others by night; some prefer to feed indoors and others prefer to do so outside; some rest after feeding and other depart; some prefer to feed on humans and others on animals; and various species choose different places for laying their eggs. Mosquito control requires a knowledge of these habits.

Today, the mosquito is literally spreading its wings as a carrier of disease and settling in new areas far from its original geographical boundaries. Some of the reasons — international travel, trade and migration — have already been outlined in the introduction to this chapter. In addition, expanding agriculture, the clearing of forests or the building of dams and irrigation schemes, and unplanned urban development provide mosquitos with new breeding grounds, while at the same time bringing more people into contact with them.

Changes in climatic conditions are enabling mosquitoes and other disease carrying insects to survive and breed at more northern latitudes and higher altitudes.

One example illustrates the role of international travel and trade.

The Asian tiger mosquito, which can transmit deadly strains of encephalitis virus as well as dengue and yellow fever, has been introduced into the United States, Brazil and parts of Africa in cargoes of rubber vehicle tyres shipped from Asia. In the United States alone, this mosquito is established in at least 23 states, and can survive winters as far north as Chicago.

Malaria is endemic in 91 countries, with about 40 per cent. of the world's population at risk. Each year there are 300-500 million clinical cases of malaria, 90 per cent. of them in Africa, and between 1.5 million and 2.7 million deaths. Among all infectious diseases, malaria continues to be one of the biggest contributors to disease burdens in terms of deaths and suffering.

By undermining the health and capacity to work of hundreds of millions of people, it is closely linked to poverty and contributes significantly to stunting social and economic development.

Epidemics return

In many parts of the world, malaria is becoming an even greater problem than before. Epidemics are recurring in areas where transmission had been interrupted, and are generally associated with deteriorating social and economic conditions.

Malaria is a febrile disease used by the four species of human malaria parasites belonging to the genus Plasmodium and naturally transmitted to people by the bite of an infected female mosquito of the genus Anopheles. Early symptoms include fever, shivering, aches and pain in the joints and headache. In Falciparum malaria, infected red cells can obstruct the blood vessels of the brain, causing cerebral malaria, which is often lethal. Other vital organs can also be damaged, with fatal consequences.

False hopes

Forty years ago there were hopes that malaria would be eradicated in a fairly short time, mainly through the intensive use of insecticides. However, malaria still remains a serious threat in endemic countries today.

Those at greatest risk of dying from the disease are children under age 5 in malaria-endemic areas; pregnant women; people moving from non-malarious to malarious zones for reasons of work, migration, refuge, war or tourism; and travellers who visit endemic countries and return home with the disease.

WHO's global malaria strategy (which is intended to prevent mortality, reduce morbidity and lead to a decrease in social and economic loss) consists of providing early diagnosis and prompt treatment; planning and implementing selective and sustainable preventive measures, including vector control; detecting early, containing or preventing epidemics; and strengthening local capacities in basic and applied research to permit and promote the regular assessment of a country's malaria situation, in particular the ecological, social and economic determinants of the disease.

The main problem in malaria control are shortage of resources and resistance to pesticides and drugs.

Dengue fever, a severe influenza-like illness, and dengue haemorrhagic fever are closely-related conditions caused by four distinct viruses transmitted by Aedes aegypti mosquitos. Dengue is the world's most important mosquito-borne virus disease. A total of 2,500 million people worldwide are at risk of infection. An estimated 20 million cases occur each year, of whom 500,000 need to be hospitalized. There is no cross-immunity, which means that an individual who has recovered from one remains susceptible to the other three.

Different virus

The haemorrhagic form of dengue (DHF) most often occurs in individuals who have previously had the infection but are infected again with a different virus type, although DHF may occasionally occur after one primary infection. The viruses move continuously between crowded urban centres, causing massive outbreaks of disease.

Dengue, and especially dengue haemorrhagic fever, cause severe headache and pain behind the eyes which worsens with movement; patients have a high fever and muscle and joint pains. In the haemorrhagic form, there is bleeding from the nose, mouth, and gums, excessive thirst and difficulty in breathing. There is no cure and as yet no vaccine.

Dengue affects more than 100 countries in all continents except Europe, and is spreading rapidly in many areas.

It flourishes in conditions of poor housing, over-crowding, and inadequate sanitation, especially in cities in tropical and subtropical regions of the Americas, Asia, Africa and the Western Pacific, and in communities where there in accumulation of solid waste, especially discarded containers and tyres where mosquitoes breed.

Huge mortality

In 1995, the worst dengue epidemic in Latin America and the Caribbean for 15 years struck at least 14 countries, causing more than 200,000 cases of dengue fever and almost 6,000 cases of dengue heamorrhagic fever. There was only limited dengue in the western hemisphere until 1981, when the first outbreak occurred in Cuba.

Dengue epidemics are increasing due to growing urban populations, expanding mosquito breeding sites and rapid transportation which involves both the movement of infected people and the spread of dengue-carrying mosquitos.

Japanese encephalitis is another mosquito-borne virus disease. Its transmission cycle involves wild birds and domestic pigs and amplifying hosts, and the most common mosquito vector in Culex tritaeniorhyncus, which is associated with rice-growing regions. In recent years, the disease has appeared to spread into new parts of Asia, perhaps as a result of increased rice field agriculture.

Most infections are asymptomatic with only one in a few hundred infections leading to clinical illness. Mild cases are often characterized by febrile headache or aseptic meningitis.

Severe infections are usually characterised by acute onset, headache, high fever, disorientation, coma, convulsions (especially in infants), and spastic paralysis. Among the severe cases, fatality rates may reach 60 per cent.

An estimated 43,000 cases of Japanese encephalitis occur globally each year, with 11,000 deaths and nearly 9,000 disabled. The vast majority of cases (about 85 per cent.) occur among children less than 15 years of age.

Nearly 10 per cent. of the cases are among those over 60 years, perhaps reflecting waning protective immunity. About three-quarters of the cases occur in the Western Pacific, primarily China and adjacent countries, with the reminder occurring in South-East Asia, especially India. The disease is rare in other parts of the world, and when seen, is generally associated with travellers returning from endemic areas.

Lymphatic filariasis or elephantiasis — the grotesquely disfiguring disease affecting the legs, arms and genitals — is the most notorious result of infection with filarial parasites transmitted by Culex mosquitos.

Drugs such as mefloquine and halofantrine have been developed and registered, and artemisinin derivatives developed and brought close to registration.

In Africa large-scale multi-centre trials of the effectiveness of insecticide-treated bednets have demonstrated a dramatic reduction in mortality of children under the age of 4. These research-based results are now being translated into operational recommendations for national control programmes.

Fruits of research

Worldwide efforts in basic research in malaria vaccines are at last beginning to bear fruit. In the United Republic of Tanzania in 1994 a double-blind phase III trial of the Colombian SPf 66 peptide vaccine demonstrated that it reduced the number of first malarial fevers in children by around a third. Continuing studies with this and other vaccines and yielding additional data that will form the basis for recommendations for their use. In the meantime, emphasis is being placed on strengthening national capacity to diagnose and treat malaria; epidemic preparedness and control; and mobilising sustainable international commitment for long-term malaria control.

In the countries of Africa south of the Sahara, special attention is being given to strengthening general health services and enabling health care providers from other sectors and the communities themselves to provide early diagnosis and prompt treatment, i.e., disease management. In the rest of the world, the emphasis is on improving the provision of basis curative services at all level of health care and the promotion of rational drug use; and implementing selective measures for disease prevention, including selective vector control.

A **dengue** vaccine is being developed in Thailand with WHO's help. The results of clinical trials in adult volunteers show that it is safe, and its immunlogical response is encouraging. Trials of the vaccine in children have also begun.

A live, attenuated, highly efficacious vaccine for yellow fever is available widely used, including in the Expanded Programme on Immunisation in many countries. Protective antibodies appear 7-10 days after immunisation and probably persist for life, although reimmunisation is currently recommended every 10 years. Other interventions centre around prevention of bites from infected mosquitos. Thus mosquito control activities, especially targeted to *Ae. aegypti*, are critical in the prevention of urban transmission.

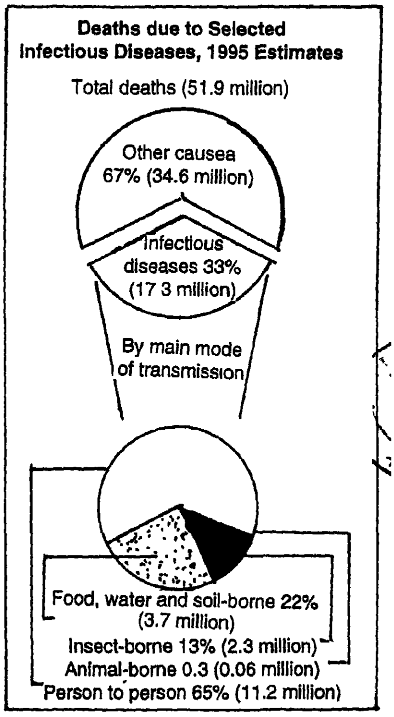
Urban transmission of yellow fever is essentially indentical to that of dengue fever, a rapidly increasing public health problem in many countries of the tropics. Control of breeding of Ae. aegypti mosquitoes around houses should lessen the risk of urban yellow fever transmission as well as that of dengue fever.

Vaccines are available for **Japanese encephalitis.** They require an initial series of two injections, followed by a booster. Immunisation is the most effective means of disease prevention. Efforts are under way to develop a live, attenuated vaccine that will be an improvement on the existing inactivated vaccine. Although promising results have been obtained, it will be several years before such a product is available for widespread use.

In **filariasis** four major break-throughs have occurred, offering the prospect that — given sufficient political commitment and resources — the disease might eventually be well controlled or even eliminated.

The first of these breakthroughs is the development of safe, single-dose, annual drug treatment. Trials have proved that a single-dose, of diethylcarbamazine (DEC) is very effective even two years after treatment. A single does of invermectin has proved to be equally effective. A combination of single doses of both drugs reduced microfilaremia more than 95 per cent. two years after treatment.

Secondly, intensive local hygiene on an affected limb, with or without



Figure—Deaths due to Selected Infectious Diseases, 1995 Estimates

the use of antibiotic and anti-fungal creams, has been shown to have dramatic effects by halting the progression of, or even reversing, elephentiasing and lymphoedema.

Thirdly, DEC-medicated table or cooking salt has been introduced in India. The carefully controlled addition of very low concentrations of DEC has long been recognised as an effective means of eliminating lymphatic filariasis infections in communities. However, the addition increases the price of the salt. During 1994, the first commercially prepared DEC salt want on sale in India, at above twice the price of ordinary salt. It remains to be seen whether the product will be a commercial success.

Finally, there has been the development of insecticide sprays and polystyrene beads to seal latrines and roof-tap water-storage tanks, to eliminate or reduce populations of urban Culex mosquitoes.

In general, the control of bubonic plague involves breaking the rodent-flea-human transmission chain by the use of insecticides, flea and rodent control and sanitation. Control of pneumonic plague aims at interrupting the respiratory route of person-to-person transmission. Antibiotics are effective in treating the disease.

Flea control involves the use of insecticides blown into rat burrows or distributed around houses frequented by rats. Insecticides should be used before any rats are killed or a rodent control campaign is carried out, because otherwise fleas leave dead rats in search of another living host such as humans.

Plague vaccines exist but are not recommended for immediate protection in outbreaks. Vaccination is only recommended for high-risk groups such as health workers and laboratory personnel who are more intensely exposed to risk of contamination.

Because it is transmitted in the wild, plague cannot be eradicated in the foreseeable further. Surveillance at local, national and international levels is crucial in the prevention and control of the disease.[1]

VECTOR CONTROL

Vector-Borne diseases are caused by a variety of parasites which are transmitted by a living carrier. A majority of the vectors are arthropods.

The important vector-borne diseases prevalent in India are malaria, filariasis and arboviral diseases such as Japanese encephalitis, dengue, chikungunya and dengue haemorrhagic fever (spread by mosquitoes), leishmaniasis, dermal and visceral (sandflies), plague (fleas) and Kyasanur forest disease (ticks).

Statistics indicate that more then five million children die of vector-borne disease annually throughout the world. Fragmented data makes it impossible to estimate the prevalence of vector-borne diseases in India. While the prevalence of malaria and filariasis can be estimated to a certain extent, data on other vector-borne diseases is negligible. One thing is certain though, we are losing the battle against most vector-borne diseases. Worse, some of these diseases are re-emerging as major problems — the frequent outbreaks of arboviral diseases like Japanese encephalitis, dengue and plague, to cite an example.

The outbreak of vector-borne diseases is determined by the complex interaction of three agents, namely parasite, host and vector in a particular environment (physical, socio-economical and cultural). The increase or decrease of vector-borne diseases cannot be attributed to the success or failure of the control programmes alone.

Population growth

Ecological change associated with population growth and development are often responsible for any outbreak of vector-borne diseases. The growth in population facilities host-parasite vector interaction by bringing the two together.

Development activities could broadly be classified into two groups. One group of activities is meant for increasing primary production, namely, agricultural activities, including irrigation projects, construction of dams and sinking of borewells. These led to deforestation, waterlogging, climatic changes, etc. The second group of activities is related to secondary production, which includes industrialisation and consequent urbanisation that triggers large-scale migration.

These activities facilitate the movement of parasite carries or non-immune people, creating a new foci or an epidemic of vector-borne diseases. Development projects are initiated to provide basic amenities in human settlements. In the process, extensive ecological changes are wrought that are conducive for not only vector-borne diseases but for many other new diseases.

Let us examine how we can tackle the problems of shelter, water, air and food and their impact on the proliferation of mosquito-borne diseases.

Shelter.—The world is inhabited by 5.7 billion people with 90 million being added every year. We keep converting fertile agricultural land into housing plots to accommodate an increasing population. When horizontal expansion is not possible we construct multi-storied buildings. This way, we induce permanent changes in an area by replacing the natural ecosystem with a man-made one. One consequence of such development is the multiplication or expansion of mosquito breeding habitats.

Haven for vectors

Multi-storied buildings are a haven for mosquitoes. Overhead water tanks, ornamental tanks and cisterns help in the breeding of the malaria vector *A. stephensi* while modern home appliances like air conditioners, coolers and heaters, etc., provide an ideal condition for the breeding of the aedes mosquito, which transmits dengue and yellow fever.

Construction in urban areas lead to large-scale migration of labourers from different parts of the country and aggregation of non-immune people and parasite carriers. When there is irregular water supply, people store water in a variety of containers. This also facilities the breeding of the aedes mosquito, increasing the risk of an outbreak of dengue.

Water. Water is essential for our survival; the demand for it is growing with the increase in population. The technology for extracting groundwater is so advanced that we neglect to harness surface water. We continue to exploit groundwater resources despite realising that it is not unlimited.

Inadequate solid waste and waste water management are often major causes for the proliferation of vectors, especially the filariasis vector *Culex quinquefasciatus*, houseflies, cockroaches and rodents. Diseases like filaraisis occur due to poor waste water management, while malaria and dengue are the result of improper water storage methods.

Food. Various technologies have been introduced in agriculture and animal husbandry to ensure food security. Irrigation projects can either increase the malariogenic potential in an area by introducing an increasing vector population or sometimes reduce the potential by replacing an efficient vector with an inefficient vector. However, the problem in water development projects is more acute at the time of construction when migration of non-immune people creates an epidemic situation — for example, intense transmission of Falciparum was recorded at the time of the construction of the Nagarjuna Sagar dam in Andhra Pradesh, the Indravati Project in Orissa, the Upper Krishna project in Karnataka and Indira Gandhi Canal in Rajasthan.

Modern agricultural practices depend on prophylactic use of pesticides. This has eliminated many useful insects and the hymenopteran parasites that helped in regulating vector population. For example, coelomonyces, a fugal infection in mosquitoes was quite common but with the extensive use of insecticide, the infection rate drastically reduced due to a decline in cyclops and other ostracod population (intermediate host). It also precipitated resistance in the vector population.

Fallout of deforestation

Deforestation, which is a common factor in any development activity, causes an imbalance in the man:animal ratio, diverting the mosquito vector which otherwise feed on animals to humans. The incidence of malaria is high in the border districts of Andhra Pradesh and Orissa and in north-eastern States where labour camps are organised for cutting bamboo for the paper industry. In time, the forest-dwelling species disappear with the forest and are replaced either by *C. quinquefaciatus* which breed in man-made breeding habitats or by other anopheline species like *A. culicifacies* breeding in wet land. By destroying forests man encroaches on the natural ecosystem and renders himself susceptible to many zoonotic diseases, which in due course of time may become anthroponotic. The Kyasanur forest disease is a good example of this.

Until 1940, programmes to control vector-borne diseases were based on improving sanitation and personal protection measures. A few examples are the yellow fever control programme in the Panama canal and the malaria control programmes in Malaysia and Peshawar, etc. However, these control methods were considered too expensive for large-scale programmes. The control programmes at that time were meant only for a selected percentage of the population. With the introduction of DDT, all the measures based on sanitation were completely neglected.

Here, we would like to emphasise that developed countries in the West controlled many of these diseases mainly by resorting to simple sanitary measures. They did not wait for any new vaccine, drugs or molecular tools to control these diseases.

The prevalence of vector-borne diseases in an area depends upon the host-parasite vector interaction in that area. It is therefore a local problem and varies even within the city. Following a uniform strategy for the entire city is neither cost-effective nor necessary. However, planners stick to a single and uniform strategy in the name of simplicity, over-looking the fact that if control measures are initiated according to the local problem, one can not only save money but implement it more efficiently.

In the Sixties, insecticide was the panacea and now the bio-environmental control of vectors and anti-parasitic drugs have the same status. Instead of controlling the vectors, drugs are distributed for controlling diseases like malaria and filariasis. Suddenly, insecticide has become bad and the use of drugs good.

We do not intend to advocate the importance of insecticides alone. In fact, we are against depending on any particular tool for all types of situations. Neither vector control nor parasite control in isolation can produce the desired results. While there are many tools for a particular situation, there is no tool which can be effective for all situations.

Bottlenecks

The present strategy also suffers from some operational and administrative bottlenecks like inadequate funding, lack of quality control of insecticides, absence of flexibility in decision-making, lack of motivation for vector-control staff, unwillingness to introduce new concepts, etc.

Inspite of these problems, the control programmes in our country did achieve considerable results in the past. After the introduction of DDT residual spray under the National Malaria Eradication Programme (NMEP), the incidence of malaria declined from an estimated 75 million cases with 0.8 million deaths in 1952 to an all-time low of 0.1 million cases with no casualties. Diseases like leishmaniasis, dengue, etc., were brought under control. A fourfold increase in the population testified to the success of various technological developments in bringing down mortality from vector-borne diseases. If the efforts were successful why are we then witnessing the emergence or re-emergence of vector-borne diseases ? Is it that the tools available are not adequate to tackle the problem or is it the lack of application of these tools ?

The risk of an outbreak of disease has increased over the years. We are content with fire-fighting measures to tackle these diseases. What is required is a comprehensive plan and concentrated efforts based on a continuous monitoring of the situation. The tools available are still sufficient to keep the diseases under control. Since environmental degradation is the major cause for the increase of vector-borne diseases, must we not attempt to improve environmental conditions ?

The strategy for controlling vectors varies from species to species. Even for the same species, the method of control may vary from one area to another. Therefore, the approach to vector control must change from an overuse of pesticides to an eco-friendly integrated vector management (IVM).

IVM is essentially an ecological information-based control programme that utilises artificial or natural control tools to be fitted as unobtrusively as possible into the total environment to effect the suppression of pest species at the time and place where they escape the repressive effect of natural control.

Community must participate

Information about the vectors — where they live, when they feed, where they breed, etc.— is important for any strategy to control them. Gathering information on ecology and epidemiology during a lean period is considered unnecessary expenditure. However, public health authorities must be vigilant and try to destroy the vectors during the lean period itself. This is easier said than done as maintaining a huge infrastructure for surveillance may be beyond many disease control agencies. Since we are dealing with a dynamic system which changes rapidly due to human interference, surveillance should be an integral part of the strategy and carried out independently. Since there is no substitute for surveillance, one cannot dispense with it. However, the cost of surveillance can be minimised by either utilising existing infrastructure or seeking the help of NGOs.

Community involvement must be ensured from the planning stage itself and education should form an integral part of the strategy. Educating people with half-truths may boomerang. The advertisement in inland letters says "Fever ? It may be malaria take chloroquine". Such advertisements make people believe that a few tablets of chloroquine will cure malaria. The message could instead read "Fever ? It can be malaria and may be fatal if not treated. Take treatment under the supervision of a physician".

Vector control can be achieved either by killing or regulating the population of the vectors. Our experience has shown that using chemicals to kill insects with a high reproductive potential is a cumbersome process requiring repeated applications which are operationally and economically not feasible in the long run. Secondly, the resurgence of the vector population due to the elimination of bio-cenotic regulators by toxic chemicals leads to population stabilisation at a higher level.

A majority of our programmes suffer due to poor implementation. Implementing agencies need to be identified at the design stage. It is not possible for vector control agencies alone to tackle the problem. The major responsibility for improving the environment must lie with the people. The needs to be enforced by a strict Public Health Act. Punishment should be so severe as to thwart any repetition.[1]

CHAPTER VI

FOR LIFE ON EARTH—SAVE OUR SEAS[1]

1. *Introduction*

Man is basically a chemical species who lives in an environment that is broadly divided into five major zones : Lithosphere, Hydrosphere, Biosphere, Atmosphere and Exosphere. The changes in and around him are chemical and biological in nature. Around 8th Century B.C, Indian thinkers outlined the Physico-chemical theories of cosmic evolution and observed that there are five basic elements of nature-Ksiti (Earth), Ap (Water) Tejas (Fire), Marut (Air) and Vyoma (Sky) and these elements fit into the Modern concept of various spheres of the total environment as earth corresponds to Lithosphere, Water to Hydrosphere and Biosphere, air to atmosphere and fire to exosphere. The ultimate ground of cosmic evolution is Prakriti (nature).

The ancient Indians saw nature as the source of all attractions because of its rhythm. Its beauty is Pristine and it appeals directly to the mind which results in a controlled aesthetics response to a range of new and often intimidating visual experiences, thereby developing a feeling of "love of nature" and thus the cosmic evolution of nature (Prakriti).

What is admitted as beauty of nature is the sense of harmony and order. However, in the last few decades mindlessly we have damaged the beauty of our planet Earth. Increase in population, increase in human needs, urbanisation and rapid industrialisation has caused extensive degradation of our environment. In this alteration of the environment, man has forgotten the environmental ethics, and has threatened the very existence of living organisms and our planet earth. Professor George Wald has summarised in the Heritage :

> "Three billion years of life, three million years of man-like creatures, ten thousands years of civilisation and mere two hundred years of industrial revolution have brought us to the brink of disaster."

During these two hundred years, sciences have led to deeper understanding of process in physical and biological world as also destruction of delicate ecological processes leading to several unnatural phenomena. Our air, land and Water and polluted causing irreparable damage to the animals and plants. If this trend continues, one apprehends that it may endanger the lives of living species, destroy the atmospheres, oceans and other water resources converting The earth into a desolate lunar-like surface.

This irresponsible behaviour of man has led to the development of Ecosystem ethics which deals with responsible behaviour of human beings towards worlds resources. The earth has a beauty, a balance of nature that is inherent in it. Unfortunately, the earth and its ecosystems have values only as objects of considerations by conscious, sentinent human beings. It is true that ecosystems regularly change, and they regularly eliminate species. After all the dinosaurs are gone. But that is different because Mother Nature did it herself. But the problem arises when human activities wipe out species.

---

[1] Source: Foundation day Lecture by, Padmeshree Dr. (Mrs.) Priyambada Mohanty-Hejmadi, Vice Chancellor Sambalpur University, Jyoti Vihar, Samabalpur-768019, Orissa, India. "World Environment Day" and 20th Anniversary of "The National Museum of Natural History" (Ministry of Environment and Forests, dated 5th June, 1998).

It is generally agreed that the balance of nature is not a static thing. It is unclear how proponents of ecosystem ethics can maintain that certain ecological changes are good where as others are not. It is generally taken for granted that what happens naturally is good and what happens through human interference is bad. In a civilised society it is desirable to have a procedure for guaranteeing that environmentally sound ethical decisions will be made by people. There is limit to the exploitation of natural resources.

2. *The Oceans*

The oceans and their marginal seas cover nearly 71 percent of the Earth's surface with an average depth of 3795 metres. The exposed land occupies the remaining 29 percent of the planetary surface and has a mean elevation of only 840 metres. An ocean is one of the areas of salt water which occur on the surface of earth.

There is an old saying to the effect that "the earth has six continents and seven seas". In fact, that generalization is not too far off the mark. The earth does have six continental landmarks : Africa, South America, North America, Eurasia (Europe and Asia occupy a single large landmass), Australia and Antarctica. As for the seven seas, there are five great oceanic bodies of water and several smaller seas. The Pacific Ocean is the largest of all. The Indian Ocean lies between Africa and Australia. The North Atlantic Ocean and the South Atlantic Ocean may be regarded as discrete oceans. Encircling Antartica is the Southern Ocean. And beneath the icecap lies the Arctic Ocean. The seventh body often identified with these oceans is the Mediterranean sea.

However, those conducting oceanic research generally recognize the existence of three major oceans, the Pacific, Atlantic and Indian. Arbitrary boundaries separate these three bodies of water in the Southern hemisphere. However, water properties, ocean currents and biological population do not necessarily recognize these boundaries.

The chemical composition of sea water is influence by a wide variety of chemical transport mechanisms. Rivers add dissolved and particulate chemicals to the oceanic margins. Wind-borne particulates are carried to mid-ocean regions thousands of kilometres from their continental source areas. The processes that deliver dissolved, particulate, and gaseous materials to the oceans ensure that they contain, at some concentration, very nearly every element that is found in the Earth's crust and atmosphere. The principal components of the atmosphere, nitrogen (78.1 percent), oxygen (21.0 percent), argon (0.93 percent) and carbon dioxide (0.035 percent), occur in sea water in variable proportion, depending on their solubilities and oceanic chemical reaction.

3. *Economic Aspects of Ocean*

The sea is generally accepted by scientists as the place where life began on Earth. Without the sea, life as it is known today could not exist. Among other functions, it acts as a great heat reservoir, levelling the temperature extremes that would otherwise prevail over the earth and expand the desert areas. The oceans provide an inexpensive form of transportation, and the coasts serve as a major recreational site. Ocean is a valuable source of food including almost all the table salt, potentially important source of energy and minerals, all of which are required in ever-increasing quantities by industrialized and developing nations alike.

(a) *Medium for transportation and communication*

Since ancient times, people have used the sea as a means of transportation. Much of the trade even *invasions* were through the seas. Even today the bulk of tonnage of products transported throughout the world today is through ocean vessels. Oceans sea bed as the måjor means of communication with the laying of transatlantic cable in the 19th century. In addition, cable pipes laid on seafloor carry electrical energy, oil and other commodities in many parts of the world.

(b) *Sources of Food and Water*

(i) Fishing : Many millions of tons of edible fish and shellfish are taken from the oceans each year. Unfortunately, over fishing of certain varieties and areas along the continental shelves have also resulted in declining numbers and therefore catches. The decimation of whales (many species are near extinction) and also the anchovy off the water of Peru exemplifies the consequences of overfishing. A more viable course of action is to develop fish-farming mariculture. The Japanese are pioneers who raise substantial amounts of oysters, shrimps, trouts and even sea weeds. A sea weed *chlorella* has the highest protein content out of all plants. Marine organisms have also been cultured as a source of therapeutic drug. Americans are pioneers who grew a marine microalgae to get beta-carotene in high concentrations.

(ii) Desalination : Throughout the world 3,500 land based disalination plants producing a total of more than 8 billion litres per day, were in operation by the early 1990's. In general, desalination plants are located in areas where population has outstripped the onshore water supply. 30 percent of these are operated in U.S., 20 percent in middle east including Israel.

(c) *Energy Sources*

(i) Tidal power generation : A certain degree of power is being generated by many countries with hydraulic turbine-generator units extracting energy from ocean tides. Attempts are being made to generate energy by *Ocean thermal energy conversion* by taking advantage of temperature differential of warm surface water and deeper could waters of the ocean.

(d) *Sources of mineral and other raw material*

(i) Petroleum : Production of oil and gas from oceanic area in increasing day by day. At present about 25 percent of the worlds' production comes from offshore drilling. It is estimated that it will increase to 50 percent of the onshore potential oil sources. We would not ignore that accidental discharge of oil cause serious damage to the environment and marine organisms.

(ii) Minerals : Nodules of commercial value are now extracted from the sea. These include manganese, Phosphorites, Barium Sulfate and even Sulphur. Ofcourse, sea has been a source of sand, gravel, shells and even gems from ancient times.

(e) *Recreation*

One of the major source of recreation all over the world. Billions of dollars are earned by recreational activities on the coast and off the coast. But, developmental activities without proper planning has led to destruction of some of the most coveted beaches along with its biodiversity all over the world.

Thus, we are dependent on the oceans for our survival. I would now like to concentrate on the "State of the art" as far as our own Indian Ocean is concerned. (But, a global prospective has to be kept in mind if we deal with the absence of boundaries in the Oceans).

4. *Indian Ocean—Perspectives and problems*

The Indian ocean is the third largest of the world's oceans, covering 73 million square kilometres. Ringed by 37 predominantly developing countries from Eastern Africa to south East Asia and Western Australia, the Indian Ocean bears almost 1/3 of the world's population, yet is the last major world region lacking a comprehensive conservation and management strategy. Fisheries in the open ocean and populations in coastal regions rely heavily on marine resources for subsistence and commerce.

If we consider India biogeography of the ocean we have to consider the ocean and the islands. Together India has a coastline of about 7,565 kms. If we take the main land alone starting at the Pakistan border, the Indian shoreline extends for nearly 5,500 kms, from Gujarat in the west, down along the Konkan and Malabar coasts, around Kanyakumari and then up along the Cormandel coast Bengal's Sundarban to continue into Bangladesh. The continent is a flanked by the Arabian sea in the West, Bay of Bengal in the East and Indian ocean in the south. A delicate, carefully structured ecosystem must fight to maintain a perfect equilibrium in the face of the most powerful force on Earth-the sea. To cope with an incessant battering from wind driven waves, a series of barriers fortify coasts. Tropical seas are studied with reefs, composed of delicate coral *communities*, which act as break-waters to restrain the waves. Sand bars then act on the waters to further temper their force. Mudflats and *Mangrove swamps* act as the final barriers. It is in these habitats that some of the worlds most fascinating and vital marine nurseries exists. Through ages inhabitants of the coast, the legendary fisherman and the ancient *mariners* controlled the coasts and our shores stayed pure and productive. Oceans are traditionally used for navigation, recreation, and for food and mineral resources. Traditionally, ours is a maritime state. Some regions like Gujarat, Karnataka, Kerala, Andhra Pradesh, Orissa and Bengal being in the fore-front of maritime usages. Ship building industry on the coast is age old and Indian ships traversed many oceans several thousands years ago.

The islands are the precious laboratories of evolution. Life probably began in the warm tropical seas into which islands were borne. The natural history of islands cannot be separated from that of the oceans that *nurture* them. The Andaman and Nicobar group is the major and better known Indian islands. This is actually an archipelago with a total of 348 islands, stretching over a length of nearly 600 Kms. The Lakshadeep group *consists* of 25 islands *in three clusters with a total land* area of a mere 109 sq. kms. The greatest variety and endemism is noticed in the floral composition of Andaman and Nicobar islands. Almost 10% of the 15,000 species of higher plants recorded in the Indian region are totally restricted to these islands. The 135 coral species and 600 fish species are fighting against heavy odds for survival. Of the 255 species and subspecies and of birds recorded in the archipelago, 112 are *endemic*. Considerable endemism is observed in the amphibian and reptilian element as well. Inspite of increased awareness and concern, the ecological and anthropological uniqueness of the islands is under severe threat.

It was in November-December 1995 a strategic conference was held in Mombasa, Kenya to address this problem and a report entitled "Integrating Marine conservation in the Indian Ocean : and Beyond" was prepared under the auspices of Indian Ocean Marine Affairs Cooperation, Fauna International and New England Aquarium.

It was obvious that data collection for Indian Ocean countries has to be intensified. For our country most of the valuable Indian coast is treated as a garbage dump. Industries and municipalities discharge untreated effluents into the sea, polluting not just the water, but the land as well.

An investigation on coastal pollution during the last decade has identified. "hot spots" along the east and west coasts. The rapidly industrial cities like Mumbai, Calcutta, Visakhapatanam etc., were found to pollute the coastal water with heavy metals and oil. Discharge of sewage into the sea is a global problem. Flux of pesticides in the east coast is greater due to intense agricultural activities. Cement and Steel Plants rip corals from reefs, unmindful of the resultant losses caused to inland areas on account of shore erasion.

Ironically, sandy beaches so vital to the breeding surface of marine organisms including turtles, also attract humans in search of peace and tranquillity. Unfettered tourism, however, is perhaps the single largest threat to breaches today, after industry. Late Prime Minister Smt. Indira Gandhi who understood the value of the shoreline, stipulated that a zone extending 500 metres from the high tide mark would be out of bounds for "developers". Unfortunately, this has now been reduced to 200 kms. and even then violation of this zone has become a common feature.

Local populations are destroying the mangrove system which is the important nursery for many marine species for fuel, fodder and of late for prawn seedlings. The trampling in the mangrove in search of these is causing irreparable damage to the mangrove ecosystem.

Such interferences adversely affect the breeding success of innumerable marine organisms such as shrimps, lobster, sharks and other fish which spawn inland. Falling fish-catches near our shores can safely be attributed to the abuse of marine ecosystems (coupled with the destruction of spawning grounds by mechanised trawlers). By destroying those nurseries we are literally snatching the only reliable protein source available to millions of rural poor who live on, and near our coasts. It is said that well over half of India's coastal fish are more or less dependent upon mangroves and estuaries which are able to re-cycle detritus to optimum advantage. Over 2,000 species of biological life forms from bacteria to mammals are associated with mangroves.

It is only recently that the biological and economical value of coasts has been realised in our country. Attempts are being made to counter the effects of shore erosion and pollution caused by developmental activities, mining corals, radioactive sands and deforesting mangroves.

Amongst the least-known and most unique animals of the coastal zone is the dugong or sea cow from Gulf of Kutch and Gulf of Mannar. Today it is an uncommon animal. Even the distribution of the estuarine crocodile is very fragmental today. The five species of sea turtles that visit Indian coast, the olive ridley, the hawksbill, the green turtle, the loggerhead and the leatherback are all threatened. Their breeding grounds are fast vanishing.

It is upto us to save the oceans which is vital for the survival on land. Action plans have to be developed to minimize pollution and over exploitation and sustainable utilization of marine resources.

Further coastal people of almost all Indian Ocean states depend on marine resources for subsistence and basic provisions. Therefore, any meaningful conservation can only be implemented and remain sustainable in the future if strongly founded "in the context of local development". Human population growth and resultant increases in resource use are the principal problems. Inherent in viewing human interactions as the prime variable in conservation is the recognition that differing social, cultural and economic contexts require different approaches to conservation. While scientific information and analyses are critically needed throughout the region, a focus on human aspects of conservation will reap the fastest benefits in term of conserving biodiversity, maintaining ecosystem health and providing for the basic needs of the regions coastal peoples.

I would now like to highlight a few of the case studies based on my personal experience relating to my work in Bhitarkanika sancturary which until recently also included the Gahirmatha area, the largest rookery of sea turtles.

5. *Marine Turtles/Gahirmatha*

Sea turtles have been roaming in this world for the last 150 million years. They are not restricted by ephemeral boundaries and therefore, are truely International.

Five of the world's seven species of marine turtles inhabit the Northern Indian Ocean : the olive ridley, the hawksbill, the green turtle, the leatherback and the, loggerhead. Historically, the Northern Indian Ocean has supported large populations of marine turtles. Marine turtle populations have declined as a result of the degradation or destruction of the habitat on which they depend. They have also declined as a result of the decades of traditional and commercial use. Marine turtle populations and habitats, it protected and managed, make a valuable cultural, ecological, and economic resource. They are a shared resource of immense value to the nations around the Northern Indian Ocean, namely, Malaysia, Thailand, Bangladesh, India, Pakistan, Maldives, Sri Lanka, Oman and Saudi Arabia. Representatives of all countries gathered in Bhubaneswar in January 1977 to draft out a common strategy for the preservation of the marine turtles in Northern Indian Ocean. Similarly, country representatives of Western Indian Ocean have drafted a strategy for Western India Ocean marine turtles. Gahirmatha has now been declared as a Marine Sanctuary (area of 1435 sq. km.) since 27.09.97.

6. *Bhitarkanika Sanctuary*

The deltaic region of rivers Brahmani and Baitarani covering an area of 672 sq. km. has been declared as a sanctuary since 22.4.1975. With a rich flora of primarily mangrove plants it is rich in species diversity having 62 out of the total or 67 species of mangroves in India. Being equally rich in fauna it has the largest population of estuarine crocodile *(Crocodylus porosus)* which also includes the largest crocodile existing in India. This is due to the successful rehabilitation program which was undertaken in 1975 through which hundreds of hatchlings were reared and released into the river system inside the sanctuary. Other endangered animals include the largest Indian lizard-the water monitor (Varanus salvator), king cobra, rare estuarine turtle *(Pelochelys bibroni)*, white bellied sea eagles and fishing cats. It also receives a good number of migratory birds in season. However, encroachment, fishing, illegal aquaculture, increase in the migrant population is threatening the very existence of the sanctuary. Pressure on mangrove plants and wading in the mangroves for prawn seeds by local people as well as incidence of poaching is on the increase.

Acknowledgment : I want to thank Shri S.K. Patnaik, Conservator of Forests, Govt. of Orissa and Shri S.K. Kar, Research Officer, wildlife division for providing the data on Bhitarkanika.

CHAPTER VII

ATMOSPHERE AND CLIMATE

Air pollution continues to be one of the most serious local environmental problems and a continuing threat to human health, especially in urban areas. Regionally, acid precipitation and atmospheric transport of a wide range of nutrients and toxic materials damage crops and disturb the acidic balance of lakes and estuaries. Globally, degradation of the stratospheric ozone layer continues. And rising global concentrations of greenhouse gases such as carbon dioxide and methane increase the risk of climate change.

These examples reflect the impact of growing human populations and expanding industrial activity on the thin layer of air that surrounds the Earth. Scientific research is making rapid progress in understanding the natural systems that govern atmospheric phenomena, the mechanisms by which human activities alter those systems, and the likely future consequences of present human activities. Progress in forging the social and political consensus necessary to deal with these problems and in implementing solutions to them is much slower.

This focuses on global environmental problems concerning the atmosphere It reports on current emissions of greenhouse gases, on the future emissions implied by a number of scenarios of energy use, and on recent scientific assessments of the likely consequences for the Earth's climate. It contrasts these assessments with the goals of the Framework Convention on Climate Change and discusses the difficulties of stabilizing atmospheric levels of greenhouse gases. It also reports on widely varying estimates of the potential costs—and benefits—of controlling emissions, on recent diplomatic efforts to strengthen the Climate Convention, on a recent scientific assessment of whether the climate is actually changing [1]

Stabilizing Earth's Climate

When most of the world's nations signed the Frame-work Convention on Climate Change in 1992 at the Earth Summit—the 1992 United Nations Conference on Environment and Development (UNCED)—their goal was to stabilize the atmospheric concentrations of greenhouse gases—primarily carbon dioxide, but also methane, nitrous oxide, and several other heat-trapping gases—at a level that would not dangerously interfere with the Earth's climate system. But the years since UNCED have provided some sobering perspectives on just how difficult attaining this goal may be. Recent projections of global energy use in the next two decades foresee a marked increase in the amount of fossil fuel burned around the world—with a concomitant increase in carbon dioxide emissions.

At the same time, climate scientists, using computer models, have studied what it will take to stabilize greenhouse gas concentrations at various levels. In general, those studies show that carbon dioxide levels will not stabilize at any desirable level unless emissions—and hence the use of fossil fuels—are cut substantially. The economic costs and benefits of a potential shift toward lower emissions are also slowly coming into sharper focus, providing critical input into the decisions on whether or when to invest in emissions abatement programs.

---

[1] Source : World Resources, 1996-97, Oxford University Press, 1996.

Even if global policy makers continue to confirm that stabilizing the climate is scientifically and economically justified, they still face the questions of how quickly and how much they should cut, how cuts will be allocated among developed and transition economies and what allowance will be made for the economic and social need of poorer countries that are in widely different phases of development. These questions provide the basis for present negotiations on how the Climate Convention can be strengthened and post-2000 commitments secured to meet the goals of the Convention without strangling the world economy or penalizing developing nations.[1]

International conventions on Climate and Biodiversity

The Earth Summit, held at Rio de Janeiro in June 1992, marked the beginning of a new era of cooperation between the rich and the poor countries to save the global environment. International Conventions on Climate and Biodiversity were signed by the majority of nations attending the summit. They also endorsed an action plan on sustainable development called Agenda 21.

However, one year later, it is not clear what the summit actually achieved. Take, for instance, the Convention on Biodiversity. Ninety per cent of the world's total biodiversity lies in the southern nations. India is one of the richest areas in the world in terms of biological diversity as it is home to 6.5 per cent of the world's wild species of animals and plants. Today it is estimated that species destruction is taking place at the rate of almost one a day. At this rate, of the 1.5 million species in the world, as much as one third could be destroyed in the next few decades.

So far, there has been a one-way transfer of resources from the South to the North. Despite the Biodiversity Convention, it is not clear whether the developing countries will have free access to technologies which have been developed in the North but are based on southern biotic resources, or whether they will have to pay for them because the richer countries hold the patents to these technologies.

Apart from preserving biodiversity on land, there is a growing realisation that many marine ecosystems are greatly endangered not just by dramatic events like oil spills, but by the daily discharge of oil, sewage and effluents into a resource which has been considered indestructible. Mishaps like oil spills account for only 10 per cent of the pollution to the world's oceans. Industrial wastes, sewage and oil from ships and boats which wash out their holds in the oceans cause much more damage to marine life. For instance, in the Andaman and Nicobar Islands, the Blair Reef has died in the course of the last 25 years. Despite this, local industries continue to dump wastes in the immediate vicinity of the reefs.

This section assesses the two main conventions signed at Rio, discusses some of the issues touched upon at the Earth Summit, and looks at the importance of biodiversity and marine ecosyststem.[2]

Climate Change

Global warming could be a significant threat to marine biodiversity. Among other effects, rising waters (as a result of melting ice caps) could drown coastal mangrove and other wetland habitats. Even if global warming were to proceed at a pace slow enough to permit species to colonize new

---

2. Source : The Hindu Survey of the Environment, 1993, p. 43.

coastline boundaries, the presence of existing agricultural and urban development with protective bulkheads and dikes would, in many cases, prevent the establishment of new wetland areas.

Projected climate change could have other effects, including changes in ocean currents, salinity (due to changes in river flow), and surface temperatures. These would alter the species compositions found within individual ecosystems today, perhaps triggering local and global extinctions in the process.

Some evidence exists that local and regional warming episodes may already be affecting marine ecosystems. It is difficult to determine whether these changes are due to natural, cyclical variations in temperature or to a long-term warming trend. As noted above, localized increases in water temperatures are believed to be one of several factors behind recent episodes of global coral bleaching. In a long-term study off the coast of southern California, researchers found an 80 percent decrease in zooplankton density between 1951 and 1993. This decline was linked to increases in ocean surface temperatures of 1.2° to 1.6° C during this time period. Other scientists in central California have reported major shifts in bottom-dwelling coastal populations over the past half century.[1]

The industrial economies are not going to meet the commitments they have made on greenhouse gas emissions for the year 2000. Michael Jefferson makes a more realistic proposal for the year 2020.

In 1992, 155 Governments signed the United Nations Framework Convention on Climate Change (UNFCCC). Since then over 160 Governments have ratified, or otherwise committed themselves to this Convention. Their purpose was to stabilise greenhouse gas concentrations in the atmosphere at a level that would prevent "dangerous" human interference with the climate system. The Inter-governmental Panel on Climate Change (IPCC) has since indicated that definition of what is "dangerous" is a political judgment.

Parties to the UNFCCC should protect the climate system for the benefit of present and future generations by taking precautionary measures to anticipate, prevent or minimise the causes of climate change, and mitigate its adverse effects.

The industrialised countries (often referred to as Annex I Parties, although Annex I also contains 11 economies in transition) committed themselves to the aim of returning their greenhouse gas emissions (not covered by the Montreal Protocol) to their 1990 levels by the year 2000.

The industrialised countries also committed themselves to providing new and additional financial resources to meet the agreed full costs of developing country Parties in complying with communications agreed under the UNFCCC; assisting vulnerable developing countries with the costs of adaptation to any adverse impacts of climate change; promoting, facilitating and financing "as appropriate" the transfer of environmentally-sound technologies and know-how to developing country Parties; and providing such financial resources, including the transfer of technology, needed by developing country Parties to meet the costs of implementation of UNFCCC commitments.

A degree of flexibility

The economies in transition are given "a certain degree of flexibility" under the UNFCCC. Developing countries, although accepting some general commitment within their "common but different responsibilities and their specific national and regional development priorities, objectives and circumstances", will take "fully into account that economic and social development and poverty eradication are the first and over-riding priorities".

---

[1] Source : World Resources, 1996-97, Oxford University Press, 1996.

Despite the apparent commitments, actual performance since 1990 has been weak. There has been much debate over whether human activity is influencing global climate. The IPCC in its Second Assessment Report (1996) concluded : "The balance of statistical evidence, when examined in the context of our physical understanding of the climate system, now points towards a discernible human influence on global climate".

Wording modified

This, by the way, is the wording in the scientific chapter on human attribution — not the wording in policymakers' summaries cobbled together by government delegates which stated that "the balance of evidence suggests that there is a discernible human influence on global climate". Some people have suggested that there is no real difference between the two wording — which begs the question : why was the scientists' original wording modified ?

The key scientific evidence is of stratospheric cooling and tropospheric warming, more pronounced in the southern hemisphere than in the northern. It is persuasive, but not cut-and-dried. For the purposes of the UNFCCC, as already explained, the scientific debate should not be used to hamper cost-effective precautionary measures by Parties to the Convention.

The main concern is that greenhouse gas emissions from human activities have continued to rise, in aggregate, in the industrialised countries. Between 1990 and 1995-end carbon dioxide (CO_2) emissions from fossil fuel use rose over 4 per cent in the OECD nations (excluding Mexico and the Republic of Korea). They rose nearly 12 per cent in Japan (CO_2 from natural gas use rose 21 per cent); 9.5 per cent in Canada; 8 per cent in Australia; and nearly 6 per cent in the U.S (CO_2 emissions from coal use rose by 2.8 per cent, from oil by 3.4 per cent and from natural gas by 11 per cent).

In Western Europe they declined 1 per cent, mainly due to falls for particular reasons in Germany (reunfication, restructuring and recession) and the U.K. (switch from coal to natural gas and economic weakness).

Large declines in CO_2 emissions from coal use have been partly offset by increases in CO_2 emissions from natural gas use in both these countries.

By contrast, the economic and political stresses in the economies in transition caused their CO_2 emissions from fossil fuels use to decline 30 per cent between 1990 and 1995. These represented 14.4 per cent of the world total at the end of 1995, by comparison with 21.4 per cent in 1990. In the developing countries CO_2 emissions rose 25.5 per cent in the same period, rising from 29 per cent of the world total in 1990 to 35 per cent at the end of 1995 (but per capita emissions remain very low).

We can state with some confidence the CO_2 emissions in industrialised countries are currently over 5 per cent above 1990 levels, and in aggregate are likely to be over 8 per cent up on 1990 levels in the year 2000.

Meanwhile, although the pace of international private investment has quickened and some overdue restricting and liberalisation is taking place in the energy sector around the world, the rate of progress towards providing and using energy more efficiently and more cleanly is disappointingly slow. The same is true for the diffusion of new renewable energy projects. India is a text book example of the problems and challenges, as well as some of the hopes.

Waste of energy

Readers will be more than familiar with the low efficiency with which energy is used in South Asia — the consequences of burning fuelwood and animal dung inefficiently in the home, the high level of transmission and distribution losses, the other causes of loss of electricity supply, the fumes from motorised road vehicles, and the emissions from coal burning — frequently without benefit of coal washing, never mind sulphur or nitrous oxide (NO) abatement measures.

But let us take a couple of global figures. Some 27 pr cent of the world's primary energy is used or wasted in converting it to secondary forms, such as electricity or motor gasoline for final consumption.

However, only 37 per cent of the world's primary energy ends up as useful energy, providing the service that users want. What a waste! And, until we tackle the issue of efficiency properly, there is little purpose served in simply providing more primary energy—whether fuelwood, fossil fuels, nuclear, or new renewable. Unfortunately, the IPCC's policy-makers' summaries — unlike some of the underlying chapters — provided little real guidance either on the scope for efficiency improvement or on the likely relative effectiveness of policy measures.

A more recent IPCC Technical Report (*Technologies, Policies and Measures for Mitigating Climate Change*, November, 1996) has made amends on the efficiency potential — though still ducking the theoretical potential for improvement — and usefully expands on the policy options.

The UNFCCC, however, has largely been an irrelevance here. Little additional financial or technology resourcing has been made available by industralised country parties. The Global Environment facility has made funds available for climate change activities, and a number of industralised countries led by the U.S. programme have been seeking to get joint implementation (JI) programmes (under Article 4.2 (*a*) and (*d*) of the UNFCCC) off the ground. This is an uphill struggle for three reasons :

(i) In the initial stages the industralised country promoters of JI seemed to pay little heed to the real priorities and needs of developing countries;

(ii) In consequence, developing countries were made even more suspicious of JI; and

(iii) In the absence of credits for JI activities (which is currently the case under Activities Implemented Jointly - AIJ - since the Berlin Conference of the parties) there is little incentive for companies in industrialised countries to get involved.

Unless the industrialised countries manage to persuade developing countries that what is planned meets the most urgent priorities and needs of developing countries, the position is unlikely to change.

Little relation to reality

Despite the poor performance to date, climate change negotiators from many industrialised countries as well as Small Island States have been calling for tough targets and timetables post 2000. Calls for cutting industrialised countries' greenhouse gas emissions 10 per cent or even 20 per cent below 1990 levels by 2005 or 2010 are widespread. Given what was estimated earlier – industralised countries in aggregate are likely to be over 8 per cent above their 1990 levels in 2000 – this sort of negotiating exercise bears little relation to reality.

Official projections by industralised countries of their emissions by 2000 over 1990 levels, sent to the UNFCCC Secretariat in 1996, show Portugal at plus 40 per cent, Spain at plus 24 per cent, Greece at (an unrealistically low) plus 15 per cent and New Zealand at plus 17 per cent. The figures for U.S., Japan and Canada will be much higher than communicated so far and all over 10 per cent up on 1990 (Austria, Finland and Greece are, however, likely to be lower).

The most recent climate change negotiations, held in Bonn (Germany) in March 1997, raised the sense of unease of many observers. Industralised countries are coming up with increasingly diverse and complex proposals for the post-2000 period. Some countries call for flexibility to cover their own needs — such as heavy dependence on coal exports and primary product extraction and processing, implying higher greenhouse gas emissions.

There are calls for a menu approach on policies and measures, with countries being permitted to pick whichever suits them best — a good idea in principle, but it makes monitoring even more difficult.

Complex principle

Some countries wish to have criteria based on emissions per capita, others want to continue with a flat rate reduction from a base year. Some countries continue to lay stress on joint implementation and the U.S. seeks international emissions trading. This last idea, whatever its intrinsic merits is complex; requires translation from relatively simple sulphur emissions trading within the U.S. to international trading in greenhouse gas emissions; infrastructure which will take years to develop; and decisions on whether an allowance-based or credit-based system is envisaged, and whether between firms or between countries. This has not made easier the prospects for reaching agreement in Kyoto next December.

Meanwhile, the European Union has offered a negotiating position whereby – for example—Germany, Austria and Denmark might reduce their CO_2, methane and nitrous oxide emissions by 25 per cent from 1990 levels by 2010. At the other end of the scale, Portugal would be permitted to increase its emissions by 40 per cent, Greece by 30 per cent, Spain by 17 per cent and Ireland by 15 per cent. It is not clear what message this sends to developing countries, but it has encouraged Australia to propose burden sharing with industrialised countries permitted to emit between minus 30 per cent and plus 40 per cent of their 1990 levels.

All in all, a target for the industrialised countries to reduce their greenhouse gas emission by 10 per cent below 1990 levels by the year 2010 will not be achieved on anything like current policies, consumer attitudes and behaviour.

Instead, if this target were to be met, a reduction of over 20 per cent is likely to the required by the OECD-member countries in aggregate within a decade. This would require a massive change in policies, attitudes and behaviour within a short time.

It might be more realistic, if it were not interpreted as signalling further postponement of real action, if Annex I industralised country parties were to move the base year from 1990 to 2000 in recognition of the failures of the Nineties. The legally binding targets for a realistic year, as 2020, with tougher requirements for countries which greatly overshot their 1990 emissions levels in the year 2000 (and interim penalties for obvious laggards along the way) might be both more realistic and acceptable.

In the meantime, we see CO_2 emissions from fossil use in the present developing countries rising from 36 per cent of the world total now to about 50 per cent by 2020, and to about 60 per cent by 2050. Methane emissions—a major factor where rice is grown and large numbers of ruminant animals exist, as in India—are also likely to grow in reflection of rising population. The possibility of human-induced climate change is a global problem requiring a global response.

Leadership needed

The industralised countries need to take the lead and need to do so much more effectively than has been apparent so far. But the developing countries also need to get more closely involved. They can only be expected to do so if they can see policies and measures, technology and finance being directed towards them in ways when closely match their expectations. This means a widening of the policy and measures agenda beyond climatic adaptation and mitigation *per se.*

The World Energy Council has developed long-term scenarios (out to the year 2100) which, in some cases, indicate an evolution of economic, energy and emissions activity which is sustainable in terms of atmospheric CO_2 concentration (e.g., below 550 ppmv—parts per million per volume—and in two scenarios below 450 ppmv in 2100). They assume global CO_2 emissions will continue to go up for some decades before they commence their decline. They assume that the developing countries will account for most of, if not eventually all, the increase.

The World Energy Council also believes that precautionary measures are required now to start tackling that threat of climatic change. Many appropriate measures can be justified on local and regional (eg. sulphur and NO abatement) grounds, while supporting climate change mitigation.

The top priority is to raise efficiency in energy provision and use. This includes providing commercial energy services efficiently to those who currently do not have them—nearly two billion people in the world, of whom some 800 million live in South Asia. This may lead initially to an increase in greenhouse gas emissions but strenuous efforts should be made—especially in rural areas—to provide locally appropriate renewable energy schemes.

Cleaner fossil fuel provision and use is essential, and—where it can achieve general public acceptance on solid grounds—safe nuclear power is desirable. But all forms of energy need to compete on an equal basis.

Subsides need to be phased out, prices should eventually cover all costs, including environmental impacts and support for R & D should not be cornered by any one sector - whether clean coal or nuclear. In India, the various forms of solar, modern biomass and biogas, small hydro, and—in a few locations - wind power would seem to have major attractions.

Unfortunately, political and instructional barriers, socio-cultural traditions and poor maintenance have so far tended to hinder the pace of development. There are now small signs that things may be changing—at least at the political and institutional level.[1]

Global Carbon Dioxide Emissions

In 1992, global emissions of carbon dioxide—the prime greenhouse gas added to the atmosphere as a direct result of human activity—amounted to 26.4 billion metric tons per year, of which 84 per cent (22.3 billion metric tons) was from industrial activity. Emissions from industrial activity have climbed 38 percent over the past 20 years. The United States continues to be the largest source of industrial emissions of carbon dioxide, accounting for nearly 22 percent of global emissions; this is followed by China (11.9 percent), Russia (9.4 percent), and Japan (5 percent). The countries of the European Union together account for 13 per cent of global emissions; the developed countries of the Organisation for Economic Cooperation and Development (OECD) account for 44.7 percent.

National totals, however, represent only part of the picture, because they depend on both population and the level of industrial activity. Per capita emission provide a better yardstick for comparing the emissions that result from the average individual's share of national industrial activity, and these figures show widely varying emission patterns. Again, the United States had the highest per capita emissions—19.1 metric tons per year—among the nations that were the major sources of global emissions in 1992, per capita emissions in India and China were 4.6 and to be about 35 percent beyond present levels. This estimate is based on moderate projected economic and population growth and is in spite of the fact that, as demand grows, prices could rise.

As a direct consequence of this increased burning of fossil fuels, global energy-related carbon dioxide emissions are expected to rise between 30 and 40 percent by 2010 under moderate growth conditions. With higher economic growth rates, and therefore higher energy demand, emissions will be greater as well. The World Energy Council's *High Growth* scenario, which assumes particularly robust economic growth in the developing world, shows a 93 percent rise in carbon dioxide emissions by 2020.

Only in the World Energy Council's *Ecologically Driven* scenario do global carbon dioxide emissions scarcely rise between 1990 and 2020. This "what-if" scenario, which is not patterned after current trends in energy use, assumes a determined effort to greatly increase the use of renewable energy sources, reduce coal consumption, and freeze oil use at today's level by switching to greater use of natural gas. (Gas, for an equal amount of energy, emits less carbon dioxide than oil.) More importantly, it assumes a very high level of energy-efficiency improvements, and a concerned effort would undoubtedly be required to implement the improvements.

---

[1] Source : The Hindu Survey of the Environment, 1997, p. 21.

In all scenarios, much of the growth in energy demand and carbon dioxide emissions in the next few decades and beyond comes from the developing world. Although carbon dioxide emissions (under a moderate growth scenario) in 2010 are expected to increase some 24 percent from their 1990 levels in OECD nations, emissions from the developing world are projected to more than double, although from a much smaller base. Given current growth trends, developing countries will account for nearly half of global carbon dioxide emissions from industrial sources by 2010; today they are responsible for less than one third.

The rapid increases in carbon dioxide emissions in the developing world can be traced to the process of development itself, which generally results in a shift away from the use of traditional fuels toward the use of commercial fuels; an increase in personal income, which leads to the ability to purchase consumer items such as refrigerators, air conditioners, or cars that boost personal energy consumption; and the expansion of energy intensive industries as economies shift from an agrarian base to a manufacturing and industrial base.

China and India, both of which have rapidly expanding economies and high absolute population growth (although at declining rates, especially in China), will likely be responsible for a significant percentage of the growth in global carbon dioxide emissions in the next two decades The scenarios suggest that by 2000 China and India will account for more than half of all carbon dioxide omissions from the developing world. Indeed, growth in their combined emissions from 1990 to 2010 will exceed the growth in emissions from all OECD countries combined during that period. This is due in part to a heavy reliance on coal—the most carbon-rich fuel. (Both China and India have large supplies.) China alone is projected to double its emissions by 2010, but still remain the second largest carbon dioxide emitter in the world behind the United States.

Even with the high projected growth in emissions in the developing world, per capita emissions in these areas will still be well below those in the developed world. If the rest of the world consumed energy at the same per catita rate as the OECD countries, total world carbon dioxide emissions in 2010 would be roughly triple what is otherwise projected. Moreover, emissions from the developed world are responsible for the overwhelming bulk of excess carbon dioxide in the atmosphere. Cumulative emissions from developed and transition countries will represent the majority of excess carbon dioxide until at least the middle of the next century, despite the steep rise in emissions by developing countries.

The Difficulty of Stabilzing Emissions

Rising global carbon dioxide emissions work at cross-purposes to the ultimate goal of the Climate Convention; to stabilize greenhouse gas concentrations at a "safe" level that does not alter the climate system in harmful ways. In fact, recent work has made clear how difficult the process of stabilizing atmospheric carbon dioxide concentrations at any reasonable level will be, given the demand of world development.

Even if global emissions could be held at current levels—an ambitious goal, considering present trends in energy use—the concentration of carbon dioxide in the atmosphere would not stabilize for several hundred years, according to the Intergovernmental Panel on Climate Change (IPCC).

The current atmospheric carbon dioxide concentration, which stands at nearly 360 parts per million by volume (ppmv), is about 28 per cent greater than that at the beginning of the Industrial Revolution and is growing at an average of 1.5 ppmv per year (0.4 percent per year). Studies by IPCC show that at present emission rates, carbon dioxide concentrations could rise to about 700 ppmv by 2100—more than doubling the pre-industrial carbon dioxide level of 280 ppmv—and could countinue rising slowly for centuries. With the increasing global emissions that are likely with economic development, carbon dioxide levels will climb even faster.

What will it take to stabilize atmospheric carbon dioxide concentrations? IPCC calculates that stabilzation at today's levels would require that today's carbon dioxide emissions be cut by 60 percent and the emissions be maintained at these reduced levels throughout the next century.

The need to curtail emissions to stabilize atmospheric carbon dioxide concentrations is illustrated in Figure, which shows IPCC's assessment of possible emission profiles over the next three centuries that would lead to the stabilization of carbon dioxide at different levels ranging from 450 to 750 ppmv. As the graph makes clear, stabilization is a long-term process that will take hundreds of years because of the ongoing nature of emissions and the long lifetime of carbon dioxide gas in the atmosphere.

It is important to understand that emissions do not necessarily have to decline immediately to stabilize carbon dioxide concentrations eventually. However, IPCC emphasizes that higher emissions today imply that much sharper cuts in emissions will be needed later on. And, further, the longer that high emissions persist, the greater will be the required cuts in future emissions to stabilize carbon dioxide concentrations at a given level. This is because it is, to a great extent, the cumulative total of emissions over time that determines the level at which carbon dioxide stabilizes in the long run, not the particular year-by-year profile of emissions.

The benefits of stabilizing carbon dioxide concentrations depend greatly on the level at which they are stabilized. Stabilization even at today's atmospheric concentration (which would require dramatic changes in world energy use patterns) will not prevent additional greenhouse warming of the atmosphere. It could moderate the pace and magnitude of such warming, however. Stabilization at higher carbon dioxide levels are expected to lead to greater warming. Most scientists active in the field believe that a failure to stabilize carbon dioxide concentrations will lead to progressively rapid and extensive climate change.

Economic Costs of Controlling Emissions

Economic analysis of the cost and benefits of reducing carbon dioxide emissions can help policy makers decide whether emissions should be curtailed and, if so, how much and on what kind of schedule. However, assigning realistic dollar values to these various costs and benefits has proved extremely difficult. In spite of much effort, analyses are still somewhat rudimentary, with results varying from study to study because of differences in background assumptions such as the availability and cost of new energy-efficient technologies or the projected growth in the global economy (and thus the growth in emissions). Estimates depend, in particular on whether they are based on "top-down" analyses—using aggregate models of the entire macro-economy to product large-scale interactions between sectors of the economy—or "bottom-up" analyses—which incorporate detailed studies of engineering costs for various technologies and describe energy consumption in great detail. Nonetheless, IPCC has drawn a number of tentative conclusions from a recent review of these studies.

In general, estimates of the annual costs of holding national carbon dioxide emissions at their 1990 levels run at about 1 to 2 percent of the gross domestic product (GDP) in OECD countries over the long term. Reducing emissions substantially below 1990 levels could cost as must as 3 percent of GDP. Bottom-up studies are more optimistic, suggesting that the costs of reducing emissions 20 percent below 1990 levels within several decades are negligible to negative. In the long term, similar studies suggest, 50 percent reductions in emissions may be possible without increasing the costs of the total energy system. Such conclusions are possible, the studies assert, because many energy-efficiency improvements pay for themselves with the savings on energy costs. As much as 10 to 30 percent of current energy demand could be eliminated with off-the-shelf and soon-to-be-available technologies, such as better electric motors, more fuel-effective cars, and better insulation of dwellings. Realizing these potential savings, however, relies on adopting policy measures such as energy or fuel-efficiency standards for appliances and cars and eliminating market distortions such as low, subsidized energy prices that reduce the economic benefit to the consumer of saving energy.

Few comparable studies have been done in developing countries or in the transition economies, but the potential for savings through energy efficiency is these regions may be particularly high, IPCC concludes. Opportunities for absolute reductions in greenhouse gas emissions may exist in the transition economies, where subsidization of energy prices has been substantial and the stock of capital equipment is generally aging and less efficent. In the developing world, however, these "free" emission cuts will fall far short of what would be required to offset the rapid rise in expected emissions associated with economic development.

The timing of emission reductions can have a large effect on abatement costs. Under certain circumstances, deferring emission reductions somewhat may save money because the costs per ton of reducing emissions is expected to decline with time. This is because the cost of renewable energy sources such as solar or wind energy are expected to go down. At the same time, new, more efficient industrial processes and consumer products will be coming on line. In addition, when emissions are deferred, capital equipment such as industrial boilers, vehicles, or air-conditioning systems can be turned over naturally at the end of their life cycles rather than being replaced sooner with more efficient, but more expensive, models. The trade-off, of course, is that drying emissions in the beginning necessitates steeper cuts later on or, alternatively, accepting a higher rate of global warming.

A key finding from many economic analyses is the important role that research and development can play in lowering the costs of reducing emissions. Vigorous promotion of research and development that focuses on renewable energy sources and energy-efficient technologies can cut the eventual costs of abatement significantly, and is therefore considered a prudent investment even in the near term, particularly if emission cuts are delayed and new technologies are being relied upon to drastically reduce emissions in the future.

Economic and some industry assessments also emphasize that cost-effective abatement of carbon dioxide emissions in the next few decades will rely on proper planning and investment today. For instance, infrastructure decisions made now, such as whether to build a traditional coal-fired power plant or to invest in newer, more expensive clean coal technology, can have a large effect on national emission levels. Such decisions will be expensive to reverse later on if steep cuts in emissions are called for. This is especially true for the transition economies and the developing world, because the infrastructure is expected to change more rapidly in these regions. This is one reason while deciding how much and when emissions should be cut is a pressing matter.

Economic Benefits of Reducing Emissions

If setting a price tag on the costs of cutting greenhouse gas emissions is difficult, determining the dollar value of the benefits is even more problematic. The primary benefit of abatement is avoiding the damages associated with global warming, which include coastal inundation from rising sea levels, disruption of rainfall and therefore water use patterns, agricultural effects due to heat stress, and ecosystem damage such as loss of biodiversity and habitat disruption. Other important potential benefits also come from cutting energy-related emissions, however, such as cleaner air, reduced damage to crops and forests, and less environmental disruption from fossil fuel extraction. These not only have an economic value but are widely accorded a higher and more urgent priority by many countries and communities.

Pricing the damages from additional global warning involves many unknowns, since the actual extent and regional distribution of the effects are uncertain. Also, although some effects such as property loss or crop damage are relatively easy to quantify, quantification of damage to environmental amenities such as clean air, functioning ecosystems, or biodiversity has always been troublesome for economists because these are intangible not traded in the market and their value to human welfare has not been quantified. The long-term and uncertain nature of climate change also complicates the pricing of damages, since many of these damages occur in the future and standard economic practice involves discounting these to some lesser, present-day value so that they are comparable to benefits and costs today. The choice of the "discount rate"—the interest rate used to discount the damages—then becomes crucial in estimating the monetary value of the effects from global warming that future generations will suffer.

Despite these difficulties, a number of studies have tried to price the damages expected from global warming. These studies generally assume a doubling of the atmospheric carbon dioxide concentration from pre-industrial levels, leading to an average 2.5° C warming. Under these conditions, a very limited set of damages has been estimated at 1 to 1.5 percent of GDP per year in developed countries and 2 to 9 percent of GDP per year in developing countries, with island nations potentially suffering much higher damages.

Of course, carbon dioxide concentrations may not stop at a doubling, and warming many continue, in which case additional damage will occur. In fact, they may rise geometrically as warming proceeds. For example, damages from a 10° C rise might reach 6 percent of GDP or more. There is also the risk of a climate catastrophe in which the global climate regime changes quickly in unforeseen and deleterious ways. In this case, the damage could escalate rapidly.

Other benefits—both local and regional—of emissions abatement, including air quality improvements, can be quite high. For example, one study estimated that the value of air quality benefits in India from freezing emissions at 1990 levels would actually exceed the costs of the freeze. Likewise, studies in Europe and the United States indicate that such non-climate-related benefits could offset 30 to 100 percent of abatement costs. At least some economists who have studied the matter believe that taking into account both climate and other benefits of cutting carbon dioxide and the need to avoid the risk of a climate disaster provide a plausible economic justification for making substantial investments in emissions abatement

Negotiating the Future

Given the difficulty of stabilizing global atmospheric carbon dioxide concentrations and the benefits of early planning in reducing eventual mitigation costs, many of the nations that signed the Framework Convention on Climate Change have begun to realize that a coordinated international course of action is urgently needed. At the most recent meeting of signatory nations—the first session of the Conference of the Parties that convened in Berlin in March 1995— the participants could not agree upon strict emissions limits, but they did adopt a procedure for negotiating such limits and set a deadline of 1997 for concluding these negotiations.

Even as the negotiations for a carbon dioxide target and emissions cuts proceed, IPCC has stressed that many of the general outlines of a global carbon dioxide strategy have already begun to take shape, and there are many actions that nations can take immediately. These include :

(*i*) Encouraging the adoption of those energy-efficiency improvements that, apart from their greenhouse benefits, are cost-effective in their own right. This implies an active program of policy reforms to encourage full-cost pricing of energy, to create efficiency standards, and to implement rebate programs or other financial vehicles to encourage adoption of energy-efficient technologies.

(*ii*) Supporting expanded research and development of alternative energy sources and energy-efficient technologies, and establishing incentives to encourage the penetration of these into energy markets.

(*iii*) Specifically promoting policies to encourage the replacement of long-lived energy, transportation, and industrial infrastructures at the end of their life cyclés with efficient, low-emission technologies.

(*iv*) Supporting continued climate research and monitoring so that the mechanism and magnitude of climate change are better understood and so that the effect of climate can be better planned for.

However, even if nations agree to take these actions and the international community is able to negotiate target for future emission cuts, there is little reason to believe that global action will be quick enough or effective enough in the short term to avoid a rise in atmospheric carbon dioxide concentrations from their present level. The momentum of global development is great, and energy planners point out that it takes time to introduce new technologies and effect large changes in energy system and infrastructure. Climate scientists estimate that the present burden of greenhouses gases has already committed Earth to an estimated temperature increase of 0.5° to 2.0° C, even if the atmospheric carbon dioxide concentration is stabilized at today's level. Although this does not lesseen the urgency of current efforts to decrease further emissions, it does emphasize the need to begin developing adaptation strategies to cope with whatever warming is already under way. It also underscores the fact that global warming is a long-term phenomenon whose mitigation must be seen in a long-term context.[1]

Protecting the Atmospheric Ozone Layer

January 1, 1996, marked an important milestone in efforts to protect the global environment. On that date, production of the industrial chemicals known as chlorofluorocarbons (CFCs) was to have ceased in developed countries under the provisions of the Montreal Protocol of the Vienna Framework Convention on Ozone-Degrading Substances. Developing countries have a 10-year grace period before they must phase out production as well. The phaseout represents the culmination of diplomatic, scientific, and industrial work to forge an international consensus and to develop alternatives to these environmentally harmful substances.

Another milestone, late in 1995, was the awaring of the Nobel Prize in chemistry to three scientists for their discoveries that trace amounts of gases could profoundly alter the chemistry of the upper atmosphere in ways that could affect Earth's ability to sustain life. The research by Paul Crutzen of Germany and F. Sherwood Rowland and Mario Molina of the United States in the early 1970's showed that both naturally occurring gases such as nitrous oxide and industrial chemicals such as CFCs could reach the upper atmosphere. There the sun's harsh ultraviolet light degrades these compounds, releasing chlorine and other reactive species that could, the scientists showed, catalyze the destruction of ozone molecules. Since the stratospheric ozone layer absorbs much of the biologically harmful ultraviolet radiation reaching Earth, the scientisists warned their increasing concentrations of ozone-degrading gases could cause a global environmental problem, exposing most form of life to damaging levels of ultraviolet light.

Initially, these conclusions were quite controversial. Subsequent measurements in the atmosphere, however, have confirmed their work and have shown that CFCs and other industrial chemicals are the cause of the huge ozone hole over the Antarctic discovered in 1985 that led to the Montreal Protocol and set in motion current efforts to phase out the production and use of these chemicals.

---

[1] Source : World Resources, 1996-97, Oxford University Press, 1996.

The scientific discoveries and the world's subsequent actions to eliminate this environmental threat appear to have come just in time to prevent serious and widespread harm. In its citation, the Nobel Committee applauded the three scientists for having "contributed to our salvation from a global environmental problem that could have catastrophic consequences". Even if all governments comply with the Montreal Protocol, however, past emissions will continue to cause ozone degradation for decades to come, and full recovery of the ozone layer is not expected until about 2100. And yet more work remains to be done Other ozone-depleting substances remain to be controlled, and mechanisms will be needed to assist developing nations in their control efforts[1, 2].

CHAPTER VIII

NATIONAL CONSERVATION STRATEGY AND POLICY STATEMENT ON ENVIRONMENT AND DEVELOPMENT

1.0 Preamble

1.1 The survival and well-being of a nation depend on sustainable development. It is a process of social and economic betterment that satisfies the needs and values of all interest groups without foreclosing future options. To this end, we must ensure that the demand on the environment from which we derive our sustenance, does not exceed its carrying capacity for the present as well as future generations.

1.2 In the past, we had a great tradition of environmental conservation which taught us to respect nature and to take cognisance of the fact that all forms of life—human, animal and plant—are closely interlinked and that disturbance in one give rise to an imbalance in other's. Even in modern times, as is evident in our constitutional provisions and environmental legislation and planning objectives, conscious efforts have been made for maintaining environmental security along with developmental advances. The Indian Constitution has laid a new important trail in the Section on Directive Principles of State Policy by assigning the duties for the State and all citizens through article 48 A and article 51 A(*g*) which state that the "State shall endeavour to protect and improve the environment and to safeguard the forests and wildlife in the country" and "to protect and improve the natural environment including forests, lakes and rivers and wildlife, and to have compassion of the living creatures".

1.3 Nevertheless, over the years, there has been progressive pressure on the environment and the natural resources, the alarming consequences of which are becoming evident in increasing proportions. These consequences detract from the gains of development and worsen the standard of living of the poor who are directly dependent on natural resources. It is in this context that we need to give a new thrust towards conservation and sustainable development.

1.4 The National Conservation Strategy and the Policy Statement on Environment and Development are in response to the need for laying down the guidelines that will help to weave environmental considerations into the fabric of our national life and of our development process. It is an expression of our commitment for reorienting policies and action in unison with the environmental perspective.

2.0 Environmental problems : Nature and dimensions

2.1 Environmental problems in India can be classified into two broad categories :

(*a*) those arising as negative effects of the very process of development; and

(*b*) those arising from conditions of poverty and underdevelopment.

The first category has to do with the impact of efforts to achieve rapid economic growth and development and continuing pressures of demand generated by those sections of society who are economically more advanced and impose great strains on the supply of natural resources. Poorly planned developmental projects are also often environmentally destructive. The second category has to do with the impact on the health and integrity of our natural resources (land, soil, water, forests, wildlife, etc.,) as a result of poverty and the inadequate availability, for a large section of our population, of the means to fulfil basic human needs (food, fuel, shelter, employment, etc.). Needless to say, the two problems are interrelated.

2.2 Population is an important resource for development, yet is a major source of environmental degradation when it exceeds the threshold limits of the support system. Unless the relationship between the multiplying population and life support systems can be stabilised, development programmes, however, innovative, are not likely to yield the desired results. It is possible to expand the 'carrying capacity' through technological advances and spatial distribution. But neither of these can support unlimited population growth. Although technological progress will add to the capabilities for sustaining a large number of population, the need for a vigorous drive for population control can hardly be over emphasised in view of the linkage between poverty, population growth and the environment.

2.3 Even today, over 250 million children, women and men suffer from undernutrition. The scenario for the coming years is alarming and we are likely to face a food crisis unless we are in a position to increase crop and animal productivity on a continuing basis, since the only option open to us for increasing production is productivity improvement Also access to food will have to be ensured through opportunities for productive employment.

2.4 A growth in domesticated animal population has been accompanied by a loss of area under grasslands and pastures. Hardly, 3.5 per cent of our geographical are is under grasslands, while our domesticated animal population numbers nearly 500 million. The livelihood security of majority of our people depends on land and water based occupations such as crop and animal husbandry, forestry and fisheries.

2.5 Out of the total area of India of about 329 million hectares, 175 million hectares of land require special treatment to restore such land to productive and profitable use. The degradation is caused by water and wind erosion (150 million ha), salinity and alkalinity (8 million ha) and river action and other factors (7 million ha).

2.6 Our forest wealth is dwindling due to over-grazing, over-exploitation both for commercial and household needs, encroachments, unsustainable practices including certain practices of shifting cultivation and developmental activities such as roads, buildings, irrigation and power projects. The recorded forest over in the country is 75.01 million ha which works out to 19.5% of the total geographical area against the broad national goal of 33% for the plain areas and 66% for hilly regions. Even within this area, only 11% constitute forests with 40% or more of crown cover. According to the State of Forest Report, 1991, the actual forest cover in the country was 64.07 million hectares during 1987-89. The loss of habitat is leading to the extinction of plant, animal and microbial species. According to the Botanical and Zoological Surveys of India, over 1500 plant and animal species are in the endangered category. The biological impoverishment of the country is a serious threat to sustainable advances in biological productivity. Gene erosion also erodes the prospects for deriving full economic and ecological benefits from recent advances in molecular biology and genetic engineering.

2.7 Our unique wetlands, rich in aquatic and bird life, providing food and shelter as also the breeding and spawning ground for the marine and fresh water fishes, are facing problems of pollution and over-exploitation. The major rivers of the country are also facing problems of pollution and siltation. Our long coastline is under similar stress. Our coastal areas have been severely damaged due to indiscriminate construction near the water-line. Coastal vegetation including mangroves and sea grasses is getting denuded. Our mountain ecosystems are under threat of serious degradation. Extensive deforestation leading to the erosion of valuable topsoil is threatening the livelihood security of millions of hill people. Equally serious is the downstream effects of the damage done upstream. Indo-Gangetic agriculture, often described as a potential bread basket in the world, is being damaged beyond repair as a result of soil degradation. Some areas are facing problems of water-logging and rising water table because of poorly planned and ill-executed irrigation. In other areas, the water table is receding because of over-exploitation of ground water. Furthermore, the quality of groundwater is being affected due to chemical pollution and in coastal areas, due to the ingress of sea water. The excessive use of fertilizers and pesticides impose threat to human health, to the genetic stocks and reduces the natural soil fertility in the long run. The absence of an integrated land and water use policy for the country is taking a heavy toll on these basic natural assets.

2.8 Coral reefs are the most productive marine ecosystem and provide habitat for diverse flora and fauna. These ecosystems are adversely affected by indiscriminate exploitation of coral for production of lime, recreational use and for ornamental trade. Similarly, the fragile environs of island ecosystems have been subjected to pressures of various forms including migration of people from the mainland.

2.9 Global atmospheric changes resulting in altered temperature and precipitation and rising ocean levels, are no longer within the realm of mere theoretical possibilities. Combination of local subsidence, greenhouse induced sea-level rise and coastal environmental degradation may lead to periodic floods, incursion of salt water, melting of glaciers and river flooding. Local changes of average rainfall will severely affect agriculture and water supply, especially in semi-arid areas.

2.10 Compounding these human-inflicted wounds on natural ecosystems and life-support mechanisms, we are facing serious problems of pollution and unsanitary conditions especially in urban areas. Pollution arising from toxic wastes and non-biodegradable consumer articles is tending to increase.

2.11 Lack of opportunities for gainful employment in villages and the ecological stresses is leading to an ever increasing movement of resource poor families to towns. Magacities are emerging and urban slums are expanding. Illiteracy and child labour are persisting. There has been a substantial urban growth in the last four decades. This has resulted in congestion and squatter settlements with millions of people having no access to the basic needs of civic amenities. The green cover in our urban centres has been largely destroyed and once beautiful garden cities have become concrete jungles. The man-made heritage in India has been often gravely and even irrevocably damaged.

2.12 A large number of industries and other development projects have been incorrectly sited, leading, on the one hand, to over-congestion and over-pollution in our urban centres and on the other hand, to diversion of population and economic resources from the rural areas. This has also resulted in the pollution of most of our water bodies which are major constituents of our life support systems. Pollution of water bodies, in turn, has adversely affected the growth of aquatic fauna and flora which is an environmentally undesirable phenomenon for any ecosystem. The problems of women in villages is compounded in this whole scenario of energy, environmental and developmental imbalance. The incidence of malaria is high in many parts of the country. Safe drinking water is still a luxury in many villages. Liver ailments and gastro-intestinal diseases are common due to unclean drinking water.

2.13 It is difficult to clearly delineate the causes and consequences of environmental degradation in terms of simple one-to-one relationships. The causes and effects are often interwoven in complex webs of social, technological and environmental factors. For instance, from a purely scientific and technological standpoint, soil erosion would result from the cultivation of marginal lands. However, from the point of view of a comprehensive environmental impact analysis, it is important to go further back and analyse the circumstances that force people to cultivate marginal lands. Viewed in this light,. it becomes clear that a concern for the environment is essentially a desire to see that national development proceeds along rational, sustainable lines. Environmental conservation is, in fact, the very basis of all development.

2.14 The overriding impact of adverse demographic pressures on our resources and ecosystems due to poverty and overpopulation of man and livestock has to the highlighted. Unless there is a curb on population growth and even a reduction of such populations and a corresponding improvement in land use policies, the current trend of over-exploitation and ecological degradation is not likely to improve.

2.15 Thus, we are faced with the need for accelerating the pace of development for alleviation of poverty which is to a great extent, responsible for many of our environmental problems. On the other hand, we have to avoid proceeding along paths with environmental costs so high that these activities cannot be sustained. Development has to be sustainable and all round, whether for the poor or the not so-poor or for the village folk or for the town people. The development models followed so far need to be reviewed.

3.0 Actions Taken

In recognition of the felt need for environmental protection, various regulatory and promotional measures have been taken in our country over the past twenty years. These included the following :—

3.1 Legal

— The Wildlife (Protection) Act, 1972, amended in 1983, 1986 and 1991.

— The Water (Prevention and Control of Pollution) Act, 1974, amended in 1988.

— The Water (Prevention and Control of Pollution) Cess Act, 1977, amended in 1991.

— The Forest (Conservation) Act, 1980, amended in 1988.

— The Air (Prevention and Control of Pollution) Act, 1981, amended in 1988.

— The Environment (Protection) Act, 1986.

— The Motor Vehicle Act, 1938, amended in 1988.

— The Public Liability Insurance Act, 1991.

— A Notification on Coastal Regulation Zone, 1991.

3.2 Institutions

— Department of Environment in 1980 and the integrated Ministry of Environment & Forests in 1985, Department of Science and Technology, Department of Agriculture and Cooperation, Department of Biotechnology, Department of Ocean Development, Department of Space, Department of Non-Conventional Energy Sources, Energy Management Centre, Council of Scientific and Industrial Research etc., at the Centre, Departments of Environment at the State and Union Territory level.

— Central Pollution Control Board and State Pollution Control Boards.

— Central Forestry Board.

— Indian Council of Forestry Research and Education with specialised institutions for research in arid zone, forestry, moist and deciduous forests, wood technology, genetics and tree breeding and deciduous forests.

— Forest Survey of India (FSI) and the Wildlife Institution of India (WII) in addition to the existing organisations like Botanical Survey of India (BSI) and Zoological Survey of India (ZSI).

— National Landuse and Wasteland Development Council.

— National Wastelands Development Board.

— Indian Board of Wildlife.

— National Museum of Natural History, Centre for Environmental Education, Institute for Himalayan Environment and Development and Centres of Excellence in specialised subject areas are among the various institutions set up.

3.3 Prevention and Control of Pollution

— Water and air quality monitoring stations in selected areas.

— Use-based zoning and classification of major rivers.

— Notification and enforcement of standards for polluting industries through the Central and State Pollution Control Boards.

— Rules for manufacture, storage, transportation and disposal of hazardous substances.

— On-side and off-site emergency plans for preparedness against chemical accidents.

— Fiscal incentives for installation of pollution control devices.

— Ganga Action Plan to prevent pollution of the river and restore its water quality which could be expanded to cover other major river systems subject to availability of resources.

Identification of critically polluted areas and of highly polluting industries.

3.4 Conservation of Forests and Wildlife

— Adoption of a new Forest Policy (1988) with the principal aim of ensuring ecological balance through conservation of biological diversity, soil and water management, increase of tree cover, meeting the requirements of the rural and tribal population, increase in the productivity, efficient utilisation of forest produce, substitution of wood and people's involvement of achieving these objectives.

— Under the Forest (Conservation) Act, 1980 stringent provisions for preventing diversion of forest land for any other purpose.

— Setting up of the National Wasteland Board to guide and oversee the wastelands development programme by adopting a mission approach for enlisting people's participation, harnessing the inputs of science and technology and achieving interdisciplinary coordination in programme planning and implementation.

— Formulation of a National Wildlife Action Plan.

— An exercise for preparation of a National Forestry Action Programme.

— Establishment of National Parks and Sanctuaries covering about 4% of the country's area.

— Eco-development plans for sanctuaries and National Parks.

— Identification of biogeographical zones in the country for establishing a network of protected areas including seven Biosphere Reserves set up so far.

— Management Plans for identified wetlands, mangrove areas and coral reefs.

— Formulation of a National River Action Plan.

3.5 Land and Soil

— Surveys by the All India Soil and Land-Use Survey Organisation.

— Treatment of catchment in selected river valley projects and integrated watershed management projects in catchment of flood prone rivers.

— Assistance to States to control shifting cultivation.

— Assistance for reclamation and development of ravine areas.

— Drought prone areas programme.

— Desert development programme.

3.6 Environmental Impact Assessment

— Establishment of procedures for environmental impact assessment and clearance with regard to selected types of projects requiring approval of the Government of India.

— Prior clearance of projects requiring diversion of forests for non-forest purposes under the Forest (Conservation) Act, 1980.

— Formulation of Environmental guidelines of projects in various sectors.

3.7 *Other Activities*

— Eco-Task Force of ex-servicemen of ecological restoration through afforestation and soil conservation.

— National Environmental Awareness Campaigns for creating environmental awareness through non-governmental organisations.

— Surveys and research studies.

— Training programmes, workshops and seminars for building up professional competence and for creation of awareness.

4.0 *Constraints and Agenda for Action*

4.1 The modest gains made by the steps taken during the past few years leave no room for complacency when viewed in the context of enormous challenges. We can meet the challenges only by redirecting the thrust of our developmental process so that the basic needs of our people are fulfilled by making judicious and sustainable use of our natural resources. Conservation, which covers a wide range of concerns and activities, is the key element of the policy for sustainable development. Framing a conservation strategy is, therefore, an imperative first step. Development requires the use and modification of natural resources; conservation ensures the sutainability of development for the present and in the future. The conservation strategy is to serve as a management guide for integrating environmental concerns with developmental imperatives.

4.2 The primary purpose of the strategy and the policy statement is to reinforce our traditional ethos and to build up a conservation society living in harmony with Nature and making frugal and efficient use of resources guided by the best available scientific knowledge.

4.3 The agenda for action in this regard will include the following :

— to ensure sustainable and equitable use of resources for meeting the basic needs of the present and future generations without causing damage to the environment;

— to prevent and control future deterioration in land, water and air which constitute our life support systems;

— to take steps for restoration of ecologically degraded areas and for environmental improvement in our rural and urban settlements;

— to prevent further damage to and conserve natural and man-made heritage;

— to ensure that development projects are correctly sited so as to minimise their adverse environmental consequences;

— to ensure that the environment and productivity of coastal areas and marine ecosystems are protected;

— to conserve and nurture the biological diversity, genepool and other resources through environmentally sustainable development and management of ecosystems, with special emphasis on our montane, marine and coastal, desert, wetlands, riverine and island ecosystems; and,

— to protect the scenic landscapes, areas of geomorphological significance, unique and representative biomes and ecosystems and wildlife habitats, heritage sites/structures and areas of cultural heritage importance.

4.4 To address to the above stated agenda, the instruments for action will include the following :

— to carry out environmental impact assessment of all development projects right from the planning stage and integrate it with their cost-benefit considerations. Appropriate costs of environmental safeguards and regeneration would continue to form an integral part of the projects;

— to ensure that all projects above a certain size and in certain ecologically sensitive areas should require compulsory prior environmental clearance;

— to incorporate environmental safeguards and protection measures, in policies, planning, site selection, choice of technology and implementation of development projects like agriculture, water resource development, industry, mineral extraction and processing, energy, forestry, transport and human settlements;

— to encourage research, development and adoption of environmentally compatible technologies; and to promote application of the modern tools of science and technology for conservation, bridging of large gaps in supply and demand as well as control and monitoring of natural resources;

— to elicit and ensure participation of people in programmes for environmental improvement and for integrating the environmental concerns in planning and implementation of development programmes;

— to create environmental consciousness through education and mass awareness programmes;

— to aim at moderation of process of demand unleashed by the developmental process itself by taking measures to recycle waste materials and natural resources, conserve energy, conserve use natural resources in industrial products by measures like wood substitution and generally try to reach moderations in life styles consistent with sustainability and human dignity;

— to develop appropriate organisational structures and a pool of professional manpower to serve as the cadre for environmental management service; and,

— to effectively implement the various environmental laws and regulations for environmental protection through creation or strengthening of the requisite enforcement machinery.

5.0 Priorities and Strategies for Action

5.1 Population Control

5.1.1 Unabated population growth, as at present, not only adds to the economic burden for all developmental activities, but also reduces the impact of economic growth on our society. Therefore, for the success of our planning, population control becomes the most urgent necessity. A comprehensive programme, with strong political backing and appropriate socio-economic measures, fully utilising the available scientific know-how, simultaneously making efforts for developing new methodologies, and supported by modern communication technology and managerial and organisational skills, is essential for success in the most difficult area. Population control should be a national mission for the next decade. Despite efforts of several years, population control projects have not met with success. More stern measures such as legislative and better incentives are needed.

5.1.2 Along with the development programmes to improve the living conditions, action must be directed towards stabilisation of population including the following measures :

— Launching a time bound national campaign for population stabilisation with the small family as a socially responsible objective;

— Increased support for female education, female employment, and of social security programmes;

— Easier access to the means of family planning and health care facilities;

— Added incentives in terms of taxation and other benefits for family planning;

—Environmental sanitation, prevention and control of communicable diseases through integrated vector control and health education; and

— Adoption of decentralised renewable energy devices that enhance quality of life in remote pockets while taking special care of the health needs of women.

5.2 Conservation of Natural Resources

5.2.1 Land and Water

5.2.1.1 An integrated land and water management approach is extremely important to sustain the food production, animal husbandry and other activities.

5.2.1.1 Amelioration of water-logged and salt affected lands, command areas development, protection of good agricultural land against diversion to urban and other uses, prevention of land fragmentation, maintenance of sustained productivity of soil and conservation of lands with forests and vegetal cover are the integral components of substainable management.

5.2.1.3 The importance of water as a finite, though a renewable resource, must be clearly recognised. Land and water use are to be considered together, particularly in the context of recurring droughts and floods. Water conservation measures; discipline on use of water; economising the consumption of water in households, agriculture and industry; and appropriate recycling would be essential.

5.2.1.4 The steps to be taken for sustainable use of land and water should include the following :

— Classification, zoning and apportionment of land for designated uses such as, agriculture, forestry, grassland, green areas, industrial activities, catchment areas and watersheds and human settlements based on assessment of their capabilities and environmental considerations;

— Enactment of laws for appropriate land uses to protect the soil from erosion, pollution and degradation;

— Protection of land near water bodies and prevention of construction thereupon;

— Measures to ensure equitable access to and responsibility for sustainable use of land and water resources;

— Micro-level planning to develop appropriate methodology and implementation of action plan by involving the people at the village level in social forestry programmes, landuse planning, afforestation etc.,

— Countrywide campaign to minimise soil and run-off losses by carrying out extensive works like contour trenching, contour bunding, terracing, construction of small storages, catchment treatment and protection of the vegetal cover in the catchments and watersheds. This is to be a specific charge of project authorities in all irrigation, power, road and agricultural projects;

— Restoration and reclamation of degraded areas including weed infested areas, mined areas, grazing lands and salt affected soils;

— Measures for preventing wind erosion by undertaking special programmes of conservation and afforestation in desert areas;

— Development of suitable agro-silvipastoral techniques with special emphasis on hilly areas and in arid and semi-arid zones;

— Building up a network for assessment and monitoring of soil and water (surface and ground water) quality throughout the country which should be on a permanent basis as in the case of meteorological stations;

— Measures for water conservation, recycling and optimal conjunctive use of surface and ground water for specific uses;

— Legislative measures to check over-exploitation of surface and ground water for various uses;

— Conservation of wetlands for ensuring sustainable ecological and economic benefits;

— Encouragement to and improvement in traditional methods of rain water harvesting and storage;

— Stringent measures for prevention and control of pollution due to indiscriminate disposal of solid wastes, effluents and hazardous substances in land and water courses;

— Control and abatement of pollution of water bodies from municipal and industrial wastes generated from urban habitats by intercepting and diverting such wastes away from water bodies;

— Classification, zoning and regulations for maintaining the quality of the water bodies to protect and enhance their capabilities to support the various designated uses; and,

— Adoption of low cost sanitation technology for prevention and control of pollution in water courses.

5.2.2 Atmosphere

5.2.2.1 For preventing and control of atmospheric pollution including noise pollution, the thrust will be on the following :

— Use of clean fuels and clean technologies, energy efficient devices and air and noise pollution control systems;

— Setting up of source specific and area-wise air quality standards and time bound plans to prevent and control pollution;

— Proper location of projects to minimise the adverse impact on people and environment;

— Incentives for environmentally benign substitutes, technologies and energy conservation;

— Raising of green belts with pollution tolerant species;

— Developing coping mechanisms for future climatic changes as a result of increased emission of carbon dioxide and greenhouse gases; and

— Appropriate action to control adverse impact on Indian continent due to ozone depletion and other gaseous effects in the atmosphere at global level.

5.2.3 Biodiversity

5.2.3.1 About 90% of the worldfood comes from 20 plant species. The plant breeders find that they have to tune more and more to the wild species to introduce into the cultivated forms desired qualities of resistance to pests and diseases and the ability to withstand adverse soil and weather conditions. India's biological diversity is very rich but unfortunately its wealth is being eroded due to various reasons. This diversity needs to be preserved and the immediate task will be to devise and enforce time bound plans for saving the endangered plant and animal species as well as habitats of biological resources. Action for conservation must to directed to:

— Intensification of surveys and inventorisation of biological resources in different parts of the country including the island ecosystems. The survey should include information on distribution pattern of particular species/population/communities and the status of ethnobiologically important groups;

— Conservation of biodiversity through a network of protected areas including Biosphere Reserves, Marine Reserves, National Parks, Sanctuaries, Gene Conservation Centres, Wetlands, Coral Reefs and such other natural habitats of biodiversity. This should include taxonomic and ecological studies on the flora and fauna with adequate emphasis placed on the lower vertebrate, invertebrate and micro-flora which are important in contributing to the healthy maintenance of ecosystems;

— Full and correct rehabilitation of rural poor/tribals displaced due to creation of national parks/biosphere reserves/tiger reserves;

— Conservation of micro-fauna and micro-flora which help in reclamation of wastelands and revival of biological potential of the land;

— Protection and sustainable use of plant and animal genetic resources through appropriate laws and practices;

— Protection of domesticated species/varieties of plants and animals in order to conserve indigenous genetic diversity;

— Maintenance of corridors between national parks, sanctuaries, forests and other protected areas;

— Emulation and support for protecting traditional skills and knowledge for conservation;

— Development of methodologies to multiply, breed and conserve the threatened and endangered species through modern techniques of tissue culture and biotechnology;

— Discouragement of monoculture and plantation of domination and exotic species, in areas unsuited for them and without sufficient experimentation; and,

— Restriction on introduction of exotic species of animals without adequate investigations.

5.2.4 *Biomass*

5.2.4.1 For the vast majority of our rural people, the fore-most need is for fuelwood, timber, fodder, fibre, etc. The issue of sustainable resource utilisation, therefore has to be specially addressed first from the point of view of the biomass requirements of the rural poor. Action must be directed to:

— Devising ways and means by which local people conserve and use thereafter the resources of the common lands and degraded forests, so that they have a stake in the continuing productivity of the resources;

— Encouraging private individuals and institutions to regenerate and develop their wastelands;

— Raising of fuelwood species and provision of alternatives to reduce dependence on fuelwood;

— Taking measures to increase the production of fodder and grasses to bridge the wide gap between supply and demand;

— Raising of bamboo and species providing small timber for local house-construction and agricultural implements;

— Increasing biomass to meet essential requirement of biomass based industry;

— Promoting direct relationship between forest-based industry and farmers to raise needed raw materials, provided this does not result in diversion of prime agricultural lands and displacement of small and marginal farmers;

— Extensive research and development in forestry for better regeneration and improved productivity;

— Development of technologies for enhancing the productivity and efficiency of use of all biomass resources (both terrestrial and marine);

—Institutional and technological systems to enable rural artisans to sustain biomass based crafts; and,

—Curtailment of the supply of subsidised biomass resources to industrial consumers.

6.0 Development Policies from Environmental Perspectives

Implementation of the aims and objectives of conservation and sustainable development will require integration and internalisation of environmental considerations in the polices and programmes of development in various sectors.

Curtailment of consumerism and shift towards use of environment—friendly products and processes, and low waste generating technologies through conscious efforts and appropriate economic policies including pricing of natural resources as well as fiscal incentives and disincentives will the guiding factors for ensuring conservation and sustainable development.

For environmental conservation and sustainable development, the steps which need to be taken in some of the key sector of development activities are outlined in the following sections.

6.1 Agriculture and Irrigation

For sustainable management of agriculture and irrigation, the action points should include the following :

6.1.1 Agriculture

— Development of pesticides and insecticides policy for the country;

— Development of integrated pest management and nutrient supply system;

— Development and promotion of methods of sustainable farming, especially organic and natural farming;

— Efficient use of inputs including agro-chemicals with minimal degradation of environment;

— Phasing out and stoppage of persistent and toxic pesticides and their substitution by environmentally safe and appropriate pesticides;

— Promotion of environmentally compatible cropping practices, biofertilizers and biopesticides;

— Restriction on diversion of prime agricultural land for other purposes;

— Ensuring land for different uses based upon land capability and land productivity;

— Evolving cost effective and efficient methods of water conservation and use;

— Incentives for cultivation of crops with high nutritive value and those with lesser demands on water and energy inputs;

— Encouraging crop rotation patterns;

— Strengthening of local bodies like Zilla Parishads, panchayats and Samitis to ensure effective decentralisation and optimal resource managements; and

— Anticipatory programmes and contingency plans for disasters such as drought, flood and climate change.

6.1.2 Irrigation

— Priority to small projects to meet the requirements of irrigation without causing significant alternation in the environmental conditions;

— Revival of traditional water management systems and development of alternate irrigation systems such as harvesting and conservation of run-off rain water;

— Measures for increasing the efficiency of wateruse, water conservation and recycling;

— Measures for provision of drainage as an integral component of irrigation projects and to prevent water logging and leaching;

— Watershed management through catchment treatment of the drainage areas, protection of vegetal cover and measures to prevent siltation in an integrated manner with the irrigation authorities being fully accountable; catchment treatment would be so designed as to have a direct impact on the life of the reservoir, hydrological regime and life support systems. It would depend on the location specific conditions in each case;

— Adoption of command area development approach for all irrigation projects to ensure optimal utilisation;

— Critical assessment of irrigation projects and delivery systems to ensure optimal utilisation of water resources along with measures to mitigate environmental and social damage;

— Focus on decentralised network of small irrigation and water projects with minimum environmental disruption which will be of great value to local communities and yet capable of generating surplus for other areas at low cost;

— Design and implementation of irrigation projects which are environmentally sustainable, based on lessons learnt from a critical analysis of all past projects; and,

— Continuous and ongoing evaluation and monitoring of all projects.

6.2 Animal Husbandry

The activities relating to animal husbandry should concentrate on the following :

— Development of an animal husbandry policy for the country;

— Intensification of sterilisation programme for containing unsustainable growth in livestock population;

— Improvement in genetic variability of indigenous population;

— Distribution of animals like goats under the Integrated Rural Development Programme strictly consistent with the availability of pasture lands to reduce pressure on the lands;

— Propagation of wildlife and wildlife resources management on sustainable basis;

— Selective breeding of animals used for draught power to conserve fuel;

— Promotion of stall feeding and rotatiational grazing;

— Restoration and protection of grazing lands;

— Involvement of local people in the policy planning on pasture lands and stall feeding to avoid fodder scarcity; and

— Incentive for growing fodder crops and establishment of fodder banks.

6.3 Forestry

Concerted efforts should be made for raising the forest cover and for conservation of existing forests which constitute an essential life support system and an important source of food, fibre, fodder, fuel and medicines etc. For attaining the goal of having at least one third of our land area under forest cover, intensified measures on a mission mode are required to be taken along with commensurate mobilisation of resources for this purpose. As outlined in the National Forest Policy (1988), the action points should include the following :

— Maintenance of environmental stability through preservation and, where necessary, restoration of the ecological balance that has been adversely disturbed by serious depletion of the forests of the country;

— Conserving the natural heritage of the country by preserving the remaining natural forests with the vast majority of flora and fauna, which represent the biological diversity and genetic resources of the country;

—Increasing substantially the forest/tree cover in the country through massive afforestation and social forestry programmes, especially on all denuded, degraded and unproductive lands involving the local people in this endeavour by giving them tangible economic motives and employment opportunities;

— Meeting the rights and concessions for requirements of fuelwood, fodder, minor forest produce and small timber of the rural and tribal population with due cognisance of the carrying capacity of forests;

— Increasing the productivity of forests to meet the essential national needs;

— Encouraging efficient utilisation of forest produce;

— Restriction on diversion of forest lands for non-forest uses and compensatory afforestation in case where diversion is unavoidable;

— Afforestation on common lands by the local communities through usufruct-sharing schemes;

— Motivation of farmers/land owners to resort to tree farming in similar manner of crop based farming;

— Substitution of wood by other materials, alternative sources of energy and fuel efficient stoves;

— Permission to forest-based enterprises after a thorough scrutiny regarding the availability of raw materials;

— Supply of forest produce to the industrial consumers only at its true market value and not at concessional prices.

— Involvement of local people and dedicated grass roots non-governmental organisations in the afforestation programme and for protection of existing forests; and

— Creation of land bank for compensatory afforestation.

6.4 Energy Generation and Use

For prevention and control of pollution and environmental hazards in energy generation and use as also for encouraging popularisation of environmentally benign energy system, the following measures should be taken :

— Environmental impact assessment prior to investment decisions and site selection; choice of practicable clean technologies for energy production and processes including waste utilisation, treatment and disposal of solid wastes, effluents and emissions;

— Location of energy generation projects based on environmental considerations including pollution, displacement of people and loss of biodivesity;

— Decentralised small projects for meeting the rural energy needs and incentives for use of non-conventional energy sources;

— Incentive and punitive measures (including proper pricing) to prevent abuse and to promote the use of energy efficient devices in the production and distribution systems and for energy conservation in all sectors including households, agriculture, industry, power and transportation;

— Concerted efforts for development and progression of non-conventional renewable energy generation systems; and,

— Setting up of biogas plants based on cow-dung, human excreta and vegetable wastes.

6.5 Industrial Development

Environmental considerations should be integrated while encouraging industrial growth. The action points in this regard should include a mix of promotional and regulatory steps which are as follows :

— Incentives for environmentally clean technologies, recycling and reuse of waste and conservation of natural resources;

— Operationalisation of "polluter pays principle" by introducing effluent tax, resource cess for industry and implementation of standards based on resource consumption and production capacity;

— Fiscal incentives to small-scale industries for pollution control and for reduction of wastes;

— While deciding upon site, priority to compatible industries so that, to the extent possible, wastes from one could be used as raw material for the other and thus the net pollution load is minimised;

— Location of industries as per environmental guidelines for siting of industry;

— Enforcement of pollution control norms in various type of industrial units depending on their production processes/technologies and pollution potential; particular attention to be paid to highly polluting industries;

— Encouragement for use of environmentally benign automobiles/motor vehicles and reduction of auto-emissions;

— Collective efforts of installation and operation of common effluent treatment facilities in industrial estates and in areas with a cluster .of industries;

— Introduction of "Environmental Audit" and reports thereof to focus on environment related policies, operations and activities in industrial concern with specific reference to pollution control and waste management;

— Dissemination of information for public awareness on environmental safety aspects and stringent measures to ensure safety of workers and general population against hazardous substances and processes;

— Preparation of on-site emergency plans for hazardous industries and off-site emergency plans for districts in which hazardous units are located;

— Public liability insurance against loss or injury to life or property;

—Setting up of environment cells in industries for implementing environmental management plans and for compliance of the requisites of environmental laws;

— Internalising the environmental safeguards as integral component of the total project cost;

— Environmental impact assessment from the planning stage and selection of sites for location of industries; and,

— Clearance by Ministry of Environment and Forests of all projects above a certain size and in certain fragile areas.

6.6 Mining and Quarrying

To prevent and to mitigate environmental repercussions in mining and quarrying operations, action must be directed to :

— Mined area rehabilitation and implementation of the environmental management plans concurrently with the on-going mining operations to ensure adequate ecological restoration of the affected areas;

— Rehabilitation of the abandoned mined areas in a phased manner so that scarce land resources can be brought back under productive use;

— Laying down of requisite stipulations for mining leases regarding tenure, size, shape and disposition with reference to geological boundaries and other mining conditions to ensure systematic extraction of minerals along with environmental conservation;

— Emphasis on production of value added finished products from mining so as to reduce indiscriminate extraction;

— Upgradation and benefaction of minerals at the source, to the extent possible in order to ensure utilisation of low-grade mineral resources and to reduce the cost of transportation, processing and utilisation;

— Environmentally safe disposal of the by-products of mining;

— Restriction on mining and quarrying activities in sensitive areas such as hill slopes, areas of natural springs and areas rich in biological diversity;

— Discouraging selective mining of high grade ores and recovery of associated lower grade ores during mining; and,

— Environmental impact assessment prior to selection of sites for mining and quarrying activities.

6.7 Tourism

To ensure sustainable growth of tourism without causing irreversible damage to the natural environment, activities relating to tourism should take care of the following :

— Promotion of tourism based on careful assessment of the carrying capacity and support facilities such as transport, fuel, water and sanitation;

— Development of tourism in harmony with the environmental conditions and without affecting the lifestyles of local people; and,

— Restriction on indiscriminate growth of tourism and strict regulation of the tourist activities in sensitive areas such as hill slopes, islands, coastal stretches, National Parks and Sanctuaries.

6.8 Transportation

For prevention of pollution and for development of environmentally compatible transportation systems, the following steps should be taken :

— Improvement in mass transport system to reduce increasing consumption of fuel, traffic congestion and pollution;

— Improved transport system based on bio-energy and other non-polluting energy sources;

— Rail transport and pipeline transport instead of road transport, where ever possible, by appropriate freight pricing so as to reduce congestion, fuel consumption and environmental hazards;

— Transportation of hazardous substances through pipelines;

— Improvement in traffic flow through proper maintenance of roads, updated traffic regulation and strict enforcement of prescribed standards;

— Enforcement of smoke emission standards for containing vehicular exhaust, at the manufacturer and user level;

— Phasing out the use of lead in motor spirit; and,

— Regulations for environmental safety in transportation of hazardous substances.

6.9 Human Settlements

To check unplanned growth of human settlements and to ensure a better quality of life for the rural and urban population, the action points should include the following :

— Creation of gainful employment opportunities and provision for meeting the basic needs through better communications, entertainment, medical and educational facilities in rural areas to check rural-urban migration;

— Decentratralisation of urbanisation through establishment of secondary cities and towns with requisite infrastructural services and employment opportunities by developing human settlement perspective plan at national and State level;

— Disincentives for industrial and job location in existing urban centres which have exceeded their carrying capacity;

— Improvement of infrastructural facilities such as water supply, sewerage, solid waste disposal, energy recovery systems and transportation in an integrated manner;

— Promoting the use of indigenous building materials and appropriate construction technologies by revising building and planning codes supporting small scale production, skill upgradation of artisans and people oriented delivery systems;

— Conservation of heritage sites and buildings, through regulation to ensure that these are not demolished, encroached upon and affected by indiscriminate construction and pollution;

— Stock-taking of buildings, areas, monuments of heritage value in the country;

— Recycling of existing building stock to save green open compounds and save building material;

— Planting of shade giving and fruit bearing and ornamental trees along the road side, in the compounds of schools, hospitals, Government as well as private office buildings, places of worship, places meant for public fairs, assemblies and markets, and the periphery of playgrounds and water bodies;

— Botanical gardens representing the local flora;

— Raising of gardens, parks and open spaces in the towns and cities for public use and for promotion of environmental consciousness;

— Laying down a system for the propagation and protection of urban forestry by assigning responsibility amongst the various authorities;

— Deterrent measures to discourage indiscriminate growth of human settlement and polluting industries in vulnerable areas such as hilly regions and coastal stretches;

— Environmental appraisal of projects related to urban development and regional planning, preparation of environmental/ecodevelopment plans for sensitive regions and sub-regions for evolving desirable norms and space standards;

— Prevention of environmental health problems and associated communicable and non-communicable diseases by educating people on personal hygiene, sanitation and use of potable water;

— Creation/strengthening of health care facilities for all sections of society both in rural and urban areas; and,

— Establishment of monitoring systems and epidemiological data to ensure adequate early warning system for prevention and control of diseases.

7.0 International Cooperation

7.1 A major threat to sustainable development has been visualised, in recent yeas, from environmental problems of a global nature-ozone layer depletion, global warming and climate change, destruction of biological diversity, transboundary air pollution, marine pollution and land-based marine pollution, transboundary movement of hazardous substances. On a philosophical plain, the scientific proof of such problems provides an opportunity to reconsider the development path ushered in by the industrial revolution, and the blinkered pursuit of lifestyles which place extreme pressures on the natural resource base. But at a practical level, it means pressures on developing countries to take measures which they can ill-afford.

7.2 It has been India's firm conviction that it is the process of industrialisation, and the continued profligacy of industrialised economies that have created the problems which threaten our planet and its life forms. Not only do they use up non-renewable natural resources in disproportionate quantities, but create discharge and emissions which disturb delicate balances in eco-systems and atmospheric equilibrium. It is true, of course, that this has not been done consciously or intentionally (except in matters such as dumping of hazardous wastes, or the use of nuclear and chemical weapons). Nevertheless, the responsibility is clearly established, as also the need for urgent and effective action, by the developed world, to prevent global disaster. This includes not only direct action, but also indirect measures such s creation of an economic order which helps developing countries to exert less pressure on their own natural resources.

7.3 The Indian approach to global environmental problems is generally in keeping with other developing countries and has the following basic elements :

— Our economic development cannot be hampered in the name of the global environment, which we have done nothing to damage and can do little to save. Our resources are required to meet our development needs such as education, nutrition, health services, drinking water, housing, sanitation, agriculture, industry, infrastructure, even all of which we find it difficult to provide having been behind in the race for development. Without this development, threats to the environment will in any case grow. In the short run, this developmental effort could even add to the discharges and emissions which cause global problems — but these are minuscule compared to the quantities which industrialised countries have already contributed. In any case, such emissions etc., can easily be compensated for a marginal reduction of the same in the industrialised world;

— For environmental protection and improvement, we will do our best with the resources available in the country. With new and additional funding support and transfer of environmentally sound technologies from the developed countries, we will be in a position to augment our capacity to deal with the environmental problems; and,

— Regulatory international regimes can be useful in some areas — such as ozone depletion or even climate change — provided the special situation of developing countries is fully addressed. But in other sector — such as forestry — such a regime is neither workable nor acceptable. In such sectors, what is required is a reduction of international, economic and commercial pressures which generate unsustainable exploitation, and additional financial resources to tackle the damage already done.

7.4 India's traditional lifestyle — still followed by a vast majority of its population — has always emphasized conservation of plant and animal life, waste minimisation, recycling, simplicity in food habit and other such environment — friendly attitudes. There is no doubt that with economic development, will also come lifestyles which require more intensive resource use. On the one hand we have to minimise the adverse environmental impacts of development (e.g., through legislation and control, impact assessment and monitoring, education and awareness). On the other, we have to continuously see how far the traditional Indian ethos can be reflected in modern lifestyles. If these efforts are supported by adequate financial resources from the international community, as well as the transfer (and development) of environmentally sound technology, Indian can contribute significantly to the international action to deal with global environmental problems.

8.0 Support Policies and System

Implementation of the aims and objectives of environmental policy will need support policies and systems for filling up of the gaps in the existing institutional set up, legislative instruments and enforcement mechanisms, research and development, mobilisation of financial resources, creation of public awareness and training of professionals.

8.1 Strengthening of Institutions and Legislation

8.1.1 It will require strengthening of existing institutions to different levels. It will need a close linkage among the compartmentalised sectors which have been historically dealt with by separate organisations. It will call for a change in the institutional mechanisms for enlisting public participation. It will necessitate quick decision making on development projects based on assessment of their potential of rendering long term sustainable benefits to the society at large, particularly vulnerable sections. It will also require effective implementation of laws and regulations for environmental protection through strengthening of and closer interaction among the regulatory bodies and administrative machinery.

8.1.2 Existing laws and enforcement mechanisms should be subjected to periodic review to evaluate their adequacy and efficacy in the light of changed circumstances and experience.

8.2 National Resource Accounting

8.2.1 As economic policies from the frame-work for a range of sectoral development, it will be necessary to consider how these policies affect the quality and productivity of environmental resources. This will require a system of resource accounting along with the other exercises of cost benefit analyses.

8.2.2 In essence, indicators of growth such as GNP and GDP should include a measure of depletion cost and value judgments in terms of environmental resources. It will require instruments and expertise for evaluation and conscious trade-offs, where unavoidable, to meet the legitimate development needs.

8.2.3 The Government will prepare, each year, a natural resources budget which will reflect the state and availability of resources like land, forests, water etc, and which will rationally allocate these resources in keeping with the principles of conservation and sustainable development.

8.3 Training and Orientation Programmes

8.3.1 Available management resources in the enterprise/projects would be oriented towards environmental considerations and expertise to be developed through appropriate training programmes.

8.3.2 Formal education and training programme in specialised areas of pollution control and environmental management will be a continuing need. For this purpose, intensive programmes for education and training will need to be introduced in the universities, IITs and other professional institutions. Environmental education at the school level including training of teachers shall be an important component of educational programmes.

8.4 Promoting Environmental Awareness

To raise public awareness and involvement in environmental activities, the mass media ranging from local folk lores to electronic media should serve a vital role. To raise public awareness on environmental issues and to promote people's participation in environmental activities and conservation of natural resources, development of environmental education resource material and use of traditional and modern media of communication need to be strengthened. Scope and functions of the existing environmental education centres should be further strengthened and enlarged to develop a network of infrastructure for environmental education including development of orientation centres and provision of education material for visitors at the national parks, sanctuaries and tiger reserves.

8.5 Promoting Appropriate Environmental Technologies

Existing research and development efforts need to be strengthened to develop the appropriate low cost technologies considering the possibilities, opened up by biotechnology, genetic engineering, information and material technologies and remote sensing, tailored to the local environmental and socio-economic conditions.

8.6 Rehabilitation of Project Oustees

8.6.1 While implementing the projects in various sectors, conscious efforts should be made to avoid displacement of local people. Where it is unavoidable, necessary measures should be taken to ensure their rehabilitation by providing suitable facilities.

8.6.2 The Government will formulate a comprehensive national rehabilitation policy which, apart from other things, ensures that the oustees are economically better off than before and above the poverty line as a result of their rehabilitation.

8.7 Role of Non-Governmental Organisations

8.7.1 Implementation of the conservation strategy would be impossible without active participation of the people. Non-Governmental Organisations (NGOs) can play an important role in mobilising the people at grassroots. This will need a network among NGOs and interface between the people and the Government to work on community involvement, providing information on environmental surveillance and monitoring, transmitting development in science and appropriate technology to the people at large.

8.7.2 Environmental Information Centres should be set up at the district level to generate knowledge regarding traditional and endogenous system management practices. NGOs at the district level should be involved in the management and dissemination of the environmental information.

8.7.3 Non-Governmental Organizations, citizen grounds and village level institutions like forests, panchayats, and Gram Sabhas should be empowered with *locus standi* and support for mobilisation of public opinion and participation in development activities.

8.7.4 Managerial capacity of the NGOs should be strengthened. Training programmes for NGOs on regional basis should be organised. An advisory cell for rural NGOs should be made available at all district headquarters.

8.8 Women and Environment

Women at the grassroot level should be actively involved in the conservation programmes which should be income generating and self financing and sustainable on a long term basis and the Government Ministries/Departments should have an NGOs cell or at least Liaison Officer for interaction with the NGOs.

8.9 Partnership Role of Centre and State Governments

Effective implementation of necessary measures, as outlined in the statement, will be facilitated by a partnership role of the Central and State Governments. Many environmental problems assume national significance. Hence, the policies and programmes at the State and Central level should be drawn up keeping in view overall national policy considerations. A monitoring mechanism involving Central and State Government representatives will be set up for inter-action as required for implementation of the policy initiatives.

9.0 Conclusion

9.1 It is only through such initiatives the contours of which have been highlighted in preceding paragraphs, we will be in a position to resolve the conflicts which often arise between the environmental concerns and developmental pursuits that have a direct bearing on the very fabric of our society and lifestyles.

9.2 The task before us would be daunting if it were not for the many positive factors that are emerging : people's movements to conserve their own environment, greater public and media concern for environmental issues and spread of environmental awareness among children and youth.

9.3 It is up to us, as State and citizens, to undertake development process in keeping with out heritage and the traditional conservation ethos and in harmony with the environmental imperatives of this land.[1]

CHAPTER IX

ECO-FUNDS—BUDGETING FOR ENVIRONMENT

The rapid changes in Indian economic policies, at least partly due to the World Bank-motivated structural adjustments, have social, economic and environmental implications. Though significant amount of attention has been paid to the first two by the press and various intellectuals, the environmental implications remain, as always, neglected. Here is an attempt to rectify this neglect.

The current economic policies will have direct and indirect adverse impacts on the environment. At least some of it is not new. But perhaps the most interesting of these features can be categorised as encouraging consumerism, deregulating industry and promoting agricultural exports.

Encouraging consumerism

Many economic policies seem directly aimed at stimulating demand and consequently, the production of consumer goods. Unfortunately, much of the attention has been focussed on what are generally known as luxury items—cars, air-conditioners, refrigerators, television sets, video cassette recorders and other such.

Generally, enhanced consumerism involving production and consumption of increasing quantities of goods, and the related increase in power, water and other natural resource needs is the essence of environmentally unsustainable. lifestyles. This is being acknowledged the world over and though little concrete action has emerged, there appears to be serious thinking about alternative models of development.

Despite this, in India, where we can still choose, we are enthusiastically embracing the lifestyles and development models that most of the world is looking for ways to jettison. A good example is the recent reduction in the duty on cars. The explicit objective is to encourage people to buy (and use) more cars. Apart from the fact that this means import of more petroleum, it also enhances our already over-the-limit air pollution.

The argument that new economic policies result in the latest, efficient, technology cannot be an adequate excuse. For, even if the new cars that come on the road are less polluting, their sheer number is enough to make the air unfit for breathing. Besides, the current economic policies do not encourage environment friendly cars. If they were, tax relief would have been given to only those cars which met stringent fuel efficiency and pollution control standards.

Nevertheless, even with the 'greenest' of cars, air pollution will continue to increase as the number of cars grow, unless, of course, structural adjustment can make a car, that instead of polluting, actually cleans up the atmosphere as it cruise around !

So what is needed is greater public sector investment in public transport. City and town planning has to be made conducive to lowering air pollution and encouraging more people to use the steadily improving public transport system. Instead, we are moving in the opposite direction.

Table—Breakup of fund allocation on environment for States and Union Territories

	Percentage of allocations	
	in Seventh Plan	in Eighth Plan
Madhya Pradesh	0.49	0.22
Sikkim	0.24	0.27
Tripura	0.17	0.11
Kerala	0.17	0.13
Assam	0.11	0.09
Andhra Pradesh	0.10	0.02
All India	**0.09**	**0.09**
Manipur	0.08	0.10

Nagaland	0.00	0.05
Dadra & Hagar Haveli	0.00	0.13
Chandigarh	0.00	0.36

** Includes allocations for Daman and Diu.*

Similarly, air-conditioners are made cheaper to stimulate the market. But we have little electricity and a depleting ozone layer. And much of the electricity produced is at great social and environmental costs. To feed the air-conditioners in Delhi, power is drawn from the northern grid, leaving little for the satellite towns. We already have the Rajghat and Badarpur power stations spewing tonnes of fly ash into the atmosphere. Now, a new power station is being planned at Bawana, which is upwind of Delhi and will contribute an additional three tonnes of nitrogen oxide every hour to Delhi's already polluted air.

The situation is no better in the other parts of the countries. In Bombay, the Tatas are setting up a new thermal plant in the heart of the city, despite the already high air pollution levels. Another power station is coming up in Dahanu, threatening the local ecology. Madras intends to build the second phase of the North Madras power station, despite the environmental problems. Kerala hopes to feed its hungry air-conditioners by building a thermal power station in Kayamkulam and thereby ruin a valuable breeding ground for fish and prawns. The coal for this power station will come from Thalcher, nearly 2,000 kms. away.

Almost all the consumer items that are being promoted have significant environmental impacts. In totality, the encouragement of consumerism, as it is being done in India, is antithetical to the concept of sustainable development. With our huge and growing population and rapidly depleting natural resources, we should pioneer innovative, environmentally sustainable models of development. Instead, we are following a path that will be even more disastrous for us, than it was for its originally proponents.

Deregulating industry

Europe and the U.S. from whom we are borrowing our 'development' philosophy, have an economy with relatively few regulations. But this is because they have created objective conditions where social costs cannot be ignored. Although all these countries operate in a license-free system, they have stringent environmental regulations and laws, a judiciary and a populace which are unforgiving, if there is a threat to human health or the environment.

These countries have strong consumer preferences for 'green' goods and a market environment where a polluting industry, if it is not closed down through litigation and punitive damages, will lose its markets due to a discriminating consumer. You have there a society where basic needs have been met and, therefore, people can and will fight for their health and environment, and are informed enough to know when it is being threatened and by whom.

In India, we have accepted deregulation and delicensing, but not recognised the need for stringent environmental standards and laws. We have also not noticed that our public, and people's institutions are not yet ready to take on the burden of safeguarding their health and environment. India remains, perhaps, the only major country which has not made environmental impact assessment (EIA) mandatory prior to the initiation of development projects. The effort to bring environmental impact assessment under the law has been delayed by the Prime Minister's office for nearly a year.

The holiday given in the last budget, to the industries in some of the "backward" regions like the Andaman and Nicobar. Lakshadweep, and the North East States has, in the absence of law insisting on EIA, posed a serious threat to the environment of these ecologically fragile areas.

The danger is not from industrial growth, but inappropriate industrial growth.

Agricultural exports

Globally, the major threat to the environment, in terms of promoting agricultural exports, has been through the replacement of traditional food crops by hybrid cash crops. Degradation of land, pollution through pesticides and fertilizers and loss of biodiversity have been some of the more disturbing environmental impacts.

In India, a new worry is starting the exports of our genetic resources and the consequent destruction of our forests and other wilderness areas.

Recent modifications in the export policy, reportedly necessitated by the World Bank, have liberalised (or allowed) export of, among others, the following items : wild orchids, processed brown seaweeds and agarophytes, excluding G. edulis of Tamil Nadu coast origin, handicrafts and articles made of peacock tail feathers, seeds of trees, hedges, ornamental plants, flowers and glorious a superba (*Lilliaceae*), plants, plant portions and derivatives obtained from the wild, processed timber of all species, excluding sandal-wood and red sanders and handicrafts made of sandal-wood.

The other new exports are : machine finished sandal-wood products, visiting cards, blades for ladies hand fans, outer case and dials of watches and any other similar products made of sandalwood, meeting the above specification and value addition norms, and handicrafts made out of seashells.

Permitting exports of wild orchids and plants will pose a serious threat to our biological diversity and make the task of protecting our forests and wildlife so much more difficult. Similarly, the export of seashells items will have a very significant impact on the ecology of our coastal and marine areas.

Most disturbing, the permission to export sandal-wood products will create a new demand for sandal-wood which cannot, but strengthen Veerappan and his ilk, much to the cost of our forests.

Solutions

Obviously the whole development strategy has to be rethought. Even if we do not immediately adopt a model of sustainable development, we must understand the implication of such a model in India—the costs and benefits and time frames involved. Measures which take a long time to actualise must be initiated now. At present, there appears to be no agency within (or outside) the Government which has any idea of a sustainable development path for India.

In any case, a nation, least of all a nation of India's size and complexity, cannot overnight change its strategy of development. This 'slowness to change' is both a weakness and a defence. It is a defence against thoughtless economic adventurism, such as what is happening at present.

Changes have to be initiated gradually, in phases. Therefore, the move to environmental and social sustainability must also be so. First, we must ensure that every development project and activity, every economic and social initiative, and every governmental action is in harmony with the principles of sustainability. Once this is done, the changes in our path and model of development are inevitable.

Table—Funds allotted for environment in 1992-93

	Percentage of allocations	Per capita allocations (*in rupees*)
Madhya Pradesh	0.35	1.22
Lakshadweep	0.33	15.24
Sikkim	0.27	7.10
Jammu and Kashmir	0.22	2.21
Meghalaya	0.21	2.71
Kerala	0.16	0.48
Rajastan	0.14	0.44
Goa	0.13	1.63
Manipur	0.12	1.31
Chandigarh	0.11	1.15
Assam	0.10	0.43
Haryana	0.10	0.49
Gujarat	0.10	0.42
All India	**0.09**	**0.32**
Tripura	0.09	0.87
Punjab	0.08	0.57
Himachal Pradesh	0.08	0.69
Orissa	0.07	0.32
West Bengal	0.07	0.15
Daman & Diu	0.07	0.94
Bihar	0.05	0.12
Andhra Pradesh	0.05	0.11
Uttar Pradesh	0.04	0.12
Delhi	0.03	0.31
Nagaland	0.03	0.47
Andaman & Nicobar	0.03	1.72
Karnataka	0.03	0.13
Mizoram	0.03	0.70
Pondicherry	0.02	0.24
Arunachal Pradesh	0.02	0.56
Maharashtra	0.02	0.07
Tamil Nadu	0.01	0.04
Dadra & Hagar Haveli	0.00	0.00

Fiscal and economic institutions like the budget and the Plan must be used progressively in this direction. The 1993-94 budget is a very disappointing one from the environmental viewpoint, especially since it was the first one after the rhetoric of the Prime Minister at the Earth Summit in Rio. Despite many opportunities, like tax reliefs to goods earning the newly instituted 'ecomark,' or to companies filing a 'green' environmental audit, the Finance Minister chose to pay lip service to the environment. He increased the rate of depreciation on pollution control machinery and removed the excise duty on non-conventional (non-wood) raw materials for manufacturing paper. Both these are welcome, but marginal interventions.

The Finance Minister also gave significant tax relief for plywood, ironically claiming that he was saving wood and the forests. Actually, the plywood industry has become one of the biggest commercial destroyers of forests and one cannot but see this tax rebate as a part of a larger design to promote the industry. A recent decision of the Minister for Environment to allow increased tree felling in the Andaman and Nicobar Islands, despite a plan by the Island Development Authority and the then Prime Minister, Rajiv Gandhi, to phase out all forestry operations in these Islands, points to this design. It is also evident in the efforts to give industry access to forest land, again spearheaded by the Minister for Environment.

The Eighth Five Year Plan and the Annual Plan for 1993-94 are also very disappointing. Though the Annual Plan for 1993-94 was approximately 29 per cent larger than that of last year, the Plan allocation for the Ministry of Environment and Forests increased by only 13.6 per cent (from Rs. 280 to Rs. 318 crores). This means that the Plan allocations for this sector went down from 0.563 to 0.497 per cent of the budget.

Though the final figures for the 1993-94 Plan allocations for the States are not available, the figures of the Seventh and the Eighth Five Year Plans and of annual plans 1991-92 and 1992-93 show that the situation has not improved much.

Apart from a drastic increase in Plan outlays, the allocations on pollution control should be pegged to outlays in sectors like industry and minerals, transport and agriculture. As the growth in these sectors (and in population) contributes to pollution and environmental degradation, it seems sensible to make the budgets on environmental protection and control a proportion, say one per cent, of the outlays of these sectors.

Finally, the allocation of natural resources must also be budgeted. The Government must present in the Parliament, an annual natural resource budget which allocates natural resources like water, forests, land, soil, biomass, and even clean air for different uses including the environmental ones. The revenue of such a budget will be the water conserved or recycled, the forests planted, the land and soil conserved and the air cleaned.

Though the concept has been accepted by the Government and included in the official Policy Statement on Conservation and Sustainable Development, it is not clear when the first budget will be presented. The sooner the better.[1]

CHAPTER X

CITY AND COMMUNITY : TOWARDS ENVIRONMENTAL SUSTAINABILITY

Managing environmental resources during this era of global urbanization is one of the greatest challenges facing the world's cities. With the fastest urban growth occurring in the cities of the developing world, the impact of urban and industrial growth on the environment is no longer limited to a handful of rich countries. It is rapidly becoming a problem shared around the world. In addition, the growing problem of urban poverty is a serious confounding factor in the effort to manage the urban environment and provide essential urban services.

The previous chapter outlines a range of policy option for tackling many of the direct environmental threats facing the world's cities. None of these policies will work, however, if there are insufficient administrative legal resources, or insufficient political will and public support implement these policies effectively. Meeting this urban challenge will require the concerted actions of everyone with a stake in the world's cities—governments at all levels, non-governmental organizations (NGOs), private enterprises, communities, and citizens.

First among these actors must be government. A powerful argument remains for a strong government role in environmental management. Governments are needed to plan for growth, to regulate polluting activities, to harmonize competing uses of the urban environment, and to address questions of equity that purely market-oriented approaches miss.

In efforts to improve the urban environment, local governments are especially critical. Local governments are responsible for most aspects of environmental management at the city level, from the provision of urban infrastructure and land use planning to local economic development and pollution control. To properly fill this role, local governments must develop their capabilities far beyond their current levels. In both the developing and the developed world, local governments are under severe stress from rapid urban change—either population growth or decline—fiscal pressures, growing demand for services, and increasing pollution. They often have neither the mandate nor the money or resources to cope with their mounting problems. This is especially true in the developing world, where urban growth is most rapid and governments tend to be underfunded and institutionally weak.

Equally important is the need to build on the efforts of low-income communities to improve their own environments. Community mobilization is by no means a substitute for government intervention; government action is essential in tackling the interconnected problems of poverty and environmental degradation. But the potential for communities to help themselves can be a major force for change. Indeed, over the past three decades, most urban "success" stories have involved projects that have incorporated community action, from the Orangi Pilot Project in Karachi, Pakistan, to the Zabbaleen in Cairo, Egypt.[1]

Environmental Action

The demand for control and rights over common resources has been the reason for growing discontent and conflict in many countries. At heart is the choice of development policy and the priorities set by governments. When production and profit gain precedence over livelihood, the poor suffer as they are deprived of their source of survival.

---

[1] Source : World Resources, 1996-97, Oxford University Press, 1996.

The writers in this section look primarily at two areas of natural resource conflict—forests and fisheries. They argue that the growing concern for global problems should not detract from the urgent need to address local issues and that an attempt to deal with domestic problems will ultimately contribute to the resolution of global environmental issues.

For instance, ever since the 1992 Earth Summit at Rió de Janeiro, tropical forests are being viewed as carbon sinks to absorb the increasing accumulation of carbon dioxide in the atmosphere. Thus, countries with large reserves of tropical forests, which also happen to be in developing countries, are being advised to stop exploiting this natural resource in the interests of global needs. But at the local level these forests are an important economic resource on which these countries depend and a means of survival for many communities.

Similarly, fishing is the only source of livelihood for millions of people living along India's 7,500 km coastline. The tendency to view aquatic resources as a short-term resource has already reduced millions of artisanal fishermen to penury. The owners of mechanised trawlers, who are more interested in today's catch than in ensuring that tomorrow there will be some fish left in the sea, have caused "species genocide" by destroying the spawning grounds of many species of marine life. It is evident that a new system of governance needs to evolve to protect the needs of people and preserve the environment. One such system, presented as a draft law, is a "People's Nature, Health and Education Bill" which builds on existing Panchayati Raj institutions to give local communities the right to decide how to use and protect their natural resources. The ideas for the Bill grew out of actual experiences which have adequately demonstrated that people are willing to protect natural resources if their livelihood needs are recognised by the authorities.

The key issue ultimately is : to whom do these common resources belong? If it is acknowledged that communities dependent on them, whether they are fisherfolk or tribals living within forests, have a right to decide how they should be used, then the basic source of present conflicts would be diffused.[1]

Almost the first advice to a person who gets interested in environmental issues is to think an act holistically, i.e., to view every thing in the world as being connected with every thing else. In other words : do not ignore interconnections and do not look at things in isolation. And so a grand view emerges in which we see the linkages to the whole universe, firstly to the immediate environment and then to more distant environments until a global interconnection is established. All this is heady stuff, and the neophyte experiences a sense of vastness and grandeur.

But there are innumerable environmental problems. There are *local* environmental problems such as unsafe water, accumulating urban garbage, untreated sewage, polluted urban air due to personal vehicular transport and/ or polluted indoor air due to smoke from fuelwood stoves, etc. There are also *regional* and *national* environmental problems such as polluting industries, acid rain, river pollution, deforestation, etc. Finally, there are *global* environmental problems such as accumulation of greenhouse gases in the atmosphere.

---

[1] Source : The Hindu Survey of the Environment, 1995, p. 31.

From a holistic vision must emerge practice, and here the dictum in the environmental movement is : *think globally and act locally*. Thinking globally implies thinking interconnectedly, i.e., with an awareness of all the interconnections. In effect, this demand is equivalent to putting all environmental problems on a par and treating them as if they are of equal importance.

There is hence no prioritisation of local, regional, national and global environmental problems. It looks, therefore, as if a holistic attitude leads naturally to an absence of priorities and a lack of focus. Accumulation of greenhouse gases in the atmosphere claims the same attention as unsafe water, accumulating urban garbage, untreated sewage and urban vehicular pollution.

Let us consider this approach in the context of a concrete problem : the accumulation of greenhouse gases in the atmosphere.

Greenhouse effect

Human activities are changing the composition and behaviour of the atmosphere at an unprecedented rate. And pollutants from a wide range of human activities are increasing the global atmospheric concentration of certain heat-trapping gases "... which act like a blanket, trapping heat close to the surface that would otherwise escape through the atmosphere to outer space". This process is commonly called "the greenhouse effect" because it reminds some observers of the heat-trapping effect of the glass walls in a horticultural greenhouse. Scientists, while they may disagree on the details, have in fact reached a consensus on the global implication of this build-up.

If current trends in the emissions of greenhouse gases continue, the surface will warm by about 0 3°C per decade. By around the middle of the next century, the cumulative warming effect will raise the average surface temperature of our planet somewhere between 1.5 and 4.5°C above the natural "background" temperature which existed before the beginning of the industrial revolution in the 18th century.

What do these temperatures mean? "...A difference of 1°C in average global temperature is all that separate today's warm climate from that of the Little Ice Age... that lasted from the 14th to the 17th century...A worldwide increase of 2°C above today's level would push average global temperature beyond anything experienced in the last 10,000 years... A warming of 5°C from the present level would make the average global temperature hotter than any time in the last million years..." (*I.M. Minzer*).

In fact, "... a general consensus exists that during 1988, almost three-quarters of the CO_2 from fossil-fuel combustion was released in industrialised countries. But when non-industrial sources are included (e.g., burning of forests and other land-use changes) the contribution of industrialised countries was about 56 per cent... Analysis of the available data suggests that the historical fossil-fuel related emissions from developing countries represent only about 14 per cent of the global total, as compared to 28 per cent of current fossil-derive CO_2 emission..." (*M. Grubb et al.*).

Developed countries to blame

Therefore, the developing countries with three times more population have been far less responsible for "polluting" the atmosphere with greenhouse gases than the industrial countries. But the contribution of the developing countries to the concentration of greenhouse gases in the atmosphere is rising.

Thus, in a world stratified into rich and poor countries, the bulk of the degradation of the global atmosphere has originated primarily from the rich industrialised countries but the contribution from the poor developing countries is also increasing rapidly.

Unfortunately, the industrialised countries (which were and continue to be overwhelmingly responsible for the deterioration of the global atmosphere) are pressuring the developing countries to cut their emissions. They are asking for environmental measures as *quid pro quo* for capital. This may be unfair, but it is *real-politik*. It is interpreted by developing countries as a conflict between environmental protection and development.

Skewed contribution

Most developing countries, however, are internally stratified. They consist of dual societies, namely, the affluent and the vast majority of poor. The elite and the poor differ in their consumption patterns and therefore in their impacts on the environment. But, environmental degradation is evident at both ends of the income spectrum—the rich pollute due to the wasteful overuse of resources and the poor degrade the environment by surviving at its expense. Thus, the global phenomenon of non-uniform and skewed contributions to atmospheric degradation is mirrored within developing countries.

Further, attention is now being drawn to the fact that the nature of the environmental degradation caused by the elite and the poor is also different. For example, the rich are mainly responsible for pollution due to carbon dioxide from automobiles and electricity generation, chlorofluorocarbons from refrigerators, etc. In contrast, the poor are responsible for deforestation in those countries and regions where cooking fuel is obtained by felling trees and where forests are cleared for agriculture because land ownership is highly skewed. In addition, the kerosene burnt by the poor for illumination contributes to carbon dioxide emissions.

So far, the contribution of various income strata to pollution in developing countries has not been scrutinised. In fact, these emissions have not even been disaggregated crudely into the contributions of the rich and the poor. The basic problem seems to be that there is no information on the emissions from various end-use devices such as automobiles, two-wheelers three-wheelers, buses, trucks, electric lighting, kerosene lighting, etc.

Nevertheless, an impressionistic, conclusion is that the poor in developing countries contribute only marginally to the greenhouse gas emissions from these countries. This has two implications of major significance :

(*i*) An emphasis on basic need-oriented development with a direct attack on poverty involves virtually no conflict with global environmental concerns.

(*ii*) However alarming and ominous the high population growth rates of the poor in developing countries may be from an economic growth point of view, these growth rates do not threaten the

> global atmosphere as much as the smaller growth rates of industrialised country populations and of the rich in developing countries.

The relative lack of responsibility of the developing countries for the degradation of the global atmosphere and the environmental degradation arising from elitist growth patterns suggests a step-by-step environmental approach for developing countries :

Step 1 : Address local environmental problems such as unsafe rural water supplies or kerosene consumption for lighting or indoor particulate pollution due to smoke from fuelwood stoves and urban vehicular pollution due to personal transportation,

Step 2 : Tackle regional environmental problems such as acid rain or river pollution,

Step 3 : Attend to national environmental problems which require attention and implementation at the national level, e.g., choosing the mix of major and minor irrigation to reduce waterlogging, etc., and

Step 4 : Pay heed to global environmental problems such as greenhouse gas accumulation in the atmosphere.

Such a step-by-step approach will be more politically saleable within developing countries. Zeroing in on global environmental problems at the beginning of environmental awareness is often viewed as succumbing to a stratagem of the industrialised countries for getting the developing countries to fix a mess that these countries had created. In addition, the equity pay-offs form this approach are substantial because the worst sufferers of environmental degradation become the first beneficiaries. There is also historical justice in this step-by-step approach because it demands that developing countries first address the problems that they had created and only then become environmentally altruistic by turning to problems that the industrialised countries had created.

Finally, an emphasis on the initial step(s) often yields as a bonus, environmental benefits corresponding to subsequent steps, in particular, global environmental benefits. Thus, reduction of urban vehicular pollution due to personal transportation also results in reduction of greenhouse gas accumulation in the atmosphere. Prioritisation of environmental concerns is not inconsistent with holism, but holism does not necessarily lead to prioritisation and the development-oriented priorities.

The prioritisation emphasized here has an important implication for joint implementation, whereby industrialised countries repay there environmental debts and earn environmental credits by financing measures in developing countries to reduce emissions of greenhouse gases, e.g., afforestation to sequester carbon from carbon dioxide in the atmosphere. The implication is that joint implementation must start with measures to improve the local environment that have the side-benefit of improving the global environment.

A developing-country perspective

Most developing countries view the challenge of development to be far more important than the threat of climate change. Thus, if at all they address the problem of climate change, they would like to tackle it along with the advancement of, or as bonus from, development. This bonus principle, which is the other side of the coin of the no regrets principle, requires that the short-term measures that advance development in developing countries must also yield the bonus of combating climate change.

This does not mean that developing countries can ignore all environmental issues. Invariably, local environmental concerns and development task are intimately intertwined. Business-as-usual economic growth in developing countries with dual societies has led neither to basic need-oriented development nor to environmentally sustainable patterns. Economic growth catering to the elite while neglecting the poor, and involving a variety of subsidies, price distortions, inefficiencies, etc., has resulted in environmental degradation from both segments of the dual society. Environmental degradation impedes and frustrates sustained development. More directly, the worst victims of environmental degradation are the poor not only because they cannot commute away and space-condition themselves from pollution but because their poorer health status makes them more vulnerable. Thus, an attack on poverty has necessarily to include environmental protection.[1]

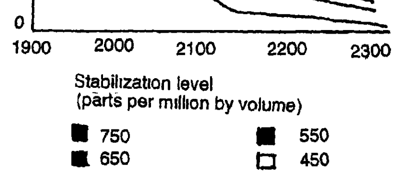
Note : Projections are based on the model of Wigley. For a detailed discussion of the model, see T.M.L. Wigley, "Balancing the Carbon Budget · Implications for Projections of Future Carbon Dioxide Concentration Changes", *Tellus*, Vol 45B, No. 5 (1993), pp. 409-425.

Figure—Possible Paths to Climate Stabilization



Source : Adapted from Intergovernmental Panel on Climate Change, *Radiative Forcing of Climate Change : The 1994 Report of the Scientific Assessment Working Group of IPCC, Summary for Policymakers* (World Meteorological Organization/United Nations Environment Programme, Geneva, 1994), Figure 7, p. 15.

Note : These models illustrate the atmospheric consequences of various future patterns of carbon dioxide emissions leading to eventual stabilization of carbon dioxide levels. Stablization at any of the concentrations studied (450 to 750 ppmv) is possible only if emissions are eventually reduced well below 1990 levels.

CHAPTER XI

CITIES, WASTE AND HEALTH

It took the scare of the Black Death, the pneumonic plague which hit Surat in September 1994, to finally make people wake up the connection between waste and health. For the unfortunate symbol of modern, urban India today is a pile of rotting garbage.

Even in the better managed cities, of which there are barely a handful in India, the problems of solid waste disposal and sanitation appear almost intractable. As the following survey of a selection of cities across the country reveals, the problems are almost identical in metropolitan cities and smaller towns.

As for as sanitation is concerned, the majority of cities have a grossly inadequate underground drainage (UGD) system. In some cases, barely half the city is covered. The unserviced part must make do with either open sewers or soak pits. In some of the smaller towns, the shocking and degrading system of night-soil removal by people continues.

Even where there is an underground drainage system, it is badly maintained.

The problem of untreated sewage being dumped into the nearest water body is leading to another set of problems. Rivers running through many cities have become open sewers with not a trace of aquatic life left in them.

Poor communities living on the banks of such polluted water bodies are vulnerable to a variety of infectious diseases as shortage of water forces them to use the water from such rivers, or lakes.

The story of solid waste disposal is no different. Most municipalities cannot afford to invest in enough vehicles or people to collect and remove garbage on a regular basis. As a result, piles of rubbish remain unattended for days on end, attracting rodents and flies and spreading disease in their wake.

Even if the garbage is collected, there is little planning on how it will be separated and disposed. Domestic waste and hazardous waste are dumped in the same place. Landfills and garbage dumps are overflowing in most cities, creating another set of problems. Furthermore, changing urban lifestyles have led to the generation of greater quantities of non-biodegradable garbage which is more difficult to destroy.

There is also the problem of disposal of hospital waste. In most cities and towns neither the hospitals nor municipal authorities take care to separate out hospital waste and burn them in incinerators. Even in the metros few concerted efforts are made to effectively destroy hospital waste. Incinerators rarely function or, when they do, a callous attitude on the part of hospital staff poses a grave danger to the health of people. Few of the smaller nursing homes or hospitals in small towns have plans even on paper for separate disposal of infected waste.

The only hopeful development in recent years is the increasing number of self-help groups that have sprung up in a number of cities. From encouraging people to separate their wet and dry garbage to vermiculture, which can reduce a pile of stinking rot to useful compost, these groups are using a variety of strategies to enlist the cooperation of communities.

Although such efforts are small, they are beginning to make a dent on the problem. Their success suggests that people are finally becoming aware of the link between waste and health. They have also realised that it is unwise to sit back and leave the authorities to manage the problem as ultimately citizens end up paying the price in terms of ill health.

Aging sewers, urgently in need of repairs, run alongside water mains and often lead to contamination of the city's water supply. In any case, lack of water to flush the sewer system leads to blockage which are never cleared for years on end.

Most of the UGD in the cities where it exists usually covers only the more affluent areas or those where government officials live. The poor are not served by any kind of system to remove either solid or liquid waste. As many slums are built on low-lying areas, their condition is unbearable during he rains when not only is their area flooded but it also gets inundated with unclean garbage and sewage.

Apart from the fact of no drainage, the poor also have practically no access to covered toilets. In many cities, the majority of poor people have to defecate in the open. Even where the municipality has provided community toilets, the majority are blocked and unusable because of the shortage of water and bad maintenance.[1]

CHAPTER XII

MEDICAL WASTE DISPOSAL

A war of sorts appears imminent over a monster called the "incinerator" with ecologist and authorities in the Capital getting drawn into campaigns and quick-fix deals.

In April 1995 the Ministry of Environment and Forests (MoEF) woke up to the threat of a health hazard from a grossly mismanaged hospital wastes disposal system and proposed legislation to make incineration of infectious medical wastes mandatory for hospitals. The medical institutions found themselves at the receiving end for poor waste management.

In March 1996, the Supreme Court, responding to a public interest litigation, directed all hospitals and nursing homes in Delhi having more than 50 bed capacity to install on-line incinerators. Ironically, it was the time when a public outcry against incineration laws was gathering momentum in the West with several countries seeking international bans and moratoria on incinerators.

True, there was then a paucity of information in India about the performance of incinerators and medical waste technology. But eco-experts and environment-friendly campaigners and activists began to tap information on the differences in theory and practice of operating incinerators in hospital.

Court order

A Delhi-based environmental non-government organisation, Srishti, took on the task of searching for a medical waste disposal technology that would be appropriate for Indian hospitals. It did not want to adopt a technology that was being abandoned in the West.

Srishti's efforts led to a slight modification in the Supreme Court order that came three months later. In May 1996, the apex court directed Delhi-hospital to install incinerators or alternative devices for medical waste disposal" and asked the Central Pollution Control Board (CPCB) to set standards for various treatment methods. These standards were decided in June 1996 but they are yet to be notified by the MoEF.

Following the court order some major hospitals fearing punitive action, installed incinerators in their premises. The authorities were not in the dark about the pros and cons of installing incinerators. But the decision by hospital to have incinerators went unchallenged. It has been now established that insinstators actually careate more health problems than solving them. While several countries in Europe and in the West have shut down incinerators and abandoned incinerator proposals, India is preparing for an influx.

In the early Eighties, Delhi had tied up with a Danish firm to install the first-ever municipal wastes incinerator at Timarpur. It was subsequently dumped owing to a miscalculation in the calorific value of the municipal wastes that the city churned out daily.

Even after the experience of the West and its own abortive attempts, the Government still wants hospital administrations to install medical wastes incinerators instead of advocating a comprehensive indigenous garbage management programme for the polluting industry.

Disadvantages more

Undoubtedly, burning garbage appears to be the best way of getting rid of wastes. But studies abroad have shown that state-of-the-art incinerators do not actually reduce wastes to nothing. The incinerator reduces the waste to ash in the process changing the chemical composition and toxicity of the substances burnt.

As a result, unseen but potentially hazardous gaseous emissions are released into the air, posing a public health risk. A dangerous by-product is the toxic chlorinated compounds called dioxins and furans which are carcinogenic and known to suppress the immunes system and cause foetal and reproductive damage.

The incinerators are beneficial when their performance is monitored under strictly controlled conditions and medical wastes are segregated properly. Unfortunately, even the rated standards of incinerators are in doubt and strict control is impossible. And when incinerators are not operated under recommended norms, they spew toxic fumes, making pollution almost impossible to control.

The U.S. has estimated that 90 per cent of its medical wastes incinerators will have to be shut down or it will have to spend $300,000 for fitting new pollution control devices to meet the standard of "maximum achievable control technology".

Can countries like India afford such investment especially when there are no special standards for incinerators? Guidelines have been drafted for medical waste incinerators—and are likely to be notified soon by the Government—but there is no guarantee that hospitals will follow them.

Monitoring nil

Who will monitor the proper functioning of incinerators, especially since it has been seen in the past two years in Delhi that the performance level of the machines is below par. They either run at incorrect temperatures or do not run regularly owing to high fuel consumption or poor maintenance.

The basic standards that need to be adhered to relate to the prescribed regulatory twin-chamber with controlled temperatures, the type of incinerators for the waste burnt per unit, sorting methods, volume of waste per size of incinerators and appropriate disposal of fly ash.

"And this is where the trouble begins", says Mr. Ravi Aggarwal of Srishti. Undeniably, legislation is necessary to force the authorities into action but one should realise that the problem of hospital waste disposal and management is serious and one which requires a scientific mandate, transparency and accountability, he added.

The Biomedical Waste (Management and Handling) Rule, 1995, recommends incineration only for select waste streams such as human anatomical wastes and disposables and the new legislation too is expected to lay down strict standards for treatment and disposal of biomedical wastes in hospitals. But can it enforce adherence to notified rules?

Srishti and individuals like Ms. Bharati Chaturvedi, an environmentalist, are determined to continue the fight for "systematic approach" to medical waste disposal, focusing on waste reduction and selective use.

In 1995, incinerators were considered to be an easy solution for addressing the medical waste problem., But in 1998, an anti-incinerator campaign has taken shape in the wake of knowledge about the disadvantages in incinerators and new methods like autoclaving, microwaving or chemical disaffection.

Ms. Chaturvedi feels that legislation will give a levy to those who prefer to invest in incinerators over non-burning technologies. But her main fear is about the absence of interventions throughout the waste stream.

Scepticism and optimism, therefore, work simultaneously. That the legislation includes a provision for alternative devices and strict standards for treating wastes is good news but it is unfortunate that hospitals opt for short-cut technology for the sake of convenience and also partially out of fear of the consequences of non-compliance. Nursing homes risk losing their licences while hospitals face punitive action if they fail to install waste disposal technology within-nine months of the issue of the notification.

Mr. Agarwal stresses that efforts should be on creating a responsible three-tiered medical waste system that embraces segregation, disinfecting and treatment with the cooperation of the entire hospital staff. Such a system is woefully lacking and the situation is worsened by the apathetic attitude of the medical fraternity.

The easy way out

Installing incinerators is an easy way out as they do not cost much. They are available for as little as Rs. 50,000. By installing one, a hospital makes the point that it is taking care to dispose of its waste. That a sub-standard incinerator is being used is of little import, points out Ms. Chaturvedi. In the absence of waste segration practices, all kinds of wastes reach the incinerator, posing serious health problems, she adds.

The Director of the country's premier medical institution, the All India Institute of Medical Sciences, says "We do not have a waste disposal problem at all. Everything is incinerated!"

On paper, environment regulation processes are in order. But in practice these rules are circumvented and guidelines violated. Since much of the danger from medical waste incinerators is not obvious, education and awareness are needed, says Mr. Agarwal. Correct and valid messages must be popularised on the issue of the medical waste disposal system.

Single largest investment

This is vital because, according to him, it will probably be the single largest urban pollution abatement investment to be made in coming years. He fears that if suitable measures are not adopted soon, medical waste technology investments in India over the next one year can exceed Rs. 300 crores in the four metros alone whereas the quantum of infectious wastes is less then 50 tonnes.

"Avoidance of knee-jerk reaction to what needs a sensible, systematic approach is critical, otherwise we will end up with a largely ineffective public investment", he warned.

The lack of awareness about the importance and benefits of waste management programmes in city hospitals is due to several reasons, includes the staff's unexplained unwilling to participate, lack of motivation, lack of proper training and education besides the permanent cash crunch which hampers providing protective gear to hospital staff for segregating wastes. And above all, the harsh fact—treating wastes is not profitable.

Independent surveys by two NGOs, Srishti and Vatavaran and the CPCB's inspection team reveal that of the 34 major hospitals in the city, 11 have installed incinerators which are operated at 400-500°C as against the 1200°C prescribed for complete and proper destruction of pathogens and necessary control of other emissions. Suitably designed pollution control devices retrofitted with the incinerator for achieving minimised emission levels and shredding all waste sharps prior to incineration are the other standards set by CPCB which are not followed.

The overall scenario on segregation of wastes too is indisputably dismal. Even now in several hospital—with or without incinerators—contractors are engaged to dispose of medical wastes. This gives way to malpractices as waste recycling by ragpickers has become an accepted way of life.

Hospital wastes are thrown in open garbage dumps either within the premises or in nearby municipal bins. Ragpickers expose themselves to infections carrying salable and washable items like surgical gloves, needles and syringes, cotton, gauze and bandages, intravenous tubes, blood bags etc. It is reported that these items are repackaged and sold in "chor bazaars" in the city at bargain prices.

Given the situation, efficient incinerators are perhaps the answer to tackle waste disposal. But then, surveys show how norms become meaningless when authorities and watchdog agencies fail to shoulder responsibilities. It is a Catch-22 situation.

In the opinion of Dr. Naresh Trehan, chief of the Escorts Heart Research Institute, the success of infection control programmes in hospital depends on the management. In Delhi, only three private hospitals - Escorts, Orthonova and Ganga Ram - and to some extent the New Delhi Municipal Committee's Charak Hospital (which has engaged the NGO Sulabh International) dispose of their waste in a somewhat professional way.

The colour coding of containers for different types of wastes in the hospital wards and operation theaters helps in the segregation of wastes at the source. The wastes are checked before being sent for incineration, surprise checks are conducted to ensure efficiency and regular courses are conducted on waste management for the staff.

Rare examples

Besides these four hospitals, the Ram Manohar Lohia hospital is the only one in the city which has a shredder to take care of plastic wastes while the Sanjay Gandhi Cancer Institute is the proud possessor of the city's first autoclave. But the examples are few and far between.

A senior Ministry official, suggests that NGOs could be brought in to educate and convince the authorities and then regularly check whether hospitals are observing proper waste treatment rules. But the CPCB chairman, Mr. Dileep Biswas, observes, "Even if we carry out inspections and expose the non-compliance of guidelines, who will take action against those who err? Neither the NGOs nor the CPCB have powers to initiate action. We can only give technological and scientific advice".

Callous approach

At some of the big hospitals like Lohia, Safdarjang or AIIMS, their medical superintendents claim that the hospital wastes are being taken care of properly. But an inspection reveals that wastes are mixed either because the "different coloured garbage bins for different types of wastes" are missing or the doctors and nurses are not aware of the need to segregate the wastes.

Ward boys either complain that they do not have protective gear like gloves, face masks and boots, or profess lack of knowledge about the sorting process and the hazards of wastes. Therefore, in spite of instructions, everything is put in one big plastic bag and shoved inside the substandard incinerators.

Waste management is in its infancy in the country and perhaps this is the right time to make the right choices, both in terms of cost and other environmental and health impacts.

Srishti has prepared a hospital manual for implementing waste management advocating segregation, mutilation or shredding of wastes so that it cannot be recycled besides stressing on alternative modes of treatment. Many hospitals—officially 15—are in the process of becoming incinerator-friendly. But they should realise that the onus of proper upkeep and use of incinerators rests with them.

Hospital waste

Delhi has 43 general and 27 special hospitals, besides a number of clinics, polyclinics, dispensaries and private nursing homes. Hospital waste requires very safe disposal as it may lead to the spread of dangerous diseases.

Some of the city hospitals do have incinerators, but they are either not properly utilised by the staff or remain out of order for extended periods. The Health Ministry's guidelines suggest that the landfill sites used for dumping solid waste should be fenced off and scavenging strictly prohibited. However, in practice, the waste is dumped in the open near the hospitals, thus inviting scavengers, flies and stray dogs. Hospital waste contains disposable needles and syringes which are sold by scavengers to people who recycle them. The waste is thoroughly overturned by ragpickers—often with bare hands and feet—to get something which could be sold.

Safdarjung Hospital has an incinerator but the concerned staff, perhaps not aware of the dangers of hospital waste, throw it in the open garbage dump outside the hospital. It is important to note that on the one hand, these hospitals cure patients, and, on the other, become a source of several diseases because of such open dumping.

Bombay—Per capita refuse generation

The per capita per day refuse generation in Greater Bombay amounts to 400 to 500 gms. An average of 4,000 tonnes of refuse and 2,000 tonnes of debris is collected daily. Ten per cent of the total refuse generated is collected door to door. The remaining 90 per cent is collected through the communal collection method. The city has four dumping grounds with a combined capacity of 6,050 tonnes per day. The total area covered by the dumping grounds is 280 acres. The total number of vehicles for waste collection is 1,100. Of these, 800 are owned by the Municipality and 300 are hired from private contractors. The frequency of collection is twice a day. The total expenditure incurred on conservancy and transport for the year 1991-92 was Rs. 135.09 crores.

Out of the total solid waste collected per day, more than 50 per cent is collected from the city area. The average per capita generation of solid waste is 445 gms/capita/day, while the maximum is in the city area. Wards A, B, C and D generate more than 1,000 gms/capita/day of solid waste. The lowest per capita generation is in the eastern suburbs, amounting to 280 gms/capita/day.

The hospital waste collected from various hospitals, nursing homes and maternity homes is also dumped in the landfill sites.[1]

CHAPTER XIII

AIR POLLUTION

Despite the potential for energy efficiency in cities, urban energy demand and fossil fuel consumption continue to grow. Already, the concentrations of airborne pollutants in and around cities far exceed those in rural areas. In addition to their toll on human health, these air pollutants can damage terrestrial and aquatic ecosystems. Not all of this damage can be attributed to urban activities. Nonetheless, sources of emissions are concentrated in or around urban areas—especially in developing countries, where industries still tend to be located in cities. In addition, combustion of the fossil fuels used for urban transportation is playing an ever greater role in air pollution problems.

Air Quality Standards

Air quality standards are typically set with human health in mind, but some forms of ecosystem damage can occur at far lower levels. Table compares health-based standards with the levels at which ecosystem damage has been documented. In most northern European cities, for example, sulphur dioxide concentrations rarely exceed World Health Organization guidelines, yet sulphur deposition still exceeds the levels at which ecosystem damage can occur. In fact, some efforts to reduce the health effects of urban air pollution in developed countries have actually increased damage to ecosystem. The tall smokestacks built to disperse pollutants in cities such as New York, Philadelphia, and Pittsburgh in the United States ultimately contributed to the acidification of lakes in he Adirondack Mountains. In most developed countries, however, stringent pollution control laws and new technologies have reduced sulphur emissions dramatically since the 1950s. Metropolitan areas have the greatest concentrations of population, industry, and energy use, and hence the largest amount of population and the highest greenhouse gas emission. One recent study estimates that almost 40 percent of total carbon dioxide emissions from North America come from 50 metropolitan areas. Although this should be considered only a rough approximation, it demonstrates the need for policy interventions to reduce urban output of greenhouse gases. In developing countries especially, the rapid growth in energy demand in urban areas (i.e., from electricity and transportation) is projected to greatly increase greenhouse gas emissions. Global warming is predicted to cause a rise in sea level, placing coastal cities at risk.

Table—Comparison of World Health Organization (WHO) Guidelines Versus Critical Levels of Atmospheric Pollutants known To Cause Ecosystem Damage

Pollutant	WHO Guidelines (micrograms per cubic metre)		Critical Level for Ecosystem[a] (micrograms per cubic metre)
	1 hour	24 hours	
Sulphur dioxide[b]	350	125	10[c] – 20[d,e] 30[d,f]
Nitrogen oxides	400	150	30[g]
Ozone	150–200	100-120 (8 hours)	80[f, h]

Sources : 1. United Nations Environment Programme and World Health Organization, Urban Air Pollution in Megacities of the World (Blackwell Publishers, Oxford, U.K., 1992), pp.222, 225-226.

2. The Swedish NGO Secretariat on Acid Rain, "Environmental Fact Sheet No. 6: Critical Loads", *Acid News*, No. 2 (April 19, 1995), pp. 4—5.

Notes : *a*. Critical levels are defined as the concentration of pollutants in the atmosphere above which direct adverse effects on receptors, such as plants, ecosystems, or materials, may occur, according to present knowledge. *b*. Guideline values for combined exposure to sulphur dioxide and suspended particular matter. These may not apply to situations in which only one of the components is presents. *c*. Annual mean. *d*. Both annual and half-year mean. *e*. Forest ecosystems and natural vegetation. *f*. Agricultural crops. *g*. Maximum annual mean. *h*. Threshold concentration. Critical levels are now expressed as cumulative exposure over a threshold concentration, using the formula x parts per billion (ppb) (2 micrograms per cubic metre = 1 ppb) for y hours above the baseline ppb.

Menace of air pollution

Compared to the problems of water and sanitation, the menace of air pollution in Indian cities is rather new. Industries and automobiles plying on roads emit many tonnes of pollutants every day in the air, putting an average urban citizen to greater health risk. The incidence of respiratory diseases in cities has increased considerably over the years. The thermal power plants in cities emit huge quantities of pollutants into the air. The three thermal power plants in Delhi viz. Indraprastha, Rajghat and Badarpur, emit 9.9 tonnes of pollutants every hour !

Monitoring air quality

The CPCB has been monitoring air quality since 1984. At present, it monitors air quality at 260 stations spread over 75 cities/towns under the National Ambient Air Quality Monitoring (NAAQM) network. The Table gives the annual mean values of pollutants in some cities in 1990.

The increasing number of motor vehicles in cities has added considerably to the air pollution in urban areas. The pollutants emitted from vehicles, prove to be more lethal as they are closer to the public, compared to the pollutants released by industries. During 1986-87, the vehicles plying on the roads of Delhi were emitting about 865 tonnes of pollutants every day. Since then, the number of vehicles in Delhi has doubled, resulting in an increase in the quantity of pollutants.

Post-Independence period

During the post-Independence period, Indian cities have expanded spatially to accommodate the growing population and increasing economic activities. The increasing distances between home and work place have forced urban dwellers to commute long distances. The expansion of public transport has not been commensurate with the growth of population. As a result, private vehicles have witnessed a rapid increase. In Delhi, there were only 1 lakh two wheelers in 1971 and today there are about 14 lakhs two wheelers although Delhi's population has grown only 2.3 times during 1971-91. Delhi has the highest number of vehicles in the country—22 vehicles per 100 persons, while Bombay and Ahmedabad have 6 and 15 vehicles per 100 persons respectively. The increase in vehicles has led to more road accidents. The rate of fatalities is the highest in Delhi — 18.87 per one lakh population. Today, cities are characterised by the utter chaos and disorder on roads due to increased congestion, delays at intersections, overcrowding of public transport and blatant violation of traffic rules.

Deteriorating environmental condition

The deteriorating environmental condition in urban areas are typically associated with the rapid growth of population in cities. As a corollary, the primary solution suggested for managing the environment is that of controlling the growth of cities. But this is neither possible nor desirable. Urban centres, throughout the history of human civlization, have played a dominant role in the economic development of nations. The shift from primary occupations based in rural areas to secondary and tertiary occupations in urban areas is recognised as an important indicator of economic progress. Attempts to control the growth of cities and establish smaller urban settlements are far more expensive solutions than managing the cities more efficiently. The fact that cities are highly organised socially, politically and economically, encompassing large masses of people over a small geographic area, provides positive conditions that are conducive to efficient management. The challenge for policy makers is to identify a set of policy measures that are environmentally sound in promoting healthier urban living and that capture the inherent advantage of a city's economic productivity.

Innovative policies applicable to India

A recent OECD publication, *Environmental Policies for Cities in 1990s* outlines some basic principles for innovative policies, that are equally applicable to India.

1. There is a need to redefine and intensify cooperation between different levels of government. Each government — local, regional, and national — is responsible for taking the initiative to protect the urban environment.

2. Cooperation between the public and private sector must grow. The private sector may be involved in designing solutions to environmental problems. The financial participation of the private sector is indispensable if urban infrastructure projects are to be successful.

3. Minimum Environmental Standards must be established and enforced. In some cases, enforcing existing standards may produce better results than creating new ones. Proper enforcement of environmental standards must take place through local authorities.

4. The local community must take part in devising and implementing environmental policies. Local initiatives stimulate greater awareness of local problems and potential. Innovative local approaches should be widely disseminated.

5. Prices must incorporate environmental and social costs. Sustainable development requires that environmental capital not be dissipated until the environmental impact is internalised. Local taxes and user fees are most appropriate for demand management and lead to resource conservation.

6. Synergies that can contribute to environmental protection must be identified. In a synergetic relationship, mutually enhancing activities are more productive when they are coordinated.

7. Short-term decisions must be taken within the framework of long-term strategies. Political as well as private decision-making often tends to be based on short-term consideration, while urban planning is done with a long-term perspective. Environmental strategy-based urban planning can provide a long-term strategy within which short-run decisions should be taken.

The hope for better cities is not lost. Curitiba in Brazil is now cited as one of the finest examples of an environment friendly city. Its experience suggests that with only marginal efforts by the communities and the local government, each city in India can become a model environmental city. We, the urban residents, owe this to the next generation of city dwellers, and must strive to achieve it.

Table—Annual Mean Values in Selected Cities —1990

City	Pollutant					
	Sulphur Dioxide		Nitrogen Dioxide		Particulate Matter	
	Average*	Max**	Agerage*	Max**	Average*	Max**
Delhi (9)	15.5	32.5	29.3	51.5	390	568
Bombay (3)	37.4	56.7	28.7	30.8	201	228
Calcutta (3)	30.2	38.5	28.7	42.0	273	302
Madras (7)	19.2	54.1	22.1	33.1	118	146
Kanpur (6)	7.6	9.8	11.4	13.3	351	566
Ahmedabad (6)	20.5	33.4	29.3	42.8	290	357

Figures in parentheses indicate the number of monitoring stations in a city.

* Average denotes average of annual mean values of all monitoring stations in a city.

** Maximum denotes maximum of annual mean values of all monitoring stations in a city.

Compiled from· National Ambient Air Quality Statistics of India — 1990, Central Pollution Control Board, Delhi

Energy Consumption and Air Pollution

Transportation requires huge amounts of energy. Globally, 20 percent of all energy produced is used for transportation. Of this, between 60 and 70 percent goes toward moving people, and the rest toward moving freight. In OECD countries, transportation uses an even larger share : about 31 percent of all energy used in 1991. Transportation is heavily oil dominated; about half of the world's oil is consumed in the transportation sector.

Energy consumption in the transportation sector expected to grow in both the developed and the developing world. From 1971 to 1992, worldwide energy use in the transportation sector grew on average 2.7 percent per year, faster than any industry or other energy end use sector. This energy consumption contributes to both local and global air pollution and presents an economic burden, especially in countries that import energy resources.

Indeed, motor vehicles produce more air pollution had any other single human activity. Nearly 50 percent of global carbon monoxide, hydrocarbon, and nitrogen oxide emissions from fossil fuel combustion come from gasoline- and diesel-powered engines. In city centres, especially on highly congested streets, traffic can be responsible for as much as 90 to 95 percent of the ambient carbon monoxide levels, 80 to 90 percent of the nitrogen oxides and hydrocarbons, and a large portion of the particulates, posing a significant threat to human health and natural resources.

In the cities of the developed world, car emissions pose the greatest threat to air quality. In the United States in 1993, transportation sources were responsible for 77 percent of carbon monoxide emissions, 45 percent of nitrogen oxides, 36 percent of volatile organic compounds, and 22 percent of particulates. In the European Union, pollution control measures have been mitigated over the past 20 years to reduce nitrogen dioxide levels, but these measures have been offset by increases in the numbers of vehicles on the road.

In the United Kingdom, for example, average concentrations of nitrogen dioxide increased by 35 percent from 1986 to 1991, mainly as the result of increased emissions by motor vehicle traffic.

In the developing world, automotive air pollution is mostly a problem in large cities with high levels of traffic, such as Mexico City, Bangkok, and Lagos, Nigeria. In other cities, power plants, factories, and other stationary sources still constitute the greatest threat to air quality. However, even in some smaller urban centres such as Peshwar, Pakistan, and Kathmandu, Nepal, air pollution from motor vehicles is becoming an increasing problem.

Motor vehicles are also a significant factor in lead emissions. An estimated 80 to 90 percent of lead in ambient air is derived from the combustion of leaded gasoline. Recognizing the health threat, most developed countries have reduced the lead content of gasoline over the past decade. Unleaded gasoline as been introduced in most Latin American countries, Malaysia, Singapore, Taiwan, and the Republic of Korea, although in most cities of the developing world, ambient lead levels still greatly exceed the health standard of 1 microgram per cubic metre. In Cairo, for example, ambient lead levels of 1.5 micrograms per cubic metre are common. Lead levels tend to be especially high along roads with heavy traffic density.

The impacts of motor vehicle emissions extend far beyond the local area. The transportation sector is the most rapidly growing source of greenhouse gas emissions—that is, emissions of chemicals that have the potential to contribute to global warming. These include carbon dioxide, chlorofluorocarbons, nitrous oxide, and carbon monoxide. In 1990, about 22 percent of carbon dioxide emissions from fossil fuel use came from the transportation sector. OECD countries are responsible for about 70 percent of greenhouse gas emissions attributed to transportation. However, the share of emissions from developing countries is expected to rise in the future because of the growing sizes of their motor vehicle fleets and their use of less efficient fuel-burning technologies.

Table—Contribution of Motor Vehicles to Urban Air Pollutant Levels In Selected Cities, 1980s and 1990s

		Percent Attributable to Motor Vehicles				
City	Year	Carbon Monoxide	Hydro-carbons	Nitrogen Oxides	Sulphur Dioxide	Suspended Particulate Matter
Athens	1990	100	79[a]	76	8	13[b]
Beijing	1989	39	75	46	X	X
Bombay	1992	X	X	52	5	24
Budapest	1987	81	75	57	12	X
Cochin, India	1993	70	95	77	X	X
Colombo, Sri Lanka	1992	100	100	82	94	88
Delhi	1987	90	85	59	13	37
Lagos, Nigeria[c,d]	1988	91	20	62	27	69
Los Angeles	1990	98	62	84	68	11[e]

		Percent Attributable to Motor Vehicles				
City	Year	Carbon Monoxide	Hydro-carbons	Nitrogen Oxides	Sulphur Dioxide	Suspended Particulate Matter
Mexico City	1990	97	53	75	22	35
Santiago	1993	95	69	85	14	11
Sao Paulo	1990	94	89	92	64	39

Notes : *a* Applies to road transport only, values listed under hydrocarbons represent volatile organic compounds. *b*. Includes smoke. *c*. Percent shares apply to all transportation modes. *d* Does not include biomass *e*. Directly emitted particulates less than 10 microns (PM 10). X = not available

Addressing Indoor Air Pollution

For many city resident, air pollution from indoor smoke, usually from biomass fuels, poses a greater health risk than outdoor air pollution. The optima strategy to reduce the exposure of lower-income residents to indoor air pollutants is to facilitate their switch from dirty fuels, for example, by providing clean burning gas or by establishing programs to make kerosene stoves more affordable. However, for many poor residents of areas without access to city services, this transition to higher-priced fuels will not be possible for some time. For this population, the most promising interim measures are the distribution of improved cookstoves and the fostering of improved house design with better ventilation.

Programs to design and disseminate cleaner-burning stoves have been under way for many years in countries such as China, India, Kenya, and Nepal. However, most stove programs are designed to improve efficiency, not reduce air pollution. One of the most successful urban stove projects has been the Kenya Ceramic Jiko initiative. More than 500,000 stoves have been distributed since the mid-1980s. The stove is a modification of the traditional stove that can be built locally from easily accessible materials and that burns charcoal more efficiently. Despite the program's apparent success, penetration of this new stove was mited to middle-class neighborhoods in Nairobi. In addition ensuring the quality of the new stoves has been difficult.

In higher-income residence and commercial buildings, in both developing and developed countries, indoor pollutants are more likely to come from cigarette smoking, unvented or improperly vented stoves or heater, airborne contaminates such as asbestos or molds and fungi, and the release of gases from construction materials and furnishings such as rugs and upholstery.

Several strategies are available to address indoor pollution in higher-income settings. Smoking indoors and in public places can be discouraged through public information campaigns alerting residents to the dangers of secondhand smoke. To minimize combustion product indoors, city environmental managers can establish programs to check home heaters and stoves to ensure proper venting and maintenance. Local ordinances can be enacted to restrict the use of asbestos insulation and fireproofing in new construction. And building codes can direct attention to the provision of adequate ventilation, particularly in new commercial buildings with closed-loop heating and cooling systems.

Reducing Energy Sector Emissions

Cutting emissions from the energy sector, particularly coal-or oil-fired power plants, is critical to controlling outdoor air pollution in many urban areas. Unfortunately, many of the factors determining energy sector pollution—such as the price of energy, the siting of state-owned power plants, the level of investment in new technologies or alternative energy sources, and the privatization of local utilities to improve their capitalization and management—are frequently determined at a national or state level. Nonetheless, cities often have considerable influence over how local utilities are run and over the energy consumption patterns of city residents.

Reducing pollution from coal-and oil-fired power plants can come via three routes: upgrading the generating efficiency and pollution-control capabilities of the plants themselves so that they emit fewer pollutants; cleaning up fuels, either by cleaning the coal before burning or by switching to cleaner-burning natural gas; or reducing the demand for power through energy conservation. Attention to proper operation and maintenance producers is required in any case to keep the performance of power plants from declining over time—an acute problem in many developing countries.

These same strategies of retrofitting with new technology and cleaning up or switching fuels can also be applied at the building or individual household level to cut energy-related emissions within neighborhood. Replacing or installing pollution control devices on aging coal-fired boilers in commercial and residential buildings in temperate zone cities can increase efficiency and decrease pollutants; converting them to gas can reduce their impact on local air problems still more

In cities where coal is used to fire individual coal stoves, as in many Chinese and Eastern European cities, upgrading the quality of coal used for such heating can bring immediate and significant air quality benefit to neighborhoods. For example, use of coal briquettes—formed from pulverized, washed coal—can improve combustion efficiency in home heaters by 20 to 30 percent and reduce carbon monoxide emissions by 70 percent and particulate emissions by 60 percent. Adding a sulphur absorbent to briquettes can cut sulphur dioxide emissions by about half. Again, where possible, converting residential heating to gas provides further pollution relief. Recognizing this, but committed to using its huge coal reserves, China is building several coal gasification plants to provide gas for urban residential use.

Promoting Energy Conservation

While energy policies are generally considered to be the responsibility of national governments, cities are in a position to help lower energy consumption. Cities can use several tools in their quest to lower energy demand, the first being a vigorous public education campaign on the need for and benefits of energy conservation and the options available to residential and commercial energy users. Such options include the use of more efficient appliance and lighting fixtures, and, in cooler climates, the installation of weather stripping and insulation.

The Urban CO_2 Reduction Project, sponsored by the International Council for Local Environmental Initiatives, is a network of 14 cities that are working together to develop local strategies to reduce energy consumption and carbon dioxide emissions. The goal of the project is to show that emission reductions are possible without harming the city's economic productivity.

Policies adopted by the 14 cities range from economic instruments to regulations to boarder strategies such as land use planning and improving public transportation. To achieve its target of 25 percent emission reductions, switching fuels for electricity generation, retrofitting municipal buildings, strengthening energy performance standards in the building codes for new buildings, modifying land use patterns, and improving waste management.

The Urban CO_2 Reduction Project shows that simple technical fixes such as insulating pipes and repairing leaks in the steam heating system in residential buildings can translate into reduced energy use. For cities in developing countries, reducing energy consumption may not be a top priority, yet in rapidly growing cities where new construction is high, the potential for cutting future energy needs through efficiency standards in building codes is large. Building in energy efficiency during initial construction is almost always less costly than retrofitting, and the energy saved—and the power plant emissions prevented—can be substantial.

Encouraging Pollution Prevention

One of the most promising tasks to reducing industrial emissions is to prevent pollution in the first place. Pollution prevention focuses on designing cleaner production processes and material handling procedures. This approach follows a natural hierarchy of industrial waste management options. First, reduce pollutants at the source as much as possible. Second, recycle or reuse as much as possible of the pollutants or wastes that are produced despite these efforts. Third, treat, detoxify, or destroy what remains. And fourth, only as a last resort release pollutants to the surrounding environment.

The central rational for this approach is economic: preventing pollution at the source both reduces pollution control costs and increases the efficiency of production, because fewer materials are lost as waste. Preventing pollution can also be a powerful marketing and public relations tool in areas where environmental awareness has increased and environmental health concerns have made their way onto urban agendas.

Cities can be important catalysts and partners in pollution prevention, mostly by helping to educate both the private sector and the public about the advantages of cleaner manufacturing. Developing and helping to administer information clearinghouses that offer details on alternative technologies and their successful application in other industries are prime means of facilitating a change to cleaner industrial processes. City governments can foster a stronger environmental ethic among local industries by conducting public "green performance" rating of manufacturing facilities, by encouraging industrial managers to publicly commit to pollution-reduction targets, and by offering awards for exemplary environmental performance.

Cities can enlist the support of the public through education campaigns that make clear the unseen costs of pollution and that encourage consumers to "buy green". Enacting public disclosure laws that force local industries to reveal their annual pollution emissions can also prod local firms to improve their environmental records, lest they acquire a reputation for being insensitive to local citizens and the environment. Such disclosure laws have been quite effective in altering corporate behaviour in some developed countries. Encouraging local non-governmental organizations to act as watch-dogs for industrial pollution problems has also proved effective in many instances.

Priorities for Action : Air Pollution

For health, environmental, and economic reasons, strategies to reduce air pollution are critical in many cities of the developed and, especially, the developing world. Ambient air pollution emanates from three major sources —energy generation, industry, and transpiration—all of which tend to increase with economic growth. Strategies to cope with automobile-related air pollution, which constitutes the fastest growing component of urban air problems.

At the most basic level, addressing urban air problems requires an understanding of the air basin in which the city is situated and the pollution sources that affect it. Forming or participating in an air basin management district or other regional regulatory body is often the best way for cities to develop this understanding and to coordinate basinwide efforts to control pollution, including the drafting and enforcement of ambient air quality standards. Developing a local air monitoring capability is essential to both policy making and enforcement efforts. In Bombay, for example, citywide air monitoring since 1969 has provided an extensive database that is used to assess both daily air quality and regional pollution trends.

In many cities in the developing world, however, the most critical health threat stems from exposure to indoor air pollution. Reducing this threat requires a different set of strategies.[1]

CHAPTER XIV

WATER POLLUTION

Water pollution probably began with the foundation of the first cities 7,000 years ago along the major river systems of the Tigris-Euphrates and Indus. Cities have long used rivers, lakes, and coastal waters as receptacles for diluting and dispersing wastes. The natural processes of water flow help to break down wastes and render them harmless. Ever-increasing urban populations and their growing amounts of wastes, however, have over-taxed the natural recycling capabilities of local rivers and lakes. In cities close to coasts, untreated sewage and industrial effluents flow into the sea and damage beaches and inshore waters.

Progress in controlling water pollution

Although there has been significant progress in controlling water pollution in developed nation over the past three decades, pollution has continued to rise in most cities in the developing world and remains high around cities in the transition economies of Russia and Central Europe, posing a threat to human health and to the health of aquatic ecosystems. In some areás, entire estuaries and even international water bodies such as the Mediterranean Sea and the Caribbean are affected.

Urban-generated pollution

Urban-generated pollution comes from both localised and dispersed, or point and nonpoint, sources. Major point sources include municipal sewage, industrial outfalls, and air emissions from power plants and heavy industries. Nonpoint sources include silt from earth-moving activities; storm runoff from roads, home gardens, and industrial sites; infiltration from aquifers contaminated with sewage or industrial chemicals; and automobile emissions.

Problems associated

Of the many problems associated with urban effluents, nutrient loading, or eutrophication, of local waters is one of the most serious. Nutrients are essential plant foods, but excessive amounts can cause radical plant growth—often massive algal blooms—that blocks the sunlight that other organisms need. As plants die and decompose, the dissolved oxygen in bottom waters is depleted—a condition that is deadly for fish and other aquatic life. Those fish and other mobile species that can survive may nonetheless lose critical habitat, their food supplies may be disrupted, or they may be forced into shallow areas where they are subject to increased predation.

Atmospheric deposition

Nutrients come from several sources, including run-off from upstream agricultural and urban areas, particularly silt, and air emissions. Atmospheric deposition is thought to be responsible for about one third of the nitrogen in the Chesapeake Bay, which is surrounded by several large urban population. The biggest single source of nutrient loading in urban waters, however, is human waste. Even after conventional wastewater treatment to remove much of the organic material and pathogens, human waste still contains copious amounts of nitrogen and phosphorus—the primary ingredients in fertilizers.

Nutrient enrichment problems

Nutrient enrichment problems are especially severe in urban estuaries, where water flushing is minimal and inputs, often from numerous cities, are large. The Baltic Sea, for instance, receives the effluents of more than 70 million people and related industries in dozens of cities. Since 1980, it has manifested increasing symptoms of eutrophication, with a lengthening list of biological effects, from declining lobster and cod catches to increasing number of nuisance algal blooms. Without a major restructuring of how urban wastewaters are handled, nutrient loads in waters seem certain to rise as urban populations increase and agricultural production expands to feed urban residents.

Water scarcity

Water scarcity is closely linked to water quality. Freshwater lakes and rivers provide affordable and easily accessible water, but uncontrolled discharges of domestic sewage and industrial effluents have left many urban rivers heavily polluted and their water unsafe for use. Consequently, cities must search for water supplies well beyond their boundaries.

Ground water

Other cities rely on groundwater, but many of them are withdrawing water from aquifers faster than natural rates of replenishment, leading to salinization and sub-sidence. Saline intrusion is common in almost all coastal cities, from Jacksonville, Florida, to Dakar, Senegal, to the Chinese cities of Dalian, Qingdeo, Yantai, and Beihai. Land subsidence can cause structural damage to buildings and roads and can contribute to urban flooding. For Bangkok, which overdraws water from its aquifer by a conservative estimate of 0.6 million to 0.8 million cubic metres per day, the compacting of underlying soils has led to land subsidence ranging from 5 to more than 10 centimetres per year throughout the region. To alleviate this land subsidence, Bangkok would have to reduce its ground-water extraction rate by at least one half—a formidable challenge because water demand is expected to grow rapidly in the coming decades.

Water shortages and conflicts among urban, industrial, and agricultural users may become especially severe in parts of India, China, and the Middle East nations. Much of sub-Saharan Africa is likely to face similar pressures, although data for the region are scarce. Already struggling with uneven distribution of water resources and local water scarcity, the urban populations of these regions are expected to double in less than 25 years.

In India, total demand for water is projected to nearly double by 2025. Although agriculture will still claim the bulk of water supplies, demand is growing fastest in the urban and industrial sectors and is protected to climb 135 per cent over the next 40 years. Already in Hyderabad, India, the need for irrigation water during low-flow years is in direct conflict with the need for water within the city itself. Similar conflicts are emerging in China, where about 300 cities already experience water shortages.

Priorities for Action : Water and Sanitation

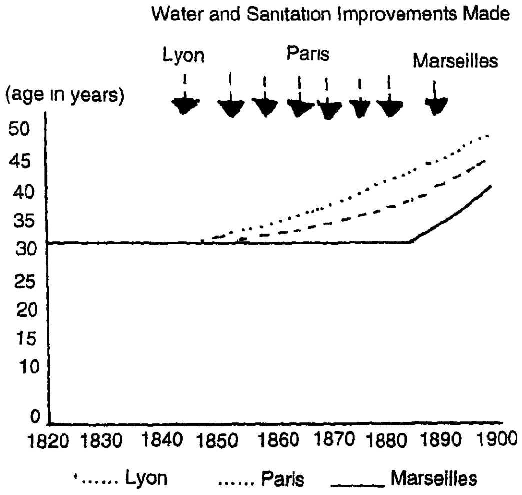
Cities across the globe confront problems related to water supply and use. For many cities of the developing world, the top environmental priority remains improving access to clean water and sanitation. As the World Bank concluded in 1992, doing so would be the single most effective means of alleviating human distress. When services were improved in cities in developed countries in the 19th and 20th Centuries, health improved dramatically. In both the developing and the developed world, there is also a critical need to use water more efficiently and to intensify efforts to stop the deterioration of aquatic environments caused by municipal and industrial effluents.

Improving Access to Water and Sanitation

Despite nearly $ 100 billion in investments, the International Drinking Water and Sanitation Decade of the 1980s fell far short of meeting its goal of water and sanitation for all. During the decade, the number of urban people in the developing world with access to adequate water increased by about 80 percent, and the number of urban people with adequate sanitation facilities increased by about 50 percent. The rapid rise in urban populations offsets these gains, however, and in 1994 more than 220 million urban dwellers (13 percent of the developing world's urban population) still did not have access to a safe and reliable water source, while more than 420 million (25 percent of the developing world's urban population) did not have access to sanitation services.

Although the Decade did not meet its goals, it did bring into focus the magnitude of the health problems associated with inadequate water and sanitation services and highlight the need to find new strategies to improve coverage. Indeed, the program's greatest achievement, by some counts, may have been the transformation in thinking that accompanied it.

Figure—Life Expectancy and Improvements in Water Supply and Sanitation, Selected French Cities, 1820—1900.



Source : The World Bank, World Development Report 1992 : Development and the Environment (The World Bank, Washington, D.C., 1992), p. 99.

Broadly, four key lessons emerged from the Decade: first, systems should respond to local demands and should be as simple, sturdy, and inexpensive as possible; second, the involvement of the community and house-holds—particularly women—in system design and maintenance is a crucial component to a project's success; third, governments need to improve the efficiency and sustainability of system operation and maintenance; and fourth, water should be treated as an economic commodity paid for by users.

Despite a surprising degree of consensus on these points, many governments and donor agencies have yet to move beyond rhetoric to implementation, according to some critics. Translating the lessons into practice poses may challenges. However, much progress is being made.

Adopting Appropriate Technology and Standards

The Decade made clear that the high-cost water and sanitation systems adopted throughout the developed world—with centralized systems built and maintained by subsidized public agencies—will not work in the developing world. The number of people unserved is far too great, and city coffers far too small, to provide all residents with piped water and flush toilets in their houses. Whereas some parts of a city, such as the urban core, may be covered by conventional sewerage, other areas, particularly low-income settlements on the urban periphery, would be much better served by lower-cost alternatives.

Evidence of the success of low-cost solutions can be found in cities around the world, from large-scale programs for pour-flush latrines or ventilated improved pit latrines to community groups implementing small-bore sewer schemes. Each solution is unique, tailored to local conditions and needs, but most rely on locally manufactured hardware (e.g., plumbing, sanitary sheds, or concrete caps for pit latrines) and the efforts of community members to install, maintain, and manage the systems. Systems using lower-level standard technologies can be effective and much less expensive, at only one tenth to one twentieth of the cost of a conventional sewage system. Most of the lowest-cost systems require far less water, and once they are installed can be upgraded gradually.

One of the greatest barriers to installing low-cost alternatives in political opposition to what is considered "low technology". In many developing countries, there is still a tendency on the part of governments and funding agencies to insist on standards that are higher than necessary, sometimes doubling the cost of service delivery. In Cartagena, Colombia, for example, officials proposed a conventional sewage system even though a high water table, impermeable soils, and land levels well below the city sewer mains caused pipes to sink and necessitated pumping wastewater uphill to city sewer mains. Once local officials were persuaded that the lower standards of technology were not "illegal", a system that uses a septic tank to remove biosolids and that transports liquid wastes in small-diameter pipes was installed at one third the cost of a conventional system. The system has been operating successfully for more than 10 years.

Condominial sewers have also proved to be a cost-effective alternative, and versions have been installed in low-income neighborhoods in northeast Brazil, Pakistan, and Yemen. Condominial sewers use a radically different layout, with smaller and shallower feeder sewers running from toilet to toilet through each backyard. The wastewater of an entire lock discharges into the main trunk line at a single point rather than having to connect each house to the main trunk.

The Orangi Pilot Project in Karachi, Pakistan, illustrates the successes possible with low-cost sanitation alternatives. The community adopted a sewage system that filters biosolids into a tank and therefore uses smaller pipes and flatter gradients in the streets. The system cost one tenth of what it would have cost to install conventional sewerage. Most of the funds were invested by the community; even now the tanks and sewers are paid for and managed by groups of households. The municipality is responsible only for the construction and maintenance of the main trunk drain.

Low-cost systems are not foolproof, however. Most rely on the active participation of community members in maintaining the pipes. While this reduces the utility's operating costs, if the community and organizational aspects are missing, the technology will work poorly.

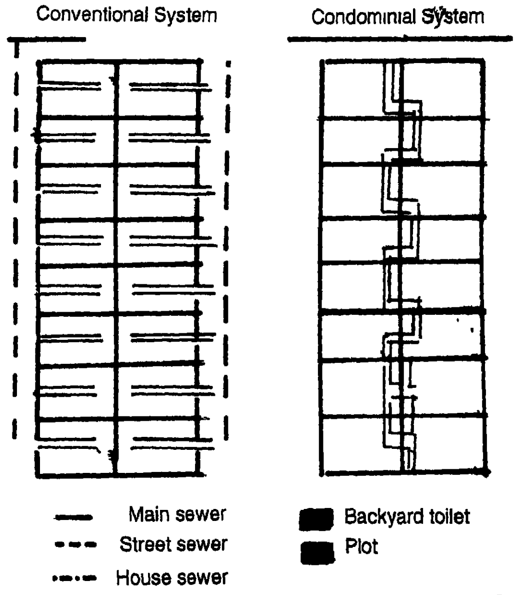
Involving the Community

Community involvement in water and sanitation projects is key to their success. Not only must communities be taught how to maintain and operate systems, they also must be consulted to determine what type of system best suits local conditions. Women, the major users of a system, can provide valuable advice about the design and management of a water and sanitation system. Failure to involve the community can lead to inefficient systems. In Nicaragua, for example, new latrines were not used by women because their feet could be seen from outside, denying them the customary privacy. In contrast, when women are taught to maintain hand-pumps or otherwise manage collective water systems, they often perform better than men because they are less likely to migrate, more accustomed to voluntary work, and can be better trusted to administer funds. Involving communities has other benefits as well, such as greater community acceptance of a new system and correspondingly increased willingness to pay for a system and help maintain it.

Improving Operation and Maintenance

National and international agencies have placed far too much emphasis on the construction of new facilities at the expense of improving operation and maintenance of existing installations. In Mexico City, for example, 50 per cent

Figure—Conventional Versus Condominial Wastewater Collection Systems



Source: The World Bank, *World Development Report 1992: Development and the Environment* (The World Bank, Washington, D.C., 1992), p. 107.

(7 out of 14) of the wastewater plants are operated at less than their designed flow capacity and treat only about 7 per cent of the city's total wastewater. The generally poor performance of public water and sewage utilities in developing countries leaves ample room for improvement and is a major factor contributing to the high cost of these services.

In many cities, about half of the water that is treated and distributed at public expense is not accounted for. In Manila, Philippines, for instance, 58 per cent of water is unaccounted for, as opposed to 8 per cent in Singapore. For Latin America as a whole, such water losses cost between $ 1 billion and $ 1.5 billion in forgone revenue each year.

As much as one half of the water not accounted for is due to unrecorded usage or illegal taps. For example, in Caracas, Venezuela, approximately 30 per cent of water connections are not registered. Reducing such losses is cheaper than reducing leakages, provided the utility has a sufficient number of trained staff. Major strategies include installing, promptly servicing, and recalibrating meters; updating and reviewing consumer records to estimate consumption when meters are unserviceable; and streamlining bureaucratic procedures to assist customers to make new legal connections.

Reductions in unaccounted-for water can allow investments in new works to be deferred or at least reduced in scope, with significant saving. In addition, by detecting and charging for illegal connections, revenue can be greatly increased to pay for water treatment and distribution as well as operation and maintenance.

Cost Recovery

With better cost recovery, utilities in developing countries could improve the quality and availability of water, potentially even in low-income areas. Water supply projects require huge capital investments, yet cities are faced with decreases in funds for urban water supply purposes and burgeoning urban populations. In developing countries, consumers pay only about 35 per cent of the costs of supplying water, according to a recent analysis of World Bank—financed projects. Recovering a greater percentage of these costs could provide city managers with funds to expand coverage in new areas or to maintain and improve existing facilities.

Drinking water, however, is a basic human need, and sufficient water for good hygiene is a prerequisite of public health. With these considerations in mind, governments have historically subsidized the cost of water. Unfortunately, these subsidies rarely reach the urban poor; instead, they most often benefit the better-off consumers with house connections. In many cases, the poor are actually paying more than their wealthier counterparts for less reliable service. Water from vendors costs substantially more (and may be of poorer quality) than piped water in the same areas. Indeed, the poor may pay as much as 30 percent of their income for water, while the well-to-do pay less than 2 percent.

Evidence exists that poor urban residents want and are willing to pay for no-plot—if not in-house—water supplies of reasonable reliability. Unlike some other environmental amenities that benefit the public at large, it is the individual household that receives most of the benefits of piped water. The prevailing assumption is that households are willing to pay about 3 to 5 percent of their income for access to clean water, yet actual studies reveal that some are willing to pay considerably more, some less.

The 1980s saw a widespread commitment to adopting more cost-recovery programs, especially among donor organizations. Yet most cities still do not achieve full cost recovery in water supply operations, and equity concerns remain. There is no guarantee, for example, that a financially motivated utility will invest the additional funds in low-income neighborhoods rather than high-income suburbs. Furthermore, the debate concerning how much to charge and to whom and whether water supply tariffs should cover only operation and maintenance costs or should also generate resources for future investment is far from over.

Promoting Water Conservation

For most cities, extending water supply coverage to current residents is challenge enough. Yet cities are also facing pressures to expand their municipal water supplies; demand for municipal water could grow by a factor of five or more over the next four decades. Many cities already face critical water shortages and high costs of supply.

The usual response is to increase supplies through expensive investments in new public infrastructure. Yet evidence suggests that cities can also manage the demand for water by reducing wasteful use (through pricing and conservation efforts) and by preventing pollution. A comprehensive strategy would include improving the operation and maintenance of water supply system, removing subsidies and price distortions that encourage waste, and public education. Demand management is a particularly attractive option for cities in the developed world, where per capita water consumption is many times that in the developing world. Recycling, especially of industrial wastewater, is another attractive strategy, providing companies with a cost-effective and reliable source of water and at the same time protecting the environment.

Reducing Water Pollution

By reducing water pollution, cities can reap the double benefit of effectively increasing the water supply while lessening the deterioration of the aquatic environment. As the "pollution shadow" spreads, cities must go further afield to find clean water, which significantly increases the costs of water supply. Shanghai, China, for instance, moved its water intakes 40 kilometres upstream at a cost of $300 million because of the degradation of river water quality around the city.

Of all the pollutants, urban sewage may be the worst offender in near-urban waters, although industrial pollutants can be a major source. In addition, up to half of the contaminants reaching urban waters come from nonpoint sources, such as urban runoff. Controlling urban runoff, although difficult, is essential if cities are to mitigate their impacts on nearby water bodies.

Preventing pollution in the first place may be the best long-term solution. One study in Santiago, Chile, found that although full wastewater treatment would cost about $ 78 million annually, the economic and health benefits resulting from pollution prevention could justify this investment.[1]

Urban Water Supply

Water has always played a decisive and crucial role in the location of settlements. Most of the earlier settlements including major civilisations were located on the banks of major rivers. Technological advancement, however, has changed this situation. With the transportation of water made possible due to technology, the constraint of locating settlements near rivers began to weaken and settlements started coming up in different places.

---

[1] Source : World Resources, 1996-97, Oxford University Press, 1996.

The demand for water has been rising in the urban centres not only due to a growth in population but also due to a growth in economic activities. In 1981, nearly 22 per cent of the urban population or 33 million people were without safe water supply in the country. The supply to those covered by the system was also not very satisfactory. The average per capita water supply in Class I cities in the country is 147 litres per capita per day (lpcd), while the average for the Class II towns is 78 lpcd. Wide variations are discernible in the supply between cities and even within the cities and even within the cities. For instance, Delhi has a supply of 245 lpcd as against a supply of 460 lpcd in Chandigarh. Within the city of Baroda variations among the different zones range from 72 lpcd to 571 lpcd.

The existing systems are crumbling under the increasing demand for water. Under pressure to supply adequate water, cities are exploring sources which are hundreds of kilometres away. In the long run this is likely to upset the ecological balance in the region. Excessive withdrawal of ground water to meet the growing demand creates its own set of problems. For instance, in Ahmedabad excessive withdrawal has pushed down the water table in the central zone from an average of 100 feet in 1965 to a level of 300 feet in 1990. The impact of inadequate water and poor water quality is on the health of the population. Water borne diseases create a major problem every monsoon when water-logging, particularly in the low income settlements, causes contamination of water leading to a variety of water borne ailments. Cholera, dysentery and gastroenteritis claim many lives in these settlements every year. Water and sanitation related illnesses account for almost 60 per cent of all urban deaths.

Increased consumption of water for various uses has increased the generation of waste water in Indian cities. Untreated/partially treated waste water, discharged in surface water bodies, has contaminated the aquatic resources of the country.

In a survey conducted by the Central Pollution Control Board in 1988 the total volume of waste water generated by 212 Class I cities was 12,145 million litres a day (mld), of which only 22 per cent was treated. Of the 241 Class II towns which generated 1,298 mld of waste water, only 2 per cent was treated. Out of a total population of about 102.95 million residing in these cities, only 38.66 million (37.6 per cent) were connected to a sewerage system.

The situation of waste water treatment is not satisfactory even in metropolitan cities. The 12 metropolitan cities had an estimated waste water generation of 6,462 mld, out of which only 1,930 mld (30 per cent) gets treated. These figures clearly show the attitude of city authorities towards collection and proper disposal of liquid waste. Almost every city has a number of open drains passing through it which carry the untreated waste water to nearby rivers. The foul smell emanating from these drains is unbearable and the water in them creates an unpleasant sight, making the life of urban citizens miserable. In the absence of proper availability of water for various uses, the people, especially the poorer sections of the society, are forced to use this water for washing and bathing, inviting various types of skin diseases.

Proper collection and disposal of liquid and solid waste is very important for the overall health of urban citizens. It is appalling to note that none of the cities in the country collects and disposes its solid waste in a safe way. A study by the Operations Research Group, Baroda, (1989), reveals that while a total of 14,786 tonnes/day of solid waste is generated in 24 cities, only 11,548 tonnes/day is collected. Very few cities like Bombay, Madras, Ahmedabad and Bhopal have a collection efficiency of more than 90 per cent. Some cities like Madurai, Cochin, Tiruchi, Calicut and Salem have a poor collection efficiency of below 50 per cent.

Besides the municipal solid waste, which is organic and/or inert in composition, the hospital waste, which contains germs of contagious diseases, is not disposed off properly. Very few hospitals have incinerators, which either remain out of order or are not used. As a result, the hospital wastes are thrown outside the hospitals and finally this waste find its way into the municipal solid waste system and gets disposed with the other wastes causing serious environmental problems. The awareness of disposal of hazardous industrial waste is yet to pick up amongst industrialists and civic authorities in the country. Though under the Hazardous Waste (Management and Handling) Rules, 1989, it is mandatory for the industries to dispose off their waste properly, in reality, this waste also gets mixed with the municipal waste.[1]

In Hot Water

The Tippagondanahalli water supply scheme will be a harbinger of health and prosperity to Bangalore. So said the then Maharaja of Mysore State, Krishnarajendra Wodeyar, inaugurating the scheme near Bangalore in 1932.

Sixty-five years later, the Bangalore Water Supply and Sewerage Board (BWSSB), continues to struggle to meet the water requirements of the city. As against the demand of 613 million litres a day (mld), the Board is able to supply only 435 mld. Worse, doubts are being expressed about the quality of water supplied. Though the water at the reservoirs and pumping stations maintained by the BWSSB is of good quality, contamination occurs in the pipeline between the pumping station and the tap at homes.

Susceptible to disease

Come summer and Bangalore plays host to a number of water-borne diseases. In 1996 alone, nearly 2,000 cases of gastro-enteritis were reported till July. According to Mr. Narendra, convener of the Centre of Science and Technology, a non-governmental organisation, the contamination of water, accumulation of garbage, flow of untreated sewage into lakes and tanks and water stagnation, all make Bangalore susceptible to the outbreak of water-borne diseases.

Between April and May last year, there were four fatalities due to gastro-entritis and four dengue deaths in the city. Instead of taking steps to prevent any recurrence, the government departments have been more active trying to pass the buck.

---

[1] Source : The Hindu Survey of the Environment, 1994, p. 13.

Passing the buck

While the health authorities blame contaminated water of the outbreak of disease, BWSSB officials hold illegal water connections responsible. According to one estimate, there are at least 33,000 illegal connections in the city.

An outbreak of gastro-enteritis, dysentery, jaundice and typhoid was reported last year in the Okalipuram area. As several of the water supply pipes in the area were corroded, it facilitated the seepage of sewage into the water mains on days when the water supply was cut off (supply was on alternate days).

At least 30 cases of gastro-enteritis were reported last year in Jayanagar 9th Block. An examination of the water samples collected in the area showed the presence of faecal matter. Binnypet, a densely populated area, reported 43 cases of gastro-enteritis in just a week.

Malaria made a comeback last year, thanks to blocked and overflowing drains. People living in the mosquito-infested areas of Koramangala, BTM Layout, Wilson Gardens and J.P. Nagar were particularly susceptible to malaria. Surveys carried out by the National Institute of Communicable Diseases (NICD), have shown that the incidence of dengue is also on the rise in the city.

The Health Officer with the Bangalore City Corporation (BCC), Dr. S.R. Bilgi, said the supply of contaminated water was the main reason for the outbreak of disese such as gastro-enteritis, cholera and hepatitis B

Poor water quality

The Centre of Science and Technology conducted a survey to monitor the quality of water in nearly 50 extensions of the city. The survey found high sulphate concentrations in the water supplied to a number of areas. A high bacterial presence was also found in the water supplied to certain areas. The centre recommended that the water pipes in these areas should be checked and replaced.

The survey dismissed the theory that groundwater was safe for drinking. The groundwater in many areas was found unfit for drinking, being chemically and bacteriological contaminated. Some samples of groundwater tested acidic due to the presence of carbonic acid.

The centre suggests that even on day when supply is cut off, the BWSSB could maintain a minimal release as standing water, whether in the pipes or over the ground, is ideal breeding ground for larvae and bacteria.

Lakes and tanks too have been subjected to environmental degradation. Of the 261 tanks surveyed in 1960, only 81 exist. Samples of sediment from the lakes showed a high content of organic matter. Solid waste was dumped into 25 tanks. Domestic waste flowed into 56 tanks while industrial effluents polluted 14 tanks. The N. Lakshman Rau Committee, instituted to suggest remedial measures to save the tanks, listed 127 tanks as requiring attention. A task force constituted later identified 14 more tanks.

The BWSSB says damaged water and sewage pipes in crowded localities and in old areas of Bangalore are not easy to replace as houses and shops have been built by encroaching on land above the water mains.

According to the BWSSB Chairman, Mr. J.S. Sharma, a team of Japanese experts has been asked to suggest measures to replace the pipes, which did not entail digging up roads.

Mr. Sharma said a term of experts from the National Environmental Engineering Research Institute (NEERI) had also been asked to test the quality of water supplied in the city. The team is likely to test 10,000 water samples. The BWSSB plans to set up low-cost water treatment plants near borewells. The Board has 6,000 borewells under its jurisdiction.

Shoe-string budget

Despite Bangalore being one of the six cities in the south, identified by the NICD as the "foci" for intensified plague surveillance, the plague monitoring cell in the city functions on a shoe-string budget. A full-fledged surveillance unit has not been set up even after reports of the increase in the number of rodents testing positive for plague.

Garbage dumps form ideal breeding grounds for rodents. Over 2,000 tonnes of garbage is generated daily in the city but the BCC does not have the efficent garbage disposal system.

Over the year, with the rapid increase in population, unplanned growth and construction activity, the sewage and garbage disposal system has reached unmanageable limits in the old city. With such unhygienic conditions can disease be far behind? In low-laying areas, particularly in areas inhabited by the poor, water-borne diseases are on the rise, so too tuberculosis (TS).

Central programme

The administration has launched the Centre-sponsored Direct Observation Treatment, Short Course Chemotherapy (DOTS) project to tackle the problem of TB in 36 districts in the State. Bhopal is one of them. In Bhopal, nearly one-sixth of the city's population is covered by the DOTS project — one lakh in the suburban town of Bairagarh and an equal number in the Shahjehanabad part of the city. A 1995 survey showed that there were 93 positive TB cases in Bairagarh and 97 in the Shahjehanabad area, besides nearly 500 cases of suspected TB.

The Madhya Pradesh Pollution Control Board, after a study in 1995-96 of the ambient air quality in some of the major cities in the State, found that the average concentration of suspended particulate matter (SPM) was 519.99 micrograms/ cubic metre, which was well above the World Health Organisation (WHO) norms. Besides, Bhopal was found to have the maximum number of vehicles in the State. According to a recent survey, there were 3,142 vehicles plying every hour in the city whereas the corresponding number was 2,316 in Gwalior, 2,292 in Dewas, 1,887 in Ratlam, 1,850 in Jabalpur, 1,047 in Raipur and 1,030 in Ujjain. The survey also found that 35 per cent of the vehicles in Bhopal were poorly maintained and emitted sulphur dioxide and nitrogen oxides beyond the prescribed limits.

Traffic congestion has become a problem in many areas of Bhopal which were not designed to accommodate rush hour traffic. The emission from vehicles is mainly responsible for the rise in the incidence of respiratory diseases and conjunctivitis.

Poisonous exhausts

People residing in the congested Shahjehanabad locality complain of continuous irritation in the eyes and many suffer from fibrosis. Lead poisoning symptoms have also been reported from this area. Victims of the Union Carbide gas disaster in 1984 also have to cope with the poisonous exhaust fumes emitted by vehicles.

The increase in the number of vehicles has brought on a proportionate rise in noise pollution. A high noise level of 72 decibels (the average is around 60 db) was recorded at the bus stand in Hamidia Road during a recent study on noise level monitoring. The noise level was on the higher side in the industrial area of Govindpura near BHEL, New Delhi.[1]

CHAPTER XV

VEHICULAR POLLUTION

Perhaps the greatest opportunity to reduce the negative impacts of current transportation systems is to influence land development patterns. An integrated land use and transportation strategy can increase the accessibility of jobs, shops, and other facilities without increasing the need to travel by car.

Ways to reduce reliance on the automobiles.—Many urban planning models have proposed ways to reduce reliance on the automobile. Some point to the compact city as the ideal, where high densities facilitate walking or bicycling and buses or subways are cost-effective alternatives. The mixed land use model, where homes, jobs and stores are clustered together, can reduce car trips and address the problem of deserted central business districts at night. Other models present the ideal form as many small, self-sufficient urban centres linked by a public transportation system. Greenbelts, greenways, and urban growth boundaries—large tracts of land on which urban development is prohibited—are heralded as effective means of protecting farmland and preventing urban sprawl. Unfortunately, these measures are neither easy to implement nor guaranteed to succeed.

Nevertheless, evidence linking urban form and transportation demand is compelling. Various studies suggest that in cities with relatively high residential densities and a balance of jobs and housing, people travel less, make shorter trips, and walk and bicycle more often. In the United Kingdom, for example, national survey data show that travel varies according to density. Travel demand quickly rises as density falls below 15 people per hectare and falls sharply as density exceeds 50 people per hectare. However, evidence is not sufficient to recommend an optimal density or settlement pattern. Comparative studies are generally limited by data constraints and confounding factors such as fuel prices, levels of automobile ownership, and cultural values.

Furthermore, textbook solutions rarely translate into real-life successes. London and Seoul, famous for their greenbelts, are facing new transportation challenges as urban development extends beyond these boundaries and workers commute even longer distances to down-town jobs. In Delhi, India, mixed land uses and high pollution densities are the norm, yet the city is faced with congestion, air pollution, and limited transportation options for its poor people. Efforts to manipulate urban form are further complicated by issues of land ownership and market forces. Additionally, an integrated strategy requires coordination between the transportation and land use sectors across an entire metropolitan region—something that is not easily achieved.

Road Pricing.—Road pricing entails charging drivers directly for using road through a variety of techniques, such as the use of tolls, area licensing schemes, and electronic road pricing. To be most effective, a road pricing scheme should cover all important roads throughout an urban area, and the charge should vary according to demand, with higher prices charged during peak periods, as is the case for electric utilities or telephone service. The goal is to encourage people to use alternate modes of transportation or to drive during off-peak periods.

Designing such a system, however, is complicated administratively, technically, and politically. In addition, road pricing will not succeed if cities do not offer attractive alternative transportation option. Accordingly, despite the demonstrated advantages of road pricing, few cities have implemented such schemes.

Most practical applications have been a type of area pricing, in which drives must pay to enter a specific area. Perhaps the most well-known of these is Singapore's area licensing scheme, which seeks to reduce traffic into the city centre by charging low-occupancy whiles a fee when they enter the area. To enter the restricted area, a car must display a special window sticker, for which a fee is also charged. Since its inception in 1975, the plan has both reduced congestion and stimulated the use of public transportation, at modest cost. The city is replacing the current system with an electronic scheme. Cameras mounted on overhead gate-ways will automatically deduct entry fees from stored values cards mounted on vehicles deshboards. The fee will be determined by both location and time of day.

In OECD countries, road pricing is being considered seriously, although in most places it is still only in the testing phase. A "smart" card, which automatically imposes a charge when a vehicle is stalled in traffic, is being tried in Cambridge, United Kingdom, to reduce congestion. In the Norwegian cities of Oslo, Bergen and Trondheim, electronic toll-collecting systems (initially designed to raise revenue for new road construction) may have the added benefit of reducing traffic in the city centre.

Taxes and Pollution Fees.—In addition to road pricing, other variable transportation charges to recover the full costs of transportation have been suggested. In practice, there is already an array of taxes on motor vehicles in most countries, ranging from purchase taxes on new vehicles to fuel taxes. Governments have long used fuel taxes as a means of raising revenue for road building and maintenance. Recently, however, some countries have began to consider taxation as a means to reduce vehicle use, conserve energy, and reduce carbon dioxide emissions. Hungary, for instance, introduced an environmental tax on fuel in 1992 as well as a road maintenance fee.

Fuel taxes can be an important policy tool in efforts to change travel behaviors. The direct impact of fuel prices on the level and pattern of transportation demand has been vividly illustrated over the past 20 years by the effects of increases in world oil prices on the overall volume of transport, on the search for improved efficiencies in the use of traditional fuel sources, and on the development of alternative fuel technologies. The high cost of fuel in Japan and Europe has led people in those countries to drive less and to drive more fuel efficient cars than their counterparts in the United States. Reducing fuel subsides and increasing fuel taxes could help improve vehicle efficiencies in developing countries as well.

Pollution fees, which increase with the amount of pollution produced by a vehicle, or vehicle-miles-of-travel (VMT) fees also can be used to recover some of the true costs of car transportation. Such fees can be collected at annual vehicle inspections and can be based on odometer readings. Research suggests that a VMT fee of $ 0.03 per kilometer imposed in Southern California could reduce automobile trips.

The Indian Transportation Paradigm

Conventional urban transportation planning, as defined in the developed world, has been applied to Indian cities such as Delhi for more than 35 years. Delhi's Master Plan includes numerous "district centres" that provide residential, shopping, commercial, and recreational facilities. By some measures, the Master Plan has succeeded : Delhi has high population densites and mixed land use patterns, resulting in short trips, many of which are made by walking, non-motorized vehicles, or public transportation. Private car ownership is low. In that regard, Delhi would seem to be a textbook example of integrated land use and transportation planning.

Even so, air pollution, congestion, and traffic fatalities are terrible and continue to worsen. The World Health Organization has classified Delhi as one of the 10 most polluted cities in the world. Congestion in Delhi seems to the worsening, despite local road improvement programs. Average speeds during peak period range from 10 to 15 kilometers per hour in central areas and from 25 to 40 kilometers per hour on arterial streets. Delhi's traffic fatalities in 1993 were more than double those of all other major Indian cities combined.

What accounts for this mismatch between the Master Plan and the reality of growing transportation problems? Much of it can be traced to attempting to apply solution for cities in the developed worlds to a city in a developing country, with its very different vehicle mix and socioeconomic conditions.

Delhi's Vehicle Mix

Traditional urban transportation models are designed to handle a homogeneous mix of passenger cars, trucks, and buses all moving at the same speed, but in Delhi, cars, trucks, and houses must compete for space with two-and three-wheel motorized vehicles as well as camels, elephants, stray cattle, bullock-carts, rickshaws, and handcarts. In facts, cars do not even constitute the majority of the city's 2,097,000 vehicles; motor scooters and motorcycles account for nearly 70 percent of registered vehicles. Another 4 percent are locally designed three-wheel scooter rickshaws; the rest are taxis, public buses, and trucks.

The city's estimated 1,500,000 two and three-wheel vehicles are heavy contributors to local pollution. As a class, these vehicles emit higher levels of hydrocarbons than cars, trucks, or buses. Three-wheel scooter riskshaws also emit significant amounts of carbon monoxide. Because they are a low-cost alternative to the city's overcrowded public transportation services, the number of two-and three-wheel vehicles on Delhi streets continues to grow. Since the 1980s, sales of such vehicles have increased by nearly 20 percent per year.

Variations in vehicle size, rate of acceleration, and speed mean that often the best way to advance through the road network is to dart laterally from lane to lane to optimize the available space. The sudden braking and change of direction that are required in this type of traffic reduce overall vehicle speeds, increase the chance of accidents, and adversely affect fuel consumption and emission rates.

Because there is no formal segregation of vehicles in Delhi and no enforcement of speed limits, nonmotorized vehicles such as bicycles and carts tend to segregate themselves naturally onto the curb lanes on two-and three-lane roads. Nowhere, there is still a considerable safety risk. Pedestrians, bicyclists, and motorcyclists make up more than 80 percent of Delhi's road fatalities . One third of the pedestrian fatalities involve Delhi's buses, which are vastly overcrowd; many deaths occur when passengers forced to ride on running boards or hanging onto the outside of the vehicles are thrown off or struck; many passengers are also struck when boarding or leaving buses.

Delhi's Socio-economic Mix

Many of Delhi's transportation-related problems have arisen because planners failed to provide for the wide range of socioeconomic levels and especially the extent of poverty within the city.

Few people in Delhi can afford the cost of private motorized transportation, even for the journey to work, instead they must rely on public transportation. Even the slightest increase in the cost of public transportation can be a hardship. A recent survey indicated that nearly 60 percent of the respondents found the minimum cost of communicant to work on public transportation (less than $ 0.06 per trip) to be unacceptable. A ride on public transportation—even at the lowest minimum fare—can consume 20 to 30 percent of a family's income for the lowest income groups. A large percentage of low-income people travel long distance and spend 30 to 60 minutes on one-way travel.

In response to both the cost of transportation within the city and the long working hours, many of Delhi's poor have no choice but to establish unauthorized settlements in substandard housing on public land near their places of employment. In 1991, an estimated 1.3 million people resided in these *jhuggi-jhopri* settlements.

In the mid-1970s, government officials made a conscious effort to relocate the *jhuggi-jhopri* settlements to the outer areas of the city where new development had been planned. Because few jobs are available on the urban periphery, however, residents in these areas now must commute long distances across the city is search of employment.

Many of Delhi's poor work in the so-called informal sector as street vendors or as operators of pavement shops and car or motor scooter repair shops along roadways. Government officials call these services "encroachments" and complain that they reduce road capacity. However they are an integral part of the urban landscape, providing a variety of services at low cost and at locations where demand for these services is high. As a result, they continue to multiply along the arterial roads of the city.

Finding New Solutions

The transportation planning tools of the developed world are not adequate to address the urban traffic mix and socioeconomic patterns characteristic of cities such as Delhi. The challenge for Delhi and similar cities is to accommodate this complexity rather than to try to minimize it or wish it away.

Given Delhi's socio-economic mix, much of the population will be unable to afford cars or even public transportation for some time to come. Meanwhile, bicycles and pedestrians continue to share the roads with cars, where they impede traffic and are exposed to a high risk of accidents. Requests to provide separate facilities for nonmotorized transport are typically met with the argument that scarce resources cannot be wasted for a mode that is going to disappear in the future. However, if Delhi and similar cities were to consider facilities for nonmotorised transport as an integral part of a program to enhance road capacity, then the investment could be justified. Not only are lanes designed for bicycle traffic less expensive to build than roadways, but they also will divert pedestrians and slow-moving vehicles from the roadway, increasing the efficiency of car and bus transport.

By accommodating the needs of all of its citizens—including the poorest ones—for safe and affordable transport, cities such as Delhi can create an equitable and environmentally friendly transportation system.

Congestion

Congestion is perhaps the most visible manifestation of the failures in urban transportation planning. It undermines the central purpose of the automobile: ready access to people, goods, and services. Clogged city streets exact a major toll on economic productivity and execerbate air and noise pollution.

In many cities in Japan, India, China, and Indonesia, peak period (run hour) speeds in city centre consistently declined throughout the 1980s to the point that today traffic creeps along at less than 10 kilometers per hour.

Perhaps the most notorious example is Bangkok, where peak period traffic speeds in the city enter declined by an average of 2 kilometers per hour per year in the second half of the 1980s. As a result, an average car in Bangkok is estimated to spend the equivalent of 44 days per year stuck in traffic.

In developed countries, congestion afflicts large and small cities alike. A study of cities in OECD countries found that in virtually every city, speeds in the central business district have declined dramatically since 1970. In the central business district of cities as diverse as Manchester, United Kingdom; Milan, Italy; Utsunomiya, Japan; and Trondheim, Norway, morning peak period speeds were 20 kilometers per hour or less in 1990.

Congestion is frequently the result of an insufficient road network, and thus even a relatively few vehicles can cause intense gridlock. Yet, expanding the road network is rarely an adequate solution. In many cities in the developing world, such improvements are beyond city's financial resources. In addition, road construction requires vacant land; in very dense cities such as Bangkok and Shanghai, China, additional road construction would require destroying existing buildings and/or displacing informal settlements. More important, any increase in road capacity tends to be quickly swamped by new travel.

Impacts of Urban Transportation Trends

These urban transportation trends are exacting significant costs in cities in both the developed and the developing world. One is simply the direct financial cost of providing and maintaining the transportation infrastructure. Investing in the transportation infrastructure is essential for economic growth, increasing productivity and quality of life. Especially in the poorest developing countries, where the length of paved roadway per one million residents is 25 times less than that in developed countries, improving the transportation infrastructure is a key factor in providing access to jobs and establishing rural and urban trade links. However, inefficient operations and inadequate maintenance are translating into large financial expenditures without the excepted benefits. In sub-Saharan Africa, for example, roads valued at almost $ 13 billion have eroded because of a lack of maintenance.

Transportation's environmental and social costs, although perhaps less quantifiable, are no less important, because they degrade quality of life and undermine urban productivity. These impacts include congestion, energy consumption, local and global air pollution, noise pollution, traffic accidents, and social inequities.

Finally, cities will have to rely on a diverse range of policy tools, from economic and regulatory instruments (to address specific problems such as air or water pollution) to boarder planning strategies (such as land use planning and community involvement).

The following sections examine how cities are addressing some of the most critical urban environmental problems: inadequate water supply and poor sanitation, water pollution, outdoor and indoor air pollution, and solid waste. The list of policy options discussed here is by no means exhaustive; rather, it is intended to give a sense of the diversity of approaches being tried in cities across the globe. Nor should any one solution be considered a panacea for all cities; each has its own unique circumstances. After reviewing economic and regulatory instruments, the chapter then looks at land for planning as a broader approach to addressing environmental concerns.[1]

CHAPTER XVI

NOISE POLLUTION

affic noise—from the constant drone of passing cars and trucks to the of screeching tires, blaring horns, radios, and car alarms—is extensive an areas. Noise pollution can damage human hearing and affect logical well-being, as well as decrease property values. An estimated lion people in OECD countries are exposed to traffic noise in excess of) (higher than the 55 dB(A) considered acceptable). Although data for ing countries are scarce, data collected along heavily traveled roads in , India, indicate sound levels of 65 to 85 dB(A).[1]

ng noise levels

e increasing noise levels in cities is a rather recent phenomenon. The sources of noise pollution in cities include automobiles, railways, machines and sirens in industrial areas, public address systems, social ious activities, etc. Noise levels monitored in various areas of Delhi 3 show that the average noise levels in residential, commercial and l areas exceed the prescribed standards during day and night times. silence zones have high noise levels. Noise levels at the different rsections in Delhi have registered levels of 70-80 dB(A). In Bombay noise levels along all the major roads is high.

World Resources, 1996-97, Oxford University Press, 1996.

CHAPTER XVII

JUDICIAL ACTIVISM

Often it takes just an individual or a group of determined people to turn the tide. Some such people receive recognition, others go unnoticed. But the sum total of many such initiatives, small and big, have contributed to slowing down the destructive tide of environmental degradation in this country.

The most outstanding of such efforts in recent year—which has now won global recognition through the Goldman Environmental Prize—has been the decade-long battle of one individual through the Supreme Court to check the callous attitude of polluting industries towards people and the environment. That he has succeeded is in large measure due to his persistence. But he has also been assisted immeasurably by the sagacity and independence of India's apex court. Through its recent rulings in cases filed by Mr. M.C. Mehta, the Supreme Court has successfully forced the executive to act on its own laws. Indeed, 1995-96 will be remembered for this outstanding and unusual form of judicial activism which has resulted in far-reaching actions on the environmental front.

Of late, there has been a hue and cry in the media about the judiciary overstepping its limits to interfere in legislative matters and usurping the powers of the executive. Vested interests have sought to create an impression that the Supreme Court has for all practical purposes assumed the reins of governance.

Though such fears have largely been expressed by disgruntled politicians, more so after the hawala scam, the concept of judicial activism has come under scrutiny in other fora as well. While one group, including Mr. Soli Sorabji, former Attorney-General, sees in such activism a timely intervention to bring some order from the chaos created by corrupt and non-functional agencies, a more conservative view has been taken by jurists like Mr. Nani Palkiwala.

The dynamism of an institution is an indication of its responsiveness and effectiveness. When the executive fails in its constitutional duties and is considered to be suffering from "executive inactivism", there is no other recourse for the people but to turn to the judiciary. If this is perceived as judicial activism, then it is the rope which a citizen in distress can hold on to and hope to be saved. If the judiciary were to remain a mute spectator to contemporary events, it will become a vestigial institution.

India is fortunate in having an apex court that can respond effectively to cries for help. In the environmental sphere, court orders have helped save the Ridge in Delhi, shift hazardous industries from residential areas, activate the authorities to keep the city clean, protect historical monuments like the Taj Mahal and protect rivers like the Ganges from indiscriminate industrial and domestic pollution. Indeed, the Supreme Court has come to the rescue of those who has suffered due to widespread "executive inactivism".

Constitutional guarantee

The Supreme Court cannot be accused of playing to the gallery for taking a stand on environmental issues. The judiciary is merely doing its duty—carrying out its Constitutional mandate in protecting the environment. Environmental protection is guaranteed under Arts. 48-A and 51-A(*g*) of the Constitution.

The apex court has also widened the scope of Art. 21 (Right to life) by stipulating that a clean environment is essential to human survival. The judiciary, by pronouncing landmark judgments and taking polluters to task, is therefore acting under its Constitutional obligations.

The firm stand of the Supreme Court has taken by surprise those used to manipulating the apathetic enforcement agencies. The Supreme Court's decisive action in environmental litigation has provided some teeth to enforcement agencies and instilled a sense of accountability in such agencies as they are answerable to the court.

When instances of industrial pollution come to its notice. The Supreme Court relies on the Pollution Control Boards (PCBs) to provide scientific data. In cases where the Boards are found to have failed in their duty, the court has not hesitated to pass strictures against them.

For instance, the Supreme Court censured the U.P. Pollution Control Board for using wrong standards in measuring pollution levels and analysing effluents in the Ganges and asked the Central Pollution Control Board to carry out the tests in its place.

In the case of the West Bengal Pollution Control Board, a vigilance enquiry was ordered by the court and the officials found guilty were suspended by the State Government. There are instances when either a Court Commissioner or scientists from the National Environmental Engineering Research Institute (NEERI) have been asked to conduct surprise checks and verify the data provided by the PCBs.

The apex court and the lower courts have responded to indiscriminate and illegal industrialisation by taking an increasingly hard stand against the polluters. The large-scale contamination of drinking and groundwater sources by the discharge of industrial effluents has lead to a water crisis.

For instance, the standing crop in 14 villages in Bichhri (Rajasthan) was wiped out by the discharge of H-acid effluents from chemical industries producing dyes. The use of this chemical has been banned in developed countries. These affluence and a highly toxic sludge seeped into the groundwater, polluting all the wells in the vicinity. A report on water sampling this year showed massive contamination of the well water in the area.

Polluter pays

In a case filed by the Indian Council for Envirolegal Action on behalf of the affected people, a NEERI report estimated that eco-restoration of the area would cost Rs. 40 crores. The Supreme Court in March this year ordered the closure of these "rogue industries" for flouting the law. Applying the "polluter pays" principle, the court has attached the properties of these industries for recovering the amount for eco-restoration.

There are several similar cases where the apex court has adjudicated to save the environment. When the contamination of the Yamuna by the discharge of domestic and industrial waste was brought to the notice of the Supreme Court, a virtual Pandora's box was opened with a plethora of issues coming into focus. Delhi, the fourth most polluted city in the world, would have been choked to death if it had not been for the court's responsiveness or "activism".

In line with the court's directive, 16 sewage treatment plants are being set up in the city, hazardous industries are being shifted to the outskirts and hundreds of industries operating in non-conforming areas have been assigned to conforming areas. What is more, common effluent treatment plants are being set up in the 28 industrial estates in Delhi and polluting industries are monitors for their compliance with the stipulation on setting up pollution control devices.

All this requires tremendous effort on the part of the court. Various agencies such as the Delhi Development Authority, the Municipal Corporation of Delhi, the Delhi Pollution Control Committee and the Delhi Water and Sewage Authority have to be forced into action. The court must ensure that these agencies come forward with viable schemes which can be implemented in the shortest possible time without getting bogged down by bureaucratic procedures.

Some of the court orders have understandably upset certain vested interests and invited criticism from those who for years have taken advantage of the apathy and corruption of government agencies. However, people in general have lauded the efforts of the Supreme Court.

As a nation we are proud inheritors of remarkable historical and cultural treasure. But we run the risk of losing this treasure in the mad race towards urbanisation and industrialisation. Once a monument of incomparable beauty, the Taj Mahal is losing its splendour, thanks to industrial pollution.

Government agencies have allowed pollution in the atmosphere to reach ten times the permissible limits within the Taj Trapezium. Short-sighted policies led to the virtual choking of the city of Agra as admitted even in the Master Plan 2001. In a bid to save the citizens as well as the World Heritage Monuments of Agra, the apex court recently passed various orders in the Taj case. One such order concerns the setting up of a green belt around the Taj Majal.

The authorities have been directed to build a bypass to decongest the Delhi-Bombay Highway which runs through Agra.

The U.P. State Industrial Development Corporation has been asked to identify industrial areas outside the Taj Trapezium. The Gas Authority of India has been directed to provide gas to Mathura Refinery and to the industrial estates. Following the Archaeological Survey of India's admission that paucity of funds posed a hindrance to the upkeep of the Taj, the Supreme Court asked the Secretary, Ministry of Environment and Forests and the Secretary, Ministry of Tourism, if the funds raised from visitors to the Taj Mahal (amounting to about Rs. 20 crores a year) could be utilised for the preservation of the monument and beautification of the city.

On the pollution caused by vehicles the Supreme Court has been monitoring the steps taken by the authorities to control this growing menace.

Under the direction of the court, the supply of lead-free petrol and that of 0.15 g/l petrol have been made available in the four metros; 0.15 g/l petrol will be supplied at all outlets in the country by December 1996.

Lead-free petrol will be made available in the capitals and major towns of all the States by 1998 and in the entire country by 2000. The Supreme Court has also ordered that "any vehicle registered after April 1995, if seen plying without a catalytic converter, shall be deemed to have disobeyed the order of this court and shall be dealt with accordingly". Conversion of all cars to compressed natural gas is in the offing, beginning with the conversion of government cars.

Threat to fertile land

Tanneries all over the country use the extremely hazardous process of chrome tanning, involving the use of 176 chemicals. About one lakh hectares of fertile land has become barren and a 100 km stretch of the Palar has been reduced to a putrid drain owing to the discharge of untreated effluents from the tanneries in North Arcot district of Tamil Nadu. The Vellore Citizens' Welfare Forum took the initiative to file a case before the Supreme Court. Following the court's directive, 164 tanneries were closed down recently and a cluster of smaller ones have been asked to set up a common effluent treatment plant within a time-bound period, failing which they too would be closed down.

The Supreme Court is in the process of rectifying the excesses of industrialisation and if in the process, the apathy and dismal performance of the authories get exposed, they have no one to blame but themselves. It is time industry placed the interest of the national above its own selfish concerns.

It is predicted that in future wars and conflicts will take place for bare essentials like fuel and water. When the earth's natural resources are depleted, what can the most rapid industrial development do? Will it be able to "manufacture" a fresh supply of water or clean air? Will it be able to replenish the earth's natural bounty? Since we can never replace what we take away, we must do our best to protect and preserve our natural wealth by adopting a more responsible attitude and abjuring reckless ways of development. No industrial development in the name of progress should be permitted to plunder or ravage nature.

Short-term gains cannot obviate the irredeemable loss of precious natural resources like water, land and clean air. At all costs, they must be preserved and protected for human survival. If the so-called judicial activism can help avert environmental disasters, a grateful nation will long remember a Supreme Court that rose to the occasion and delivered true justice in the land [1]

When Mahesh Chander Mehta, a lawyer, moved the Supreme Court in 1985, seeking a direction to relocate 1,200 polluting industries away from Delhi, little did he realise that he had opened a Pandora's box. Till then no one had given any thought to the Master Plan for Delhi, formulated in 1962, which if implemented would sound the death knell to thousands of small units operating illegally in the capital

Mr. Mehta, who moved from Jammu to Delhi in 1983, was appalled to see that contrary to the provisions of the Master Plan industrial units were operating in residential and non-conforming areas (which, according to the Master Plan, should not contain industries of any kind) Estimates place the number of such units at over 1.27 lakhs with a combined annual turnover of Rs. 5,700 crores. At least 10 per cent of these units are hazardous industries.

Ironically, this dismal situation could have been avoided if only the Master Plan had been implemented in the first place. All was not lost however. Hope came in the form of the judiciary, which acting on Mr. Mehta's petition strove to set right things. Following up on its order of 10th May, 1996, the Division Bench of Mr. Justice Kuldip Singh and Mr. Justice Faizan Uddin, issued a directive on 8th July, asking 168 hazardous industries to move from Delhi to suitable locations in the National Capital Region (NCR) by 30th November, 1996. The apex court further set the deadlines of 30th January and 30th June, 1997, for the relocation of 513 and 334 units operating in non-conforming areas. The court also asked the Delhi administration to ensure that 40,000 units, operating in non-conforming areas either be relocated or closed down.

The judiciary thus set in motion a process that should have been in place a long time ago. The Court asked the Deputy Commissioner of Police, NCR, to submit a report after ensuring that its orders had been complied with. The

---

[1] Source : The Hindu Survey of the Environment, 1996, p. 209.

Planning Board of the NCR was asked to coordinate with the Chief Secretaries of Delhi, Haryana, Rajasthan and Uttar Pradesh (the NCR has been carved from these States). The Court also directed that an agency should be set up to effect the relocation.

Workers not to suffer

The apex court assured the over one 100,000 workers who were dependent on the small units for their livelihood that they would not suffer on account of the relocation. In fact, they would be paid full wages till the relocation was completed. Besides, those willing to shift would be paid a year's wages and bonus.

In response to dissent from various quarters, the Centre filed an interlocutory application, seeking further clarification on the status of workers in industries that did not want to shift to alternate sites in the NCR. On 4th December, a Division Bench comprising Mr. Justice Kuldip Singh and Mr. Justice Sagir Ahmed, passed another order raising her compensation to be paid to workers.

The court asked industries opting to close their units instead of relocating to pay as compensation six years' wages to their workers. It also set a deadline, 30th April, 1997, by which time compensation should be paid. This was in addition to the amount fixed in the 8th July order.

Ambiguity removed

The court was clear about other points as well. The Centre expressed its fear that industries choosing to close down may take advantage of the ambiguity over the use of the sites they had hitherto occupied and make a real estate killing. In response, the court said only 32 per cent of the land could be retained by the owners while the rest had to be surrendered to the Government.

Further, relocating industries, units allowed to operate in their existing locations and those intending to start afresh in Delhi itself must conform to environmental protection laws and be cleared by the Pollution Control Board.

Also, workers of relocating industries could occupy the residential quarters provided by the management until the units at the new site started functioning. Workers of units choosing to close could occupy their quarters for at least 1-1/2 years until alternative arrangements were made. Alternatively, workers could be paid a compensation of Rs. 20,000 and asked to vacate immediately.

The Bench, noting that the court had been monitoring the progress in the case since the first order in 1992, directing the closure of 300 stone crushing units in the Capital, regretted that several industries were yet to initiate the process of relocation.

The Supreme Court's refusal to extend the 31st December deadline for closure of units came as a shock to the 40,000 industries located in non-conforming areas as the State Government, expecting an extension of the deadline, had made plans to shift these industries to alternative sites. Hopes that the court would intervene and direct the Government not to charge Rs. 3,000 per sq.m. for the 100-acre plot identified for relocation, were belied with the court declining to interfere in the matter.

There are over 200,000 units located in residential areas, but only 40,000 of these are registered. Another sore point is the vesting of powers with one official, the Director of Industries.

This has sent wrong signals about the administration's efforts to resolve the issue. Vishwas Nagar has over 5,000 units manufacturing PVC compounds, copper and aluminium wirings while Anand Parbat and Tri Nagar are two other residential areas crowded by electroplating and footwear units. Mr. J.R. Jindal, president of the Delhi Factory Owner's Association, said the Government would not help 45,000 industries that failed to apply for alternate site. In its earlier order itself, the Supreme Court had asked entrepreneurs willing to shift to give an undertaking that they would close their units once land was allotted to them elsewhere.

Factory owners allege that the Government has only recently started to distribute application forms, priced at Rs. 500 each. The entrepreneurs are in the doldrums with the court not extending the deadline for closure of units. They are required to deposit 10 per cent of the land cost while submitting their applications. The remaining amount can be paid in instalments. Mr. Rakesh Chopra, an industrialist of Anand Parbat said, "The cost of a 100 sq.m. land is Rs. 3 lakh. We will have to deposit Rs. 30,000 and pay the rest in instalments.

The plight of workers employed in these units is worse. With the factories in various stages of closure, material and product to be moved about have reduced. Only those who have made full payment get their orders delivered. For people like Ram Singh and Kushi Ram, this means fewer trips with their carts and reduced income.

Fresh lease of life

The apprehensions of employers and workers notwithstanding, the administration appears determined to give the Master Plan a fresh lease of life. The Industries Commissioner and Principal Secretary, Mr. Ganga Das, insists that the Supreme Court is satisfied with the progress made so far. The 40,000 units will shift to new sites "as soon as possible". A sum of Rs. 100 crores has been allocated for hypothecating 1,300 acres of land in the NCR.

Indicating that they meant business, the Governments of Haryana, Rajasthan, Uttar Pradesh and Delhi organised meetings, seminars and discussions to thrash out a plan which could be implemented efficiently. The NCR Planning Board's Member-Secretary (Planning), Mr. Umesh Sehgal, said there was no need to worry about availability of land as over 2,500 acres in Haryana and Uttar Pradesh could be developed as industrial estates. Industries shifting o the States comprising the NCR, can employ local labour in lieu of workers who opt to quit instead of moving to the new place.

The Uttar Pradesh Government has announced that as many as 200 units targeted by the Supreme Court order can be located in Tronica City, being developed at a cost of Rs. 232 crores, and in Loni and Ghaziabad areas. The Delhi administration is considering implementing the court's order to set aside 6,500 acres of land outside Delhi for industry.

The Supreme Court has named over 20 non-polluting units, all allottes of Delhi Development Authority flats or dwelling units, allowing them to continue in their present premises.

Mr. Mehta's stand on the issue of pollution has been vindicated, at last. But could it be a case of too little, too late? The advocate warns that Delhi's residents will be spending Rs. 5,000 crores every year for treating pollution-related ailments of steps are not taken to save the situation.[1]

CHAPTER XVIII

LEGAL REDRESS

India, with a population of more the 900 millions, having varied cultures, languages and rich natural resources, is facing the onslaught of forces which ignore anything resembling consideration for human rights and a minimal ethical code. In the name of development and economic prosperity, reckless industrialisation is causing social and environmental conflicts on a large scale.

These later escalate into a form of developmental terrorism by the big national and multinational industrial houses.

Silent victims

Economic liberatlisation, without observing proper safeguards for the protection of the environment and people's life and health, is sure to prove counter-productive in the near future. In the process, millions of the world's poor who have long been afflicted by economic deprivation and all its consequent ills, will be further subjected to the aftermath of mounting environment degradation and despoliation. These helpless people will become the silent victims of their own and their children's exploitation. Confronting the huge odds of power and pelf, they have no choice but to be trampled under the feet of mighty economic giants. This is happening due to the lopsided policies and reckless attitude of the polluters and negligence on the part of authorities, who have so far failed to enforce environmental laws and protect the right to life when includes the right to live in a healthy environment.

More than a decade of environmental battles in the Supreme Court of India have laid the foundation of environmental jurisprudence in the country. The land-mark judgments and orders passed by the Apex Court in various cases, have helped in the protection of the, environment and rescued millions of people suffering from the ill-effects of air and water pollution and environmental degradation.

The range of environmental cases in the Supreme Court is wide, covering diverse aspects of the environment—from protection of the fragile ecology of coastal areas and marine life to cleaning up sacred rivers, namely, the Ganga and the Yamuna, controlling pollution from vehicles and industries and saving World Heritage monuments such as the Taj Mahal.

Directions have been given by the Supreme Court in a case for introducing environmental education as a compulsory subject in schools and colleges and broadcasting environmental awareness programmes on television and radio, every day for at least seven minutes, as well as a longer programme once a week. The Court further directed the State Governments and Union Territories to make the free screening of at least two slides/ messages on environment mandatory for cinema halls, touring cinemas and video parlours. Failure to comply with these orders would be treated as a ground for cancellation of licence by the appropriate authorities.

Pollution in coastal areas

The coastal areas of the country, which have unique and fragile ecology, are being threatened by the setting up of hazardous industries, mushrooming of unplanned development activities and misutilisation of beaches, thereby seriously damaging the delicate ecosystem. Indiscriminate industrialisation and urbanisation, without requisite pollution control mechanisms, have resulted in serious pollution in the sea, bays, estuaries and creeks. Fertile agricultural lands, mangrove and casuarina trees that serve as wind-breaks are fast disappearing. Pollution in coastal areas is causing large-scale morbidity among people and there is a decline in fisheries. The mushrooming of aquaculture farms along the coastline is threatening the livelihood of thousands of fisherflok and peasants.

The directive issued in 1981 by the then Prime Minister, India Gandhi, to the Chief Ministers of all coastal States was to the effect that the coastal areas should be kept clear of all activities at least up to 500 metres from the water at the maximum high tide line. The letter further stressed that beaches must be kept free from all construction and commercial activities. Pollution from industrial and town waste was also to be avoided. Under the Environment Protection Act, 1986 and the Environment Protection Rules, the Ministry of Environment and Forest declared coastal stretches as Coastal Regulation Zones (CRZ) *vide* notification dated 19th February, 1991. Under this notification, restrictions were imposed on the setting up and expansion of industries, operation or processes in the said Coastal Regulation Zone within their respective territories. The notification further stated that the State Governments and Union Territories shall formulate coastal zone management plans within one year.

Despite the Environmental Guidelines for Development of Beaches and the CRZ Notification of 19th February, 1991, the State Governments and Union Territories have been slow to formulate coastal management plans but quick to "permit" illegal and haphazard activity along the coastline. To rectify this situation, a writ petition was filed in 1993 in the Supreme Court by the Indian Council For Environ-Legal Action (ICELA), seeking directions to the States and Union Territories not to allow any development activity along the coastline, which is violative of the notification dated 19th February, 1991; to formulate coastal zone management plans; to identify the coastal zone regulation areas; and to constitute an independent coastal and marine resources authority for co-ordination, monitoring and supervising the day-to-day activities taking place in the coastal areas and on the sea.

A Division Bench, consisting of Mr. Justice Kuldip Singh and Mr. Justice S. Saghir Ahmad, directed all the Coastal States and Union Territories on 9th March, 1995 that the notification dated 19th February, 1991 should be meticulously followed by all the States concerned. The activities, which were declared as prohibited within the CRZ Notification, would not be undertaken by any of the respondent States. The case is still being heard by the Supreme Court.

Damage caused by shrimp farms

Similarly, in the name of a "Blue Revolution," large-scale degradation of coastal areas is taking place through aquaculture farming especially in the States of Orissa, Andhra Pradesh and Tamil Nadu. Vast stretches of green areas and fertile agricultural lands are being converted into shrimp farms, resulting in serious environmental degradation.

There is a growing trend of using groundwater in aquacture. The salt water intrusion into fresh water aquifers deprives local people from using fresh water for drinking and irrigation purposes. The discharge of toxic effluents into fields and water sources destroys the fertility of the soil and depletes the already scarce water resources of the region. Intensive aquaculture also poses a threat to the livelihood of thousands of fisherfolk, whose access to the sea has been cut off by barricades, jetties and other structures built by multinationals and rich industrial houses.

In the absence of any environmental guidelines and regulatory processes formulated by the Ministry of Environment and Forests and Pollution Control Boards prawn farming has been allowed to grow in haphazard and ecologically destructive ways. On a petition filed in this regard by Mr. S. Jagannathan, a noted Gandhian and Chairman, Tamil Nadu Gram Swaraj Movement, and PREPARE, a voluntary organisation, the Supreme Court has issued notices to all coastal States and Union Territories.

Ganga Action Plan

For decades, the holy Ganga has been receiving millions of gallons of untreated domestic sewage from hundreds of towns and cities and toxic industrial effluents from thousands of industries, located along its sprawling 2,500 km stretch. This once salf-purificatory river is slowly being turned into a toxic dump by highly polluting industries, as well as by municipal bodies in the Ganga Basin. The groundwater in many places along its banks has become unfit for drinking, bathing and irrigation purposes. The treatment being meted out to the Ganga, venerated by millions of people, is a stark and revealing illustration of how ruthlessly we abuse our magnificent natural resources.

The Government's efforts to clean up the river though its ambitious two-phased Ganga Action plan came up for scrutiny by the Supreme Court in the famous "Ganga Case". It appeared from the affidavits filed by the Ganga Project Directorate and the States of Uttar Pradesh, West Bengal and Bihar, that the elaborate plans to build sewage treatment plants in 29 identified cities had gone haywire. It was found that since its inception in 1985, the Ganga Project Directorate had spent more than Rs. 400 crores on cleaning the river but there had been insignificant results. Neither has the quality of water improved nor has the influx of industrial and domestic sewage into the river been stemmed with an adequate network of sewage plants. Many sewage plants are yet to take off and those which have been set up are malfunctioning.

The National Environmental Engineering Research Institute (NEERI), Nagpur, which had been entrusted with the task of reporting on the efficacy of the Ganga Action Plan by the Supreme Court *vide* its order dated 8th April, 1994, submitted in its findings in July 1994 that "...many of the waste treatment systems covered under the Ganga Action Plan-Phase I are either not constructed/not commissioned or are non-functional". It further stated "that there is an urgent need in all inspected municipalities/corporations for scientific waste management based on the premises of appropriateness and cost-effectivity with regard to climatic advantages available in the states".

On 30th September, 1994, the Supreme Court stayed the disbursement of Rs. 421 crores earmarked for the Ganga Action Plan-Phase II. Subsequently, on 19th January, 1995, when Mr. Vinay Shankar, Director, Ganga Project Directorate, appeared before the Court and explained the various components of the Ganga Action Plan-Phase II, the Court lifted the stay but made it clear that it intended to regulate the spending of money on various projects undertaken by the Directorate. As a first step, the Ganga Project Directorate was directed to submit the sewage treatment and interception diversion schemes for the cities of Lucknow and Kanpur to the Court for release of funds.

Within the ambit of the "Ganga Case", the problem of pollution from a cluster of about 600 tanneries situated in the heart of Calcutta came up for hearing. The tanneries were located in such a congested area that they did not have enough space to put up primary treatment plants and were discharging highly toxic effluents straight into the river, simultaneously causing air pollution. The only alternative open to the Supreme Court was to order the shifting of the tanneries from their present site. The West Bengal Government, which was asked to find an alternative site for the tanneries, come out with a scheme for an Integrated Leather Complex in the suburbs of Calcutta with its own effluent treatment plant for tanneries and other leather-related industries. A progress report is being filed in the Supreme Court every month in this connection. To hasten the process of shifting, the Apex Court in a recent order passed on February 20, 1995, ordered that the cost of a common effluent treatment plant, estimated to be Rs. 65 crores, should initially be borne the Ganga Project Directorate and the West Bengal Government to be later recovered from the tanneries in the form of "effluent charge". This arrangement can bring down the initial cost of shifting the tanneries.

Perceiving an alarming rise in the vehicular pollution in Delhi, which contributed to about 65 per cent of the pollutants in the environment of the city, a petition was field in the Supreme Court way back in 1985. It is a well-documented fact that constant exposure to lead emissions leads to delayed cognitive development in children, a lower Intelligence Quotient (IQ) and impaired hearing, besides causing respiratory and bronchial diseases.

In November 1991, the Supreme Court set up a high-powered committee headed by Mr. Justice K.N. Saikia, a retired judge of the Supreme Court, to make an assessment of technologies available for vehicular pollution control in India and abroad and to examine the feasibility of measures to reduce/eliminate pollution from motor vehicles, both on a short-term and long-term basis. The Saikia Committee has been submitting bi-monthly reports to the Supreme Court since then. Its recommendations included : (1) the introduction of unleaded petrol, (2) fitting all cars on the road with catalytic convertors, (3) conversion to Compressed Natural Gas (CNG) or a dual-fuel mode system, and (4) sticker standards of emission.

In a far-reaching order, a Full Bench, comprising Mr. Justice A.M. Ahmadi, presently the Chief Justice of India, Mr, Justice K. Ramaswamy and Mr. Justice N. Venkatachala, on 21st October, 1994 directed the Union Government to provide lead-free petrol to four metropolitan cities, namely, Delhi, Bombay Madras and Calcutta from 1st April, 1995. It is also ordered that by December 1996, the entire country should be supplied petrol with a maximum lead content of 0.15 grams per litre. The automobile manufactures were ordered to equip new vehicles with catalytic convertors so that they could be plied on lead-free petrol. The Court also asked the Union Government to consider the feasibility of converting all Government vehicles and public transport to be run on CNG Fuel. CNG is not only a cleaner fuel but also much cheaper and more economical than petrol. Though the initial cost of engine conversion to CNG is about Rs. 28,000, the advantage is that on a cylinder costing Rs. 100, a car can run about 250 km.

The Taj Mahal case

It is a sad commentary on us as a nation that we are quite apathetic to our rich cultural heritage and environment; it took a decade of litigation in the Court to move the Union Government to take measures to abate pollution in the Taj Trapezium, a 10,400 sq. km area, for protecting the Taj Mahal and other World Heritage sites in and around Agra. The Taj Mahal has been facing a serious threat from atmospheric pollution caused by the Mathura Refinery and over 2,300 small and medium-sized industries, cumulatively spewing tonnes of sulphur dioxide and other noxious gases in the air. These are facts that the Ministry of Environment and Forests, the U.P. Government, the Central Pollution Control Board and various other authorities have been fully aware of since 1974. Grave misgivings were expressed by a Joint Parliamentary Committee in 1978 about locating the Mathura Refinery so close to the Taj.

The Vardarajan Committee set up in 1977 by the Ministry of Petroleum, had categorically stated : "Efforts should be made immediately to minimise the existing pollution from sources close to monuments in the Agra zone.... (2) Steps may be taken to ensure that no new industry, including any small industry or other unit which can cause pollution is located north-west of the Taj Mahal and (3) Efforts may be made to relocate the existing small industries, particularly the foundries, to save the monument".

Despite warnings by scientists and studies conducted by NEERI, vested interests have been given priority over environmental concerns, which cover public health and well-being as well as preservation of World Heritage monuments.

The Mathura Refinery was not only allowed to be set up within the Taj Trapezium, it was later given permission for expansion of its capacity from six million tonnes per annum to 7.5 million tonnes and then to eight million tonnes as recently as in January, 1995. A number of other hazardous industries were permitted to be set up, even after the Taj Trapezium was declared as environmentally fragile area. So much for the veracity of government policies and concerns. The truth came out when the Supreme Court order the U.P. Pollution Control Board to conduct a survey of polluting industries in Agra. It was reported by the Pollution Control Board that out of 512 polluting industries inspected by it only one had pollution control devices. The Supreme Court had to close down 212 industries, which had failed to respond to notices sent by the U.P. Pollution Control Board.

Lack of political will

There has been an inexplicable lack of political and bureaucratic will to protect and preserve the Taj. At the time of setting up the Mathura Refinery, a few politicians had stated, "You can take away the Taj Mahal, stone by stone; we want the refinery"... "So what if the Taj is threatened by the fumes of the refinery? A thousand jobs are more important than preserving these slabs of marble". The consequences of being led by such fallacious arguments have been grave. The air quality in and around Agra has not only wrought severe damage to historical monuments, what is worse, the toxic pollutants rife in the atmosphere have affected the health of an entire population. The iron foundries in Agra and the Refinery at Mathura blame each other as being responsible for the pollution.

The Supreme Court has taken on the onerous task of regulating pollution control from both these sources. A Bench presided over by Mr. Justice Kuldip Singh, passed a number of orders, namely, directing the industries to either put up pollution control devices or face closure; directing Mathura Refinery to explore the use of cleaner fuel and cut down its sulphur dioxide emissions; ordering the Ministry of Environment and Forests to set up a special cell to monitor the creation of a green belt around the Taj Mahal; to set up an expert authority to identify the various sources of pollution in the Taj Trapezium and suggest measures to control them. While the report of the expert committee of the Ministry of Environment and Forests is awaited, the Court's earlier proposal to shift the polluting industries in a phased manner is still viable.

Since 1990, the Ministry of Petroleum has refused to supply natural gas as clean fuel to Mathura Refinery, whereas it has been providing nature gas to a number of private and public sector industries located outside the Taj Trapezium for the last many years. The belated concern of the Petroleum Ministry to save the Taj by its much publicised 10-point programme, largely a compliance of the Supreme Court's orders, is only the first step. There is much more to be done. Piece-meal measures will not help unless there is a co-ordinated and determined effort on the part of the Government to rescue the Taj. One wonders what would have been the fate of the incomparable Taj if the Supreme Court had not come forward to act as its saviour.

The Apex Court in a number of other cases has delivered landmark judgments and given directions to various authorities to take prompt measures to save the environment and thereby save the people from pollution and environmental degradation. A number of cases are still pending. In all these cases filed in the Court, India's environment, battered and abused, seeks refuge and ultimate justice.[1]

PART I-A

THE WATER (PREVENTION AND CONTROL OF POLLUTION) ACT, 1974[1]

(ACT NO. 6 OF 1974)

[*23rd March, 1974*]

An Act to provide for the prevention and control of water pollution and the maintaining or restoring of wholesomeness of water, for the establishment, with a view to carrying out the purposes aforesaid, of Boards for the prevention and control of water pollution, for conferring on and assigning to such Boards powers and functions relating thereto and for matters connected therewith.

WHEREAS it is expedient to provide for the prevention and control of water pollution and the maintaining or restoring of wholesomeness of water, for the establishment, with a view to carrying out the purposes aforesaid, of Boards for the prevention and control of water pollution and for conferring on and assigning to such Boards powers and functions relating thereto;

AND WHEREAS Parliament has no power to make laws for the States with respect to any of the matters aforesaid except as provided in Arts. 249 and 250 of the Constitution;

AND WHEREAS in pursuance of Cl. (1) of Art. 252 of the Constitution resolutions have been passed by all the Houses of the Legislatures of the States of Assam, Bihar, Gujarat, Haryana, Himachal Pradesh, Jammu and Kashmir, Karnataka, Kerala, Madhya Pradesh, Rajasthan, Tripura and West Bengal to the effect that the matters aforesaid should be regulated in those States by Parliament by law;

BE it enacted by Parliament in the Twenty-fifth Year of the Republic of India as follows :—

STATEMENTS OF OBJECTS AND REASONS

"The problem of pollution of rivers and streams has assumed considerable importance and urgency in recent years as a result of the growth of industries and the increasing tendency to urbanization. It is, therefore, essential to ensure that the domestic and industrial effluents are not allowed to be discharged into the water courses without adequate treatment as such discharges would render the water unsuitable as source of drinking water as well as for supporting fish life and for use in irrigation. Pollution of rivers and streams also causes increasing damage to the country's economy.

---

[1] Received the assent of the President on 23rd, March, 1974 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 1, dated 25th March, 1974.

2. A Committee was set up in 1962 to draw a draft enactment for the prevention of water pollution. The report of the Committee was circulated to the State Governments and was also considered by the Central Council of Local Self-Government in September, 1963. This Council resolved that a single law regarding measures to deal with water pollution control, both at the Centre and at the State levels, may be enacted by the Union Parliament. A draft Bill was accordingly prepared and put up for consideration at a joint session of the Central Council of Local Self-Government and the Fifth Conference of the State Ministers of Town and Country Planning held in 1965. In pursuance of the decision of the joint session, the draft Bill was considered subsequently in detail by a Committee of Ministers of Local Self-Government from the States of Bihar, Madras, Maharashtra, Rajasthan, Haryana and West Bengal.

3. Having considered the relevant local provisions existing in the country and recommendations of the aforesaid Committees, the Government came to the conclusion that the existing local provisions are neither adequate nor satisfactory. There is, therefore, an urgent need for introducing a comprehensive legislation which would establish unitary agencies in the Centre and States to provide for the prevention, abatement and control of pollution of rivers and streams, for maintaining or restoring wholesomeness of such water courses and for controlling the existing and new discharges of domestic and industrial wastes.

4. The Bill follows the recommendations of the aforesaid Committees and seeks to—

(*i*) establish at the Centre as well as in the States Water Pollution Prevention Boards with the necessary complement of technical and administrative staff and to confer on them such powers as are necessary to deal effectively with the problem of water pollution in the country;

(*ii*) provide penalties for contravention of the provisions of the Act; and

(*iii*) establish Central and State water testing laboratories to enable the Boards to assess the extent of pollution, lay down standards and establish guilt or default.

5. Legislation in respect of the aforesaid subject-matter is relatable to entry 17 read with entry 6 of List II in the Seventh Schedule to the Constitution and Parliament has no power to make a law in the States (apart from the provisions of Arts. 249 and 250 of the Constitution) unless the Legislatures of two or more States pass a resolution in pursuance of Art. 252 of the Constitution empowering Parliament to pass the necessary legislation on the subject. The Legislatures of the States of Gujarat, Jammu and Kashmir, Kerala, Haryana and Mysore have passed such resolutions. The Bill is intended to give effect to the resolutions passed by the Legislatures of the aforesaid States".

Comments

This clause accords constitutional validity to the Act. It is evident from this clause that by reason of the fact, that State-legislatures, like Gujarat, Jammu and Kashmir, Kerala, Haryana and Mysore having passed the necessary resolution in terms of Art. 252 of the Constitution it was competent for the Central legislature to pass the present Act.

Comments of Legislature on various clauses of Water (Prevention and Control of Pollution) Act, 1974.—Comments and explanations given on the various clauses of the Act are given in Notes on Clauses which is, as under :

Notes on Clauses

Clause 1.—This clause provides for bringing the Act into force in the States of Gujarat, Jammu and Kashmir, Kerala, Haryana and Mysore which have already passed resolutions under Art. 252 of the Constitution and in the Union territories and also in any other State which may adopt this Act by a resolution as aforesaid.

Clause 2.—This clause seeks to define certain expressions used in the Act.

Clause 3.—This clause provides for the constitution of a Central Board to be called the Central Prevention for Water Pollution Board which shall be a body Corporate consisting of persons nominated by the Central Government, as specified in sub-clause (2), a Chairman, a member-secretary, five officials of the Central Government, persons (not exceeding five) from amongst the members of the State Boards referred to in Cl. 4 and three persons to represent the interests of persons engaged in agriculture, fisheries or any industry or trade or any other interest deemed necessary by the Central Government.

Clause 4.—This clause provides for the constitution of State Boards consisting of persons nominated by the State Government as specified in sub-clause (2). This clause also provides that in relation to United territory, the Central Board shall exercise the powers and functions of a State Board for that Union territory.

Clauses 5 to 8.—Clauses 5 to 8 seek to lay down the terms and conditions of service of the members of the Boards, disqualification for membership and vacancy arising therefrom and meetings of the Board.

Clause 9.—This clause provides for the constitution of committees, the procedure for transaction of business in such committees and for payment of fees and allowances to the members of the committees.

Clause 10.—This clause provides for the temporary association of persons with a Board for purposes of advice or assistance.

Clause 11.—This clause is self-explanatory.

Clause 12.—This clause deals with the terms and conditions of service of the members-secretary and other officers and employees of a Board.

Clause 13.—This clause deals with the functions of the Central Board which *inter alia* relate to advising the Central Government on matters concerning prevention of water pollution, co-ordinating the activities of the State Boards and resolving disputes among them and providing technical assistance and guidance to State Boards.

Clause 14.—This clause deals with the functions of the Boards which are as under :

(*i*) to plan a comprehensive programme for the prevention, control or abatement of pollution of streams and wells;

(*ii*) to advise the State Government, local bodies or industrial undertakings on any matter concerning the prevention of water pollution;

(*iii*) to collect and disseminate information relating to water pollution control and to encourage research programmes;

(*iv*) to collaborate with the Central Board in organising and training of technical personnel.

Clause 15.—This clause deals with power to give directions to the Central Board and the State Boards.

Clause 16.—This clause empowers the State Governments to define certain areas as water pollution prevention areas and to do certain other acts in relation thereto.

Clause 17.—This clause empowers the State Boards and officers empowered in this behalf to obtain information relating to water pollution prevention areas.

Clause 18.—This clause empowers the Board or any officer authorised by the Board to take samples from any stream or of sewage or of trade effluent which is passing from any place for purposes of analysis. The clause also lays down the procedure to be followed while taking such samples for analysis.

Clause 19.—This clause empowers persons authorised by a State Board in this behalf to enter and inspect any place for the purpose of exercising the functions of the Board and for determining as to whether the provisions of this Act or rules framed thereunder have been complied with; they have also been empowered to enter any place for the purpose of examining any plant, record, register, document or other material object and to seize any such record, register, document or other material object, if there is any reason to believe that an offence under this Act or rules thereunder has been committed.

Clause 20.—This clause seeks to prohibit the use of stream or well for the disposal of polluting matter. It also prohibits the disposal into any stream or well of any waste which may tend either directly or in combination with other matters to impede the regular flow of water in a manner likely to lead to aggravation of pollution in a water pollution prevention area.

Clause 21.—This clause lays down that no person shall being into use any new or altered outlet for the discharge of trade or sewage effluent or wastes into a stream or well without the consent of the State Board. It also lays down that no new discharge of trade or sewage effluent shall be let into any stream or river without the consent of the State Board. The State Board may grant its consent in this behalf subject to such conditions as it may impose.

Clause 22.—This clause empowers the State Board to review any condition imposed by the Board under Cl. 21 from time to time and to vary or revoke any condition after giving notice to the person concerned.

Clause 23.—This clause provides for an appeal against the orders passed by the State Board under Cl. 21 or Cl. 22. This clause also provides for the constitution of the appellate authority.

Clause 24.—This clause empowers the State Government, either of its own motion or on application made to it in this behalf, to call for the records of any case where an order has been passed by the State Board under Cl. 21 or 22 for the purpose of satisfying itself as to the legality or propriety of any such order and to pass such orders as the State Government may deem fit.

Clause 25.—This clause empowers the State Board to carry out any work connected with the prevention of water pollution where the person who has been duly served with a notice to execute such works specified therein, fails to comply with the notice within the specified time mentioned in the notice. It also empowers the Board to recover the expenses incurred by it together with the interest for the execution of the aforesaid works from the persons concerned as areas of land revenue.

Clause 26.—This clause empowers the State Board to carry out certain operations where it appears to the Board that immediate action is necessary to meet the situation created by the presence of any poisonous, noxious or polluting matter in any stream or well.

Clauses 27 to 33.—These clauses contain the usual provisions relating to funds, amounts and audit of the Central Board and the State Boards.

Clauses 34 to 40.—These clauses provide for penalties in respect of offences committed under this Act. Clause 38 provides for enhancement of penalty in case of conviction for the same offence on a subsequent occasion. It has been provided in Sec. 40 that no Court shall take cognizance of any offence under this Act except on a complaint made by, or with the previous sanction of, the State Board.

Clause 41.—This clause provides for the establishment of a Central Water Laboratory. It also provides for specifying any Laboratory or institute as a Central Water Laboratory to carry out the functions entrusted to the Central Water Laboratory under this Act. The clause also empowers the Central Government to make rules to provide for the functions of the Laboratory and other matters.

Clause 42.—This clause provides for the establishment of a State Water Laboratory. It also provides for specifying any laboratory or institute as a State Water Laboratory to carry out the functions entrusted to the State Water Laboratory under this Act. The clause also empowers the State Government to make rules to provide for the functions of the Laboratory and other matters.

Clause 43.—This clause provides for the appointment of Government analysts.

Clause 44.—This clause provides for the reports of the Government analysts being used as evidence in any proceeding under this Act.

Clause 45.—This clause provides that all local authorities shall render such help and assistance and furnish such information to the Board as the Board may require for the discharge of its functions.

Clause 46.—This clause prescribes that the Central Board and the State Boards shall furnish to the Central Government and the State Governments respectively such reports, returns, statistics, accounts and other information with respect to their funds or activities as may be called for by the respective Governments.

Clause 47.—This clause seeks to give protection to any member or officer of a Board in respect of actions done or intended to be done in good faith in pursuance of this Act or the rules thereunder.

Clause 48.—This clause provides that the provisions of this Act shall have overriding effect in case of inconsistency with any other enactment.

Clauses 49 and 50.—These two clauses empower the Central

Government and the State Governments respectively to make rules in consultation with the Central Board or, as the case may be, the State Board.

Comment

The Financial Memorandum attached with the Water (Prevention and Control of Pollution) Bill lays down the functions to be carried out by the Central and State Government in order to enforce the Bill. The financial memorandum is as under :

FINANCIAL MEMORANDUM

The scheme of this Bill centres round the effective prevention of water pollution in the country. The establishment of a Central Prevention of Water Pollution Board and a Central Water Laboratory has been proposed. Whereas the major work of enforcement of the provisions of the proposed Bill will have to be undertaken by the State Government, the Central Government will *inter alia* have to carry out the following functions :

(*i*) Under Cl. 3 (1), the Central Prevention of Water Pollution Board will have to be constituted to carry out functions to be assigned to it under this Act.

(*ii*) Under Cl. 4 (4), the Central Prevention of Water Pollution Board shall exercise the powers of a State Prevention of Water Pollution Board in relation to Union territories, including the carrying out of certain works, such as, restraining or prohibiting discharge of any harmful, poisonous or toxic wastes into a stream or well or from making insanitary use of the stream or well which functions, during an emergency, are to be carried out in respect of States by the State Prevention of Water Pollution Boards under Cl. 26.

(*iii*) Under Cl. 9 (1), the Central Prevention of Water Pollution Board may constitute as many Committees consisting wholly of members and partly of other persons, and for such purpose or purposes as it may think fit.

(*iv*) Under Cl. 9 (3), fees and allowances shall have to be paid to the members of a Committee (other than the members of the Board) for attending its meetings and for attending to any other work of the Board as may be prescribed.

(*v*) Under Cl. 12 (3), the Central Prevention of Water Pollution Board may appoint such officers and employees as it considers necessary for the efficient performance of its functions.

(*vi*) Under Cl. 27, necessary contributions have to be made to the Central Prevention ot Water Pollution Board to enable the Board to discharge its functions under this Act.

(*vii*) Under Cl. 41 (1), the Central Government may establish a Central Water Laboratory to carry out the functions assigned to it under the Act or any rules made thereunder.

2. The actual expenditure which the Central Government would be required to incur for implementing the provisions of this Bill cannot be correctly estimated, but it is likely to be about Rs. 152 lakhs recurring per

year. No non-recurring expenditure is anticipated at present, except the expenditure on works required to be executed during an emergency under Cl. 26 in any Union Territory in respect of which the Central Prevention of Water Pollution Board would be required to exercise the powers and functions of the State Prevention of Water Pollution Board. The expenditure likely to be incurred in this behalf is dependent on very many uncertain factors and it may not be possible to give a correct estimate at this stage; however, such expenditure is not likely to exceed rupees one lakh non-recurring. The above part, if and when a Central Water Laboratory is established, an additional expenditure both recurring and non-recurring, an estimate of which is not possible to visualise at this stage, may have to be incurred.

Comments

This clause makes provision regarding expenditure, required to be incurred implementing the provisions of this Bill.

Memorandum regarding delegated legislation.—Clause 49 of the Bill empowers the Central Government, after consultation with the Central Prevention of Water Pollution Board and subject to the condition of the previous publication, to make rules for the purpose of giving effect to the provisions of this Act in respect of matters falling within the purview of this clause.

Water pollution.—The problem of pollution is faced largely in connection with water. Water pollution has adverse effects on various facts of human life, *e.g.*, human health, recreation, fishing, esthetics, agriculture and industrial needs. To protect the public from health hazards due to pollution like typhoid, dysentry and salmonellosis and many other diseases water must be, lifted to high levels before it is fit for drinking. Referring to adverse effect on recreations opportunities, American author David P. Currie in his book on *Pollution* observed :

Three major types of recretional activities may be hampered by water pollution :

Boating and water sking.—Such water pollution as floating solids, gas bubbles and odours, and algal blooms make boating and water sking unpleasant. And if bacterial levels are sufficiently high, water pollution can be a health hazard to water sportsmen.

Swimming.—When bacterial counts reach certain levels, public health authorities close beaches. Inadequately disinfected wastes from municipalities and overflows from combined sewers are principal bacterial polluters in populated areas.

Sport fishing.—The highest water quality is needed to maintain populations of certain types of game fish. When water quality declines, the fish die. For example, the most popular fresh water sport fish, the trout, requires cold water and dissolved oxygen levels in excess of 5 parts per million to live and reproduce. On the other hand, carp, a "trash" fish, can live with dissolved oxygen levels below 4 parts per million, and even below 2 parts per million for a limited time.

Fish can die from all type of pollution, but the majority of fish kills are caused by lack of dissolved oxygen, pesticides, and by toxic wastes from industrial operations. In 1969, over 70 per cent of the kills were caused by industrial waste and 20 per cent by agricultural waste. Most of the fish killed were "trash" or "rough" fish—those already tolerant of water pollution.[1]

---

CHAPTER I

PRELIMINARY

1. Short title, application and commencement.— *(1) This Act may be called the Water (Prevention and Control of Pollution) Act, 1974.*

(2) It applies in the first instance to the whole of the States of Assam, Bihar, Gujarat, Haryana, Himachal Pradesh, Jammu and Kashmir, Karnataka, Kerala, Madhya Pradesh, Rajasthan, Tripura and West Bengal and the Union Territories; and it shall apply to such other State which adopts this Act by resolution passed in that behalf under Cl. (1) of Art. 252 of the Constitution.

(3) It shall come into force, at once in the States of Assam, Bihar, Gujarat, Haryana, Himachal Pradesh, Jammu and Kashmir, Karnataka, Kerala, Madhya Pradesh, Rajasthan, Tripura and West Bengal and in the Union territories, and in any other State which adopts this Act under Cl. (1) of Art. 252 of the Constitution on the date of such adoption and any reference in this Act to the commencement of this Act shall, in relation to any State or Union territory, mean the date on which this Act comes into force in such State or Union territory.

Comment

Amendment.—The Act also extends to the whole of the State of Uttar Pradesh by virtue of the Resolution passed to the effect of adopting the Act by both the Houses of Legislature of that State, in the year 1975.[1]

2. Definitions.— *In this Act, unless the context otherwise requires,—*

(a) "Board" means the Central Board or a State Board;

[2]*[(b) "Central Board" means the Central Pollution Control Board constituted under Sec. 3;]*

(c) "member" means a member of a Board and includes the Chairman thereof;

[3]*[(d) "occupier", in relation to any factory or premises, means the person who has control over the affairs of the factory or the premises, and includes, in relation to any substance, the person in possession of the substance;]*

[4]*[(dd) "outlet" includes any conduit pipe or channel, open or closed, carrying sewage or trade effluent or any other holding arrangement which causes, or is likely to cause, pollution;]*

(e) "pollution" means such contamination of water or such alteration of the physical, chemical or biological properties of water or such discharge of any sewage or trade effluent or of any other liquid, gaseous or solid substance into water (whether directly or indirectly) as may, or is likely to, create a nuisance or render such water harmful or injurious to public health or safety, or to domestic, commercial, industrial, agricultural or other legitimate uses, or to the life and health of animals or plants or of acquatic organisms;

[3] Ins. by Act 44 of 1978, Sec. 2.

[4] Subs. by Act 53 of 1988, Sec. 2, for "trade or industry".

(f) *"prescribed" means prescribed by rules made under this Act by the Central Government or, as the case may be, the State Government;*

(g) *"sewage effluent" means effluent from any sewerage system or sewage disposal works and includes sullage from open drains ;*

[1][*(gg)* *"sewer" means any conduit pipe or channel, open or closed, carrying sewage or trade effluent;*]

[2][*(h)* *"State Board" means a State Pollution Control Board constituted under Sec. 4;*]

(i) *"State Government" in relation to a Union territory means the Administrator thereof appointed under Art. 239 of the Constitution;*

(j) *"stream" includes—*

  (i) *river ;*

  (ii) *water course (whether flowing or for the time being dry);*

  (iii) *inland water (whether natural or artificial);*

  (iv) *sub-terranean waters;*

  (v) *sea or tidal waters to such extent or, as the case may be, to such point as the State Government may, by notification in the Official Gazette, specify in this behalf;*

(k) *"trade effluent" includes any liquid, gaseous or solid substance which is discharged from any premises used for carrying on any* [3][*industry, operation or process, or treatment and disposal system*], *other than domestic sewage.*

Comments

Section 3 of the Water's Act, 1974 relates to Constitution of Central Board. Similarly Sec. 3 of the Air (Prevention and Control of Pollution) Act, 1981 also relates to Central Board for the Prevention and Control of Air Pollution. Rules 3 and 4 of the Water (Prevention and Control of Pollution) Rules, 1975 deals with salaries, allowances and other conditions of service of the Chairman and member-secretaries respectively. Rule 7 of the said rules deals with powers and duties of the Chairman, whereas rule 9 deals with powers and duties of the member-secretary. Rule 8 empowers the Central Board for creation and abolition of posts.

General principle of construction.—There is one principle on which there is complete unanimity of all the courts in the world and this is that where the words or the language used in a statute are clear and cloudless, plain, simple and explicit, unclouded and unobscured, intelligible and pointed so as to admit of no ambiguity, vagueness, uncertainty or equivocation, there is absolutely no room for deriving support from external aids. In such cases, the statute should be interpreted on the face of the language itself without adding, subtracting or omitting words therefrom. Where the language is plain, and unambiguous the Court is not entitled to go behind the language so as to

---

1. Ins. by Act 44 of 1978, Sec. 2.
2. Subs. by Act 53 of 1988, Sec. 2, for Cls. *(b)*, *(d)* and *(h)*.
3. Subs. by Act 53 of 1988, Sec. 2, for "trade or industry".

add or supply omissions and thus play the role of a political reformer or of a wise counsel to the Legislature.[1]

Stream—Definition of.— The definition of "stream" includes river, water course, inland water and sub-terranean water. So the discharge of the trade effluent will either mix with the sub-terranean water or inland water or shall go to some stream or river. Even if it is allowed to remain stagnant, it will mix with sub-terranean water and that will be included in the definition of "stream".[2]

CHAPTER II

THE CENTRAL AND STATE BOARDS FOR PREVENTION AND CONTROL OF WATER POLLUTION

3. ***Constitution of Central Board.***— *(1) The Central Government shall, with effect from such date (being a date not later than six months of the commencement of this Act in the States of Assam, Bihar, Gujarat, Haryana, Himachal Pradesh, Jammu and Kashmir, Karnataka, Kerala, Madhya Pradesh, Rajasthan, Tripura and West Bengal and in the Union territories) as it may, by notification in the Official Gazette, appoint, constitute a Central Board to be called the [3][Central Pollution Control Board] to exercise the powers conferred on and perform the functions assigned to that Board under this Act.*

(2) The Central Board shall consist of the following members, namely :—

(a) a full-time Chairman, being a person having special knowledge or practical experience in respect of [4][matters relating to environmental protection] or a person having knowledge and experience in administering institutions dealing with the matters aforesaid, to be nominated by the Central Government;

(b) [5][such number of officials, not exceeding five,] to be nominated by the Central Government to represent that Government;

(c) such number of persons, not exceeding five to be nominated by the Central Government, from amongst the members of the State Boards, of whom not exceeding two shall be from those referred to in Cl. (c) of sub-section (2) of Sec. 4;

(d) [6][such number of non-officials, not exceeding three,] to be nominated by the Central Government, to represent the interests of agriculture, fishery or industry or trade or any other interest which, in the opinion of the Central Government, ought to be represented;

(e) two persons to represent the companies or corporations owned, controlled or managed by the Central Government, to be nominated by that Government;

(f) [7][a full-time member-secretary, possessing qualifications, knowledge

and experience of scientific, engineering or management aspects of pollution control, to be appointed by the Central Government.]

(3) The Central Board shall be a body corporate with the name aforesaid having perpetual succession and a common seal with power, subject to the provisions of this Act, to acquire, hold and dispose of property and to contract, and may, by the aforesaid name, sue or be sued.

4. ***Constitution of State Boards.***— *(1) The State Government shall, with effect from such date [1][***] as it may, by notification in the Official Gazette, appoint, constitute a [2][State Pollution Control Board] under such name as may be specified in the notification, to exercise the powers conferred on and perform the functions assigned to that Board under this Act.*

(2) A State Board shall consist of the following members, namely :

(a) a [3][***] Chairman, being a person having special knowledge or practical experience in respect of [4][matters relating to environmental protection] or a person having knowledge and experience in administering institutions dealing with the matters aforesaid, to be nominated by the State Government :

[5][Provided that the Chairman may be either whole-time or part-time as the State Government may think fit;]

(b) [6][such number of officials, not exceeding five,] to be nominated by the State Government to represent that Government;

(c) [7][such number of persons, not exceeding five,] to be nominated by the State Government from amongst the members of the local authorities functioning within the State;

(d) [8][such number of non-officials, not exceeding three] to be nominated by the State Government to represent the interests of agriculture, fishery or industry or trade or any other interest which, in the opinion of the State Government, ought to be represented;

(e) two persons to represent the companies or corporations owned, controlled or managed by the State Government, to be nominated by that Government;

(f) [9][a full-time member-secretary, possessing qualifications, knowledge and experience of scientific, engineering or management aspects of pollution control, to be appointed by the State Government.]

(3) Every State Board shall be a body corporate with the name specified by the State Government in the notification under sub-section (1), having perpetual

succession and a common seal with power, subject to the provisions of this Act, to acquire, hold and dispose of property and to contract and may, by the said name, sue or be sued.

(4) Notwithstanding anything contained in this section, no State Board shall be constituted for a Union territory and in relation to a Union territory, the Central Board shall exercise the powers and perform the functions of a State Board for that Union territory :

Provided that in relation to any Union territory the Central Board may delegate all or any of its powers and functions under this sub-section to such person or body of persons as the Central Government may specify.

Comments

Section 4 of the Water Pollution Act, 1974 as well as Sec. 5 of the Air Pollution Act, 1981 relate to the constitution of State Boards.

Scope and applicability.— The reading of Sec. 4 clearly shows that it is obligatory on the Government for the proper discharge of function and exercise of powers under the Act to constitute a Board as a legal Corporate Entity consisting of all its components mentioned in sub-section (2) representing various interest and under sub-section (1) of Sec. 4. A notification in Official Gazette is required to be issued only for appointing a day with effect from which such a Board is to function. The powers and functions that are referred to in the Act at various places are the powers and functions to be exercised and performed by such a Board as required to be constituted under sub-section (2). Since the section itself makes such a Board a body corporate, it only means that all the elements and/or components of the Board as mentioned in sub-section (2) taken together and not individually would alone constitute a Board as contemplated under the Act.[1]

Requisite qualification.—Appointment as Chairman of the Board by reference in particular to Sec. 4 (2) of the Act. The question, in other words, is as to what should constitute special knowledge or practical experience 'in respect of matters relating to Environmental Protection'. The Act does not define the expressions 'Special Knowledge' or 'Practical Experience' nor is the expression "matters relating to Environmental Protection", defined. When seen in the light of the functions of the Board as set out in Sec. 17 of the act., matters relating to Environmental Protection would present a boad spectrum beginning with planning of comprehensive programmes for prevention, control and abatement of pollution of streams and wells and ending with laying down of standards of sewerage and trade effluents and advising the State Government as regards the location of the Industries. The rcptrddion 'matters relating to Environmental Protection' is therefore of wide amplitude taking within its sweep not only matters relating to formulation of plans and policies regarding pollution control but dissemination of information, conduct of investigation and research. Inspection of sewerage or trade effluents works and plants for the treatment of sewerage and laying down and/or modifying the effluent standards etc. Suffice it to say that in the absence of any specialised assisance know-how or expertise, it would be difficult, if not impossible, for Karnataka High Court to examine the credentials of a person claiming to possess such knowledge on the basis of the research work done or the academic qualifications acquired by him. In a writ of quo warranto, the Court is primarily concerned with examining whether the person appointed to the public office possesses the requisite qualification prescribed. It is necessary that the Court should be in a position to authoritatively answer the question one way or the other before granting or refusing relief. Such a course may be relatively easy in where the statute governing the appointment prescribes conditions of eligibility for appointment in terms of academic qualifications. In any such case, all that the Court would be required to examine is whether or not the person appointed possess the requisite qualification.[1]

L.J. 142 at p. 144 (Kant.) : 1990(1) Kar. L.J. 78 at p. 81; R.P. Shavi *v.* State of Karnataka, 1990 (1) Kar. L.J. 70 at p. 74.

5. ***Terms and conditions of service of members.***— *(1) Save as otherwise provided by or under this Act, a member of a Board, other than, a member-secretary, shall hold office for a term of three years from the date of his nomination :*

Provided that a member shall, notwithstanding the expiration of his term, continue to hold office until his successor enters upon his office.

(2) [2][The term of office of a member of a Board nominated under Cl. (b) or Cl. (e) of sub-section (2) of Sec. 3 or Cl. (b) or Cl. (e) of sub-section (2) of Sec. 4 shall come to an end as soon as he ceases to hold the office under the Central Government or the State Government or, as the case may be, the company or corporation owned, controlled or managed by the Central Government or the State Government, by virtue of which he was nominated].

(3) The Central Government or, as the case may be, the State Government may, if it thinks fit, remove any member of a Board before the expiry of his term of office, after giving him a reasonable opportunity of showing cause against the same.

(4) A member of a Board, other than the member-secretary, may at any time resign his office by writing under his hand addressed—

- *(a) in the case of the Chairman, to the Central Government or as the case may be, the State Government ; and*
- *(b) in any other case, to the Chairman of the Board,*

and the seat of the Chairman or such member shall thereupon become vacant.

(5) A member of a Board other than the member-secretary, shall be deemed to have vacated his seat if he is absent without reason, sufficient in the opinion of the Board, from three consecutive meetings of the Board, [3][or where he is nominated under Cl. (c) or Cl. (e) of sub-section (2) of Sec. 3 or under Cl. (c) or Cl. (e) of sub-section (2) of Sec. 4, if he ceases to be a member of the State Board or of the local authority or, as the case may be, of the company or corporation owned, controlled or managed by the Central Government or the State Government and such vacation of seat shall, in either case, take effect from such date as the Central Government or, as the case may be, the State Government may, by notification in the Official Gazette, specify.]

(6) A causal vacancy in a Board shall be filled by a fresh nomination and the person nominated to fill the vacancy shall hold office only for the remainder of the term for which the member in whose place he was nominated.

(7) A member of a Board [4][shall be eligible for renomination.]

---

[1] **G. Jagannatha Pillai v. State or Karnataka, 1998 (6) Kant. L.J. 126 at p. 132.**

[2] Subs. by Act 44 of 1978, Sec. 5, for sub-section (2).

[3] Subs. by Act 44 of 1978, Sec. 5, for certain words.

[4] Subs. by Act 53 of 1988, Sec. 5, for "shall not be eligible for renomination for more than two terms".

(8) The other terms and conditions of service of a member of a Board, other than the Chairman and member-secretary, shall be such as may be prescribed.

(9) The other terms and conditions of service of the Chairman shall be such as may be prescribed.

Comments

Section 5 of the Water Pollution Act, 1974 as well as Sec. 7 of the Air Pollution Act, 1981 relate to the terms and conditions of service of members of Board. Rule 5 of the Water (Prevention and Control of Pollution) Rules, 1975 provides for the payment of allowances to non-official members of the Central Board.

The member of the Board can be removed by the Central Government or State Government at any time before the expiry of his term of office.

6. Disqualifications.— *(1) No person shall be a member of a Board, who—*

(a) is, or at any time has been, adjudged insolvent or has suspended payment of his debts or has compounded with his creditors, or

(b) is of unsound mind and stands so declared by a competent court, or

(c) is, or has been, convicted of an offence which, in the opinion of the Central Government or, as the case may be, of the State Government, involves moral turpitude, or

(d) is, or at any time has been, convicted of an offence under this Act, or

(e) has directly or indirectly by himself or by any partner, any share or interest in any firm or company carrying on the business of manufacture, sale or hire of machinery, plant, equipment, apparatus or fittings for the treatment of sewage or trade effluents, or

(f) is a director or a secretary, manager or other salaried officer or employee of any company or firm having any contract with the Board, or with the Government constituting the Board, or with a local authority in the State, or with a company or corporation owned, controlled or managed by the Government, for the carrying out of sewerage schemes or for the installation of plants for the treatment of sewage or trade effluents, or

(g) has so abused, in the opinion of the Central Government or as the case may be, of the State Government, his position as a member, as to render his continuance on the Board detrimental to the interest of the general public.

(2) No order of removal shall be made by the Central Government or the State Government, as the case may be, under this section unless the member concerned has been given a reasonable opportunity of showing cause against the same.

(3) Notwithstanding anything contained in sub-sections (1) and (7) of Sec. 5, a member who has been removed under this section shall not be eligible for renomination as a member.

Comments

Section 6 of the Water Pollution Act, 1974, as well as Sec. 8 of the Air Pollution Act, 1981 relate to the disqualifications of members to be appointed in the Board.

This section embodies the principle of the natural justice that the member of the Board before his removal by the Central or State Government must be given the reasonable opportunity of being heard.

Disqualification of a person from becoming member of the Board.—A careful reading of the provisions of Sec. 6(*f*) would show that in order to disqualify a person from becoming a member of the Board, it is essential that he should be a Director, a Secretary, Manager, or other salaried officer or employee of any firm having a contract with the Board or with the Government constituting the Board or with the Local Authority in the State or with a Company or a Corporation owned, or managed by the Government for carrying out the sewerage schemes or for the installation of plants or the treatment of sewerage or trade effluents. What is, therefore, important is not only that the person concerned should hold a salaried or other position in any Company or Firm, but that such Company or Firm should have a subsisting contract with the Board to which the appointment is being made or with the Government constituting such Board or with any Local Authority in the State or with a Company or Corporation owned, controlled or managed by the Government for the purpose of carrying out sewerage schemes or for the installation of plants for the treatment of sewerage or treatment of effluents. The petitioners have not, however, placed any material on record to show that any contract as envisaged by Sec. 6 (*f*) at any stage existed between M/s. B.P. Consultants on the one hand and the Board, Government, Local Authority, Company or the Corporation referred to in Sec. 6 (*f*) on the other. In the absence of any such material the mere fact that M/s. B.P. Consultants or the laboratory of Dr. Bangeri was on the list of approved consultants of the respondent-Board would not disqualify the respondent Dr. Bangeri from appointment.[1]

7. ***Vacation of seats by members.***— *If a member of a Board becomes subject to any of the disqualifications specified in Sec. 6, his seat shall become vacant.*

Comment

Section 7 of the Water Pollution Act, 1974, as well as Sec. 9 of the Air Pollution Act, 1981 relate to the vacation of seats by members of the Board.

8. ***Meetings of Boards.***— *A Board shall meet at least once in every three months and shall observe such rules of procedure in regard to the transaction of business at its meeting as may be prescribed :*

Provided that if, in the opinion of the Chairman, any business of an urgent nature is to be transacted, he may convene a meeting of the Board at such time as he thinks fit for the aforesaid purpose.

Comments

Section 8 of the Water Pollution Act, 1974, as well as Sec. 10 of the Air Pollution Act, 1981 relate to the meeting of Board.

The Chairman is empowered to convene the meeting of the Board at any time.

9. ***Constitution of committees.***—*(1) A Board may constitute as many committees consisting wholly of members or wholly of other persons or partly of members and partly of other persons, and for such purpose or purposes as it may think fit.*

---

[1] **G. Jagannatha Pillai *v.* State or Karnataka, 1998 (6) Kant. L.J. 126 at p. 130.**

(2) A committee constituted under this section shall meet at such time and at such place, and shall observe such rules of procedure in regard to the transaction of business at its meetings, as may be prescribed.

(3) The members of a committee (other than the members of the Board) shall be paid such fees and allowances, for attending its meetings and for attending to any other work of the Board as may be prescribed.

Comment

Section 9 of the Water Pollution Act, 1974 as well as Sec. 11 of the Air Pollution Act, 1981, relate to the Constitution of Committees. Rule 6 of the Water (Prevention and Control of Pollution) Rules, 1975 deals with fees and allowances to be paid to such members of a Committee of the Central Board as are not members of the Board under sub-section (3) of Sec. 9 of the Water Pollution Act, 1974. Rule 11 of the Water Pollution (Procedure for Transaction of Business) Rules, 1975 deals with procedure for transaction of business of committees constituted by the Board under Sec. 9 of the Water Pollution Act, 1974.

10. Temporary association of persons with Board for particular purposes.— *(1) A Board may associate with itself in such manner, and for such purposes as may be prescribed any person whose assistance or advice it may desire to obtain in performing any of its functions under this Act.*

(2) A person associated with the Board under sub-section (1) for any purpose shall have a right to take part in the discussions of the Board relevant to that purpose, but shall not have a right to vote at a meeting of the Board, and shall not be a member for any other purpose.

[1]*[(3) A person associated with the Board under sub-section (1) for any purpose shall be paid such fees and allowances, for attending its meetings and for attending to any other work of the Board, as may be prescribed.]*

Comment

Section 10 of the Water Pollution Act, 1974, as well as Sec. 12 of the Air Pollution Act, 1981 relate to the temporary association of person with Board for particular purposes. Rule 10 of the Water (Prevention and Control of Pollution) Rules, 1975 specifies the manner and purpose of association of persons with Central Board and allowances to be paid to them.

11. Vacancy in Board not to invalidate acts or proceedings.— *No act or proceeding of a Board or any committee thereof shall be called in question on the ground merely of the existence of any vacancy in, or any defect in the constitution of, the Board or such committee, as the case may be.*

Comments

Section 11 of the Water Pollution Act, 1974 as well as Sec. 13 of the Air Pollution Act, 1981 provides that vacancy in Board shall not invalidate acts or proceedings.

Combined scope of Secs. 4 and 11.— Section 11 initially speaks about the act of the Board. Reading Secs. 4 and 11 together, it is clear that before any act would be said to be an act of the Board or its committee, a Board as contemplated under sub-section (2) of Sec. 4 with all its components must be constituted and should exist. Therefore, the vacancies in the Board, as is contemplated under Sec. 11 of the Act could be a vacancy that may be caused only after the Board, as contemplated under Sec. 4 was constituted and had started functioning.[2]

---

1. Ins. by Act 44 of 1978, Sec. 6.
2. H.C. Kathiwala *v.* Maharashtra Water (Prevention and Control of Pollution) Board, 1982 Cr. L.R. 290 at pp. 297, 298 (Bom.).

[1][*11-A.* ***Delegation of powers to Chairman.***— *The Chairman of a Board shall exercise such powers and perform such duties as may be prescribed or as may, from time to time, be delegated to him by the Board.]*

Comment

Section 11-A of the Water Pollution Act, 1974 as well as Sec. 15 of the Air Pollution Act, 1981 relate to the delegation of powers. Section 23 of the Environment (Protection) Act, 1986 provides the same power.

12. ***Member-secretary and officers and other employees of Board.***— *(1) The terms and conditions of service of the member-secretary shall be such as may be prescribed.*

(2) The member-secretary shall exercise such powers and perform such duties as may be prescribed or as may, from time to time, be delegated to him by the Board or its Chairman.

(3) Subject to such rules as may be made by the Central Government or, as the case may be, the State Government in this behalf, a Board may appoint such officers and employees as it considers necessary for the efficient performance of its functions [2][***].

[3][*(3-A) The method of recruitment and the terms and conditions of service (including the scales of pay) of the officers (other than the member-secretary) and other employees of the Central Board or a State Board shall be such as may be determined by regulations made by the Central Board or, as the case may be, by the State Board :*

Provided that no regulation made under this sub-section shall take effect unless,—

(a) in the case of a regulation made by the Central Board, it is approved by the Central Government; and

(b) in the case of a regulation made by the State Board, it is approved by the State Government.]

[4][*(3-B) The Board may, by general or special order, and subject to such conditions and limitations, if any, as may be specified in the order, delegate to any officer of the Board such of its powers and functions under this Act as it may deem necessary.]*

(4) Subject to such conditions as may be prescribed, a Board may from time to time appoint any qualified person to be a consulting engineer to the Board and pay him such salaries and allowances and subject him to such other terms and conditions of service as it thinks fit.

Comments

Section 12 of the Water Pollution Act, 1974 as well as Sec. 14 of the Air Pollution Act, 1981, relate to the member-secretary and Officers and other employees of the Board. Rule 4 of the Water (Prevention and Control of Pollution) Rules, 1975 deals with salaries, allowances and other conditions of service of member-secretary.

State Government is not empowered to interfere with decision of Board.— It is true that the State Government has been vested with the power in regard to the matters relating to the appointment of the officers and employees in the Board and that the power of the Board under Rule 8 cannot be held to be absolute, but at the same time, the State Government, in Court's opinion does not have the power to interfere with the decision of the Board in such manner, which virtually amounts to taking away the autonomy of the Board. The Government can only act in accordance with the powers amanating from the provisions of the Act or the Rules framed thereunder and not otherwise. Any action taken by the State Government beyond the purview of the provision of the Act or the Rule framed thereunder cannot be sustained. In the instructions, issued by the Finance (Public Enterprises Bureau) Department of Government of Bihar as contained in Annexures B/1 and B/2 the power of promotion in different undertakings has been vested in the high level selection committee of the Bureau, which is directly inconsistent with the powers given in the Board under the statutory Rule 8. The only exception in the said rule is that the same will be subject to Rules, if any, made under sub-section 3 of Sec. 12 of the Act. Accordingly, His Lordship finds substance in the submission of Mr. Mahto, senior counsel appearing for the Board that the instuctions issued by Bureau relied upon by the State Government, which have overriding effect over the statutory Rule, 8, which fully empowers the Board to create and abolish posts in different scales as considered necessary for efficient functioning and to appoint against such posts and consequently terminate their appointment made against such posts, are wholly without jurisdiction.[1]

CHAPTER III

JOINT BOARDS

13. ***Constitution of Joint Board.***— *(1) Notwithstanding anything contained in this Act, an agreement may be entered into—*

(a) by two or more Governments of contiguous States, or

(b) by the Central Government (in respect of one or more Union territories) and one or more Governments of States contiguous to such Union territory or Union territories,

to be in force for such period and to be subject to renewal for such further period, if any, as may be specified in the agreement to provide for the constitution of a Joint Board,—

(i) in a case referred to in Cl. (a), for all the participating States, and

(ii) in a case referred to in Cl. (b), for the participating Union territory or Union territories and the State or States.

(2) An agreement under this section may—

(a) provide, in a case referred to in Cl. (a) of sub-section (1), for the apportionment between the participating States and in a case referred to in Cl. (b) of that sub-section, for the apportionments between the Central Government and the participating State Government or State Governments, of the expenditure in connection with the Joint Board;

(b) determine, in a case referred to in Cl. (a) of sub-section (1), which of the participating State Governments and in a case referred to in Cl. (b) of that sub-section, whether the Central Government or the participating State Government (if there are more than one participating State, also which of the participating State Governments) shall exercise and perform the several powers and functions of the State Government under this Act and the references in this Act to the State Government shall be construed accordingly;

(c) provide for consultation, in a case referred to in Cl. (a) of sub-section (1), between the participating State Governments and in a case referred to in

---

[1] Shailendra Kumar *v.* State of Bihar, 1996 Lab. I.C. 1631 at p. 1634.

Cl. (b) of that sub-section, between the Central Government and the participating State Government or State Governments either generally or with reference to particular matters arising under this Act ;

(d) make such incidental and ancillary provisions, not inconsistent with this Act, as may be deemed necessary or expedient for giving effect to the agreement.

(3) An agreement under this section shall be published, in a case referred to in Cl. (a) of sub-section (1), in the Official Gazette of the participating States and in a case referred to in Cl. (b) of that sub-section in the Official Gazette of participating Union territory or Union territories and participating State or States.

14. Composition of Joint Boards.—*(1) A Joint Board constituted in pursuance of an agreement entered into under Cl. (a) of sub-section (1) of Sec. 13 shall consist of the following members, namely : —*

(a) a full-time Chairman, being a person having special knowledge or practical experience in respect of [1][matters relating to environmental protection] or a person having knowledge and experience in administering institutions dealing with the matters aforesaid, to be nominated by the Central Government ;

(b) two officials from each of the participating States to be nominated by the concerned participating State Government to represent that Government ;

(c) one person to be nominated by each of the participating State Governments from amongst the members of the local authorities functioning within the State concerned ;

(d) one non-official to be nominated by each of the participating State Governments to represent the interests of agriculture, fishery or industry or trade in the State concerned or any other interest which, in the opinion of the participating State Government, is to be represented ;

(e) two persons to be nominated by the Central Government to represent the companies or corporations owned, controlled or managed by the participating State Governments;

[2][*(f) a full-time member-secretary, possessing qualifications, knowledge and experience of scientific, engineering or management aspects of pollution control, to be appointed by the Central Government.*]

(2) A Joint Board constituted in pursuance of an agreement entered into under Cl. (b) of sub-section (1) of Sec. 13 shall consist of the following members, namely :—

(a) a full-time Chairman, being a person having special knowledge or practical experience in respect of [3][matters relating to environmental protection] or a person having knowledge and experience in administering institutions dealing with the matters aforesaid, to be nominated by the Central Government;

(b) two officials to be nominated by the Central Government from the participating Union territory or each of the participating Union territories, as the case may be, and two officials to be nominated, from the participating State or each of the participating States, as the case may be by the concerned participating State Government;

---

[1] Subs. by Act 44 of 1978, Sec. 9, for certain words.

[2] Subs. by Act 53 of 1988, Sec. 7, for Cl. *(f)*.

[3] Subs. by Act 44 of 1978, Sec. 9, for certain words.

(c) *one person to be nominated by the Central Government from amongst the members of the local authorities functioning within the participating Union territory or each of the participating Union territories, as the case may be, and one person to be nominated, from amongst the members of the local authorities functioning within the participating State or each of the participating States, as the case may be, by the concerned participating State Government;*

(d) *one non-official to be nominated by the Central Government and one person to be nominated by the participating State Government or State Governments to represent the interests of agriculture, fishery or industry or trade in the Union territory or in each of the Union territories or the State or in each of the States, as the case may be, or any other interest which in the opinion of the Central Government or, as the case may be, of the State Government is to be represented;*

(e) *two persons to be nominated by the Central Government to represent the companies or corporations owned, controlled or managed by the Central Government and situate in the participating Union territory or territories and two persons to be nominated by the Central Government to represent the companies or corporations owned, controlled or managed by the participating State Governments;*

[1][(f) *a full-time member-secretary, possessing qualifications, knowledge and experience of scientific, engineering or management aspects of pollution control, to be appointed by the Central Government.*]

(3) When a Joint Board is constituted in pursuance of an agreement under Cl. (b) of sub-section (1) of Sec. 13, the provisions of sub-section (4) of Sec. 4 shall cease to apply in relation to the Union territory for which the Joint Board is constituted.

(4) Subject to the provisions of sub-section (3), the provisions of sub-section (3) of Sec. 4 and Secs. 5 to 12 (inclusive) shall apply in relation to the Joint Board and its member-secretary as they apply in relation to a State Board and its member-secretary.

(5) Any reference in this Act to the State Board shall, unless the context otherwise requires, be construed as including a Joint Board.

15. Special provisions relating to giving of directions.— *Notwithstanding anything contained in this Act where any Joint Board is constituted under Sec. 13,—*

(a) *the Government of the State for which the Joint Board is constituted shall be competent to give any direction under this Act only in cases where such direction relates to a matter within the exclusive territorial jurisdiction of the State;*

(b) *the Central Government alone shall be competent to give any direction under this Act where such direction relates to a matter within the territorial jurisdiction of two or more States or pertaining to a Union territory.*

---

[1] Subs. by Act 53 of 1988, Sec. 7, for Cl. (*f*).

CHAPTER IV

POWERS AND FUNCTIONS OF BOARDS

16. Functions of Central Board.— *(1) Subject to the provisions of this Act, the main function of the Central Board shall be to promote cleanliness of streams and wells in different areas of the States.*

(2) In particular and without prejudice to the generality of the foregoing function, the Central Board may perform all or any of the following functions, namely :—

(a) advice the Central Government on any matter concerning the prevention and control of water pollution;

(b) co-ordinate the activities of the State Boards and resolve disputes among them;

(c) provide technical assistance and guidance to the State Boards, carry out and sponsor investigations and research relating to problems of water pollution and prevention, control or abatement of water pollution ;

(d) plan and organise the training of persons engaged or to be engaged in programmes for the prevention, control or abatement of water pollution on such terms and conditions as the Central Board may specify;

(e) organise through mass media a comprehensive programme regarding the prevention and control of water pollution;

[1]*[(ee) perform such of the functions of any State Board as may be specified in an order made under sub-section (2) of Sec. 18];*

(f) collect, compile and publish technical and statistical data relating to water pollution and the measures devised for its effective prevention and control and prepare manuals, codes or guides relating to treatment and disposal of sewage and trade effluents and disseminate information connected therewith;

(g) lay down, modify or annul, in consultation with the State Government concerned, the standards for a stream or well:

Provided that different standards may be laid down for the same stream or well or for different streams or wells, having regard to the quality of water, flow characteristics of the stream or well and the nature of the use of the water in such stream or well or streams or wells;

(h) plan and cause to be executed a nation-wide programme for the prevention, control or abatement of water pollution;

(i) perform such other functions as may be prescribed.

(3) The Board may establish or recognise a laboratory or laboratories to enable the Board to perform its functions under this section efficiently, including the analysis of samples of water from any stream or well or of samples of any sewage or trade effluents.

Comments

This section enumerates the functions to be discharged by the Central Board, viz. planning a nation-wide programme for the prevention and control of water pollution.

---

[1] Ins. by Act 53 of 1988, Sec. 8.

Section 16 of the Water Pollution Act, 1974 as well as Sec. 16 of the Air Pollution Act, 1981 relate to the functions of Central Board. Chapter V of the Water (Prevention and Control of Pollution) Rules, 1975 empowers the Central Board to : (*i*) appoint consulting engineer, Rule 11 ; (*ii*) terminate the appointment of consulting engineer, Rule 12 ; (*iii*) pay the consulting engineer suitable emoluments or fees, Rule 13; (*iv*) send consulting engineer on tours, Rule 14; (*v*) ask consulting engineer not to disclose information, Rule 15; and (*vi*) depute functions to the consulting engineers. Rule 29 of the said Rules empowers the Central Board to act as State Board for Union territories. Under Rule 30 the Central Board or any officer empowered by the Board shall have the power of taking samples.

*17. **Functions of State Board.**— (1) Subject to the provisions of this Act, the functions of a State Board shall be—*

(a) to plan a comprehensive programme for the prevention, control or abatement of pollution of streams and wells in the State and to secure the execution thereof;

(b) to advise the State Government on any matter concerning the prevention, control or abatement of water pollution;

(c) to collect and disseminate information relating to water pollution and the prevention, control or abatement thereof;

(d) to encourage, conduct and participate in investigations and research relating to problems of water pollution and prevention, control or abatement of water pollution;

(e) to collaborate with the Central Board in organising the training of persons engaged or to be engaged in programmes relating to prevention, control or abatement of water pollution and to organise mass education programmes relating thereto;

(f) to inspect sewage or trade effluents, works and plants for the treatment of sewage and trade effluents and to review plans, specifications or other data relating to plants set up for the treatment of water, works for the purification thereof and the system for the disposal of sewage or trade effluents or in connection with the grant of any consent as required by this Act;

(g) to lay down, modify or annul effluent standards for the sewage and trade effluents and for the quality of receiving waters (not being water in an inter-State stream) resulting from the discharge of effluents and to classify waters of the State;

(h) to evolve economical and reliable methods of treatment of sewage and trade effluents, having regard to the peculiar conditions of soils, climate and water resources of different regions and more especially the prevailing flow characteristics of water in streams and wells which render it impossible to attain even the minimum degree of dilution;

(i) to evolve methods of utilization of sewage and suitable trade effluents in agriculture;

(j) to evolve efficient methods of disposal of sewage and trade effluents on land, as are necessary on account of the predominant conditions of scant

stream flows that do not provide for major part of the year the minimum degree of dilution;

(k) to lay down standards of treatment of sewage and trade effluents to be discharged into any particular stream taking into account the minimum fair weather dilution available in that stream and the tolerance limits of pollution permissible in the water of the stream, after the discharge of such effluents;

(l) to make, vary or revoke any order—

  (i) for the prevention, control or abatement of discharges of waste into streams or wells;

  (ii) requiring any person concerned to construct new systems for the disposal of sewage and trade effluents or to modify, alter or extend any such existing system or to adopt such remedial measures as are necessary to prevent, control or abate water pollution;

(m) to lay down effluent standards to be complied with by persons while causing discharge of sewage or sullage or both and to lay down, modify or annul effluent standards for the sewage and trade effluents;

(n) to advise the State Government with respect to the location of any industry the carrying on of which is likely to pollute a stream or well;

(o) to perform such other functions as may be prescribed or as may, from time to time be entrusted to it by the Central Board or the State Government.

(2) The Board may establish or recognise a laboratory or laboratories to enable the Board to perform its functions under this section efficiently, including the analysis of samples of water from any stream or well or of samples of any sewage or trade effluents.

Comments

Section 17 of the Water Pollution Act, 1974 as well as of the Air Pollution Act, 1981 both relate to the functions of State Board.

Financial capacity and responsibility to tanneries.— The Supreme Court in the case of *M.C. Mehta* v. *Union of India,*[1] held that it is true that it may not be possible for the tanneries to establish immediately the secondary system plant in view of the large expenditure involved but having regard to the adverse effect the effluents are having on the river water, the tanneries at Jajmau, Kanpur should at least set up of the primary treatment plants and that is the minimum which the tanneries should do in the circumstances of the case. The financial capacity of the tanneries should be considered as irrelevant while requiring them to establish primary treatment plants. Just like an industry which cannot pay minimum wages to its workers cannot be allowed to exist, a tannery which cannot set up a primary treatment plant cannot be permitted to continue to be in existence for the adverse effect on the public at large which is likely to ensue by the discharging of the trade effluents from the tannery to the river Ganga would be immense and it will outweigh any inconvenience that may be caused to the management and the labour employed by it on account of its closure. Moreover, the tanneries involved in these cases are not taken by surprise. For several years they are being asked to take necessary steps to prevent the flow of untreated waste water from their factories into the river. Some of them have already complied with the demand. It should be remembered that the effluent discharged from a tannery is ten times noxious when compared with the domestic sewage water which flows into the river from any urban area on its banks. The tanneries at Jajmau, Kanpur cannot be allowed to continue to carry on the industrial activity unless they take steps to establish primary treatment plants. In cases of this nature the Supreme Court act for effecting or likely to affect the public is being committed and the statutory authorities who are charged with the duty to prevent it are not taking adequate steps to rectify the grievance. For every breach of a right there should be a remedy. It is unfortunate that a number of tanneries at Jajmau even though they are aware of these proceedings have not cared even to enter appearance in this Court to express their willingness to take appropriate steps to establish the pre-treatment plants. So far as they are concerned an order directing them to stop working their tanneries should passed.

---

[1] A.I.R. 1988 S.C. 1037 at pp. 1045, 1046.

The word "shall"—Meaning of.— It has been laid down consistently by the Supreme Court that the mere use of the word "shall" by itself in the statute does not make the provision mandatory, but it is the duty of the courts of justice to try to get at the real intention of the Legislature by carefully attending to the whole scope of the statute to be construed. In each case, one has to look to the subject-matter, consider the importance of the provisions and the relations of that provision with the general object intended to be secured by the Act and upon the review of the case in that aspect decide whether the enactment is mandatory or only directory.[1]

18. Powers to give directions.— [2]*[(1)] In the performance of its functions under this Act—*

- *(a) the Central Board shall be bound by such directions in writing as the Central Government may give to it ; and*
- *(b) every State Board shall be bound by such directions in writing as the Central Board or the State Government may give to it :*

Provided that where a direction given by the State Government is inconsistent with the direction given by the Central Board, the matter shall be referred to the Central Government for its decision.

[3]*[(2) Where the Central Government is of the opinion that any State Board has defaulted in complying with any directions given by the Central Board under sub-section (1) and as a result of such default a grave emergency has arisen and it is necessary or expedient so to do in the public interest, it may, by order, direct the Central Board to perform any of the functions of the State Board in relation to such area for such period and for such purposes, as may be specified in the order.*

(3) Where the Central Board performs any of the functions of the State Board in pursuance of a direction under sub-section (2), the expenses, if any, incurred by the Central Board with respect to performance of such functions may, if the State Board is

---

[1] Mohammad Mahboob Khan *v.* State Transport Appellate Tribunal, U.P., 1982 A.L.J. 300 at p. 301.

[2] Sec. 18 renumbered as sub-section (1) thereof by Act 53 of 1988, Sec. 9.

[3] Ins. by Act 53 of 1988, Sec. 9.

empowered to recover such expenses, be recovered by the Central Board with interest (at such reasonable rate as the Central Government may, by order, fix) from the date when a demand for such expenses is made until it is paid from the person or persons concerned as arrears of land revenue or of public demand.

(4) For the removal of doubts, it is hereby declared that any directions to perform the functions of any State Board given under sub-section (2) in respect of any areas would not preclude the State Board from performing such functions in any other area in the State or any of its other functions in that area.]

Comment

Section 18 of the Water Pollution Act, 1974 and the Air Pollution Act, 1981, both relate to the power of giving directions. Similar power has been given under Sec. 5 of the Environment (Protection) Act, 1986.

CHAPTER V

PREVENTION AND CONTROL OF WATER POLLUTION

19. Power of State Government to restrict the application of the Act to certain areas.— *(1) Notwithstanding anything contained in this Act, if the State Government, after consultation with, or on the recommendation of, the State Board, is of opinion that the provisions of this Act need not apply to the entire State, it may, by notification in the Official Gazette, restrict the application of this Act to such area or areas as may be declared therein as water pollution, prevention and control area or areas and thereupon the provisions of this Act shall apply only to such area or areas.*

(2) Each water pollution, prevention and control area may by declared either by reference to a map or by reference to the line of any watershed or the boundary of any district or partly by one method and partly by another.

(3) The State Government may, by notification in the Official Gazette,—

(a) alter any water pollution, prevention and control area whether by way of extension or reduction; or

(b) define a new water pollution, prevention and control area in which may be merged one or more water pollution, prevention and control areas, or any parts or part thereof.

SYNOPSIS

1. Unless adequate provision for pollution control has been made, licences to establish new industries to be refused ... 191
2. Petitioner entitled to move the Court to enforce the statutory provisions of the Act ... 191
3. Duty of Nagar Mahapalika to prevent the pollution of water ... 191
4. Supreme Court decision applies *mutatis mutandis* to all other Mahapalikas and Municipalities ... 193
5. High Courts should not ordinarily grant orders of stay in criminal proceedings relating to pollution control ... 193

This section empowers the State Government after consultation with the State Board to impose restriction on the application of the Act to the entire State. Section 19 of the Water Pollution Act, 1974 as well as Sec. 19 of the Air Pollution Act, 1981 relate to the applicability of the Act to certain areas.

1. Unless adequate provision for pollution control has been made, licences to establish new industries to be refused.— In *M.C. Mehta* v. *Union of India,*[1] the Supreme Court held that whenever applications for licences to establish new industries are made such applications shall be refused unless adequate provision has been made for the treatment of trade effluents flowing out of the factories. Immediate action should be taken against the existing industries if they are found responsible for pollution of water.

2. Petitioner entitled to move the Court to enforce the statutory provisions of the Act.— In common law, the Municipal Corporation can be restrained by an injunction in an action brought by a riparian owner who has suffered on account of the pollution of the water in a river caused by the Corporation by discharging into the river insufficiently treated sewage from discharging such sewage into the river. In *Pride of Derby and Derbyshire Angling Association* v. *British Celanese Ltd.,*[2] the second defendant, the Derby Corporation admitted that it had polluted the plaintiff's fishery in the river Dermont by discharging into it insufficiently treated sewage, but claimed that by the Derby Corporation Act, 1901 it was under a duty to provide a sewerage system, and that the system which had accordingly been provided and become inadequate solely from the increase in the population of Derby. The Court of Appeal held that it was not inevitable that the work constructed under the Act of 1901 should cause a nuisance, and that in any case, the Act on its true construction did not authorise the commission of a nuisance. The petitioner in the case is no doubt not a riparian owner. He is a person interested in protecting the lives of the people who make use of the water flowing in the river Ganga and his right to maintain the petition cannot be disputed. The nuisance caused by the pollution of the river Ganga is a public nuisance, which is widespread in range and indiscriminate in its effect, and it would not be reasonable to expect any particular person to take proceedings to stop it as distinct from the community at large. The petition has been entertained as a public interest litigation. On the facts and in the circumstances of the case, it was held that the petitioner is entitled to move Supreme Court in order to enforce the statutory provisions which impose duties on the municipal authorities and the Boards constituted under the Water Act. The Supreme Court has already set out the relevant provisions of the statute which impose those duties on the authorities concerned. On account of their failure to obey the statutory duties for several years the water in the river Gange at Kanpur has become to much polluted that it can no longer be used by the people either for drinking or for bathing. The Nagar Mahapalika of Kanpur has to bear the major responsibility for the pollution of the river near Kanpur city.[3]

3. Duty of Nagar Mahapalika to prevent the pollution of water.— Dealing with the duties of Nagar Mahapalika, the Supreme Court in the case of *M.C. Mehta* v. *Union of India,*[4] observed as under :

---

[1] A.I.R. 1988 S.C. 1115 at p. 1127.

[2] 1953 Ch. 149.

[3] M.C. Mehta *v.* Union of India, 1988 (1) Com. L.J. 81 at p. 92: A.I.R. 1988 S.C. 1115 at p. 1126.

[4] A.I.R. 1988 S.C. 1115 at pp. 1126, 1127, 1128 : 1988 (1) Com. L.J. 81.

"It is no doubt true that the construction of certain works has been undertaken under the Gange Action Plan at Kanpur in order to improve the sewerage system and to prevent pollution of the water in the river Gange. But as we see from the affidavit filed on behalf of the authorities concerned in this case the works are going on at a snake's pace. We find from the affidavits filed on behalf of the Kanpur Nagar Mahapalika that certain target dates have been fixed for the completion of the works already undertaken. We expect the authorities concerned to complete those works within the target dates mentioned in the counter-affidavit and not to delay the completion of the works beyond those dates. It is, however, noticed that the Kanpur Nagar Mahapalika, has not yet submitted its proposals for sewage treatment works to the State Board constituted under the Water Act. The Kanpur Nagar Mahapalika should submit its proposals to the State Board within six months from today. It is seen that there is a large number of dairies in Kanpur in which there are about 80,000 cattles. The Kanpur Nagar Mahapalika should take action under the provisions of the U.P. Nagar Mahapalika Adhiniyam, 1959, or the relevant bye-laws made thereunder to prevent the pollution of the water in the river Ganga on account of the waste accumulated at the dairies. The Kanpur Nagar Mahapalika may either direct the dairies to be shifted to a place outside the city so that the waste accumulated at the dairies does not ultimately reach the river Ganga or in the alternative it may arrange for the removal of such waste by employing motor vehicles to transport such waste from the existing dairies in which event the owners of the dairies cannot claim any compensation. The Kanpur Nagar Mahapalika should immediately take action to prevent the collection of manure at private manure pits inside the city. The Kanpur Nagar Mahapalika should take immediate steps to increase the size of the sewers in the labour colonies so that the sewage may be carried smoothly through the sewage system. Wherever sewerage line is not yet constructed steps should be taken to lay it. Immediate action should also be taken by the Kanpur Nagar Mahapalika to construct sufficient number of public latrines and urinals for the use of the poor people in order to prevent defecation by them on open land. The proposal to levy any charge, for making use of such latrines and urinals shall be dropped as that would be a reason for the poor people not using the public latrines and urinals. The cost of maintenance of cleanliness of those latrines and urinals has to be borne by the Kanpur Nagar Mahapalika. One other aspect to which our attention has been drawn is the practice of throwing corpses and semi-burnt corpses into the river Ganga. This practice should be immediately brought to an end. The co-operation of the people and police should be sought in enforcing this restriction. Steps shall be taken by the Kanpur Nagar Mahapalika and the Police authorities to ensure that dead bodies or half burnt bodies are not thrown into the river Gange. In order to rouse amongst the people the consciousness

> of cleanliness of environment the Government of India and the Governments of the States and of the Union Territories may consider the desirability of organising 'keep the city clean' week (Nagar Nirmalikarana Saptaha); 'Keep the town clean' week (Pura Nirmalikarana Saptaha) and 'Keep the village clean' week (Grama Nirmalikarana Saptaha) in every city, town and village throughout India at least once a year. During that week the entire city, town or village should be kept as far as possible clear, tidy and free from pollution of land, water and air. the organsiation of the week should be entrusted to the Nagar Mahapalika, Municipal Corporations, Town Municipalities, village Panchayats or such other local authorities having jurisdiction over the area in question. If the authorities decide to organise such a week it may not be celebrated in the same week throughout India but may be staggered depending upon the convenience of the particular city, town or village. During that week all the citizens including the members of the executive, members of Parliament and the State Legislatures, members of the judiciary may be requested to co-operate with the local authorities and to take part in the celebrations by rendering free personal service. This would surely create a national awareness of the problems faced by the people by the appalling all-round deterioration of the environment which we are witnessing today. We request the Ministry of Environment of the Government of India to give a serious consideration to the above suggestion".

4. **Supreme Court decision applies *mutatis mutandis* to all other Mahapalikas and Municipalities.**— About the applicability of the decision of *M.C. Mehta* v. *Union of India*,[1] their Lordships of the Supreme Court held as under :

> "What we have stated above applies *mutatis mutandis* to all other Mahapalikas and Municipalities which have jurisdiction over the areas through which the river Ganga flows. Copies of this judgment shall be sent to all such Nagar Mahapalikas and Municipalities. The case against the Nagar Mahapalikas and Municipalities in the State of Uttar Pradesh shall stand adjourned by six months. Within that time all the Nagar Mahapalikas and Municipalities in the State of Uttar Pradesh through whose areas the river Ganga flows shall file affadvaits in this Court explaining the various steps they have taken for the prevention of pollution of the water in the river Ganga in the light of the above judgment".

5. **High Courts should not ordinarily grant orders of stay in criminal proceedings relating to pollution control.**— The exericse of inherent powers of High Court under Sec. 482 Cr. P.C., depends upon the peculiar facts and circumstances of each particular case. The Supreme Court in the case of *M.C. Mehta* v. *Union of India*,[2] in a question raised by Pollution Board relating to quick obtaining of stay orders from High Court under Sec. 482 of the Code of Criminal Procedure, 1973 held as under :

---

[1] A.I.R. 1988 S.C. 1115 at p. 1128 : 1988(1) Com. L.J. 81.

[2] A.I.R. 1988 S.C. 1115 at p. 1127 : 1988 (1) Com. L.J. 81.

> "It is submitted before us that whenever the Board constituted under the Water Act initiates any proceedings to prosecute industrialists or other person who pollute the water in the river Ganga, the persons accused of the offences immediately institute petitions under Sec. 482 of the Code of Criminal Procedure, 1973 in the High Court and obtain stay orders thus frustrating the attempts of the Board to enforce the provisions of the Water Act. They have not placed before us the facts of any particular case. We are, however, of the view that since the problem of pollution of the water in the river Ganga has become very acute the High Courts should not ordinarily grant orders of stay of criminal proceedings in such cases and even if such an order of stay is made in any extraordinary case the High Courts should dispose of the case within a short period, say about two months, from the date of the institution of such case. We request the High Courts to take up for hearing all the cases where such orders have been issued under Sec. 482 of the Code of Criminal Procedure, 1973 staying prosecutions under the Water Act within two months. The counsel for the Board constituted under the Water Act shall furnish a list of such cases to the Registrar of the concerned High Court for appropriate action being taken thereon".

20. ***Power to obtain information.*** — *(1) For the purpose of enabling a State d to perform the functions conferred on it by or under this Act the State Board or officer empowered by it in that behalf, may make surveys of any area and gauge keep records of the flow or volume and other characteristics of any stream or well ich area, and may take steps for the measurement and recording of the rainfall in area or any part thereof and for the installation and maintenance for those oses of gauges or other apparatus and works connected therewith, and carry out m surveys and may take such other steps as may be necessary in order to obtain information required for the purposes aforesaid.*

(2) A State Board may give directions requiring any person who in its opinion stracting water from any such stream or well in the area in quantities which are tantial in relation to the flow or volume of that stream or well or is discharging ge or trade effluent into any such stream or well, to give such information as to abstraction or the discharge at such times and in such forms as may be specified e directions.

(3) Without prejudice to the provisions of sub-section (2), a State Board may, a view to preventing or controlling pollution of water, give directions requiring person in charge of any establishment where any [1][industry, operation or process, reatment and disposal system] is carried on, to furnish to it information regarding construction, installation or operation of such establishment, or of any disposal em or of any extension or addition thereto in such establishment and such other iculars as may be prescribed.

Comment

Section 20 of the Water Pollution Act, 1974 and Sec. 25 of the Air lution Act, 1981 relate to the power to obtain information. Similar provision ontained in Sec. 20 of the Environment (Protection) Act, 1986.

Subs. by Act 53 of 1988, Sec. 10, for "industry or trade".

21. Power to take samples of effluents and procedure to be followed in connection therewith.—*(1) A State Board or any officer empowered by it in this behalf shall have power to take for the purpose of analysis samples of water from any stream or well or samples of any sewage or trade effluent which is passing from any plant or vessel or from or over any place into any such stream or well.*

(2) The result of any analysis of a sample of any sewage or trade effluent taken under sub-section (1) shall not be admissible in evidence in any legal proceeding unless the provisions of sub-sections (3), (4) and (5) are complied with.

(3) Subject to the provisions of sub-sections (4) and (5), when a sample (composite or otherwise as may be warranted by the process used) of any sewage or trade effluent is taken for analysis under sub-section (1), the person taking the sample shall—

(a) serve on the person in charge of, or having control over, the plant or vessel or in occupation of the place (which person is hereinafter referred to as the occupier) or any agent of such occupier, a notice, then and there in such form as may be prescribed of his intention to have it so analysed;

(b) in the presence of the occupier or his agent, divide the sample into two parts;

(c) cause each part to be placed in a container which shall be marked and sealed and shall also be signed both by the person taking the sample and the occupier or his agent;

(d) send one container forthwith,—

(i) in a case where such sample is taken from any area situated in a Union territory, to the laboratory established or recognised by the Central Board under Sec. 16; and

(ii) in any other case, to the laboratory established or recognised by the State Board under Sec. 17;

(e) on the request of the occupier or his agent, send the second container,—

(i) in a case where such sample is taken from any area situated in a Union territory, to the laboratory established or specified under sub-section (1) of Sec. 51; and

(ii) in any other case, to the laboratory established or specified under sub-section (1) of Sec. 52.

[1]*[(4) When a sample of any sewage or trade effluent is taken for analysis under sub-section (1) and the person taking the sample serves on the occupier or his agent, a notice under Cl. (a) of sub-section (3) and the occupier or his agent wilfully absents himself, then,—*

(a) the sample so taken shall be placed in a container which shall be marked and sealed and shall also be signed by the person taking the sample and the same shall be sent forthwith by such person for analysis to the laboratory referred to in sub-clause (i) or sub-clause (ii), as the case may be, of Cl. (e) of sub-section (3) and such person shall inform

---

[1] Subs. by Act 44 of 1978, Sec. 10, for sub-section (4).

the Government analyst appointed under sub-section (1) or sub-section (2), as the case may be, of Sec. 53, in writing about the wildful absence of the occupier or his agent; and

(b) the cost incurred in getting such sample analysed shall be payable by the occupier or his agent and in case of default of such payment, the same shall be recoverable from the occupier or his agent, as the case may be, as an arrear of land revenue or of public demand:

Provided that no such recovery shall be made unless the occupier or, as the case may be, his agent has been given a reasonable opportunity of being heard in the matter.]

(5) When a sample of any sewage or trade effluent is taken for analysis under sub-section (1) and the person taking the sample serves on the occupier or his agent a notice under Cl. (a) of sub-section (3) and the occupier or his agent who is present at the time of taking the sample does not make a request for dividing the sample into two parts as provided in Cl. (b) of sub-section (3), then, the sample so taken shall be placed in a container which shall be marked and sealed and shall also be signed by the person taking the sample and the same shall be sent forthwith by such person for analysis to the laboratory referred to in sub-clause (i) or sub-clause (ii), as the case may be, of Cl. (d) of sub-section (3).

Comments

Section 21 of the Water Pollution Act, 1974 and Sec. 26 of the Air Pollution Act, 1981 relate to the power of taking samples and procedure to be followed in connection therewith. Similar provision has been provided in Sec. 11 of the Environment (Protection) Act, 1986. Rule 31 of the Water (Prevention and Control of Pollution) Rules, 1975 provides that in case of Union territory a notice under Cl. (*a*) of sub-section (3) of Sec. 21 of the Water Pollution Act, 1974 shall be given in Form XII.

This section requires the person taking sample for analysis under sub-section (1) to serve a notice then and there of his intention to have it so analysed.

Compliance of Sec. 21 (5).— The learned Magistrate observed that as no presence was put in on behalf of the company, so the question of there being any request by the company for dividing the samples into two parts did not arise. This conclusion of the learned Magistrate is not sustainable as a representative of the company was duly present at the time when the sample was lifed. Further in view of the said pleadings of the parties it has to be taken that a demand was also made by the said rerpesentative to the officials of the Board to divide the sample into two parts and to get the same analysed in accordance with Sec. 21(5) of the Act but that request was not acceded to. Thus it can be held that the officials of the Board were not justified in getting the sample analysed from a laboratory only recognised by the Board instead of getting the same analysed from a laboratory of the Delhi Administration and without complying with the requirements of sub-section (5) of Sec. 21 of the Act. That being so, the conclusion that the petitioners were discharging effluents in the stream which were likely to cause pollution is not sustainable. Consequently the impugned order is bad and is liable to be set aside.[1]

---

[1] Delhi Bottling Company Pvt. Ltd., New Delhi *v.* Central Board for the Prevention and Control of Water Pollution, New Delhi, A.I.R. 1986 Del. 152 at p. 154.

22. ***Reports of the results of analysis on samples taken under Sec. 21.***— *(1) Where a sample of any sewage or trade effluent has been sent for analysis to the laboratory established or recongised by the Central Board or, as the case may be, the State Board, the concerned Board analyst appointed under sub-section (3) of Sec. 53 shall analyse the sample and submit a report in the prescribed form of the result of such analysis in triplicate to the Central Board or the State Board, as the case may be.*

(2) On receipt of the report under sub-section (1), one copy of the report shall be sent by the Central Board or the State Board, as the case may be, to the occupier or his agent referred to in Sec. 21, another copy shall be preserved for production before the Court in case any legal proceedings are taken against him and the other copy shall be kept by the concerned Board.

(3) Where a sample has been sent for analysis under Cl. (e) of sub-section (3) or sub-section (4) of Sec. 21 to any laboratory mentioned therein, the Government analyst referred to in that sub-section shall analyse the sample and submit a report in the preseribed form of the result of the analysis in triplicate to the Central Board or, as the case may be, the State Board which shall comply with the provisions of sub-section (2).

(4) If there is any inconsistency or discrepancy between, or variation in the results of, the analysis carried out by the laboratory established or recognised by the Central Board or the State Board, as the case may be, and that of the laboratory established or specified under Sec. 51 or Sec. 52, as the case may be, the report of the latter shall prevail.

(5) Any cost incurred in getting any sample analysed at the request of the occupier or his agent shall be payable by such occupier or his agent and in case of default the same shall be recoverable from him as arrears of land revenue or of public demand.

Comments

Section 22 of the Water Pollution Act, 1974 and Sec. 27 of the Air Pollution Act, 1981 deal with report of the analysis on samples taken. Similar provision is contained in Sec. 15 of the Environment (Protection) Act, 1986. Rule 26 of the Water (Prevention and Control of Pollution) Rules, 1975 provides that when a sample has been sent for analysis to a laboratory established or recognised by the Central Board, the Central Board analyst shall analyse the sample and submit his report in triplicate in Form X.

The result of analysis carried out by the laboratory established or recognized by the State shall prevail over the result carried out by the laboratory established by the Central Board in case of variation between the two.

23. ***Power of entry and inspection.***— *(1) Subject to the provisions of this section, any person empowered by a State Board in this behalf shall have a right at any time to enter, with such assistance as he considers necessary, any place—*

- *(a) for the purpose of performing any of the functions of the Board entrusted to him;*
- *(b) for the purpose of determining whether and if so in what manner, any such functions are to be performed or whether any provisions of this Act*

or the rules made thereunder of any notice, order, direction or authorization served, made, given, or granted under this Act is being or has been complied with;

(c) for the purpose of examining any plant, record, register, document or any other material object or for conducting a search of any place in which he has reason to believe that an offence under this Act or the rules made thereunder has been or is being or is about to be committed and for seizing any such plant, record, register, document or other material object, if he has reason to believe that it may furnish evidence of the commission of an offence punishable under this Act or the rules made thereunder :

Provided that the right to enter under this sub-section for the inspection of a well shall be exercised only at reasonable hours in a case where such well is situated in any premises used for residential purposes and the water thereof is used exclusively for domestic purposes.

(2) The provisions of [1][the Code of Criminal Procedure, 1973 (2 of 1974)] or, in relation to the State of Jammu and Kashmir, the provisions of any corresponding law in force in that State, shall, so far as may be, apply to any search or seizure under this section as they apply to any search or seizure made under the authority of a warrant issued under [2][Sec. 94] of the said Code, or, as the case may be, under the corresponding provisions of the said law.

Explanation.— For the purposes of this section, "place" includes vessel

Section 23 of the Water Pollution Act, 1974 and Sec. 24 of the Air Pollution Act, 1981 relate to the powers of entry and inspection. Similar provision is provided under Sec. 10 of the Environment (Protection) Act, 1986. Section 94 of the Code of Criminal Procedure, 1973 (2 of 1974), has been made applicable.

1. Inspect—Meaning of.— The ordinary dictionary meaning of the term "inspect" is "to look closely into" or "examine officially"; vide *Oxford Concise Dictionary*. Normally this will not involve seizure of search.

---

[1] Subs. by Act 44 of 1978, Sec. 11, for "Code of Criminal Procedure, 1898 (5 of 1898)".

[2] Subs. by Act 44 of 1978, Sec. 11, for "Sec. 98".

2. Search—Meaning of.— The meaning of "search" in the *Oxford concise Dictionary* is given as "look or feel or go over (person or his face or pockets, receptacle, place, book) for what can be found or to find something of which presence is suspected, probe, look for, seek out". A search is therefore not mere looking for something which is produced or open but which is hidden, concealed or not obvious. It is looking for in the sense of seeking out what is suspected or concealed by probing into or investigation or examination.

Davis in *Federal Searches and Seizures* says that the mere observation or visual inspection of what is open and patent does not constitute a search. At page 350 Davis again refers to the American view that a search implies an examination of one's premises or person with a view to the discovery of contraband or evidence of guilt to be used in prosecution of a criminal action, that the term implies exploratory investigation or quest and that it is well established that it is not a search to observe what is open and patent either in day light or artificial light.

3. Search and inspection—Distinction.— All searches are inspections, but all inspections are not searches. A search is a thorough inspection of a man's house, building or premises or of his person, with the object of discovering some material which would furnish evidence of guilt for some offence with which he is charged. It implies a prying into hidden places for that which is concealed. If the object sought for is always in plain sight, then there is no search. If the private account-books had been kept in the counter openly at all times and they could have been found on inspection at any time of the day, then the seizure of such account-books cannot be said to have been made after a search.[1]

4. Search—Nature.— The term implies some exploratory investigation,[2] or an invasion,[3] and quest,[4] a looking for,[5] or seeking out.[6] The quest may be secret, intrusive, or accomplished by force,[7] and it has been held that search implies some sort of force, either actual or constructive, much or little.[8] A search implies a prying into hidden places for that which is concealed,[9] and that the object searched for has been hidden of intentionally put.out of the way.[10]

5. Seize—Meaning of.— The meaning of the word "seize" given in *Ballantine's Law Dictionary* is equated to taking a thing into possession. This, however, might be the meaning in particular contexts when used in the sense of the cognate Latin expression "seized" wherein the context in which it is used in the Act in Sec. 178-A of the Sea Customs Act, 1878 [now Sec. 123 (1) of the Customs Act, 1962] it means " take possession of contrary to the wishes of the owner of property". No doubt, in cases where a delivery is effected by an owner of the goods in pursuance of a demand under legal right, whether oral or backed by a warrant, it would certainly be a case of seizure but he idea that it is the unilateral act of the person seizing is the very essence of the concept.[1]

6. Seizure—Dictionary meaning.— According to *Stroud's Judicial Dictionary* also, the word "seizure" in its ordinary and natural sense means "forcible taking possession". According to *Webster's Dictionary* the word "seize" means "to effect legal possession.". In *Shorter Oxford English Dictionary* the said word means "to put in possession".

Seizure implies not mere taking but forcible taking. It is taking with force possession of something contrary to the wishes of its owner or possessor.[2] In *Chandrika Sao and Hazarilal.* v. *State of Bihar,*[3] it was pointed out :

> "In our opinion, merely holding books found lying in the premises for perusing them cannot properly be regarded as seizure because seizure implies doing something over and above holding an article in one's hand. According to the *Shorter Oxford Dictionary,* seizure, among other things, means 'confiscation or forcible taking possession (lands or goods); a sudden and forcible taking hold'. As already stated, Mr. Singh merely picked up the books which were lying in the shop and did not snatch them away from any one nor did he take them by force".

A mere power of inspection will not, therefore, take with it a power to size unlike a search which often, particularly, as seen from the provisions of the Code of Criminal Procedure, includes a power of seizure. But a power of seizure need not necessarily imply a power of search, for, there may be seizure on production or on inspection.[4] Seizure is an expression which implies a forcible exaction or taking possession from either the owner or one who has the possession and who is unwilling to part with possession.

7. Seizure—Nature.—A seizure contemplates a forcible dispossession of the owner,[5] and it is not a voluntary surrender.[6]

8. Right to restoration of seized goods.— The right to restoration of the seized goods is a civil right which accrues on the expiry of the initial six months and which is defeated on an extension being granted, even though such extension is possible within a year from the date of the seizure.[7]

9. **Seizure when charge is only of abetting.**— Where the specific charge against the petitioner was that he was abetting the illegal importation of gold, there is no need to seize any incriminating article from the petitioner, since he is not charged of carrying but only abetting.[1]

10. **Illegality of search—If vitiates the seizure.**— The illegality of search by itself cannot and will not vitiate the seizure of the articles.[2]

11. **Seizure of foreign currency.**— In *Remo Paul Altoe* v. *Union of India*,[3] the appellant was a foreigner who arrived at Calcutta by air from Bangkok on 28th June, 1975. On a search of his room in the hotel where he was staying in Calcutta, the customs authorities found in his possession 1,701 U.S. dollars and 4,400 Canadian dollars which they seized a smuggled goods. On 23rd September, 1975, an Assistant Collector of Customs filed a complaint in the Court of the Chief Metropolitan Magistrate, Calcutta alleging, *inter alia,* that the appellant had brought in the foreign currency seized from his possession in violation of Sec. 13 (1) of the Foreign Exchange Regulation Act, 1973, and was therefore liable to be convicted under Sec. 135 of the Customs Act, 1962. The Metropolitan Magistrate convicted the appellant under Sec. 135 of the Customs Act and sentenced him to pay a fine of Rs. 2,000 in default to suffer rigorous imprisonment for six months (now one year). The Magistrate further ordered that the "goods involved in this case are confiscated to the State, if not already confiscated". The Calcutta High Court in revision affirmed the appellant's conviction but reduced the sentence of fine to Rs. 500 and affirmed the order of confiscation. It was held by the Supreme Court that the appeal should succeed on a short point. An order for the disposal of any property under Sec. 452 (1) of the Criminal Procedure Code of 1898, is necessary where the property remains to be disposed of by the Court after the enquiry or trial is over. In the present case it appears that the foreign currency seized from the appellant was not produced before the Magistrate and was not in the custody or control of the Court when the order of confiscation was made. There was thus no necessity or occasion for the Court to make an order for disposal of any property; the order of the Magistrate that the goods involved in the case are confiscated "if not already confiscated" clearly shows that he was not aware what had happened to the goods which were in the control of the customs authorities. It is true that the foreign currency seized from the appellant's possession was property in respect of which an offence was committed, but this fact alone did not call for order under Sec. 452 (1) in the circumstances of the case and the order passed, besides being unwarranted, is likely to create complications if in respect of the foreign currency a proceeding under the Customs Act is pending or the customs authorities have made any order with which the Magistrate's order is inconsistent. The Supreme Court set aside the order of confiscation.

12. **Search—Independent witnesses.**— Panchas whom the police take with them at the time of raid are independent witnesses and their evidence is a good evidence requiring no corroboration before acceptance.[4]

13. Search—Necessity of presence of independent witnesses.— Presence of independent witness is an essential requirement of Sec. 103, [Sec. 100 (4) to (8) new] of the Criminal Procedure Code and also Sec. 105 of the Customs Act. Even though Sec. 103 (old) of Criminal Procedure Code says that the witness must be of the same locality, this is merely directory and not mandatory. So long as the persons are respectable they can be from a different locality.[1] An omission to get witness of the same locality will, therefore, be at the most an act of irregularity and will not render such as illegal.

If respectable persons are not be found very near the premises to be searched, it will not be illegal to bring persons from half a mile away.[2]

However persons living more than a mile away cannot be said to be persons of the locality.[3]

14. The term respectable inhabitants of the locality.— The words "respectable inhabitants of the locality" must be construed in the light of object of the section in accordance with *maxim ut res magis valeat quam pereat* that an act may avail rather than perish. The Legislature has made this provision to ensure fair dealing and a feeling of confidence and security amongst the public in regard to a sometimes necessary invasion of a private right regarded as almost sacred under the British system. In order to give effect to this object, it is necessary that the persons selected should be absolutely unprejudiced and uninterested in the result of what they have to take part in. The selection of officers connected with the searching party, or persons who are not impartial, is not contemplated by the section. Having been a prosecution witness is not sufficient to deprive one of one's title to respectability. Only respectable persons of the locality are to be selected as witnesses for the search. The words "of the locality" do not mean that they should be living within a stone's throw of the house to be searched. Nor are the words restricted to mean the same quarter. They are comprehensive and include places even within three or four miles of the place of search. But the fact that the witnesses are from a different locality will not necessarily make the search invalid or make, the evidence of such witnesses inadmissible. Similarly, the mere fact that the witnesses are taken from another locality should not be looked upon as a factor militating against their respectability. The emphasis of the section is on the word "respectable" and not on the word "locality".

The following is the relevant case-law on the subject.[4]

L.J. 775; *In re* Rajabather, A.I.R. 1959 Mad. 450 at p. 452.

The expression "inhabitants of the locality" has to be interpreted having regard to the object of the section. They must be absolutely unprejudiced and disinterested. Merely because a person was a prosecution witness, it does not deprive him of title to respectability.[1]

Respectable persons is one who is impartial and on whom the owner and occupier of the premises searched can *prima facie* rely.[2]

The respectability has no reference to status or wealth. The only requirement is that he should not be disreputable in any way.[3]

15. Search witnessed by non-respectable persons—Legality.— The fact that the search was witnessed by non-respectable persons, namely, two rickshawalas would not effect the legality of the search but would affect the weight of the evidence.[4]

16. Witnesses of different locality.— In *Panda Inderjit* v. *Emperor*,[5] the search-witnesses were residents of different localities and the officer conducting the search had made no attempt to secure the presence of respectable person, it was held that the search was not a good search and it could not be made the basis of a successful prosecution.[6]

17. Search—Recording of reasons.— The important words of Sec. 165 (new) Cr. P.C., are "such officer may, after recording, in writing the grounds of his belief, and specifying, in such writing, so far as possible, the thing, for which search is to be made". Consequently, it cannot be argued with any justification that the statute does not require the empowered officer to record his grounds of the requisite belief. It is needless to point out that Sec. 165 (new) Cr. P.C., does not authorise a general search on the off-chance that something might be found. The recording of reasons does not confer on the officer jurisdiction to make a search, though it is a necessary condition for making a search. The jurisdiction or the power to make a search is conferred by the statute, and is not derived from recording of the reasons. The Code of Criminal Procedure by its Sec. 165 (new) lays down various steps to be followed in making a search. The recording of reasons is an important step in the matter of search and to ignore it is to ignore the material part of the provisions governing searches. If that can be ignored, it cannot be said that the search is carried out in accordance with the provisions of the Code of Criminal Procedure; it would be a search made in contravention of the provisions of the Code of Criminal Procedure.[7]

18. Search—Reason to believe.— The condition precedent to exercising jurisdiction under Sec. 18 of the Central Excises and Salt Act is to form a suspicion that a manufacturer is attempting to evade payment of excise duty under the Central Excises and Salt Act and thereafter reasons are to be recorded in writing before any seizure of accounts, registers or documents, as

may be necessary, can be made. Suspicion is nothing but a belief in existence of wrong on inadequate proof. Recording of reasons is absolutely necessary, otherwise the powers conferred upon the empowered officer under Sec. 18 would become arbitrary. The result would be that the citizen's fundamental rights guaranteed under Arts. 14 and 19 (1) (*f*) and (*g*) of the Constitution would be jeopardised. It is true that sufficiency of the reasons recorded by the empowered officer cannot be investigated by the Court, but the Court can examine the materials whether an honest and reasonable person can base his reasonable belief upon such materials. Therefore, where no reasons have been recorded before the search and seizure, the search and seizure are without jurisdiction and must be set aside.[1] It has been held in *Income-tax Officer, Special Investigation, Circle B, Merut* v. *Messrs Seth Borthers*,[2] that if the action of the Commissioner in issuing a search-warrant under Sec. 132 (1) of the Income-tax Act is challenged, the burden lies on him to satisfy the Court that he had taken action on proper and relevant material. The reasons, which imple the Commissioner to take this action may not necessarily be mentioned in the search-warrant itself but when the matter comes before the Board under Sec. 132 (12) of the Income-tax Act or the High Court in the proceedings under Art. 226 of the Constitution, he has to produce the record to show that he formed the requisite belief on the basis of relevant information. There is a presumption of correctness in favour of the acts done and the record prepared contemporaneously by a public servant, in normal course of business, but this is not an irrebuttable presumption. Those, who challenge the correctness of the official record, have to prove this fact by bringing before the Court the necessary material on the basis of which a finding in their favour can be given. It has been held that by virtue of the application of Sec. 165 (new) Cr. P.C., the Commissioner of Income-tax has to record his reasons before issuing a search warrant.[3] It is not possible to lay down precisely or exhaustively as to what constitutes "reason to believe". It would depend on various circumstances. The issue of a warrant and the reason to believe for issue of such warrant would involve the following elements: (1) articles of search ; (2) place, in which they are secreted; (3) manner, in which they are secreted; and (4) person, who is in possession of the articles of search, or the place, where they are secreted. It may be that the information, which the Warrant Officer has regarding each of the said elements may not be precise or absolutely certain without any possibility of doubt. But still, if the information is such as leads him to believe that articles of search are secreted in a place, which is concrete, he may thereby have "reason to believe". He may, in such circumstances, issue a warrant even if he does not know, for certain, the name of the person, who is in possession of the articles of search, of the place, where they are secreted. As laid down by their Lordships of the Supreme Court in *Pukhraj* v. *D.R. Kohli*,[4] all that the Court can consider is whether there is ground, which *prima facie*, justifies the statement in the warrant by the Warrant Officer that he had "reason to believe".[5]

19. Vitiation of search on account of non-observance of conditions of Sec. 165, Cr. P.C.— The provisions of Sec. 165, Cr. P.C., must be followed in the matter of searches under rule 201 of the Central Excise Rules, 1944. Searches, made by a police officer during the course of an investigation of a cognizable offence, can properly be approximated with the searches to be made by the authorised officer under rule 201 for in the former case the police officer makes a search during the investigation of a cognizable offence and in the latter case the authorised officer makes the search to ascertain whether a person contravened the provisions of the Central Excises and Salt Act, 1944, or the rules made thereunder, which is an offence. There is not reason why conditions should be imposed in the matter of a search by the police officer under Sec. 165 of the Code the Criminal Procedure, but no such safeguard need be provided in the case of a search by the Excise Officer under the said rules. Therefore, a search conducted by a Deputy Superintendent of Central Excise without observing the conditions laid down in Sec. 165, Cr. P.C., is illegal.[1]

*24. **Prohibition on use of stream or well for disposal of polluting matter, etc.**— (1) Subject to the provisions of this section,—*

- *(a) no person shall knowingly cause or permit any poisonous, noxious or polluting matter determined in accordance with such standards as may be laid down by the State Board to enter (whether directly or indirectly) into any [2][stream or well or sewer or on land]; or*
- *(b) no person shall knowingly cause or permit to enter into any stream any other matter which may tend, either directly or in combination with similar matters, to impede the proper flow of the water of the stream in a manner leading or likely to lead to a substantial aggravation of pollution due to other causes or of its consequences.*

(2) A person shall not be guilty of an offence under sub-section (1), by reason only of having done or caused to be done any of the following acts, namely :—

- *(a) constructing, improving or maintaining in or across or on the bank or bed of any stream any building, bridge, weir, dam, sluice, dock, pier, drain or sewer or other permanent works which he has a right to construct, improve or maintain;*
- *(b) depositing any materials on the bank or in the bed of any stream for the purpose of reclaiming land or for supporting, repairing or protecting the bank or bed of such stream provided such materials are not capable of polluting such stream;*
- *(c) putting into any stream any sand or gravel or other natural deposit which has flowed from or been deposited by the current of such stream;*
- *(d) causing or permitting, with the consent of the State Board, the deposit accumulated in a well, pond or reservoir to enter into any stream.*

(3) The State Government may, after consultation with, or on the recommendation of, the State Board, exempt, by notification in the Official Gazette, any person from the operation of sub-section (1) subject to such conditions, if any, as may be specified in the notification and any condition so specified may by a like notification and be altered, varied or amended.

[2] Subs. by Act 53 of 1988, Sec. 11, for "stream or well".

SYNOPSIS

1. Object of the Act . 206
2. Proper complaint . 206
3. Evolving of national policy for location of chemical and other hazardous industries in areas where population is scarce . 207
4. Liability of occupier or officer in charge of actual operation of the caustic chlorine plant ... 208
5. Personal liability of Chairman and managing director for payment of compensation in case of death or injury resulting on account of escape of chlorine gas . 210
6. Supreme Court's suggestion for setting up Environment Courts 211
7. Conditional order of discharge of effluents from the factory even into lagoons 212
8. The Court is empowered to intervene and protect the fundamental right to life and liberty of the citizens .. 212
9. Responsibility for causing the pollution in the wells, soil, etc.—Determination of ... 212

The State Government is empowered to grant exemption to any person from the operation of sub-section (1).

1. **Object of the Act.**— In order to meet the abnormal situation the Water (Prevention and Control of Pollution) Act, 1974, was enacted. The object of the Act enumerated is to provide for the prevention and control of water pollution and the maintaining or restoring of wholesomeness of water. The Pollution Act provides for constitution of State Boards. Under the Pollution Act, the Board is empowered to take measures necessary for preventing the deterioration of water. Sections 20 to 27 of Chapter V of the said Pollution Act deal with the powers conferred on the Board. Under Sec. 17 (1) (*j*) of the Pollution Act, one of the important functions of the Board is :

> "to evolve efficient methods of disposal of sewage and trade effluents on land, as are necessary on account of the predominant conditions of scant stream flows that do not provide for major part of the year the minimum degree of dilution".

Section 24 contains a prohibition on use of stream or well for disposal of polluting matter.[1]

2. **Proper complaint.**— The Madhya Pradesh Pradushan Niwaran Mandal through its Secretary preferred a complaint under Sec. 24 of the Water (Prevention and Control of Pollution) Act, 1974 complaining that the accused petitioner No. 1 Indore Malwa United Mills and the accused petitioner No. 2 the production manager of the Mills, being engaged in bleaching, dyeing and spinning yarn were continuing to discharge trade effluent in a stream and *nalah*, thereby causing hazard to animal, human and acquatic life, fully knowing that they were not to discharge trade effluent, in site of the complainant Mandal granting consent to them under the Act for the duration from 29th May, 1957 to 28th June, 1976, on conditions that they would submit design and drawings of the treatment plant within three months, that they would complete the treatment plant by December, 1977, that the trade effluent will conform to the prescribed standard of IS 2490, and that the treatment proposals should be submitted to the complainant immediately. The complainant apprehending that the effluent of the industry was likely to pollute the waters of the stream river and nearby wells, which might be injurious to animal, human and acquatic life, thereby causing nuisance, prayed

---

[1] Kisan Sahkari Chini Mills Ltd. *v.* State of Uttar Pradesh, A.I.R. 1987 All. 298 at p. 303.

that the proceedings under Sec. 33 of the Water (Prevention and Control of Pollution) Act, for restraining them from committing the breach be initiated and they be restrained from committing the specified wrongs. The complainant also under Sec. 33 of the Water (Prevention and Control of Pollution) Act, by a special application prayed that the Court be pleased to initiate action and issue the necessary directions to the accused. The complainant along with its complaint and the special application submitted certain documents. The learned Chief Judicial Magistrate taking cognizance of the matter and it appears that on taking into account the records before him and the address by the learned Counsel for the complainant, passed the order. The contention of the learned Counsel for the petitioners was two-fold : *firstly* that the complainant has not named a particular stream or river of well into which the alleged discharge is being made and *secondly* that the learned Magistrate ought not to have given directions, which he had given in the absence of evidence or material before him justifying his conclusion that the petitioners were polluting a particular stream. But the contention was rejected as there was sufficient materials before the learned Chief Judicial Magistrate to proceed under Sec. 33(3) of the Water (Prevention and Control of Pollution) Act and give directions to the accused.[1]

3. **Evolving a national policy for location of chemical and other hazardous industries in areas where population is scarce.**— The Supreme Court in the case of *M.C. Mehta* v. *Union of India*,[2] by its order dated 17th February, 1986 held as under :

> "We have formulated the conditions with a view to ensuring continuous compliance with the recommendations of Manmohan Singh Committee and Nilay Choudhary Committee and strict observance of safety standards and procedures, so that the possibility of hazard of risk to the workmen and the community is almost reduced to nil. We would like to point out that the caustic chlorine plant of Shriram is not the only plant which is carrying on a hazardous industry. There are many other plants in Delhi which are employing hazardous technology or are engaged in manufacture of hazardous goods and if proper and adequate precautions are not taken they too are likely to endanger the life and health of the community. We would therefore, suggest that a High Powered Authority should be set up by the Government of India in consultation with the Central Board for overseeing functioning of hazardous industries with a view to ensuring that there are no defects or deficiencies in the design, structure or quality of their plant and machinery, there is no negligence in maintenance and operation of the plant and equipment and necessary safety devices and instruments are installed and are in operation and proper and adequate safety standards and procedures are strictly followed. This is a question which needs serious attention of the Government of India and we would request the Government of India to take the

---

[1] Indore Malwa United Mills *v.* Madhya Pradesh Pradushan Niwaran Mandal, 1986 Cr. L.R. 150 at pp. 151, 152 (M.P.).

[2] (1986) 1 S.C.R. 312 at pp. 343, 345 : A.I.R. 1987 S.C. 965 at pp. 980, 981.

> necessary steps at the earliest, because the problem of danger to the health and well being of the community on account of chemical and other hazardous industries has become a pressing problem in modern industrial society. It is also necessary to point out that when science and technology are increasingly employed in producing goods and services calculated to improve the quality of life, there is a certain element of hazard or risk inherent in the very use of science and technology and it is not possible to totally eliminated such hazard or risk altogether. We cannot possibly adopt a policy of not having any chemical or other hazardous industries merely because they pose hazard or risk to the community. If such a policy were adopted it would mean the end of all progress and development. Such industries, even if hazardous, have to be set up since they are essential for economic development and advancement of well-being of the people. We can only hope to reduce the element of hazard or risk to the community by taking all necessary steps for locating such industries in a manner which would pose least risk or danger to the community and maximising safety requirements in such industries. We would, therefore, like to impress upon the Government of India to evolve a national policy for location of chemical and other hazardous industries in areas where population is scarce and there is the little hazard or risk to the community, and when hazardous industries are located in such area, every care must be taken to see that large human habitation does not grow ground them. There should preferably be a green belt of 1 to 5 k.m. width around such hazardous industries".

4. **Liability of occupier or officer in charge of actual operation of the caustic chlorine plant.**— The Supreme Court in the case of *M.C. Mehta* v. *Union of India*,[1] held that pending consideration of the issue whether the caustic chlorine plant should be directed to be shifted and relocated at some other place, the caustic chlorine plant should be allowed to be restarted by the management of Shriram, subject to certain stringent conditions.

The Supreme Court further held that the conditions formulated shall be strictly and scrupulously followed by Shriram and if at any time it is found that any one or more of these conditions are violated, the permission granted will be liable to be withdrawn. One of the conditions read thus :

> "The management of Shriram will obtain an undertaking from the Chairman and Managing Director of the Delhi Cloth Mills Ltd., which is the owner of the various units of Shriram as also from the officer or officers who are in actual management of the caustic chlorine plant that in case there is any escape of chlorine gas resulting in death or injury to the workmen or to the people living in the vicinity, they will be personally responsible for payment of compensation for such death or injury and such undertakings shall be filed in Court within 1 week from today".

Another application was filed by Shriram Foods and Fertilizer Industries for clarification in respect of certain conditions set out as above. On dealing with such conditions, the Supreme Court observed as under :

---

[1] A.I.R. 1987 S.C. 965 at pp. 975, 978, 979 : 1986 (1) S.C.R. 312.

"The contention of Shriram is that it is clear as to who can be described as officer in actual management of the caustic chlorine plant and that this particular direction requires clarification so that the management can obtain the necessary undertaking from such officer. So far as this difficulty pointed out on behalf of Shriram is concerned, we would like to clarify that the officer whose undertaking is required to be taken under the directions given in our Order dated 17th February, 1986 is the officer who is the 'occupier' under the Factories Act, 1948 because he is the person who has actual control over the affairs of the factory and/or the officer who is in charge of the actual operation of the caustic chlorine plant and who is responsible to the management for the operation of the plant. But it was urged on behalf of Shriram that if we insist upon an undertaking to be given by any such officer or officers it would be impossible to secure the services of any competent officers because they would not be willing to accept employment in a situation where they are made responsible not only for their own acts of omissions but also for the acts or omissions of others over whom they have no control. It was, therefore, seriously contended on behalf of Shriram that the condition requiring undertaking to be given by such officer or officers should be deleted We are unable to persuade ourselves to accept this contention of Shriram. If the contention of Shriram is and that is the contention which has seriously been pressed on behalf of Shriram in support of their plea that the caustic chlorine plant should be allowed to be reopened that there is no risk or hazard to the community in the operation of the caustic chlorine plant, there is no reason why the officer or officers who have ultimate control over the affairs of the caustic chlorine plant and/or who are responsible to the management for the efficient operation of the caustic chlorine plant should hestitate to give an undertaking to the Court that in case of death or injury arising on account of escape of chlorine gas, they would be personally responsible. But while making this comment, we are not unmindful of the fact that if absolute unlimited liability were to be imposed on any officer or officers in the employ of Shriram for death or injury arising on account of possible escape of chlorine gas, many competent persons would shy away from accepting employment in Shriram and that would make it difficult for Shriram to have really competent and professionally qualified person to manage and operate the caustic chlorine plant. We would, therefore, modify the condition prescribed by us by providing that undertaking shall be obtained from the officer who is 'occupier' of the caustic chlorine plant under the Factories Act, 1948 and/ or the officer who is responsible to the management for the actual operation of the caustic chlorine plant as its head and such undertaking shall stipulate that in case there is any escape of chlorine gas resulting in death or injury to the workmen or to the people living in the vicinity, the officer concerned will be personally responsible, to the extent of his annual salary with allowances, for payment of compensation for such death or injury but if he shows

> that such escape of gas took place as a result of act of God or vis major or sabotage or that he had exercised all due diligence to prevent such escape of gas, he shall be entitled to be indemnified by Shriram".[1]

5. **Personal liability of Chairman and managing director for payment of compensation in case of death or injury resulting on account of escape of chlorine gas.**— The Supreme Court in the case of *M.C. Mehta* v. *Union of India*,[2] in its order dated 17th February, 1986 formulated the following conditions as under :

> "The management of Shriram will obtain an undertaking from the Chairman and Managing Director of the Delhi Cloth Mills Ltd., which is the owner of the various units of Shriram as also from the officer or officers who are in actual management of the caustic chlorine plant that in case there is any escape of chlorine gas resulting in death or injury to the workmen or to the people living in the vicinity, they will be personally responsible for payment of compensation for such death of injury and such undertaking shall be filed in court within 1 week from today".

The Supreme Court dealing with such condition relating to the liability of Chairman and that of Managing Director held as under :

> "So far as the undertaking to be obtained from the Chairman and Managing Director of Shriram is concerned it was pointed out by Shriram that Delhi Cloth Mills Ltd. which is the owner of Shriram has several units manufacturing different products and each of these units is headed and managed by competent and professionally qualified persons who are responsible for the day to day management of its affairs and the Chairman and Managing Director is not concerned with day to day functioning of the units and it would not therefore be fair and just to require the Chairman and Managing Director to give an undertaking that in case of death or injury resulting on account of escape of chlorine gas, the Chairman and Managing Director would be personally liable to pay compensation. We find it difficult to accept this contention urged on behalf of Shriram. We do not see any reason why the Chairman and/or Managing Director should not be required to give an undertaking to be personally liable for payment of compensation in case of death or injury resulting on account of escape of chlorine gas, particularly when we find that according to the reports of various expert committees which examined the working of caustic chlorine plant, there was considerable negligence in looking after its safety requirements and in fact, considerable repair and renovation with and installation of safety devices had to be carried out at a fairly heavy cost in order to reduce the element of risk or hazard to the community. We may however make it clear that the undertaking to be given by the Chairman and/or Managing Director may provide that no liability shall attach to the Chairman and/or Managing Director if he can show that the escape of chlorine gas

---

[1] M.C. Mehta *v.* Union of India, A.I.R. 1987 S.C. 982 at pp. 984-985.

[2] 1986 (1) S.C.R. 312 at p. 341.

> was due to an act of God or vis major or sabotage. But in all other cases the Chairman or Managing Director must hold himself liable to pay compensation. That alone in our opinion would ensure proper and adequate maintenance of safety devices and instruments and operation of the caustic chlorine plant in a manner which would considerably reduce, if not eliminate, risk or hazard to the workmen and to the people living in the vicinity".[1]

6. **Supreme Court's suggestion for setting up Environment Courts.**— In the case of *M.C. Mehta* v. *Union of India*,[2] the Supreme Court has suggested the Government of India to set up Environment Courts since cases involving issues of environmental pollution, ecological destruction and conflicts over natural resources are increasingly coming up for adjudication. The relevant extract from the judgment reads thus :

> "There is also one other matter to which we should like to draw the attention of the Government of India. We have noticed that in the past few years there is an increasing trend in the number of cases based on environmental pollution and ecological destruction coming up before the Courts. Many such cases concerning the material basis of livelihood of millions of poor people are reaching this Court by way of public interest litigation. In most of these cases, there is need for neutral scientific expertise as an essential input to inform judicial decision making. These cases require expertise at a high level of scientific and technical sophistication. We felt that the need for such expertise in this very case and we had to appoint several expert committees to inform the Court as to what measures were required to be adopted by the management of Shriram to safeguard against the hazard or possibility of leaks, explosion, pollution of air and water, etc., and how many of the safety devices against this hazard or possibility existed in the plant and which of them, though necessary, were not installed. We had great difficulty in finding out independent experts who would be able to advise the Court on these issues. Since there is at present no independent and competent machinery to generate, gather and make available the necessary scientific and technical information, we had to make an effort on our own to identify experts who would provide reliable, scientific, and technical input necessary for the decision of the case and this was obviously a difficult and by its very nature, unsatisfactory exercise. It is, therefore, absolutely essential that there should be an independent Centre with professionally competent and public spirited experts to provide the needed scientific and technological input. We would in the circumstances urge upon the Government of India to set up an Ecological Sciences Research Group consisting of independent, professionally competent experts in different branches of science and technology, who would act as an information bank for Court and the Government departments and generate new information according to the particular requirements of the Court or the concerned Government departments. We would also suggest to the Government of India that since cases involving issues of environmental pollution, ecological destruction and

---

[1] M.C. Mehta *v.* Union of India, A.I.R. 1987 S.C. 982 at pp. 985, 986.

[2] *Ibid* : 1986 1 S.C.R. 312 at pp. 345-46.

> conflicts over natural resources are increasingly coming up for adjudication and these cases involve assessment and evolution of scientific and technical data, it might be desirable to set up Environment Courts on the regional basis with one professional Judge and two experts drawn from the Ecological Sciences Research Group keeping in view the nature of the case and the expertise required for its adjudication. There would of course be a right of appeal to this Court from the decision of the Environment Court".

7. **Conditional order of discharge of effluents from the factory even into the lagoons.**— In view of the undertaking given on behalf of the petitioner in the instant case, it was held that complete stoppage of the discharge of effluents from the factory even into the lagoons shall take place forthwith and it will continue till all the lagoons have polythene layering. Even after this when the effluents are discharged in a polythene layered lagoons, the effluents shall be got tested by the petitioner through the agency of the Board and this will be in order to determine the quality of the trade effluents. The petitioners have entered into an agreement with some Experts for the setting up of a Treatment Plant and it may take about 15 months to complete. If the Board after the test of the trade effluents finds them to be above the prescribed standard, the petitioners shall take immediate steps to bring them within the prescribed limits within a reasonable time which shall not be more than six months, in any case from the date of the report of the Board and if after that time also the effluents which are discharged are above the standard prescribed, their discharge shall further stay till the Treatment Plant is completed and the prescribed standard is obtained.[1]

8. **The Court is empowered to intervene and protect the fundamental right to life and liberty of the citizens.**—If Supreme Court finds that the said authorities have not taken the action required of them by law and that their inaction in jeopardising the right to life of the citizens of this country or of any section thereof, it is the duty of Supreme Court to intervene. If it is found that the respondents are flouting the provisions of law and the directions and orders issued by the lawful authorities, Supreme Court can certainly make appropriate directions to ensure compliance with law and lawful directions made thereunder. This is a social action litigation on behalf of the villagers of Bichhri whose right to life, as elucidated by Supreme Court in several decisions, is invaded and seriously infringed by the respondents as is established by the various reports of the experts called for, and filed before, Supreme Court. If an industry is established without obtaining the requisite permission and clearances and if the industry is continued to be run in blatant disregard of law to the detriment of life and liberty of the citizens living in the vicinity, can it be suggested with any modicum of reasonableness that Supreme Court has no power to intervene and protect the fundamental right to life and liberty of the citizens of this country.[2]

9. **Responsibility for causing the pollution in the wells, soil etc.—Determination of.**—So far as the responsibility of the respondents for causing the pollution in the wells, soil and the aquifers is concerned, it is clearly established by the analysis report referred to in the report of the Central

[2] Indian Council For Enviro-legal Action *v.* Union of India, (1996) 3 S.C.C. 212 at p. 238.

experts' team dated 1st November, 1993 (p. 1026 of Vol. II) Indeed, number of orders passed by Supreme Court, referred to hereinbefore, are premised upon the finding that the respondents are responsible for the said pollution. It is only because of the said reason that they were asked to defray the cost of removal and storage of sludge. It is precisely for this reason that, at one stage, the respondents had also undertaken the dewatering of polluted wells. Disclaiming the responsibility for the pollution in and around Bichhri village, at this stage of proceedings, is clearly and afterthought. Their Lordships of Supreme Court accordingly held and affirm that the respondents alone are responsible for all the damage to the soil, to the underground water and to village Bichhri in General, damage which is eloquently portrayed the several reports of the experts mentioned hereinabove. NEERI has worked out the cost for repairing the damage at more than Rupees forty crores. Now, the question is whether and to what extent can the respondents be made responsible for defraying the cost of remedial measures in these proceedings under Article 32. It may perhaps be appropriate to clarify that so far as removal of remaining sludge and/or the stoppage of discharge of further toxic wastes are concerned, it is the absolute responsibility of the respondents to store the sludge in a proper manner (in the same manner in which 720 MT of sludge has already been stored) and to stop the discharge of any other or further toxic wastes from its plants including Sulphuric Acid Plant and to ensure that the wastes discharged do not flow into or through the sludge.[1]

25. ***Restrictions on new outlets and new discharges.***—[2]*[(1) Subject to the provisions of this section, no person shall, without the previous consent of the State Board,—*

(a) establish or take any steps to establish any industry, operation or process, or any treatment and disposal system or an extension or addition thereto, which is likely to discharge sewage or trade effluent into a stream or well or sewer or on land (such discharge being hereafter in this section referred to as discharge of sewage); or

(b) bring into use any new or altered outlets for the discharge of sewage; or

(c) begin to make any new discharge of sewage:

Provided that a person in the process of taking any steps to establish any industry, operation or process immediately before the commencement of the Water (Prevention and Control of Pollution) Amendment Act, 1988, for which no consent was necessary prior to such commencement, may continue to do so for a period of three months from such commencement or, if he has made an application for such consent, within the said period of three months, till the disposal of such application.

(2) An application for consent of the State Board under sub-section (1) shall be made in such form, contain such particulars and shall be accompanied by such fees as may be prescribed.]

(3) The State Board may make such inquiry as it may deem fit in respect of the application for consent referred to in sub-section (1) and in making any such inquiry shall follow such procedure as may be prescribed.

---

[1] Indian Council for Enviro-Legal Action *v.* Union of India, (1996) 3 S.C.C. 212 at pp. 240, 241.

[2] Subs. by Act 53 of 1988, Sec 12, for sub-sections (1) and (2).

[1]*[(4) The State Board may—*

(a) grant its consent referred to in sub-section (1), subject to such conditions as it may impose, being—

(i) in cases referred to in Cls. (a) and (b) of sub-section (1) of Sec. 25, conditions as to the point of discharge of sewage or as to the use of that outlet or any other outlet for discharge of sewage;

(ii) in the case of a new discharge, conditions as to the nature and composition, temperature, volume or rate of discharge of the effluent from the land or premises from which the discharge or new discharge is to be made, and

(iii) that the consent will be valid only for such period as may be specified in the order,

and any such conditions imposed shall be binding on any person establishing or taking any steps to establish any industry, operation or process, or treatment and disposal system or extension or addition thereto, or using the new or altered outlet, or discharging the effluent from the land or premises aforesaid; or

(b) refuse such consent for reasons to be recorded in writing.

(5) Where, without the consent of the State Board, any industry, operation or process, or any treatment and disposal system or any extension or addition thereto, is established, or any steps for such establishment have been taken or a new or altered outlet is brought into use for the discharge of sewage or a new discharge of sewage is made, the State Board may serve on the person who has established or taken steps to establish any industry, operation or process, or any treatment and disposal system or any extension or addition thereto, or using the outlet, or making the discharge, as the case may be, a notice imposing any such conditions as it might have imposed on an application for its consent in respect of such establishment, such outlet or discharge

(6) Every State Board shall maintain a register containing particulars of the conditions imposed under this section and so much of the register as relates to any outlet, or to any effluent, from any land or premises shall be open to inspection at all reasonable hours by any person interested in, or affected by such outlet, land or premises, as the case may be, or by any person authorised by him in this behalf and the conditions so contained in such register shall be conclusive proof that the consent was granted subject to such conditions.]

(7) The consent referred to in sub-section (1) shall, unless given or refused earlier, be deemed to have been given unconditionally on the expiry of a period of four months of the making of an application in this behalf complete in all respects to the State Board.

(8) For the purposes of this section and Secs. 27 and 30,—

(a) the expression "new or altered outlet" means any outlet which is wholly or partly constructed on or after the commencement of this Act or which (whether so constructed or not) is substantially altered after such commencement;

---

[1] Subs. by Act 53 of 1988, Sec. 12, for sub-sections (4), (5) and (6).

(b) *the expression "new discharge" means a discharge which is not, as respects the nature and composition, temperature, volume, and rate of discharge of the effluent substantially a continuation of a discharge made within the preceding twelve months (whether by the same or different outlet), so however that a discharge which is in other respects a continuation of previous discharge made as aforesaid shall not be deemed to be a new discharge by reason of any reduction of the temperature or volume or rate of discharge of the effluent as compared with the previous discharge.*

Rule 32 of the Water (Prevention and Control of Pollution) Rules, 1975 provides for moving an application for obtaining the consent of the Central Board for bringing into use any new or altered outlet for the discharge of sewage or trade effluent into stream or well or to make any new discharge under Sec. 25 or for continuing an existing discharge or sewage or trade effluent under Sec. 26. This application shall be moved in Form XIII. Rule 33 of the said Rules provides for procedure for making inquiry into application for consent. The officer concerned shall give notice to the applicant of his intention in Form XIV before visiting any premises.

1. Scope of.— Article 48-A is one of the Directive Principles of State Policy. It says that the State shall endevour to protect and improve the environment and to safeguard to forests and wildlife of the country. Article 51-A sets out the fundamental duties of the citizens. One of them is "(g) to protect and improve the nautral environment including forests, lakes, rivers and wildlife, and to have compassion for living creatures"; The problem of increasing pollution of rivers and streams in the country-says the statement of Objects and Reasons appended to the Bill which became the Water (Prevention and Control of Pollution) Act, 1974—attracted the attention of the State legislature and Parliament. They realised the urgency of ensuring that domestic and industrial effluents are not allowed to be discharged into water courses without adequate treatment and that pollution of rivers and streams was causing damage to the country's economy.[1]

2. Laying down certain conditions and compliance thereof.— Directions were made in the present case with a view to enabling Shriram Food and Fertilizer Industries to restart the plants. Courts laid down certain conditions which shall be strictly and scrupulously followed by Shriram and if any time it is found that any one or more of these conditions are violated, the permission granted will be liable to be withdrawn. These conditions were as follows :

> "(1) Since it is clear from the affidavits and the reports of the various Expert Committees that the management of Shriram was negligent in the operation and maintenance of the caustic chlorine plant and did not take the necessary measures for improving the design and quality of the plant and equipment and installing adequate safety devices and instruments, with a view to ensuring the maximum safety of the workers and the community living in the vicinity and it is only after writ-petition was filed and all the glaring deficiencies were pointed out that the management carried out various alterations and adopted various measures in accordance with the recommendations made by Manmohan Singh Committee and Nilay Choudhary Committee, it is necessary that an Expert Committee should be appointed which will monitor the operation and maintenance of the plant and equipment and ensure the continued implementation of the recommendations of these two Committees.
>
> Courts accordingly constituted an Expert Committee consisting of Shri Manmohan Singh, Sri P.R. Gharekhan and Professor P. Khanna of the Indian Institute of Technology, Bombay, and if Professor P. Khanna is not available for any reason, Dr. Sharma of the University Department of Chemical Technology, Bombay, will take his place as a member of the Expert Committee—and this Expert Committee will inspect the caustic chlorine plant of Shriram at least once in a fortnight and examine whether the recommendations made by Manmohan Singh Committee and Nilay Choudhary Committee are being scrupulously implemented by the management. The Expert Committee will also examine the adequacy of the design, materials fabrication, etc., of the devices, instruments and other hardware calculated to monitor, warn, avoid control and handle all situations arising on account of possible accidental release of chlorine gas, keeping in mind metereological factors, location of the plant and the largeness of the population exposed to hazard or risk. This examination may involve a thorough check and experimentation at site with a view to determining how far the safety measures adopted by the management are adequate to deal with a possible situation. The Expert Committee will submit a report of its examination to this Court immediately after completion of the examination with copies to the petitioner and Shriram. The first such examination shall be made by the Expert Committee within one

---

[1] Indian Council for Enviro-Legal Action *v.* Union of India, (1996) 3 S.C.C. 212 at p. 236.

week of the restarting of the caustic chlorine plant and it shall be followed by a second examination within a further period of 15 days. If as a result of either of such examination it is found that there is default on the part of the management in continuous compliance with any of the recommendations made by Manmohan Singh Committee and Nilay Choudhary Committee or the safety devices or instruments are not in operation or are not properly functioning, the petitioner will be at liberty to immediately bring such default to the notice of this Court so that in that event, the permission granted to the management to restart the caustic chlorine plant may be revoked. Shriram will, within 3 days from today, deposit a sum of Rs. 30,000 in this Court to meet the travelling, boarding and lodging expenses of the members of the Expert Committee.

(2) One operator should be designated as personally responsible for each safety device or measure and the head of the caustic chlorine division should be made individually responsible for the efficient operation of such safety device of measure. If at any time during examination by the Expert Committee or inspection by the Inspectorate, it is found that any safety devise or measure is inoperative or is not properly functioning, the head of the caustic chlorine plant as well as the operator in charge of such safety device or measure shall be held personally responsible. Their duty shall be not merely to report non-functioning or malfunctioning of any such safety device or measure to the higher authority but to see that the operation of the entire plant is immediately shut down, the safety device is urgently replenished and the plant does not restart functioning until such replenishment is completed.

(3) The Chief Inspector of Factories of any Senior Inspector duly nominated by him, who has necessary expertise in inspection of chemical factories, will inspect the caustic chlorine plant at least once in a week by paying surprise visit without any previous intimation and examine whether the recommendations of Manmohan Singh Committee and Nilay Choudhary Committee are being complied with by the management and whether the safety devices or instruments installed by the management are operative and are properly functioning of whether there are any defects or deficiencies in the operation and maintenance of the caustic chlorine plant and in the safety devices or instruments installed in the plant. The Chief Inspector of Factories or the Senior Inspector nominated by him, who carries out such inspection, shall immediately report to this Court and to the Labour Commissioner any default, deficiency or remissness on the part of the management which may be noticed by him in the course of such inspection and on such report being made, it will be open to the Labour Commissioner and the Chief Inspector of Factories to take such action as they think fit.

(4) The Central Board will also depute a Senior Inspector to visit the caustic chlorine plant and the Vanaspati plant, at least once in a week without any prior notice to the management, for the purpose

of ascertaining whether the effluent discharged from the Vanaspati plant, as also at the terminal outlet complies with the limiting standards laid down in the consent order issued under the Water (Prevention and Control of Pollution) Act, and the particulate matter emitted by the stacks of the boilers in the power plant complies with the standards laid down in consent order issued under the Air Act, and if there is any default in complying with the relevant standards in either case, such default shall be brought to the notice of this Court and the Central Board will be entitled to take such action as it thinks fit, including revocation of the relevant consent order.

(5) The management of Shriram will obtain an undertaking from the Chairman and Managing Director of the Delhi Cloth Mills Ltd., which is the owner of the various units of Shriram as also from the officer or officers who are in actual management of the caustic chlorine plant that in case there is any escape of chlorine gas resulting in death or injury to the workmen or the people living in the vicinity, they will be reasonably responsible for payment of compensation for such death or injury and such undertakings shall be filed in Court within one week from today.

(6) There shall be a Committee of three representatives of Lokahit Congress Union and three representatives of Karamchari 'Ekita Union to look after the safety arrangements in the caustic chlorine plant. The function of this Committee will be to ensure that all safety measures are strictly observed and there is no non-functioning or mal-functioning of the safety devices and instruments and for this purpose, they will be entitled to visit any section or department of the plant during any shift and ask for any relevant information from the management If there is any default or negligence in the observance of the safety measures and the maintenance and operation of the safety devices and instruments, this Committee will be entitled to bring such default or negligence to the notice of the management and if the management does not heel to the same, this committee will be entitled to draw the attention of the Labour Commissioner to such default or negligence. The members of this Committee will be given proper and adequate training in regard to the functioning of the caustic chlorine plant and the operation of the safety devices and instruments and this will be done within a period of 2 weeks after the nomination of three representatives on the Committee is communicated by each of the two unions to the management.

(7) There shall be placed in each department or section of the caustic chlorine plant as also at the gate of the premises a detailed chart in English and Hindi stating the effects of chlorine gas on human body and informing the workmen and the people as to what immediate treatment should be taken in case they are affected by leakage of chlorine gas.

(8) Every work in the caustic chlorine plant should be properly trained and instructed in regard to the functioning of the specific

plant and equipment in which he is working and he should also be educated and informed as to what precautions should be taken and in case of leakage of chlorine gas, what steps should be taken to control and contain such leakage. The most effective way to giving such training and instruction would be through audio-visual programmes to be specially prepared by the management. Even after proper training and instruction is given it is likely that the workers engaged in the plant may, on account of lapse of time, forget he sequence of steps to be taken to monitor, warn, avoid, control and handle any chlorine leakage emergency and refresher courses should, therefore, be conducted at least once in six weeks with mock trials.

(9) Loud speakers shall be installed all around the factory premises for giving timely warning and adequate instructions to the people residing in the vicinity in case of leakage of chlorine gas.

(10) The management shall maintain proper vigilance with a view to ensuring that workers working in the caustic chlorine plant wear helmets, gas masks or safety belts as the case may be while working in the hazardous departments or sections of the plant and regular medical check-up of the workers shall be got carried out by the management in order to ensure that the workers are in good health.

(11) The management of Shriram will deposit in the Supreme Court a sum of Rs. 20 lacs as and by way of security for payment of compensation claims made by or on behalf of the victims of oleum gas, if and to the extent to which such compensation claims are held to be well founded. This amount deposited by the management of Shriram will be invested by the Registrar of Supreme Court in fixed deposit with a nationalised Bank so that it earns interest and it will abide further directions of Supreme Court. The management of Shriram will also furnish a bank guarantee to the satisfaction of the Registrar of the Supreme Court for a sum of Rs. 15 lacs which bank guarantee shall be encashed by the Registrar, wholly or in part, in case there is any escape of chlorine gas within a period of three years from today resulting death or injury to any workman or to any person or persons living in the vicinity. The amount of the bank guarantee when encashed shall be utilised in or towards payment of compensation to the victims of chlorine gas, the quantum of compensation being determinable by the District Judge, Delhi on applications for compensations being made to him by the victims of chlorine gas. The amount of Rs. 20 lacs shall be furnished within a period of 2 weeks from today and on failure of the management of Shriram to do so, the permission granted by Supreme Court by this judgment to restart the caustic chlorine plant and other plants shall stand withdrawn".[1]

3. The true scope and ambit of Arts. 21 and 32 of the Constitution.— It is an admitted fact that the caustic chlorine plant was set up by Shriram more than 35 years ago and whatever might have been the situation at the time when the plant was installed, it cannot be disputed that, at present, largely owing to the growth and development of the city, there is sizeable population living in the vicinity of the plant and there is therefore hazard or risk to large numbers of people, if, on account of any accident, whether occasioned by negligence or not, chlorine gas escapes. The various Expert Committees appointed by the Government as well as by the Court clearly emphasise the danger to the community living in the vicinity of the caustic chlorine plant if there is exposure to chlorine gas through an accidental release which may take place on account of negligence or other unforeseen events. Now it is evident from the reports of the Expert Committees and on this aspect of the matter they are all unanimous—that there was considerable negligence on the part of the management of Shriram in the maintenance and operation of the caustic chlorine plant and there were also defects and drawbacks in its structure and design. The report of Dr. Slater which is the first report in the series clearly pointed out that the safety policies, practices and awareness on the part of the management needed to be addressed urgently and added *inter alia* that the effectiveness and availability of the design and emergency arrangements was, to say the least, questionable and in the real emergency involving a major spill, the measures would probably prove ineffective in limiting serious consequences inside and outside the plant. He also added that the standard of house-keeping and training among the operational staff was not good and it was symptomatic of inadequate awareness of the importance of safety devices and the scale of potential consequences following "loss of containment". He also reiterated that the manner in which the caustic chlorine plant was being maintained and operated did not " measure upto the responsibility incumbent upon operators of such plants". So also the report of Manmohan Singh Committee pointed out various drawbacks and deficiencies in the structure and design of the caustic chlorine plant as also in its maintenance and operation and made various detailed recommendations which in the opinion of the Manmohan Singh Committee needed to be strictly and scrupulously carried out, if the risk to the workers and the population in the vicinity was to be minimised. The Nilay Choudhary Committee also made several recommendations in order to minimise the hazard due to a possible leakage of chlorine gas. The management of Shriram claimed that all these recommendations made in the reports of Manmohan Singh Committee and Nilay Choudhary Committee had been carried out by Shriram and the possible hazard to the workers and the community living in the vicinity was almost reduced to nil and that Shriram should therefore be allowed to reopen the caustic chlorine plant. The management of Shriram made it clear that they did not intend to restart immediately their plants manufacturing sulphuric acid, oleum, chlorosulphonic acid, super phosphate and granulated fertiliser, ferric alum and active earth. Since these plants were under detailed engineering audit and that out of these plants double conversion double absorption sulphuric acid plant and ferric alum and active earth plants would be started in the second phase, "after attending to immediate maintenance needs" and that so far as the other plants were concerned, the schedule for restarting would be communicated later. The only plants in respect of which Shriram sought the permission of the Court to restart were the power plant and the plants manufacturing *vanaspati* and refined oil including its by-products and recovery plants like soap, glycerine and technical hard oil and the caustic chlorine plant including plants manufacturing by-product, such as, sodium sulphate, hydrochloric acid, stable bleaching powder, superchlor, sodium hypochlorite and container works. Directions in the present judgment must, therefore necessarily be confined only to these plants which Shriram wants to restart immediately and it is made clear that so far as other plants which Shriram does not propose to restart immediately are concerned, they shall not be restarted by Shriram without obtaining further directions from the Court, particularly since the machinery and equipment in some of these plants is as pointed out in the report of Seturaman Committee old and worn out and the safety instrumentation is not adequate and the Court would, therefore, have to be satisfied that the machinery and equipment is properly renovated and its design and structure modernised with a view to ensuring maximum safety before the Court can permit these plants to be recommissioned. Now, of course, there would be no objection to the restarting of the *vanaspati* and refined oil plant and other recovery plants like soap, glycerine and technical hard oil, because they admittedly do not involve any risk or hazard to the community but these plants obviously cannot be restarted by the management of Shriram unless and until the caustic chlorine plant is also allowed to be reopened, because hydrogen is needed for the *vanaspati* and refined oil plant and hydrogen would not be available unless the caustic chlorine plant is put into operation. It is undoubtedly true that chlorine gas is dangerous to the life and health of the community and if it escapes either from the storage tanks or from the filled cylinders or from any other point in the course of production, it is likely to affect the health and well-being of the workmen and the people living in the vicinity.

---

[1] M.C. Mehta *v.* Union of India, 1986 S.C.C. (Cr.) 122 at pp. 142, 143, 144, 146 : (1986) 2 S.C.C. 176.

There can, therefore, be no doubt that there would be hazard to the life and health of the community, if there is escape of chlorine gas from the caustic chlorine plant, whether by reason or negligence of the management or due to accidental release. In fact, the issue of the journal "Scavenger" for January, 1985 enumerates some major accidents which have occurred in different parts of the world in the process industries and this enumeration shows that not less than 25 accidents have been caused by escape of chlorine gas in the last about 70 years and many of these accidents have resulted in death of quite a few persons. To take only a few examples, the escape of chlorine from storage tank in Wilsum, Germany in 1952 resulted in death of seven persons and similarly release of chlorine gas in Bankstown, Australia in 1967 resulted in passing of five persons and on account of escape of chlorine gas in Baton Rouge in 1976, about 10,000 persons had to be evacuated. It is true that quite a few of these accidents arose on account of escape of chlorine gas in course of transport by rail tank cars but some accidents did occur on account of escape of chlorine gas from storage tanks.

Courts also cannot overlook the old and worn out state of machinery and equipment, the negligence of the management in the maintenance and operation of the caustic chlorine plant and the indifference shown by the management installing pr0per safety devices and safety instruments and taking proper and adequate measures for ensuring safety of the workmen and the people living in the vicinity. There can be, no doubt, particularly having regard to the opinion of Manmohan Singh Committee, Nilay Choudhary Committee and the last Committee appointed by Court, that the possibility of hazard or risk to the community is considerably minimised and there is now appreciable risk to danger to the community if the caustic chlorine plant is allowed to be restarted. One cannot also ignore the interests of the workmen while deciding this delicate and complex question. It could not be disputed either by the Government of India or by the Delhi Administration or even by the petitioner that the effect of permanently closing down the caustic chlorine plant would be to throw about 4000 workmen out of employment and that such closure would lead to their utter impoverishment. The Delhi Water Supply Undertaking which gets its supply of chlorine from Shriram would also have to find alternative sources of supply and it was common ground between the parties that such sources may be quite distant from Delhi. The production of down stream products would also be seriously affected resulting to some extent in short supply of these products. The Central Board is constituted under the Water (Prevention and Control of Pollution) Act, 1974, and it is also required to perform the functions assigned under the Air (Prevention and Control of Pollution) Act, 1981. Since some of the plants of Shriram situate within the complex including the *vanaspati* plant were discharging effluent, Shriram was required to obtain consent for discharging effluent from the Central Board under Sec. 25 of the Water (Prevention and Control of Pollution) Act, the Shriram accordingly made an application for this purpose in the prescribed form. The Central Board passed an order on 19th April, 1979, granting consent to Shriram to discharge effluent from their factory in the sewer subject to the terms and conditions set out in the consent order. The consent granted to Shriram was renewed from time to time and the last renewed consent order was dated 22nd July, 1985, and it was vaid up to 31st December, 1985. Pursuant to the consent order Shriram installed effluent treatment plants in the *vanaspati*, stable bleaching powder, super phosphate and active earth units with a view to complying with the limiting standards stipulated by the Central Board in the consent order. The waste water in other units was either solar dried in lagoons or recycled in the different process houses and the major units emanating waste water were thus *vanaspati*, active earth, super phosphate and stable bleaching power plants. The waste water effluent from these four plants used to be drained out through one common terminal outlet and the complaint of the Central Board was that this combined effluent at the terminal outlet never complied with the limiting standards prescribed by the Central Board. The results of analysis of the samples collected by the officers of the Central Board at the terminal outlet were annexed as Annexure I the supplementary affidavit dated 19th December, 1985 filed by Shri P.R. Gharekhan on behalf of the Central Board. The Central Board also repeatedly complained that the effluent discharged from the *vanaspati* plant was not in accordance with the limiting standards prescribed in the consent order. Now, as pointed out by Senior Environmental Engineer in the employ of Shriram, there are broadly two technologies available for effluent treatment in *vanaspati* industry. One is the technology of removing suspended solids by settling with the help of clariflocculation and the other is the technology or removing suspended solids, oils and grease and greasy solids by flotation and skimming. The affidavit of Senior Environment Engineer stated that the technology based on settling with the help of clariflocculation was recommended by the Central Board and Messrs. Dorr Oliver were selected by Shriram in consultation with the Central Board for supply of an effluent treatment plant employing this technology. But, unfortunately, the plant of Messrs. Dorr Oliver failed to give the guaranteed results presumably because this technology was not satisfactory. The Central Board in fact carried out a performance evaluation of this plant in December, 1983 and they came to the conclusion that this plant would require substantial changes to make it to achieve stipulated effluent standards. It was then realised that the technology of removal of impurities by flotation method is more appropriate for *vanaspati* plant effluent and Shriram accordingly once again, as pointed out in the affidavit of Senior Environment Engineer made a reference to the Central Board. On 17th January, 1985, the Central Board directed that Messrs. Kroft Engineering Company should be asked to set up a pilot plant based on dissolved air flotation technology in the *vanaspati* plant for treatability study of the effluent. But despite the follow up action taken by Shriram, the pilot plant was not set up by Messrs. Kroft Engineering Company. Shriram, thereupon in its anxiety to comply with the limiting standards set by the Central Board in the consent order, placed an order with another reputed supplier namely, Messrs. Patel Brothers of Bombay in June, 1985 for supply of a plant based on flotation technology. Messers Patel Brothers guaranteed to instal and commission the plant by 31st December. 1985, but the affidavits show that there has been some delay in the installation of this plant and its installation is now going to be completed by 28th February, 1986. Meanwhile, however, Shriram installed at the terminal outlet a plant based on dissolved air flotation technology of Messrs. Kroft Engineering Company and the counter-affidavit of Shri P.R. Gharekhan dated 13th January, 1986 shows that the representatives of the Central Board have verified that this terminal treatment plant has been installed. However, the performance of this terminal treatment plant is yet to be evaluated by the Central Board in order to assess compliance with the limiting standards stipulated in the consent order. The Central Board will, therefore, have to evaluate the performance of this terminal treatment plant after the caustic chlorine and other plants of Shriram commence production. So far as the effluent discharged by the active earth plant and stable bleaching plant is concerned, it complies with the limiting standards prescribed for it in the consent order but the effluent discharged by the *vanaspati* plant does not comply with the relevant limiting standards. Shriram has, however, stated that once the plant ordered from Messrs Patel Brothers, Bombay is installed, it will be possible to secure compliance with the requirement of the limiting standards. This, of course will have to be assessed on the basis of performance evaluation of the plant of Messrs Patel Brothers when installed. But there is one difficulty in the way of Shriram restarting its *vanaspati* plant. The last renewed consent order dated 2nd July, 1985 expired on 31st December, 1985 and obviously therefore Shriram cannot operate the *vanaspati* plant and discharge effluent unless and until the consent order is renewed, for the discharge of effluent without consent order would be contrary to the provisions of the Water (Prevention and Control of Pollution) Act. It appears that the Central Board has stated in the affidavit filed in this behalf by Assistant Environmental Engineer, that the Central Board has no objection to grant temporary consent pursuant to the provisions of the water (Prevention and Control of Pollution) Act, on condition that Shriram would comply with all the recommendations of various Committees appointed by the Supreme Court of otherwise and that such consent would be valid only for a period of one month from the date of issue of the consent order. Since courts are permitting to reopen its caustic chlorine, *vanaspati* and other plants above referred to, the Supreme Court asked the Central Board to a temporary consent order to Shriram valid for a period of one month from the date of its issue and the Central Board will take samples from the effluent discharged from the *vanaspati* plant as also at the terminal outlet and ascertain whether the samples comply with the limiting standards set out in the consent order. If the samples do not comply with the relevant standards, the Central Board will immediately bring such fact to the notice of the Supreme Court and it will be open to the Central Board to take such action as it thinks fit including non-renewal of the consent order.[1]

4. **Doctrine of promissory estoppel—Applicability against Government.**— In the undernoted case it is not in dispute that the petitioner was granted provisional registration to manufacture hydrated and burnt lime in the industrial area Korba on 23rd March, 1985, and thereafter a permanent lease for 99 years of plots Nos. 48 and 49 was executed on 1st July, 1985, in favour of the petitioner to manufacture lime on a rent of Rs. 275.50 per annum premium of Rs. 36,731 and on furnishing security of Rs. 5,000. The lease was executed in the name of the Governor and it stipulated that the lessee would within one year of taking possession commence production. The petitioner accordingly applied for loan of rupees seven lacs was sanctioned for erecting the factory by M.P. Finance Corporation on 5th October, 1985. It is said so far amount of Rupees 3.8 lacs has been granted and the petitioner has spent over rupees 5.5 lacs and the factory is ready for commission since 27th September, 1987. During pendency of the petition on 25th November, 1987, the State Pollution Board has granted the "No Objection Certificate" to the petitioner for manufacture of hydrated lime at Korba and it is said now there is no impediment in starting the factory. In the absence of "No Objection Certificates" from the Special Area Development Authority and the Town and Country Planning Authority, the factory cannot be started and the petitioner is overburdened with payment of large recurring sums as interest to the Corporation and other creditor. The Supreme Court in *Motilal Padampat Sugar Mills* v. *State of U.P.*,[2] held that the doctrine of promissory estoppel has also been applied against the Government and the defence based on executive necessity has been categorically negatived. Where Government makes a promise knowing or intending that it would be acted on by the promisee and in fact, the promisee acting in reliance on it, alters his position; the Government would be held bound by the promise and the promise would be enforceable against the Government at the instance of the promisee, notwithstanding that there is no consideration for the promise and the promise is not recorded in the form of a formal contract as required under Art. 299 of the Constitution... The Government cannot claim to be exempt from the liability to carry out the promise on some indefinite and undisclosed ground of necessity or expediency, nor can the Government claim to be the sole judge of its liability and repudiate it on an *ex parte* appraisement of the circumstances... It is only if the Court is satisfied on proper and adequate

---

[1] M.C. Mehta *v.* Union of India, 1986 S.C.C. (Cr.) 122 at pp. 132, 133, 137, 138, 139, 140, 141 : 1986 (2) S.C.C. 176.

[2] A.I.R. 1979 S.C. 621.

material placed by the Government that overriding public interest requires that the Government should not be held bound by the promise but should be free to act unfettered by it that the Court would refuse to enforce the promise against the Government.... The doctrine of promissory estoppel cannot be invoked for preventing the Government from acting in discharge of its duty under the law. The doctrine of the promissory estoppel cannot be applied in teeth of an obligation or liability imposed by law. Again the Supreme Court in *Gujarat State Financial Corporation* v. *Lotus Hotels Pvt. Ltd.*,[1] held :

> "Thus the principle of promissory estoppel would certainly estop the corporation from backing out of its obligation arising from a solemn promise made by it to the respondent. The respondent acting upon the solemn promise made by the appellant incurred huge expenditure and if the appellant is not held to its promise, the respondent would be put in a very disadvantageous position and therefore also the principle of promissory estoppel can be invoked in this case".

The Special Area Development Authority and the Town and Country Planning Authority were not parties to the grant of lease of the plots for manufacturing hydrated and burnt lime in the industrial area of Korba and the petitioner had not acted on their promises in erecting lime kiln at a cost of rupees 5.5 lacs or so. There can be no promissory estoppel against them because the petitioner has taken loan and constructed the lime kiln at his own risk and at the most at the instance of the District Industries Centre, which being a subordinate agency of the State could not have granted permission for starting a hydrated lime factory against the direction of the Divisional Commissioner dated 13th January, 1981, and the decision taken at the conference of different agencies on 18th April, 1981, nor to establish any industry causing pollution.

Therefore, the registration for manufacture of lime kiln at Korba itself was irregular. Under the circumstances no writ can lie against statutory bodies for preventing them from doing their statutory functions and duties. Refusal of "No Objection Certificate" is in public interest and when there is a clash between personal and public interest the latter must prevail. It is also surprising that when circumstances remained the same in 1986 and 1987, then how the State Pollution Board took a topsy-turvy turn on 25th November, 1987, and granted no objection certificate to the petitioner though the 100 bedded hospital and Government college are still there. The State of Madhya Pradesh has disclaimed the decision of the Board and challenged its decision as by passing the circumstances prevailing at Korba. One fail to understand how "No Objection Certificate" could be granted after and solemn assurance by the Board's Chairman to the Special Area Development Authority that no lime kiln will be permitted near the hospital and the college. The Board could not be ignorant of the fact that Special Area Development Authority has been declared air pollution control area on 8th June, 1984, and no industry causing pollution can be established. The Special Area Development Authority has protested about issue of "No Objection Certificate" to the Board. Overriding public interest requires that even the District Industries Centre should not be bound by its promise and should be free to act unfettered by it.[2]

5. Restrictions on new out-lets and new discharges.— Section 25 of the Water Act, prescribes restrictions on new out-lets and new discharges. It *inter alia* provides that no person shall, without the previous consent of the State Board, establish any industry or process which is likely to discharge sewerage or trade effluent into the stream or well or sewer or on land. The consent of the State Board can be obtained by an application made under Sec. 25 (2) of the Water Act. Under sub-section (4) of Sec 25, the State Board may grant its consent, subject to conditions as it may impose. The State Board may impose conditions including conditions as to the nature and composition, temperature, volume or rate of discharge of the effluent from the premises from which the discharge is to be made. In the consent order issued by the State Board, the tolerance limits of the effluent were medicated and they constitrted condition for granting consent, the consent letters which were issued by the State Board have been placed on record along with the affidavit-in-reply filed by the State Government. Thus, a mere consent order issued by the State Board under Sec. 25 (2) did not entitle the applicant to discharge trade effluents and it was incumbent upon the applicants to comply with the conditions mentioned in the consent order as also to put up the effluent treatment plants within the time prescribed in the consent order. Failure of complying with the requirement of putting up effluent treatment plant resulted in lapse of the consent. Therefore, mere fact that consent orders were obtained by the petitioners cannot insulate them against the requirement of putting up the effluent treatment plants and complying with the standards of tolerance limits prescribed.[1]

The scope of Sec. 319 of the Code of Criminal Procedure, 1973, will have to be looked into from the spirit of the enactment which empowers a Court to add on a party as the accused at any stage of the trial, if it appears that *prima facie*, there is material to hold that such inclusion is necessary. In this case, the original accused-Society pointed out that the unit is being run by the present petitioners and since the offence alleged was in relation to the discharge of effluent from the unit, the High Court was fully justified in adding on the Company which is in fact running the unit.[2]

6. Degradation of coastal waters due to intensive shrimp farming in coastal States of India.—Coastal Pollution is an universally emerging problem. It has already become a serious environmental problem in India. Besides direct dumping of waste materials in the seas discharged through marine outfalls, large volumes of untreated or semi-treated wastes generated in various land-based sources/activities, ultimately find way to the seas. The coastal water directly receive the inland waters, by way of surface run-off and land drainage, ladden with myraid of refuse materials and the rejects or wastes of civilisation. Apart from inputs from rivers and effluent outfalls, the coastal areas are subject to intensive fishing, navigational activities, recreations, ports, industrial discharge and harbours which are causative factors of water quality, and degradation to varying degrees.

Intensive shrimp (prawn) culture industry is taking its roots in India causing severe environmental degradation. It is adversely affecting and replacing the environmentally benign traditional rice shrimp rotating aquaculture system followed by the fisherman in India. In the traditional aquaculture system, rice is grown during part of the year and shrimp and other fish species are cultured during the rest of the year. However, during the last decade, the traditional system, which apart from producing rice, produced about 140 kgs of shrimp per hectare of land, began to give way to more intensive methods of shrimp culture which could produce thousands of kilograms per hectare. A large number of private companies and multinational corporations have started investing in shrimp farms. More and more areas are being brought under semi-intensive and intensive modes of shrimp farming. The environmental impact of shrimp culture essentially depend on the mode of culture adopted in the shrimp farming. The traditional farming is low yield, and natural but sustainable over long periods. It has no adverse effects on the environment and ecology. The modern method, on the other hand, is larger in scale and intensive in nature. It is owned and operated by commercial and often foreign owned companies which mainly export the shrimp. In intensive aquaculture, selected species are bred using a dense stocking rate. To maintain very crowded shrimp population and attain higher production efficiency, artificial feed, chemical additives and anti-bioties are used. Indeed, the new trend of more intensified shrimp farming in certain parts of the country without much control of feeds. seeds and other inputs and water management practices has brought to fore a serious threat to the environment and ecology.

[1] M/s. Narula Dyeing & Printing Works *v.* Union of India, A.I.R. 1995 Guj. 185 at p. 189.

[2] B.T. and F.C. (Private) Limited, M/s. Bangalore *v.* Karnataka State Pollution Control Board, Bangalore, 1997 (3) Kant. L.J. 199 at p. 201.

The reports reveal that intensive shrimp farms are developing at the expense of other agriculture, aquaculture, forest uses and fisheries that are better suited in many places for meeting local. Food and employment requirements. Therefore they pose various environmental threats to the Coastal Zones. The court observed that although almost 100% of the produce of industry is exported and the industry has a large potential to earn foreign currency for the country but the damage caused to ecology and economics by the aquaculture farming is much higher than the earnings from the sale of the coastal aquaculture produce. Hence the intensive shrimp farming must be stopped immediately.[1]

7. **Shifting of polluting tanneries from present location to place of common treatment plant.**— While monitoring the said directions, the leather industries located in various cities on the banks of River Ganga were called upon to stop discharging untreated effluent into the river. In this judgement the court is concerned with the tanneries located at Tangra, Topsia and Pagla Danga—the four adjoining areas in the eastern fringe of the city of Calcutta (the Calcutta tanneries). These areas accommodate about 550 tanneries. According to the Calcutta tanneries use chrome based tanning process. 500 tannery units are located in thickly populated residential areas. Located on the bank of Ganga river in Calcutta, surrounding of the tanneries are extremely unhygienic due to discharge of untreated effluents in open drains, stagnation of wastewater in low-lying areas around the tannery units, and accumulation of solid waste in tanneries."[2]

After the enactment of the Water (Prevention and Control of Pollution) Act, 1974 in the State of West bengal, tanneires of the said locality never applied for consent to the State Pollution Control Board. Only in the year 1989, more than one hundred tanneries applied for consent to the State Board after long persuasion and advised the tanneries to construct primary effluent treatment plant and submit a scheme of secondary effluent treatment plant. But unfortunately none of the tanneries situated in the said area constructed or have taken any steps for construction of effluent treatment plant. Therefore, State Board issued legal notice to the tanneires in the year 1992 Show-cause notices were also issued by the State Board asking why their factory effluent treatment plant as per the order of the Hon'ble Supreme Court dated 1.12.1992 was not complied

---

[1] **S. Jagannath *v.* Union of India, (1997) 2 S.C.C. 87: 1997 I A.D.S.C. 81.**

[2] **M.C. Mehta (Calcutta Tanneries matter) *v.* Union of India, (1997) 2 S.C.C. 411 at p. 415-16.**

Subsequently more than 275 tanneires applied for consent to the State Board but in view of the Hon'ble Supreme Court's order dated 19th February, 1993, 'consent' was not granted to any of the tanneries Moreover tanneries of the said area were directed to submit an undertaking in the court on stamp paper that they are willing to move to any place as fixed up by the Government of West Bengal. That due to the existence of the tanneries without having any treatment facilities in Tangra, Tiljala and Topsia area, environmental degradation in such areas and their surroundings are extremely alarming. Virtually shifting of the tanneries from the present location to another place and construction of common effluent treatment plant, is the only practicable solution to control the environmental degradation as a whole.

8. State Government had a valid reason to prevent the units from discharging the trade effluents.— The State Board is a specialised agency created under the Water Act and when on the basis of the analysis report and other reports it opines that there is no requisite effluent treatment plant put up or that the tolerance limits are exceeded, ordinarily the Court will not sit in appeal over it's views. The material disclosed shows that the State Government had a valid reason to take action to prevent these units from discharging the trade effluents in the Khari-cult Canal.[1]

9. Grant or refusal of consent in the very nature of thing is at the discretion of the State Board.—The reason stated cannot be said to be unreasonable or extraneous or not germane to the purpose of the statute which is to prevent and to control water pollution and to maintain wholesomeness of water Grant or refusal of consent in the very nature of thing is at the discretion of the State Board. It is not for the Court to go into the propriety of the reason and substitute its opinion in place of the decision of the State Board. Their Lordships therefore, see no valid ground to interfere with the order of refusal or consent by the State Board.[2]

10. Further orders depending upon the contents of the report-Requirement of.— It was for the Central Government to consider the report taking into consideration the several facts and circumstances mentioned therein as also the contending views expressed by the several authorities and departments referred to therein. This the Central Government has clearly failed to do. There is another relevant consideration. The slaughter house has been in operation for the past eighteen months or so. It would be possible to find out the effect, if any, the operation of the slaughter house had on the cattle population of Medak and adjacent and nearly districts. It would equally be relevant to ascertain, if possible, what percentage of cattle slaughtered have been brought from other States and what percentage from the surrounding areas. In this connection, it is relevant to mention that the Animal Husbandry department has taken the total cattle population of the Andhra Pradesh State which is indeed misleading. The slaughter house is situated on the western border of Andhra Pradesh State, almost on the trijunction of Andhra Pradesh, Maharashtra and Karnataka. In such a situation, the slaughter house would rather draw its requirements of cattle from the surrounding and nearby districts rather than go all the way to far away districts of Andhra Pradesh State like Srikakulam, Visakhapatnam or for that matter. Nellore and Anantapur, which are situated several hundreds of miles away. The transport of cattle over long distance may induce the slaughter house to go in for cattle in the nearby areas, whether in Andhra Pradesh, Maharashtra or Karnataka unless, of course, the cattle are available at far cheaper rates at distant places, which together with transport charges would make it more economic for the slaughter house to bring cattle from far away districts or from far away areas in the country. Therefore, taking the entire cattle population of the Andhra Pradesh State is bound to convey an incorrect picture. Perhaps, it would be more appropriate to take into consideration the cattle population of, what the Krishnan Committee Calls, the "hinterland" of the slaughter house.

---

[1] M/s. Narula Dyeing & Printing Works *v.* Union of India, A.I.R. 1995 Guj. 185 at p. 191.

[2] Mahabir Soap and Gudakhu Factory, M/s *v.* Union of India, A.I.R. 1995 Orissa 218 at p. 221.

In view of the fact that the controversy relating to the establishment of the slaughter house has been going on over the last several years. It is appropriate that the Central Government should look into all relevant aspects, as directed by the High Court of Andhra Pradesh in its judgment dated 16th November, 1991, forthwith and record its opinion before a final decision in the matter, is taken. The decision of the Central Government shall be recorded in a reasoned proceeding, which shall be placed before Supreme Court. The further orders to be passed would depend upon the contents of the report and the material so placed before Supreme Court.[1]

11. Panchayat is empowered to grant licence on the basis of the recommendation of the State Pollution Control Board.— District Collector had to test by a trial run of the plant and then come to the conclusion that the ice plant will be harmful. On the basis of mere surmises, District Collector came to the conclusion that pollution will be caused if the ice plant is allowed to operate. Further according to his Lordship District Collector was wrong in saying that communal tension will be created. It is strange that a person, who is in charge of law and order, should say that the starting of an ice plant will create communal tension and hence it should not be started. Authorities should take all steps to prevent such situations. The fundamental right enshrined in Art. 19 of the Constitution of India. Article 19(1)(g) of the Constitution grants fundamental right to every citizen to exercise his professional, trade, etc. On the basis of the recommendation of the State Pollution Control Board, Panchayat may grant licence to the petitioner for starting the industry.[2]

12. Water pollution exists as coke dust settles on the Unkal Tank.—It is stated in the statement of objections that the industry is adjacent to the lake bund and also very near to the village and so there are chances of fire hazards to the village. It is further stated that coke dust settle on the Unkal Tank which is the drinking water source to Hubli citizens. It is also clear from the statement of objections that there are complaints regarding the pollution created by running the industry.[3]

26. Provision regarding existing discharge of sewage or trade effluent.—*Where immediately before the commencement of this Act any person was discharging any sewage or trade effluent into a* [1]*[stream or well or sewer or on land], the provisions of Sec. 25 shall so far as may be, apply in relation to such person as they apply in relation to the person referred to in that section subject to the modification that the application for consent to be made under sub-section (2) of that section* [2]*[shall be made on or before such date as may be specified by the State Government by notification in this behalf in the Official Gazette].*

SYNOPSIS

1. Drawing untreated sullage from the sewers is against the provisions of the Act—Stoppage order is justified . 230
2. Complaint with vague language—Not maintainable 230
3. Discharge of a trade effluent into a sewerage or on land without consent of the Board is an offence ... 231
4 Complaint is not maintainable as the place of sewage discharge is not specified . . 231

1. Drawing untreated sullage from the sewers is against the provisions of the Act—Stoppage order is justified.— In the instant case his Lordship is also of the opinion that Chandigarh Administration was justified in stopping the petitioners and other farmers from drawing untreated sullage from its sewers as according to the provisions of the Water (Prevention and Control of Pollution) Act, 1974, no person of any department of the State can without the previous consent of the State Board constituted under the said Act, permit the discharge of sewage on any land and if permission is granted for such discharge without the consent of the Board, the same constitutes an offence under the said Act. It appears that Chandigarh Administration has not been granted any permission by the State Board for the supply of sullage water and the Chief Engineer, Union Territory of Chandigarh, has already received a notice for having violated the provisions of Secs. 25 and 26 read with Secs. 43, 44 and 48 of the said Act. In such a situation how can the Administration be compelled to permit the discharge of sullage water from the sewers of Chandigarh, when its officers are being threatened with prosecution under the said Act.[3]

2. Complaint with vague language—Not maintainable.—Section 26 of Water (Prevention and Control of Pollution) Act refers to the place of discharge like stream, well or sewerage or land, unless these places are specified in the complaint, it cannot be taken that there is violation of the provisions of the Act and therefore, in the absence of any such place, the complaint with vague language, is not maintainable, In this complaint also, filed by the complainant, the extract of Sec. 26 is repeated and thereafter, it is stated that the occupier in relation to the factory/permises having control over the affairs of the factory, are discharging the sewage, trade affluent of the factory causing or likely to cause pollution without obtaining sanction from the Board. It is not specified in the complaint actually where the sewage or trade affluent is discharged. Government Advocate (Criminal Side) would concede that there is no mention of specific place of discharge, in the complaint and therefore, under the Old Act, unless place is specified it will not attract the penal section of the Act. Therefore, applying the above decision of Madras High Court, his Lordship feels that the complaint of the respondent is not maintainable and the same is liable to be quashed.[1]

---

[1] Subs. by Act 44 of 1978, Sec. 13, for "stream or well".

[2] Subs. by Act 44 of 1978, Sec. 13, for certain words.

[3] Amar Singh *v.* Union Territory of Chandigarh, 1993 (1) P.L.R. (P. & H.) 393 at p. 395.

3. **Discharge of a trade effluent into a sewerage or on land without consent of the Board is an offence.**— Sections 25 and 26 the Act which are the relevant sections for the case in hand, were amended by the Water (Prevention and Control of Pollution) Amendment Act, 1978 (44 of 1978). The amendment was brought into effect in the State of Haryana from 13th December, 1978. The State Government. issued Notification No. 29/3/PH (3) dated 14th July, 1980, specifying 21st October, 1980 as the date on or before which an application for consent under sub-section (2) of Sec. 25 read with Sec. 26 was to be made. Admittedly, no such application was made by the accused upto the taking of sample that is 31st July, 1981. According to the amendment, discharge of a trade effluent into a sewerage or on land constituted an offence without consent of the Board from 21st October, 1980 onwards. It will make no difference whether the trade effluent was discharged in the municipal drain or such effluent was drained out of the municipal drain and allowed to flow on land.[2]

4. **Complaint is not maintainable as the place of sewage discharge is not specified.**—In the complaint, the complainant has not specified the place of sewage discharge as mentioned in the Act viz., either in stream or well or sewerage or on land and therefore, without specifying the place of discharge the complaint for the offence under Sec. 26 of the above said Act is not maintainable.[3]

27. ***Refusal or withdrawal of consent by State Board.***—[4]*[(1) A State Board shall not grant its consent under sub-section (4) of Sec. 25 for the establishment of any industry, operation or process, or treatment and disposal system or extension or addition thereto, or to the bringing into use of a new or altered outlet unless the industry, operation or process, or treatment and disposal system or extension or addition thereto, or the outlet is so established as to comply with any conditions imposed by the Board to enable it to exercise its right to take samples of the effluent.]*

[5]*[(2) A State Board may from time to time review—*

- [6]*[(a) any condition imposed under Sec. 25 or Sec. 26 and may serve on the person to whom a consent under Sec. 25 or Sec. 26 is granted a notice making any reasonable variation of or revoking any such condition;*
- *(b) the refusal of any consent referred to in sub-section (1) of Sec. 25 or Sec. 26 or the grant of such consent without any condition, and may make such orders as it deemed fit.]*

(3) Any condition imposed under Sec. 25 or Sec. 26 shall be subject to any

[4] Subs. by Act 53 of 1988, Sec. 13, for sub-section (1).

[5] Subs. by Act 44 of 1978, Sec. 14, for sub-section (2).

[6] Subs. by Act 53 of 1988, Sec. 13, for Cl. (*a*).

variation made under sub-section (2) and shall continue in force until revoked under that sub-section.

Comment

The State Board is empowered to review the refusal of any consent referred to in sub-section (1) of Sec. 25 or Sec. 26.

*28. **Appeals.**— (1) Any person aggrieved by an order made by the State Board under Sec 25, Sec. 26 or Sec. 27 may within thirty days from the date on which the order is communicated to him, prefer an appeal to such authority (hereinafter referred to as the appellate authority) as the State Government may think fit to constitute :*

Provided that the appellate authority may entertain the appeal after the expiry of the said period of thirty days if such authority is satisfied that the appellant was prevented by sufficient cause from filing the appeal in time

[1]*[(2) An appellate authority shall consist of a single person or three persons as the State Government may think fit, to be appointed by that Government.]*

(3) The form and manner in which an appeal may be preferred under sub-section (1), the fees payable for such appeal and the procedure to be followed by the appellate authority shall be such as may be prescribed.

(4) On receipt of an appeal preferred under sub-section (1), the appellate authority shall, after giving the appellant and the State Board an opportunity of being heard, dispose of the appeal as expeditiously as possible.

(5) If the appellate authority determines that any condition imposed, or the variation of any condition, as the case may be, was unreasonable, then,—

- *(a) where the appeal is in respect of the unreasonableness of any condition imposed, such authority may direct either that the condition shall be treated as annulled or that there shall be substituted for it such condition as appears to it to be reasonable;*
- *(b) where the appeal is in respect of the unreasonableness of any variation of a condition, such authority may direct either that the condition shall be treated as continuing in force unvaried or that it shall be varied in such manner as appears to it to be reasonable.*

Comments

Section 28 of the Water Pollution Act, 1974 and Sec. 31 of the Air Pollution Act, 1981 provide for appeal.

The appellate authority is empowered to entertain the appeal even after the expiry of the period of thirty days.

*29. **Revision.**— (1) The State Government may at any time either of its own motion or on an application made to it in this behalf, call for the records of any case where an order has been made by the State Board under Sec. 25, Sec. 26 or Sec. 27 for the purpose of satisfying itself as to the legality or propriety of any such order and may pass such order in relation thereto as it may think fit :*

Provided that the State Government shall not pass any order under this sub-section without affording the State Board and the person who may be affected by such order a reasonable opportunity of being heard in the matter.

---

1. Subs. by Act 44 of 1978, Sec. 15, for sub-section (2).

(2) The State Government shall not revise any order made under Sec. 25, Sec. 26 or Sec. 27 where an appeal against that order lies to the appellate authority, but has not been preferred or where an appeal has been preferred such appeal is pending before the appellate authority.

30. Power of State Board to carry out certain works.— [1]*[(1) Where under this Act, any conditions have been imposed on any person while granting consent under Sec. 25 or Sec. 26 and such conditions require such person to execute any work in connection therewith and such work has not been executed within such time as may be specified in this behalf, the State Board may serve on the person concerned a notice requiring him within such time (not being less than thirty days) as may be specified in the notice to execute the work specified therein.]*

(2) If the person concerned fails to execute the work as required in the notice referred to in sub-section (1), then, after the expiration of the time specified in the said notice, the State Board may itself execute or cause to be executed such work.

(3) All expenses incurred by the State Board for the execution of the aforesaid work together with interest, at such rate as the State Government may, by order, fix, from the date when a demand for the expenses is made until it is paid, may be recovered by that Board from the person concerned, as arrears of land revenue, or of public demand.

31. Furnishing of information to State Board and other agencies in certain cases.— [2]*[(1) If at any place where any industry, operation or process, or any treatment and disposal system or any extension or addition thereto is being carried on, due to accident or other unforeseen act or event, any poisonous, noxious or polluting matter is being discharged, or is likely to be discharged into a stream or well or sewer or on land and, as a result of such discharge, the water in any stream or well is being polluted, or is likely to be polluted, then the person in charge of such place shall forthwith intimate the occurrence of such accident, act or event to the State Board and such other authorities or agencies as may be prescribed.]*

(2) Where any local authority operates any sewerage system or sewage works, the provisions of sub-section (1) shall apply to such local authority as they apply in relation to the person in charge of the place where any industry or trade is being carried on.

Comments

This section requires the person in charge on place or industry to furnish the information of the discharge of poisonous or polluting mater into a stream or well due to accident or other unforeseen act.

Section 31 of the Water Pollution Act, 1974 and Sec. 23 of the Air Pollution Act, 1981 deals with furnishing of information to State Board and other agencies in certain cases. Similar provision is contained in Sec. 9 of the Environment (Protection) Act, 1986.

32. Emergency measures in case of pollution of stream or well.— *(1) Where it appears to the State Board that any poisonous, noxious or polluting matter is present in* [3]*[any stream or well or on land by reason of the discharge of such matter*

---

[1] Subs. by Act 53 of 1988, Sec. 14, for sub-section (1).

[2] Subs. by Act 53 of 1988, Sec. 15, for sub-section (1).

[3] Subs. by Act 53 of 1988, Sec. 16, for "any stream or well".

in such stream or well or on such land] or has entered into that stream or well due to any accident or other unforeseen act or event, and if the Board is of opinion that it is necessary or expedient to take immediate action, it may for reasons to be recorded in writing, carry out such operations as it may consider necessary for all or any of the following purposes, that is to say,—

(a) removing that matter from the [1][stream or well or on land] and disposing it of in such manner as the Board considers appropriate;

(b) remedying or mitigating any pollution caused by its presence in the stream or well;

(c) issuing orders immediately restraining or prohibiting the person concerned from discharging any poisonous, noxious or polluting matter [2][into the stream or well or on land] or from making insanitary use of the stream or well.

(2) The power conferred by sub-section (1) does not include the power to construct any works other than works of a temporary character which are removed on or before the completion of the operations.

*33. **Power of Board to make application to courts for restraining apprehended pollution of water in streams or wells.**—[3][(1) Where it is apprehended by a Board that the water in any stream or well is likely to be polluted by reason of the disposal or likely disposal of any matter in such stream or well or in any sewer or on any land, or otherwise, the Board may make an application to a court, not inferior to that of a Metropolitan Magistrate or a Judicial Magistrate of the first class, for restraining the person who is likely to cause such pollution from so causing.]*

(2) On receipt of an application under sub-section (1) the Court may make such order as it deems fit.

(3) Where under sub-section (2) the Court makes an order restraining any person from polluting the water in any stream or well, it may in that order—

(i) direct the person who is likely to cause or has caused the pollution of the water in the stream or well, to desist from taking such action as is likely to cause pollution or, as the case may be, to remove from such stream or well, such matter, and

(ii) authorize the Board, if the direction under Cl. (i) (being a direction for the removal of any matter from such stream or well) is not complied with by the person to whom such direction is issued, to undertake the removal and disposal of the matter in such manner as may be specified by the Court.

(4) All expenses incurred by the Board in removing any matter in pursuance of the authorisation under Cl. (ii) of sub-section (3) or in the disposal of any such matter may be defrayed out of any money obtained by the Board from such disposal and any balance outstanding shall be recoverable from the person concerned as arrears of land revenue or of public demand.

[3] Subs. by Act 53 of 1988, Sec. 17, for sub-section (1).

SYNOPSIS

1 Scope . 235

2 Justification of directions under Sec 33 . . 235

3. Proceeding under Sec. 33 of the Act are obviously legal proceedings under the Act .. 236

4 Sections do not overlap but are complementary to each other ... 237

5. Doctrine of implied repeal—Rules of interpretation ... 238

6. Implied repeal of Sec. 133, Cr P C. ... 238

7. Power of the Board to seek remedies from a Magistrate ... 238

1. **Scope.**—This section gives powers to the Board to make an application to a court not inferior to a Presidency Magistrate or a Magistrate of the First Class, for restraining a person who was likely to cause pollution as mentioned in the said section from so causing it. Non-compliance with the directions given by the Court under the said Sec. 33 was made an offence punishable under Sec. 41 (2) of the Act. Under the provisions of Sec. 33 of the said Act of 1974, it was validly constituted Board which alone could file an application under that section. In this case, at the date of the application, *i.e.* on 24th July, 1981, there was no such validly constituted Board and therefore the said application was not maintainable.[1]

2. **Justification of directions under Sec. 33.**— Though the name of the river (or stream or well) does not appear in the complaint or the special application under Sec. 33 of the Water (Prevention and Control of Pollution) Act, there is a document with the title Form (to be submitted in triplicate purporting to be an application for consent by the accused for discharge, continuation of discharge under Secs. 25/26 of the Water (Prevention and Control of Pollution) Act (*see* rule 3), dated 27th October, 1978 describing the river to be river "Khan". Hence there is no force in the argument that the complaint is vague regarding the particular river. The complaint itself makes a reference to it. Again the same document purporting to be signed for the Indore-Malwa United Mills by the Manager (Administration and Co-ordination) admits of unpleasant smell in "B" Mill and odour in "A" Mill effluents. It also gives the details about quantitative disposal effluent in the stream for 2-2 cub/M/Lt. It also admits of no provision for holding the effluents in a tank and no change in the existing process. It, of course admits metal and alloy, chemicals, oils and grease and fuels, like wood, coal, oil, land gases being used in manufacturing cotton cloth using 22,50,000 litres of water daily. In these circumstances, there was sufficient material before the learned Chief Judicial Magistrate to proceed under Sec. 33 (3) of the Water (Prevention and Control of Pollution) Act, and give directions to the accused ; in any event the directions given are interlocutory in nature and liable to be set aside if the accused persons satisfy the Chief Judicial Magistrate to refrain from making them continue till the completion of the trail. There is no force in the argument that the learned Chief Judicial Magistrate has already pre-judged the issue. He has simply proceeded under Sec. 33 of the Water (Prevention and Control of Pollution) Act, pursuant to a special application in that regard by the complainant for which there was material before him.[2]

---

[1] H.C. Kathiwala *v.* Maharashtra Water (Prevention and Control of Pollution) Board, 1982 Cr. L.R. 290 at pp. 293, 298 (Bom.).

[2] Indore-Malwa United Mills *v.* Madhya Pradesh Pradushan Niwaran Mandal, (1986) Cr. L.R. 150 at pp. 151, 152 (M.P.); *see* also Sir Shadi Lal Enterprises Ltd. *v.* Chief Judicial Magistrate, Saharanpur, 1989 All. L.J. 7.

The Allahabad High Court in writ petition No. 8943 of 1985 decided on 6th February, 1987 held that the pollution of water of river Gomti by their health hazardous effluents which is used also as drinking water and is supplied through Jal Sansthan is said to be caused by both these Mills also. So far as Mohan Meakins Breveries is concerned which is rather on the bank of river Gomti the trade effluent flows directly in river Gomti though at a distance of few kilometers down stream from the Gaughat Pumping Station (supplying drinking water) while the trade effluent of Oudh Sugar Mills flows in river Gomti indirectly that is after covering the distance of 120 kilometres through Nala and the river Sarayan The water from a Distillery causes much more pollution than the waste of Sugar Mill because of the high concentration of organic matter in it.

The Pollution Board gave opportunities to these Mills but they did not avail it for reasons best known to them and even did not comply with the orders passed by the competent Court of law against them. The making of efforts without seriously developing even alternate ways for ending or even reducing to the minimum the injurious affects of trade effluent may only be an eye-wash. Even though these Mills gave undertaking to set-up treatment plant, but they did not even submit plan for treatment of effluents and time-bound programme what to say the installation of plant itself. The reminders by Board failed to make them to act in accordance with law in the matter of discharge of effluents or in public welfare.

Although Pollution Board has been taking action under Sec. 33 of the Pollution Act, but still more serious and continuous efforts towards this great problem in the State on its part is some-what lacking including exercise of emergency powers. It should gear up its machinery in right direction and see that its position is not reduced to that of a helpless watchman

3. Proceeding under Sec. 33 of the Act are obviously legal proceedings under the Act.— The Scheme of the Act shows that Sec. 21 is a provision of general application governing the matter of lifting of samples in all cases including the cases for the purpose of obtaining an order under Sec. 33 of the Act. The heading of Sec. 21 is "Powers to take samples of effluents and procedure to be followed in connection therewith" Section 21(1) incorporates the powers of the State Board or of the officers of the State Board with regard to the lifting of samples of water from any stream or well or samples of any sewage or trade effluent which is passing from any plant or vessel or from or over any place into any such stream or well. Sub-section (2) of Sec. 21 states that the result of any analysis of a sample of any sewage or trade effluent taken under sub-section (1) shall not be admissible in evidence in any legal proceeding unless the provision of sub-sections (3), (4) and (5) are complied with. The proceedings under Sec. 33 of the Act are obviously legal proceedings under the Act. It is thus clear that the sample must be lifted in accordance with the provisions of Sec. 21 of the Act when only its analysis could be admissible in evidence in the proceedings under Sec. 33 of the Act. Further Secs. 32 and 33 are the only two provisions of the Act where under samples may be lifted by the Board. Whereas Sec. 32 provides for emergent cases, Sec. 33 is the normal provision empowering the Board to make applications to courts for restraining apprehended pollution of water in streams of wells. So to say that for taking action under Sec. 33 which is a normal provision in which the lifting of samples is involved that the provision of Sec. 21 are not operative is wholly fallacious. The learned Magistrate also took note of the fact that the petitioners had not erected any treatment plant as per Cl. 5 of the consent order. It was submitted that there was no absolute obligation on the part of the petitioners to erect a separate treatment plant so long as they were not discharging the effluents contrary to the parameters as provided in the consent order. Be that as it may, the true interpretation of the impugned order is that a restraint order has been passed against the petitioners restraining them from discharging their effluents in the stream which do not conform to the quality as per the standards prescribed by the Board in its consent order and thereby causing pollution of the stream. One cannot read in between the order that a direction has been given to the petitioners to erect a treatment plant. Such a direction is also perhaps not envisaged by the provisions of Sec. 33 (1) of the Act. Section 33(1) only provides for the passing of a restraint order by the Court against the Company for ensuring the stoppage of apprehended pollution of water in the stream in which the trade effluents of the Company are discharged. For the non-erection of the treatment plant the Board has the power to launch prosecution against the defaulting company under the provisions of Sec. 41 of the Act. Therefore the learned Magistrate was not right in coming to the conclusion that through the provisions of Sec. 21 were applicable to the case, yet the sample was not required to be divided into two parts and got analysed as per the provision of sub-section (5) of Sec. 21 because in his view no appearance was put in on behalf of the company before he officials of the Board at the time of the taking of the sample by them.[1]

4. **Sections do not overlap but are complementary to each other.**— Under Sec. 33 of the Water (Prevention and Control of Pollution) Act, 1974, the Board is empowered to make an application of a Criminal Court for restraining any person who is likely to cause pollution and the Court on that application, may direct the person to desist from taking any such action as is likely to cause pollution or to remove from such stream or well such matter. The Court can also pass an order authorising the Board in case the direction for removal of any matter from the stream or well is complied with by the person to undertake the removal or disposal of the matter in such manner as the Court could specify, and all expenses incurred by the Board in removing any matter can be recovered from the person concerned as arrear of land revenue. In several other respects also, the Water (Prevention and Control of Pollution) Act is different from the Air (Prevention and Control of Pollution) Act, 1981. The decision, rendered by the Kerala High Court under the Water (Prevention and Control of Pollution) Act, therefore, would not apply to the Act. The foregoing analysis of the two legislations shows that the object, scope, areas of operations and the effect of the two legislations and the powers of the authorities empowered to implement them are different. In relation to public nuisance by air pollution, the provisions of the Code of Criminal Procedure, 1973 are wider in application and more effective and are intended primarily to remove public nuisances and prevent its recurrence. The latter Act is limited

---

[1] Delhi Bottling Company Pvt. Ltd., New Delhi *v.* Central Board for the Prevention and Control of Water Pollution, New Delhi, A.I.R. 1986 Delhi 152 at pp. 153, 154, 155.

in its operation to certain areas and to certain kinds of pollutants, and is primarily intended to control on scientific lines, certain types of air pollution and penalise the offender. There is no inconsistency or repugnancy between the two legislations so as to infer an implied repeal of the relevant provisions of the Code by virtue of the overriding provisions contained in Sec. 52 of the Air Act. The two legislations are complementary to each other, and are intended to function side by side in their own parallel channels. They do not even overlaps.[1]

5. **Doctrine of implied repeal—Rules of interpretation.**— The doctrine of implied repeal is based on the theory that the Legislature, which is presumed to know the existing law, did not intend to create any confusion by retaining conflicting provisions and, therefore, when the Court applies the doctrine, it does no more than give effect to the intention of the Legislature by examining the scope and the object of the two enactments and by a comparison of their provision[2] A repeal by implication will not be inferred merely from something contained in the preamble of the Act.[3] The continuance of existing legislation, in the absence of an express provision of repeal, being presumed. the burden to show that there has been a repeal by implication lies on the party asserting the same. The presumption is, however, rebutted and a repeal is inferred by necessary implication, when the provisions of later Act are so inconsistent with or repugnant to the provisions of earlier Act "that the two cannot stand together". The Supreme Court indicated in *Municipal Corporation, Palai* v. *T J. Joseph*,[4] certain tests to be applied for solving a question of implied repeal, namely (*i*) whether there is a direct conflict between the two provisions; (*ii*) whether the Legislature intended to lay down an exhaustive Code in respect of the subject-matter replacing the earlier law; (*iii*) where the two laws occupy the same filed. The matter in each case is one of the construction and comparison of two Acts. Lastly, a repeal by implication is just as effective as by express words.[5]

6. **Implied repeal of Sec. 133, Cr. P.C.**— Section 133, Cr. P.C., so far as it relates to water pollution does not stand repealed by the Water Act.

7. **Power of the Board to seek remedies from a Magistrate.**— The special law overrides the general law, if they operate in the same field and if they are irreconcilable. It is difficult to think that the Pollution Control Act and the Code of Criminal Procedure, are "special" and "general laws". One deals with pollution and the other with maintenance of law and order. The Pollution Control Act, which repeals the Code according to the learned Judge, has nothing whatever to do with maintenance of law and order. Their Lordships find no provision in the Pollution Control Act, to warrant such an inference. On the contrary, provisions of the Act indicate that the Board itself has to seek remedies from a Magistrate (Sec. 33).[6]

[7][***33-A. Power to give directions.***—*Notwithstanding anything contained in any other law, but subject to the provisions of this Act, and to any directions that the*

Central Government may give in this behalf, a Board may, in the exercise of its powers and performance of its functions under this Act, issue any directions in writing to any person, officer or authority, and such person, officer or authority shall be bound to comply with such directions.

Explanation.— For the avoidance of doubts, it is hereby declared that the power to issue directions under this section includes the power to direct—

(a) the closure, prohibition or regulation of any industry, operation or process; or

(b) the stoppage or regulation of supply of electricity, water or any other service.]

SYNOPSIS

1. Provisions of ... 239
2. Power to issue directions with regard to closure of industry ... 239
3. Power of Board to give directions ... 240
4. Pollution in river water-closure of the operation of the Industry ... 240

1. **Provisions of.—** The provision in Sec. 33-A read in the context of other provisions of the Act clearly brings this legal position to the fore that the Board is also empowered under Sec. 33-A to issue, in exercise of its power and performance of its function under the Act, necessary directions to its officers and employees appointed by it in virtue of Sec. 12 (3) thereof, who are also bound to comply with its directions. Section 33-A or the scheme of the Act itself for that matter does not envision issuance of direction by the Board to any Deputy Commissioner or Executive Magistrate under Criminal Procedure Code to execute its order passed under the Act. In that view of the ambit of Sec. 33-A, the contentation of learned counsel for the Board that the Board had the power thereunder to direct the Deputy Commissioner to execute its order dated 5.10.1996 passed against the petitioner's industrial unit is patently not acceptable and is untenable. Therefore, the Board's direction given or made to Deputy Commissioner to enforce its order dated 5.10.1996 passed against the petitioner's industrial unit is patently not acceptable and is untenable. Therefore, the Board's direction given or made to Deputy Commissioner to enforce its order dated 5.10.1996 was without authority of law. As a result, Deputy Commissioner was incompetent to carry out the Board's direction contained in its said letter dated 4.1.1997. Consequently, the impugned order of R. 1 if construed as having been passed on implied instructions from the Deputy Commissioner, as was sought to be argued by the Board's learned Counsel would be per se illegal.[1]

2. **Power to issue directions with regard to closure of industry.—** In the instant case, it is not possible to hold that the order passed by the respondent-Board directing the closure of industry is shockingly disproportionate and excessively severe. However, it is always open to the petitioner industry to comply with the directions issued by the respondent-Board and fulfil the requirements of standards and approach the respondent-Board for restarting its industrial activities and the same shall have to be considered by the Board on its own merits.[2]

[1] **Executive Apparel Processors, M/s. Bangalore *v.* The Taluka Executive Magistrate & Tahsildar, 1997 (4) Kant. L.J. 181 at p. 185 : 1997 Cr. L.J. 4472 at p. 4474.**

[2] **Ambuga Petro-chemicals Ltd. *v.* A.P. Pollution Control Board, A.I.R. 1997 A.P. 41 at p. 46. : 1996** (3) A.L.D. 422 at pp. 425, 426, 427 (A.P.).

3. Power of Board to give directions.— The Board has power to give "directions" under Sec. 33-A of the Act which includes the power to direct the closure, prohibition, regulation of industry, operation, process or stoppage or regulation of supply of electricity, water or any other service. The control is exercised through "consent" and conditions. However, as the scheme of law suggests State Pollution Control Board (Respondent), constituted under Sec. 4 of the Act, is controlled by the directions that the Central Government may choose to give in matter of exercise of powers available under Sec. 33-A of the Act.[1]

4. Pollution in river water—Closure of the operation of the Industry.— According to the Tamil Nadu Pollution Control Board, the seepage from the unlined lagoons in which effluent has been stored joins the drain and ultimately reaches river Bhivani thereby polluting the river water. This is a serious matter and shows that pollution is continuing because of actions of respondent No. 6 and remedial steps have not been taken to prevent pollution and contamination of the river water. Respondent No. 6, has obviously failed to arrest the unabated pollution, which has become a health hazard and environmental enemy. Enough time has been given to the Industry (respondent No. 6) to take the remedial steps. It has failed to do so. Their lordships directed the closure of the operation of the Industry (Respondent No. 6) on or before 2nd February, 1998. The Tamil Nadu Pollution Control Board shall submit a report regarding compliance of this direction by Industry.[2]

CHAPTER VI

FUNDS, ACCOUNTS AND AUDIT

*34. **Contributions by Central Government.**— The Central Government may, after due appropriation made by Parliament by law in this behalf, make in each financial year such contributions to the Central Board as it may think necessary to enable the Board to perform its functions under this Act.*

Section 34 of the Water Pollution Act, 1974 and Sec. 32 of the Air Pollution Act, 1981 relate to the contributions by Central Government.

*35. **Contribution by State Government.**— The State Government may, after due appropriation made by the Legislature of the State by law in this behalf, make in each financial year such contributions to the State Board as it may think necessary to enable that Board to perform its functions under this Act.*

*36. **Fund of Central Board.**— (1) The Central Board shall have its own fund, and all sums which may, from time to time, be paid to it by the Central Government and all other receipts (by way of gifts, grants, donations, benefactions [3][fees] or otherwise) of that Board shall be carried to the fund of the Board and all payments by the Board shall be made therefrom.*

(2) The Central Board may expend such sums as it thinks fit the performing its functions under this Act, [4][and, where any law for the time being in force relating to the prevention, control or abatement of air pollution provides for the performance of any function under such law by the Central Board, also for performing its functions

4. *Ibid.*

under such law] and such sums shall be treated as expenditure payable out of the funds of that Board.

Comment

This section empowers the Central Board to expend such sums which it thinks fit for performing its functions under this Act.

37. *Fund of State Board.*— *(1) The State Board shall have its own fund, and the sums which may, from time to time, be paid to it by the State Government and all other receipts (by way of gifts, grants, donations, benefactions* [1]*[fees] or otherwise) of that Board shall be carried to the fund of the Board and all payments by the Board shall be made therefrom.*

(2) The State Board may expend such sums as it thinks fit for performing its functions under this Act, [2]*[and, where any law for the time being in force relating to the prevention, control or abatement of air pollution provides for the performance of any function under such law by the State Board, also for performing its functions under such law] and such sums shall be treated as expenditure payable out of the funds of that Board.*

Comment

Section 37 of the Water Pollution Act, 1974 and Sec. 33 of the Air Pollution Act, 1981 relate to the fund of State Board.

[3][**37-A. *Borrowing powers of Board.***— *A Board may, with the consent of, or in accordance with, the terms of any general or special authority given to it by the Central Government or, as the case may be, the State Government, borrow money from any source by way of loans or issue of bonds, debentures or such other instruments, as it may deem fit, for the performance of all or any of its functions under this Act.]*

38. *Budget.*— *The Central Board or as the case may be, the State Board shall during each financial year, prepare, in such form and at such time as may be prescribed, a budget in respect of the financial year next ensuing showing the estimated receipt and expenditure, and copies thereof shall be forwarded to the Central Government or, as the case may be, the State Government.*

Comment

Section 38 of the Water Pollution Act, 1974 and Sec. 34 of the Air Pollution Act, 1981 relate to the budget.

[4][**39. *Annual Report.***— *(1) The Central Board shall, during each financial year, prepare, in such form as may be prescribed, an annual report giving full account of its activities under this Act during the previous financial year and copies thereof shall be forwarded to the Central Government within four months from the last date of the previous financial year and that Government shall cause every such report to be laid before both Houses of Parliament within nine months from the last date of the previous financial year.*

(2) Every State Board shall, during each financial year, prepare, in such form as may be prescribed, an annual report giving full account of its activities under this Act during the previous financial year and copies thereof shall be forwarded to the State Government within four months from the last date of the previous financial year and that Government shall cause every such report to be laid before the State Legislature within a period of nine months from the last date of the previous financial year.]

---

1. Ins. by Act 44 of 1978, Sec. 16.
2. Ins. by Act 44 of 1978, Sec. 17.
3. Ins. by Act 53 of 1988, Sec. 19.
4. Subs. by Act 53 of 1988, Sec. 20, for Sec. 39.

Comment

Section 39 of the Water Pollution Act, 1974 and Sec. 35 of the Air Pollution Act, 1981 relate to the annual report.

40. Accounts and audit.— *(1) Every Board shall maintain proper accounts and other relevant records and prepare an annual statement of accounts in such form as may be prescribed by the Central Government or, as the case may be, the State Government.*

(2) The accounts of the Board shall be audited by an auditor duly qualified to act as an auditor of companies under Sec. 226 of the Companies Act, 1956 (1 of 1965)

(3) The said auditor shall be appointed by the Central Government or, as the case may be, the State Government on the advice of the Comptroller and Auditor-General of India.

(4) Every auditor appointed to audit the accounts of the Board under this Act shall have the right to demand the production of books, accounts, connected vouchers and other documents and papers and to inspect any of the offices of the Board.

(5) Every such auditor shall send a copy of his report together with an audited copy of the accounts to the Central Government or, as the case may be, the State Government.

(6) The Central Government shall, as soon as may be after the receipt of the audit report under sub-section (5), cause the same to be laid before both Houses of Parliament.

(7) The State Government shall, as soon as may be after the receipt of the audit report under sub-section (5), cause the same to be laid before the State Legislature.

Comment

Section 40 of the Water Pollution Act, 1974 and Sec. 36 of the Air Pollution Act, 1981 relate to "accounts and audit". Rule 25 of the Water (Prevention and Control of Pollution) Rules, 1975 provides that the annual statement of accounts of the Central Board shall be in Forms V to IX of the Rules.

CHAPTER VII

PENALTIES AND PROCEDURE

[1][**41. Failure to comply with directions under sub-section (2) or sub-section (3) of Sec. 20, or orders issued under Cl. (c) of sub-section (1) of Sec. 32 or directions issued under sub-section (2) of Sec. 33 or Sec. 33-A.**— *(1) Whoever fails to comply with any direction given under sub-section (2) or sub-section (3) of Sec. 20 within such time as may be specified in the direction shall, on conviction, be punishable with imprisonment for a term which may extend to three months or with fine which may extend to ten thousand rupees or, with both and in case the failure continues, with an additional fine which may extend to five thousand rupees for every day during which such failure continues after the conviction for the first such failure.*

---

1. Subs. by Act 53 of 1988, Sec. 21, for Sec. 41.

(2) Whoever fails to comply with any order issued under Cl. (c) of sub-section (1) of Sec. 32 or any direction issued by a court under sub-section (2) of Sec. 33 or any direction issued under Sec. 33-A shall, in respect of each such failure and on conviction, be punishable with imprisonment for a term which shall not be less than one year and six months but which may extend to six years and with fine, and in case the failure continues, with an additional fine which may extend to five thousand rupees for every day during which such failure continues after the conviction for the first such failure.

(3) If the failure referred to in sub-section (2) continues beyond a period of one year after the date of conviction, the offender shall, on conviction, be punishable with imprisonment for a term which shall not be less than two years but which may extend to seven years and with fine.]

Comments

Section 41 of the Water Pollution Act, 1974 and Sec. 37 of the Air Pollution Act, 1981 are the penal provision and are based on the same footing. The provision relating to penalty has been provided in Sec. 15 of the Environment (Protection) Act, 1986.

Taking action under the provisions of.— The Act is a self-contained special enactment legislated with the avowed object of preventing and controlling water pollution and maintaining or restring the wholesomeness of water and the Board as the statutory body is created and established by it to achieve this specific purpose. The Act provides an effective machinery for the Board for successful implementation of its scheme to achieve its object. The remedies of appeal and revision against the order of the Board are also provided by the Act to the aggrieved person. In that view of the object and structural pattern of the Act investing the Board with the full power and providing the necessary machinery to achieve the aforementioned object, the general power of the Executive Magistrate under Sec. 133 of Cr. P.C. to take action in regard to any case of water pollution must, by necessary implication, give way and yield to the superseding statutory power of the Board to deal with and tackle the same.

Therefore, for the reasons stated above, his lordship finds that the impugned order of R. 1-Taluka Executive Magistrate shown as passed in exercise of its power under Sec. 133 of Criminal Procedure Code, is unsustainable in law. It needs to be noted here that for the reasons best known to it the Board instead of promptly proceeding to take action under Sec. 41 of the Act against the erring petitioner for alleged breach of its said order dated 5.10.1996, has unnecessarily indulged in futile exercise of getting the same executed through the Deputy Commissioner.[1]

42. Penalty for certain acts.*— (1) Whoever—*

- *(a) destroys, pulls down, removes, injures or defaces any pillar, post or stake fixed in the ground or any notice or other matter put up, inscribed or placed, by or under the authority of the Board, or*

(b) obstructs any person acting under the orders, or directions of the Board from exercising his powers and performing his functions under this Act, or

(c) damages any works or property belonging to the Board, or

(d) fails to furnish to any officer or other employee of the Board any information required by him for the purpose of this Act, or

(e) fails to intimate the occurrence of an accident or other unforeseen act or event under Sec. 31 to the Board and other authorities or agencies as required by that section, or

(f) in giving any information which he is required to give under this Act, knowingly or wilfully makes a statement which is false in any material particular, or

(g) for the purpose of obtaining any consent under Sec. 25 or Sec. 26 knowingly or wilfully makes a statement which is false in any material particular,

shall be punishable with imprisonment for a term which may extend to three months or with fine which may extend to [1]*[ten thousand rupees] or with both.*

(2) Where for the grant of a consent in pursuance of the provisions of Sec. 25 or Sec. 26 the use of a meter or gauge or other measure or monitoring device is required and such device is used for the purposes of those provisions, any person who knowingly for wilfully alters or interferes with that device so as to prevent it from monitoring or measuring correctly shall be punishable with imprisonment for a term which may extend to three months or with fine which may extend to [1]*[ten thousand rupees] or with both.*

Comments

Sub-section (2) provides for the punishment consisting of imprisonment up to three months or of fine up to one thousand rupees or both for wilful alteration or interference with the device used, *i.e.*, meter gauge or monitoring device for the grant of a consent in pursuance of the provisions of Sec. 25 or Sec. 26.

Section 42 of the Water Pollution Act, 1974 and Sec. 38 of the Air Pollution Act, 1981 provide penalty for certain acts.

43. *Penalty for contravention of provisions of Sec. 24.*— *Whoever contravenes the provisions of Sec. 24 shall be punishable with imprisonment for a term which shall not be less than* [2]*[one year and six months] but which may extend to six years and with fine.*

Comment

Necessity of sanction.— Cognizance can be taken either on a complaint filed by the State Board itself, or with the previous sanction of the State Board if the complaint is not filed by the State Board itself. In the present case when the complainant is the State Board itself, the question of sanction does not arise.[3]

---

[1] Subs. by Act 53 of 1988, Sec. 22, for "one thousand rupees".

[2] Subs. by Act 53 of 1988, Sec. 24, for "one year".

44. Penalty for contravention of Sec. 25 or Sec. 26.— *Whoever contravenes the provisions of Sec. 25 or Sec. 26 shall be punishable with imprisonment for a term which shall not be less than [1][one year and six months] but which may extend to six years and with fine.*

SYNOPSIS

1. Withdrawal of the complaint for the offence under Secs. 43 and 44 ... 245
2. Responsibility of ... 245
3. Special Court — Establishment of ... 245

1. Withdrawal of the complaint for the offence under Secs. 43 and 44.— In the absence of any specific provision under the Act, under which the prosecution has been launched against the petitioner, mere fact that the counsel for the complainant Board had also signed the application for withdrawal of the complaint would not fall in this lacuna. At any rate, from the perusal of the said application it is quite apparent that no prayer, whatsoever, was made by the counsel for the complainant Board to withdraw prosecution against the accused-petitioner. Mere mention in the said application to withdraw the complaint, or, the same be dismissed as withdrawn, would not be sufficient to hold that the said application tantamounts to request for withdrawal of the prosecution launched against the accused-petitioner by the complainant Board.[2]

2. Responsibility of.— It may be pointed out that the complaint filed against applicants does contain specific allegation that all the applicants were incharge of the business of the company and were responsible for the working of the company and for conduct of its business in para 19. The complaint cannot be said to be bad on this score.[3]

3. Special Court—Establishment of.— The State Government issued a notification on 22nd July, 1988 by which it established special court of Judicial Magistrate of the first Class at Lucknow with effect from 1st August, 1988 to try and inquire into cases arising within the limits of any district in Uttar Pradesh under the Water (Prevention and Control of Pollution) Act, 1974. The contention raised by the petitioner in the petition is that by the notification, no special court of Judicial Magistrate First Class was established. This contention has no force in view of the clear language of the notification. Subsequently, by an order dated 25th August, 1988, the High Court had appointed a Presiding Officer of the special court of Judicial Magistrate First Class at Lucknow exercising its powers under Sec. 11(2) of the Code of Criminal Procedure. As soon as the special Court of Judicial Magistrate of the First Class was created to try the offences punishable under the Act, the Jurisdiction of all other Magistrates to try to offences under the Act ceased. It cannot, in the circumstances, be said that the Magistrate before whom the matter was pending before the establishment of the Special Court of Judicial Magistrate First Class continued to have jurisdiction to try the case. In view of the above fact, Allababad High Court was right in directing that all the cases pending before other Magistrates should be transferred to the court of special court of Judicial Magistrate of the First Class, Lucknow for trial.[4]

---

1. Subs. by Act 53 of 1988, Sec. 23, for "six months".
2. L.R Wadhawani *v.* Haryana State, State Board for the Prevention and Control of Water Pollution, Chandigarh, 1989(1) P.L.R. 140 at p. 142.
3. Trans Asia Carpets Ltd. *v.* State, 1992 All. L.J. 357 at p. 359 : 1992 Cr. L.J. 673.
4. Raghunath Raj *v* State of U.P., 1993 (1) Crimes 1001 at p. 1003 (All.).

45. *Enhanced penalty after previous conviction.*— *If any person who has been convicted of any offence under Sec. 24 or Sec. 25 or Sec. 26 is again found guilty of an offence involving a contravention of the same provision, he shall, on the second and on every subsequent conviction, punishable with imprisonment for a term which shall not be less than* [1]*[one and half years] but which may extend to six years and with fine :*

Provided that for the purpose of this section no cognizance shall be taken of any conviction made more than two years before the commission of the offence which is being punished.

Comment

This section provides for taking into account of the previous conviction for the contravention of Sec. 24 or Sec. 25 or Sec. 26, since it provides enhanced penalty therefor. But the previous conviction should not have been more than two years before the commission of the offence which is the subject of punishment.

[2]**[45-A. *Penalty for contravention of certain provisions of the Act.*—** *Whoever contravenes any of the provisions of this Act or fails to comply with any order or direction given under this Act, for which no penalty has been elsewhere provided in this Act, shall be punishable with imprisonment which may extend to three months or with fine which may extend to ten thousand rupees or with both and in the case of a continuing contravention or failure, with an additional fine which may extend to five thousand rupees for every day during which such contravention or failure continues after conviction for the first such contravention or failure.]*

46. *Publication of names of offenders.*— *If any person convicted of an offence under this Act commits a like offence afterwards it shall be lawful for the Court before which the second or subsequent conviction takes place to cause the offender's name and place of residence, the offence and the penalty imposed to be published at the offender's expense in such newspapers or in such other manner as the Court may direct and the expenses of such publication shall be deemed to be part of the cost attending the conviction and shall be recoverable in the same manner as a fine.*

47. *Offences by companies.*— *(1) Where an offence under this Act has been committed by a company, every person who at the time the offence was committed was in charge of, and was responsible to the company for the conduct of, the business of the company, as well as the company, shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :*

Provided that nothing contained in this sub-section shall render any such person liable to any punishment provided in this Act if he proves that the offence was committed without his knowledge for that he exercised all due diligence to prevent the commission of such offence.

(2) Notwithstanding anything contained in sub-section (1), where an offence under this Act was been committed by a company and it is proved that the offence has been committed with the consent or connivance of, or is attributable to any neglect on the part of, any director, manager, secretary or other officer of the company, such director, manager, secretary or other officer shall also be deemed to be guilty of that offence and shall be liable to be proceeded against and punished accordingly.

---

[1] Subs. by Act 53 of 1988, Sec. 23, for "six months".

[2] Ins. by Act 53 of 1988, Sec. 25.

Explanation.— For the purpose of this section,—

(a) "company" means any body corporate, and includes a firm or other association of individuals; and

(b) "director" in relation to a firm means a partner in the firm.

24. Small functionaries committed no offence as they were not responsible for conduct of the day-to-day business of the company ... 261
25. Every person who was responsible to the company for the conduct of the business of the company, as well as the company shall be deemed to be guilty of the offence ... 261

Section 47 of the Water Pollution Act, 1974 and Sec. 40 of the Air Pollution Act, 1981 deal with offences by Companies. Similar provision is contained in Sec. 16 of the Environment (Protection) Act, 1986.

Under this section, the director or manager is also liable to be punished if the offence has been committed with his consent or connivance.

1. Definitions.—Company.— The expressions, "company", "existing company", "private company" and "public company", are defined in Sec. 3 of the Companies Act, 1956, as follows :

> *"Definitions of 'company', 'existing company', 'private company' and 'public company'.—* (1) In the Companies Act, 1956, unless the context

otherwise requires, the expressions 'company', 'existing company private company' and 'public company' shall, subject to the provisions of sub-section (2) have the meaning specified below :

(*i*) 'Company' means a company formed and registered under this Act or an existing company as defined in Cl. (*ii*);

(*ii*) 'existing company' means a company formed and registered under any of the previous companies laws specified below:

(*a*) Any Act or Acts relating to companies in force before the India Companies Act, 1866 (X of 1866) and repealed by that Act;

(*b*) the Indian Companies Act, 1866 (X of 1866) ,

(*c*) the Indian Companies Act, 1882 (VI of 1882);

(*d*) the Indian Companies Act, 1913 (VII of 1913);

(*e*) the Registration of Transferred Companies Ordinance, 1942 (LIV of 1942); and

(*f*) any law corresponding to any of the Acts or the Ordinance aforesaid and in force—

(1) in the merged territories or in Par B State (other than the State of Jammu and Kashmir) or any part thereof, before the extension thereto of the Indian Companies Act, 1913 (VII of 1913);

(2) in the State of Jammu and Kashmir, or any part thereof, before the commencement of the Jammu and Kashmir (Extension of Laws) Act, 1956, in so far as banking, insurance and financial corporations are concerned, and before the commencement of the Central Laws (Extension to Jammu and Kashmir) Act, 1968, in so far as other corporations are concerned;

(*iii*) 'private company' means a company which by its articles,—

(*a*) restricts the right to transfer its shares, if any;

(*b*) limits the number of its members of fifty not including—

(*i*) persons who are in the employment of the company, and

(*ii*) persons who, having been formerly in the employment of the company, were members of the company while in that employment and have continued to be members after the employment ceased ; and

(*c*) prohibits any invitation to the public or subscribe for any shares in, or debentures of, the company :

Provided that where two or more persons hold one or more shares in a company jointly, they shall, for the purposes of this definition, be treated as a single member;

(*iv*) 'public company' means a company which is not a private company.

(2) Unless the context otherwise requires, the following companies shall not be included within the scope of any of the expressions definition in Cls. (*i*) to (*iv*) of sub-section (1), and such companies shall be deemed, for the purposes of this Act, to have been formed and registered outside India :

(*a*) A company the registered office where of is in Burma, Aden or Pakistan and which immediately before the separation of that country from India was a company as defined in Cl. (*i*) of sub-section (1) ;

(*b*) A company the registered office whereof is in the State of Jammu and Kashmir and which immediately before the 26th day of January, 1950, was a company as defined in Cl. (*i*) aforesaid".

2. **Director.**— The word "director" has been defined in Sec. 2 (13) of the Companies Act, 1956, as follows :

> "(13) 'director' includes any person occupying the position of director, by whatever name called".

3. **Manager.**— The word "manager" has been defined in Sec. 2 (24) of the Companies Act, 1956, as follows :

> "(24) 'manager' means an individual (not being the managing agent) who, subject to the superintendence, control and direction of the Board of Directors, has the management of the whole, or substantially the whole, of the affairs of a company, and includes a director or any other person occupying the position of a manager, by whatever name called, and whether under a contract of service or not".

4. **Managing agent.**— The words "managing agent" have been defined in Sec. 2 (25) of the Companies Act, 1956, as follows :

> "(25) 'managing agent' means any individual, firm or body corporate entitled, subject to the provisions of this Act, to the management of the whole, or substantially the whole, of the affairs of a company by virtue of an agreement with the company, or by virtue of its memorandum or articles of association, and includes any individual, firm or body corporate occupying the position of a managing agent, by whatever name called".

5. **Managing Director.**— The words "managing director' has been defined in Sec. 2 (26) of the Companies Act, 1956, as follows :

> "(26) 'managing director' means a director who, by virtue of an agreement with the company or of a resolution passed by the company in general meeting or by its Board of Directors or by virtue of its memorandum or articles of association, is entrusted with any powers of management which would not otherwise be exercisable by him, and includes a director occupying the position of a managing director, by whatever name called :
>
> Provided that the power to do administrative acts of a routine nature when so authorized by the Board such as the power to affix the common seal of the company to any document or to draw and endorse any cheque on the account of the company in any bank or

> to draw and ensorse any negotiable instrument or to sign any certificate of share or to direct registration of transfer of any share, shall not be deemed to be included within substantial powers of management :
>
> Provided further that a managing director of a company shall exercise his powers subject to the superintendence, control and direction of its Board of Directors".

6. **Officer.**— The word "officer "has been defined in Sec. 2 (30) of the Companies Act, 1956, as follows ·

> "'Officer' includes any director, managing agent, secretaries and treasurers, manager or secretary or any person in accordance with whose directions or instructions the Board of Directors or any one or more of the directors is or are accustomed to act, and also includes—
>
> (*a*) where the managing agent, the secretaries and treasurers or the secretary is or are a firm, any partner in the firm ;
>
> (*b*) where the managing agent or the secretaries and treasurers is or are a body corporate, and director or manager of the body corporate ;
>
> (*c*) where the secretary is a body corporate, any director, managing agent, secretaries and treasurers or manager of the body corporate;
>
> but, save in Secs. 477, 478, 539, 543, 545, 621, 625 and 633 does not include an auditor".

7. **Secretary.**— The word "secretary" has been defined in Sec. 2 (45) of the Company Act, 1956, as follows :

> "secretary' means any individual, firm or body corporate appointed to perform the duties which may be performed by a secretary under this Act and any other purely ministerial or administrative duties".

8. **Firm.**— The firm being a partnership firm comes under the definition of the company.[1] The expression "firm" has been defined in Sec. 4 of the Indian Partnership Act, 1932, as follows :

> "4. *Definition of 'partnership', 'partner', 'firm' and 'firm name'.* — Partnership is the relation between persons who have agreed to share the profits of a business carried on by all or any of them acting for all. Persons who have entered into partnership with one another are called individually 'partners' and collectively a 'firm' and the name under which their business is carried on is called the 'firm name'".

9. **Offence committed by the firm.**— When the firm is accused of an offence an opportunity must be given to defend itself and for that purpose

---

[1] Durgamata Oil Mills *v.* Corporation of Calcutta, (1978) 1 F.A.C. 183 at p. 185.

proper representation of the firm will be necessary. Unless the firm knows that it is answerable or it is to be tried there can be no proper arrangement for representation of the firm and for proper defence. The company, meaning here the firm, is a distinct legal entity and therefore separate charge must be framed. When there was no charge or notice to the firm that it would be tried there can be no question of conviction against the firm.[1]

It is true that such a formal averment should be contained in the complaint or that some material should be placed before the High Court for purposes of arraigning an accused person but we cannot lose sight of the legal position in certain situations. Where an offence on the part of a Company is alleged the Managing Director as the Chief Executive would necessarily have to be cited as an accused, though it is always open to the individual concerned to plead whatever defence on facts and law he is entitled to.[2]

10. "Act of firm".— The expression "act of firm" has been defined in sec. 2 (*a*) of the Indian Partnership Act, 1932, as under :

> "'An act of firm' means any act or omission by all the partners, or by any partner of agent of the firm which gives rise to a right enforceable by or against the firm".

Where there was nothing on the record to show that the Plant Superintendent (sole accused) was a person responsible or in charge of or responsible to the manufacture of sale of Coca-Cola, it was held that he was entitled to the benefit of doubt.[3]

In *Municipal Corporation of Delhi* v. *Bhagwan Dass*,[4] the defence taken by the accused was that he had severed his connections with the firm and that defence he had failed to establish. It was held that there was no question of the offence having been committed without his knowledge or that he had exercised all due diligence for the prevention of such offence.

11. Liability of a partner of firm.— A Division Bench of the Delhi High Court in *M.C.D.* v *Krishan Chand*,[5] has held that where a company has been acquitted "whatever the reasons for the acquittal may be, and as an inevitable concomitant thereof, it is not possible to deem any person to be guilty of the offence because of his being in charge of the business of the company at the material time".

12. Prosecution of manager in the absence of the proprietor.— Withdrawal of the prosecution against the proprietors of the firm, is not a ground for dropping of the proceedings against the manager of the firm.[6]

13. Prosecution against Director and Secretary of Company.— In a case it has been said in the complaint that the accused persons are knowingly and intentionally discharging their polluted trade effluent without obtaining the consent of the Board and they are Directors and Secretary of the company and they are responsible for the conduct of day to day business of the company and responsible for not obtaining the consent of the Board and discharging the trade effluents without obtaining consent. It has further been said that they are incharge of the business of the company and they are responsible for day to day working of the company and also conducting business of the company and continuous commissioning of the offence.

---

[1] Durgamata Oil Mills. *v.* Corporation of Calcutta, 1978 Cr. 222 at p. 223.

[2] B.T. and F.C. (Private) Limited, M/s. Bangalore *v.* Karnataka State Pollution Control Board, Bangalore, 1997 (3) Kant. L.J. 199 at pp. 201, 202.

[3] B.K. Verma *v.* Corporation of Madras, A.I.R. 1971 Mad. 40 at p. 41.

[4] (1972) 2 Cr. L.J. 1433 at p. 1436.

[5] Criminal Appeal No. 122 of 1972, decided on 25th March, 1975 (Delhi).

[6] Naveen Chandra *v.* State of Rajasthan, 1979 F.A.J. 403 at p. 405 (Raj.).

Thus there is clear allegation against them that they are responsible for conduct of the work of the company So they can be prosecuted unless they prove that the offence was committed without their knowledge or that they exercised all due diligence to prevent the commissioning of such offence.[1]

14. Liability of co-operative society and its secretary.— A co-operative society and the secretary can be separately convicted.[2]

In the above-noted case, what the secretary was doing was checking the cash received by the clerk and checking accounts recorded by the clerk. The day-to-day business of selling milk was done by the clerk because the secretary who was only an honorary secretary was not going to the society daily and the business was left in the hands of the clerk with a check over him by the secretary.

Natural persons are made vicariously liable for an offence when it is established that the offence was committed by a company or firm and these persons had some nexus with the crime either because of their connivance with or due to their criminal negligence which had resulted in its commission.[3]

15. Whether a private corporation would fall within scope and ambit of Art. 12 of the Constitution.— The Supreme Court in the case of *M.C. Mehta* v. *Union of India*,[4] held that it is not correct to say that in India once a corporation is deemed to be "authority", it would be subject to the constitutional limitation of fundamental rights in the performance of all its functions and that the appellation of "authority" would stick to such corporation, irrespective of the functional context. The Supreme Court has throughout the last few years expanded the horizon of Art. 12 primarily to inject respect for human rights and social conscience in corporate structure. The purpose of expansion has not been to destroy the *raison detre* of creating corporations but to advance the human rights jurisprudence. Similar apprehension was voiced when this Court in *Ramanna D. Shetty* v. *International Airport Authority*,[5] brought public sector corporations within the scope and ambit of Art. 12 and subjected them to the discipline of fundamental rights. But the instant case being subjudice, the Supreme Court held as under :

---

[3] Municipal Corporation of Delhi *v.* Bhagwan Dass, 1972 F.A.C. 177 at p. 182 (Delhi).
[4] 1987(1) S.C.R. 819 at pp. 841, 842 : A.I.R. 1987 S.C. 1086 at pp. 1097, 1098.
[5] A.I.R. 1979 S.C. 1628 : 1979 (3) S.C.R. 1014.

> "But we do not propose to decide finally at the present stage whether a private corporation like Shriram would fall within the scope and ambit of Art. 12, because we have not had sufficient time to consider and reflect on this question in depth. The hearing of this case before us concluded only on 15th December, 1986 and we are called upon to deliver out judgment within a period of four days, on 19th December, 1986. We are, therefore, of the view that this is not a question on which we must make any definite pronouncement at this stage. But we would leave it for a proper and detailed consideration at a later stage if it becomes necessary to do so".

16. Section does not necessarily mandate the incorporation of the words "was in charge of and was responsible to the company for the conduct of the business of the company".— Section 47 (1) spells out a deeming fiction of vicarious liability and a rule of evidence laying the burden of proof on persons in charge of and responsible to the company for the conduct of its business. It is settled beyond cavil that rules of evidence and deeming fictions are not to be expressly spelt out and pleaded. They are matters which are for consideration and application in the course of the trial. To require that the complaint itself must plead a rule of evidence or, in terms spell out a deeming fiction provided by the statute therein in an argument bordering on hyper-technically. One must always keep in mind the broader perspective that the administration of criminal law is more a matter of substance than of form and should not be allowed to be obscured by pettifogging technicality. Now it is manifest from the above that the categoric allegation in the evidence was that the petitioner was the Managing Director of the company and this is a fact which is undisputed on the record. The Managing Director of a company from his very designation implies both the control and command of the affairs of such a company and equally a statutory liability to the company for responsible conduct of its business. It is a compendious terms, which signifies both control of and responsibility to the company both in ordinary parlance and by virtue of the provisions of the Indian Companies Act. Consequently, to insist that in spite of the description of a person as a Managing Director of the company there must be a further pleading that he is the person in charge thereof and is responsible to it for the conduct of its business would suffer from the vice of laterality of course, as the proviso, to Sec. 47 (1) shows, it is permitted even for a Managing Director to show that he did not have any knowledge of the commission of the offence or that he acted with the greatest diligence to prevent the same. But, the burden of proof is laid upon him. The factum of being the Managing Director of the company is by itself sufficient to attract the provisions of Sec. 47 (1) and the vicarious liability specified therein. The specific words therein he was in charge of and was responsible to the company for the conduct of the business of the company are not a magic incantation which, unless repeated, would vitiate a prosecution if the substance of the matter is well spelt out either in the complaint itself or in categoric terms by acceptable testimony. Thus, Sec. 47 (1) of the Act does not necessarily mandate the incorporation of the words.—"was in charge of and was responsible to the company for the conduct of the business of the company"—in all complaints against the Chairman, the Managing Director or the General Manager of the company for offences in contravention of the company for offences in the Act.[1]

17. Whether Sec. 47 (2) inflexibly mandates the incorporation of the allegation that the offence was committed with the consent or connivance or was attributable to the neglect on the part of the Chairman or Managing Director or General Manager of the company in the complaint itself.—Unlike sub-section (1) which foists vicarious liability only on persons incharge of and responsible to the company for the conduct of its business, the sub-section imposes a somewhat similar liability on a larger class of directors, managers, secretaries or even other officers of the company. In a way this sub-section is envisaged to widen the net of vicarious liability and to bring within its sweep not only the primal official of the company but even other officers of thereof if the commission of the offence by the company can be established to have been done with the consent, connivance or neglect on their part Thus, the role and scope of sub-section (2) is somewhat different from that of sub-section (1), the former being applicable only to persons directly incharge of and responsible to the company and the latter having a wider application though in a given situation. They might slightly overlap. Equally the stringency of vicarious liability in the two sub-sections is variable When closely viewed, sub-section (2) is clearly indictive of the fact that it is both a rule of evidence and yet again a deeming fiction or vicarious culpability. Perhaps the one crucial aspect herein is the use of the word proved in the earlier part of the sub-section It comes into play only at the stage of the availability of adequate proof that the offence has been committed with the consent, connivance or neglect of the principal or other officers of the company. The usual and the normal rule of criminal law is that the charge must be brought home directly to the offender. However, sub-section (2) lightens that burden by providing that even if it is proved that the principal officers were guilty of consent, connivance or negligence with regard to the offence committed by the company, they would be within the net of culpability. This is effectuated by an express deeming fiction that if any of the aforesaid ingredients is established then the officials concerned will be held guilty of that offence and be punished accordingly. Sub-section (2) may truly come into play during the course of the trial and even at its conclusion when it is proved that the offence has been committed with the consent, connivance or neglect of the company's principal officials. Thus, the stringent rule in sub-section (2) in a way provides a second line of defence for the prosecution. Even where the case set up is that the offence has been directly, wilfully or deliberately committed by the company and its officials but the same cannot be established to the hilt, this sub-section provides that such officer would still be guiltly if the relatively lower culpability of even consent or mere connivance or neglect is laid at this door. This is probably and patently due to the difficulties of proving a charge beyond reasonable doubt in cases of vicarious liability for offences committed by legal and artificial persons as compared to natural persons. It bears repetition that this sub-section (2) is a rule of evidence for apportioning guilt when consent, connivance or neglect is proved by its principal officer and a deeming fiction of guilt for vicarious liability to the crimes committed by the company itself. Now once it is held as above, it is well settled that a rule of evidence or a deeming fiction of the law are not to be pleaded as such. No principle warrants that either in a complaint or in a first information report the literal words of the statute must be incorporated or what is even important is that the rule of evidence with regard to burden of proof and a deeming fiction of guilty should be quoted at the foundational stage. Therefore, to require that the complaint or the first information report must inflexibly plead consent, connivance or negligence of the officers at the threshold stage is, patently fallacious. Seen broadly the deeming fiction is primarily one of evidence and proof and not of the literal formalities of pleading which are foreign to the criminal law. Indeed, it must be noticed that in a particular case the prosecution charge may be one of direct, deliberate and wilful commission of the offence by the company and its official. In such a situation to require that they should plead at the outset that it was only by way of connivance or neglect would be an absurdity and, indeed, destructive or contrary to the case set up. Again, as has been noticed above, sub-section (2) applies independently and notwithstanding anything contained in sub-section (1). Therefore, to require that the pleading of consent, connivance or neglect must be incorporated even with regard to the guilt under sub-section (1), which is absolute pertaining to the person in charge of and responsible to the company, is in a way rather more fallacious. Thus, Sec. 47(2) does not mandate the incorporation that the offence was committed with the consent or connivance or was attributable to he neglect on the part of the Chairman, Director or General Manager of the company in the complaint itself.[1]

---

[1] Mahmud Ali *v.* State of Bihar, 1986 (1) Cr. L.C. 706 at pp. 714, 715 (Pat.) : A.I.R. 1986 Pat. 133 : 1986 P.L.J.R. 123.

18. Director of a company or partner of a firm can be tried for the offence committed by the company.— A bare reading of Sec. 47 makes it manifest that besides persons who at the time the offence was committed were in charge and were responsible to the Company for the conduct of the business of the Company, the Company as well is to be deemed to be guilty of the offence and be liable to be proceeded against and punished accordingly. The person conceived of in the section not only include people who constitute the Company but others as well. And in the constitution of the Company, which word confinedly includes the firm, all partners of the firm are deemingly guilty of the offences and liable to be proceeded against and punished accordingly. It significantly does not hold them liable straightaway but starts with the presumption in their being arraigned as accused. The safety valve is provided in the proviso. Any of these persons can take shelter thereunder to say that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of the offence. Yet at any stage, on the contrary, if consent or connivance or any neglect is attributed to any director, manager, *etc.* then again the deeming provision comes into preparation and they can be held liable to be proceeded against and punished accordingly. The section, as it appears is comprehensive enough to bring in and take out people dependent on the facts and circumstances of each case. But to say that being with no director of a company or partner of a firm can be tried for the offence committed by the Company apparently does not appeal. In all these complaints, when the direction of the Board was not obeyed to obtain consent conceived of under Secs. 25 and 26 of the said Act, requisite notices were sent to all concerned inclusive of the petitioners to do the needful as required under the law. It is only on the failure thereof that these complaints have been filed.[1]

---

[1] Mahmud Ali *v.* State of Bihar, 1986 (1) Cr. L.C. 706 at pp. 715-717 (Pat.) : 1987 P.L.R. 123 : A.I.R. 1986 Pat. 133.

19. Strict vicarious criminal liability is somewhat of an exception to the general rule of direct personal culpability.— Plainly enough, the prevention and absolute control of water pollution and maintaining of restoring of wholesomeness of the water resources of the country cannot but be labelled as beneficent legislation which has to be somewhat liberally construed. The violation of the provisions of the Act; a part from the individual persons, may also be committed by companies, bodies corporate, firms and other associations of individuals. Section 47 provides specifically for offences by companies which by virtue of the explanation was to extend to all the bodies. It is well settled that the strict criminal liability of companies or legal persons is in a class by itself and poses problems peculiar them. Since a legal person is a fiction of the law and does not exist in actuality, the issue of vicarious liability of office bearers through whom a company must necessarily act, comes to the force. A plain reading of Sec. 47 of the Water (Prevention and Control of Pollution) Act, would indicate that this incorporates the stringent principle of strict vicarious criminal liability of persons who are responsible to the company for the conduct of its business or its responsible office-bearers like a director, manager, secretary, *etc.*, for all offences committed by a company. Now, strict vicarious criminal liability is somewhat of an exception to the general rule of direct personal culpability and is a modern development through statutory provisions. That there can be such vicarious criminal liability by legislative mandate is no longer in dispute. Nevertheless steeped as courts are in the basic principle of criminal jurisprudence that *mens rea* must be an ingredient of an offence and both the act and intent must concur to constitute a crime, it needs some effort to accept whole-heartedly the legislative mandate of vicarious criminality even if the absence of either of the aforesaid ingredients.[2]

20. Vicarious liability discussed.— On a plain reading of sub-section (1) of Sec. 47 of the Water (Prevention and Control of Pollution) Act, 1974, where an offence has been committed by a company, every person who at the time of the commission of the offence was "in-charge of and responsible to" the company for the conduct of the business of the company, as well as the company shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly. Proviso to sub-section (1) however engrafts an exception in the case of any such person if he were to prove that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offence. It would be noticed that sub-section (1) of Sec. 47 is much wider than

---

1. Bihari Lal Rattan Chand Printing Mills *v.* Punjab State, 1986 P.L.R. 363 at pp. 365, 366.
2. Mahmud Ali *v.* State of Bihar, 1986 (1) Cr. L.C. 706 at p. 711 (Pat.) : 1986. P.L.J.R. 123 : A.I.R. 1986 Pat. 133.

sub-section (4) of Sec. 17 of the Prevention of Food Adulteration Act, 1954 which fell for consideration in *I.K. Nangia* v. *State (Delhi Administration)*.[1] Furthermore, proviso to sub-section (1) shifts the burden on the delinquent officer or servant of the company responsible for the commission of the offence. The burden is on him to prove that he did not know of the offence or connived in it or that he had exercised all due diligence to prevent the commission of such offence. The *non obstante* clause in sub-section (2) expressly provides that notwithstanding anything contained in sub-section (1), where an offence under the Act has been committed by a company and it is proved that the offence has been committed with the consent or connivance of, or, is attributable to any neglect on the part of any director, manager, secretary or other officer of the company, such director, manager, secretary or other officer shall also be deemed to be guilty of that offence, and shall be liable to be proceeded against and punished accordingly. On a combined reading of the provisions contained in sub-sections (1) and (2), there is no doubt whatever that the Chairman. Vice-Chairman, Managing Director and members of the Board of Directors of Messrs Modi Industries Limited, the company owning the industrial unit Messrs Modi Distillery could be prosecuted as having been in charge of and responsible to the company for the business of the industrial unit Messrs Modi Distillery owned by it and could be deemed to be guilty of the offence with which they are charged.[2]

21. Measure of liability of an enterprise engaged in an hazardous or inherently dangerous industry.— The Supreme Court in the case of *M.C. Mehta* v. *Union of India*,[3] dealing with a question relaing to measure of liability of an enterprise which is engaged in a hazardous or inherently dangerous industry held as under :

> "We must also deal with one other question which was seriously debated before us and that question is as to what is the measure of liability of an enterprise which is engaged in a hazardous or inherently dangerous industry, if by reason of an accident occurring in such industry, person die or are injured. Does the rule in *Rylands* v. *Fletcher*,[4] apply or is there any other principle on which the liability can be determined? The rule in *Rylands* v. *Fletcher*,[5] was evolved in the year 1866 (1868) and it provides that a person who for his own purpose brings on to his land and collects and keeps there anything likely to do mischief if it escapes must keep it at his peril and, if the fails to do so, is *prima facie* liable for the damage which is the natural consequence of its escape. the liability under this rule is strict and it is no defence that the thing escaped without that person's wilful act, default or neglect or even that he had no knowledge of its existence. This rule laid down a principle of liability that if a person who brings on to his land and collects and keeps there anything likely to do harm and such thing escapes and does damage to another, he is liable to compensate for the damage

5. *Ibid.*

caused. Of course, this rule applies only to non-natural user of the land and it does not apply to things naturally on the land or where the escape is due to an act of God and an act of stranger or the default of the person injured or where the thing which escapes is present by the consent of the person injured or in certain cases where there is statutory authority.[1] Considerable case law has developed in England as to what is natural and what is non-natural, use of land and what are precisely the circumstances in which this rule may be displaced. But it is not necessary for us to consider these decisions laying down the parameters of this rule because in a modern industrial society with highly developed scientific knowledge and technology where hazardous or inherently dangerous industries are necessary to carry a part of the developmental programme. This rule evolved in the 19th Century at a time when all these developments of science and technology had not taken place cannot afford any guidance in evolving any standard of liability consistent with the constitutional norms and the needs of the present day economy and social structure. We need not feel inhibited by this rule which was evolved in this context of a totally different kind of economy. Law has to grow in order to satisfy the needs of the last changing society and keep abreast with the economic developments taking place in the country. As new situations arise the law has to be evolved in order to meet the challenged of such new situations. Law cannot afford to remain static. We have to evolve new principles and lay down new norms which would adequately deal with the new problems which arise in a highly industrialised economy. We cannot allow our judicial thinking to be constricted by reference to the law as it prevails in England or for the matter of that in any other foreign country. We no longer need the crutches of a foreign legal order. We are certainly prepared to receive light from whatever source it comes but we have to build up our own jurisprudence and we cannot countenance an argument that merely because the new law does not recongise the rule of strict and absolute liability in cases of hazardous or dangerous liability or the rule as laid down in *Rylands* v. *Fletcher*,[2] as is developed in England recognises certain limitations and responsibilities. We in India cannot hold our hands back and I venture to evolve a new principle of liability which English Courts have not done. We have to develop our own law and if we find that it is necessary to construct a new principle of liability to deal with an unusual situation which has arisen and which is likely to arise in future on account of hazardous or inherently dangerous industries which are concomitant to an industrial economy, there is no reason why we should hesitate to evolve such principle of liability merely because it has not been so done in England. We are of the view that an enterprise which is engaged in a hazardous or inherently dangerous industry which poses a potential threat to the health and safety of the persons working in the factory and residing in the surrounding areas owes an absolute and non-delegable duty to the community to ensure that no harm results to anyone on account of hazardous or inherently dangerous nature of the activity which it has undertaken. The enterprise must be held to be under an obligation to provide that the hazardous or inherently dangerous activity in which it is engaged must be conducted with the highest standards of safety and if any harm results or account of such activity, the enterprise must be absolutely liable to compensate for such harm and it should be no answer to the enterprise to say that it had taken all reasonable care and that the harm occurred without any negligence on its part. Since the persons harmed on account of the hazardous or inherently dangerous activity carried on by the enterprise would not be in a position to isolate the process of operation from the hazardous preparation of substance or any other related element that caused the harm the enterprise must be held strictly liable for causing such harm as a part of the social cost for carrying on the hazardous or inherently dangerous activity. If the enterprise is permitted to carry on an hazardous or inherently dangerous activity for its profit, the law must presume that such permission is conditional on the enterprise absorbing the cost of any accident arising on account of such hazardous or inherently dangerous activity as an appropriate item of its overheads. Such hazardous or inherently dangerous activity for private profit can be tolerated only on condition that the enterprise engaged in such hazardous or inherently dangerous activity indemnifies all those who suffer on account of the carrying on of such hazardous or inherently dangerous activity regardless of whether it is carried on carefully or not. This principle is also sustainable on the ground that the enterprise alone has the resource to discover and guard against hazards or dangers and to provide warning against potential hazards. We would, therefore, hold that where an enterprise is engaged in a hazardous or inherently dangerous activity and harm results to anyone on account of an accident in the operation of such hazardous or inherently dangerous activity resulting for example, in escape of toxic gas the enterprise is strictly and absolutely liable to compensate all those who are affected by the accident and such liability is not subject to any of the exceptions which operate *vis-a-vis* the tortious principle of strict liability under the rule in *Rylands* v. *Fletcher*.[1] We would also like to point out that the measure of compensation in the kind of cases referred to in the preceding paragraph must be correlated to the magnitude and capacity of the enterprise because such compensation must have a deterrent effect. The larger and more prosperous the enterprise, greater must be the amount of compensation payable by it for the harm caused on

> account of an accident in the carrying on of the hazardous or inherently dangerous activity by the enterprise".

22. What amounts to neglect.— In Criminal Miscellaneous Application No. 3277 of 1988 decided on 24th May, 1985 the Allahabad High Court held that the expression "neglect" in sub-section (2) of Sec. 47 is not to be interpreted in a narrow sense. What would amount to "neglect" in a given case should depend on a variety of factors and circumstances. The expression "neglect" in relation to contravention of the provisions of Secs. 25 and 26 of the Act should be taken to have a wider connotation, having regard to the purpose and object of the Act and the stress on obtaining prior consent of the Board. The wide sweep and importance of the object of the Act is evident from the definition of the term "pollution". The object is to protect the life and health of human beings, animals, plants or acquatic organisms from being injuriously effected by contaminated water. The Act also seeks to ensure safe water for domestic, commercial, industrial, agricultural or other legitimate uses. The requirement of obtaining prior consent of the Board in effect amounts to providing that no factory which produces noxious and polluting effluent shall start working unless a plant for treatment and disposal of such affluent is installed to the satisfaction of the Board. Thus, obtaining prior consent of the Board is germane to the commencement of production in a factory producing noxious and polluting effluent in the process of manufacture. It is not in dispute that the paper mill of the company produces such trade effluent in the process of manufacture of paper. Bearing in mind the objects of the Act and the importance of Secs. 25 and 26 it can safely be said that it was the duty of the Directors to ensure, that a proper plant for treatment and disposal of trade effluent was set up and prior consent of the Board was obtained. If the Directors did not care to ensure compliance with the provisions of Sec. 25 of the Act, it would *prima facie,* amount to neglect coming within the purview of sub-section (2) of Sec 47 of the Act.

23. Stagnation of water in the main stream.— In the undernoted case the petitioner Gram Panchayat is seeking a writ of *mandamus* directing the Punjab Water Pollution Board respondent No. 1 to restrain respondents Nos. 2 to 5 from discharging the polluted/ untreated water and trade effluents into the main drain which passes through the village of Gram Panchayat and further to restrain respondents Nos. 2 to 5 from discharging such polluted/ untreated water and trade effluents till the said respondents comply with the requirements as per provisions of the Water (Prevention and Control of Pollution) Act, 1974. It is no more disputed that prosecution proceedings are already pending against respondents Nos. 2, 3, and 5 whereas against respondent No. 4, the same said to have been withdraw on 7th July, 1983. In the return filed by the Board, it has been stated in para No. 11 that the Board has taken action against the defaulting respondents, who are discharging effluent, and is proceeding against respondents Nos. 3 and 5 in a court of law and is contemplating action against respondents Nos. 2 and 4. It has also been stated therein that there is no stagnation of water in the main drain. In this situation, it cannot be said that the same is injurious to the health of the residents of the village and detrimental to the crops as it alleged by the petitioner.[1]

---

[1] Gram Panchayat Chabba *v.* Punjab Water Pollution Board, 1989 (2) C.L.J (C.Cr. and Rev.) 166 at pp. 166, 167 (P. & H.).

24. Small functionaries committed no offence as they were not responsible for conduct of the day-to-day business of the company.— The provisions of Sec. 47 of the Act, and the proviso thereunder, read as :—

> "Where an offence under this Act has been committed by a company, every person who at the time when the offence was committed, was incharge of, and was responsible to the company for the conduct of the business of the company as well as the company, shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly. Provided that, nothing contained in this sub-section shall render any such person liable to any punishment provided in this Act, if he proves that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offence".

Thus the evidence on record and proviso to Sec. 47 of the Act, leave no manner of doubt that none of the respondents *i.e.*, S.N.C. Bakshi and D.P. Gupta can be said to have committed any offence, as they were not responsible for conduct of the day-to-day business of the company and as such cannot be proceeded against.[1]

25. Every person who was responsible to the company for the conduct of business of the company, as well as the company shall be deemed to be guilty of the offence.— Section 47 of the Act relating to offences by companies which; expression according to the explanation added to that section includes a partnership firm, lays down that where an offence under the Act is committed by any company, every person who at the time the offence was committed was incharge of, and was responsible to the company for the conduct of the business of the company, as well as the company shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly. In order to fasten liability on Smt. Phoola Devi, all that the prosecution has been able to do, was to bring on record an admission made by Subhash Chander, Manager and that of Smt. Phoola Devi herself, in her statement under Sec. 313, that she is a partner of the firm. There is no other material on record to show that she was incharge of, or was responsible to the company for the conduct of the business of the company. The burden of proving these facts is obviously on the prosecution. For this reason, it is not possible to convict Smt. Phoola Devi.[2]

***48. Offences by Government Departments.**— Where an offence under this Act has been committed by any Department of Government, the Head of the Department shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :*

Provided that nothing contained in this section shall render such Head of the Department liable to any punishment if he proves that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offences.

Comments

Section 48 of the Water Pollution Act, 1974 and Sec. 41 of the Air Pollution Act, 1981 deal with offences by Government Departments. It has also been provided in Sec. 17 of the Environment (Protection) Act, 1986.

Under this section the head of the Department of Government cannot be held guilty of the offence if the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offence.

49. *Cognizance of offences.*—[1]*[(1) No Court shall take cognizance of any offence under this Act except on a complaint made by—*

(a) a Board or any officer authorised in this behalf by it; or

(b) any person who has given notice of not less than sixty days, in the manner prescribed, of the alleged offence and of his intention to make a complaint, to the Board or officer authorised as aforesaid,

and no Court, inferior to that of a Metropolitan Magistrate or a Judicial Magistrate of the first class shall try any offence punishable under this Act.]

[2]*[(2) Where a complaint has been made under Cl. (b) of sub-section (1), the Board shall, on demand by such person, make available the relevant reports in its possession to that person :*

Provided that the Board may refuse to make any such report available to such person if the same is, in its opinion, against the public interest.]

[3]*[(3) Notwithstanding anything contained in Sec 29 of the Code of Criminal Procedure, 1973] it shall be lawful for any* [4]*[Judicial Magistrate of the first class or for any Metropolitan Magistrate] to pass a sentence of imprisonment for a term exceeding two years or of fine exceeding two thousand rupees on any person convicted of an offence punishable under this Act.]*

SYNOPSIS

1. Cognizance of an offence ... 262
2. Water pollution is among the worst form of anti-social offences .. 264
3. The power of the Board to grant sanction for prosecution ... 265
4. Requirements of the section — Full compliance of ... 266

Section 49 of the Water Pollution Act, 1974 and Sec. 43 of the Air Pollution Act, 1981 deal with cognizance of offences. It is also provided in Sec. 19 of the Environment (Protection) Act, 1986.

Only the Court of Metropolitan Magistrate or a Judicial Magistrate of the first class or any Court superior to that can take the cognizance of the offence.

1. Congnizance of an offence.— In view of the provisions of Sec. 49 of the Act, the complaint was competent even without any sanction because the same has been filed by the Board. Following facts are not in dispute :- *(i)* that

---

1. Subs. by Act 53 of 1988, Sec. 26, for sub-section (1).
2. Ins. by Act 53 of 1988, Sec. 26.
3. Sub-section (2) renumbered as sub-section (3), by Act 53 of 1988, Sec. 26.
4. Subs. by Act 44 of 1978, Sec. 19, for certain words.

the petitioner industry was established in 1993; (*ii*) that the complaint had been filed by the Board through its Environmental Engineer on the strength of item No. 40.23 of the resolution passed in the 40th meeting of the Board which reads as under :- "Item No. 40.23 Violation of provisions of Sec. 26 read with Sec. 5 of the Water (Prevention and Control of Pollution) Act, 1974 by the industries on account of their failure to apply for the consent of the Board on or before 30th June 1980. After consideration of cases the Board resolved that the complaints be filed against the following industrial units in the Courts of Law under the provisions of the Water (Prevention and Control of Pollution) Act, 1974 for not applying for the consent of the Board thereby contravening the provisions of the Act. Prosecution should be launched against the owners officers directly responsible for day-to-day business of the concerned industry/ factory in the Court of competent jurisdiction after completing the legal formalities.

1. * * * * *

2. * * * * *

3. * * * * *

17. *M/s Shiroga International Pvt. Ltd. 6-A, Phase* v. *Focal Point, Ludhiana,* (*iii*) that the petitioners were discharging their trade effluent, which was causing pollution, into the municipal sewer; and (*iv*) that the petitioner Industry has not applied for any consent of the Board as required under Secs. 25 and 27 of the Act. Provisions of Secs. 25 and 26 are mandatory in nature and contravention thereof entails penalty under Sec. 44 read with Sec. 47 of the Act and Cognizance of such an offence is to be taken on a complaint made by or with the previous sanction in writing of the State Board by a Magistrate of the 1st Class. In the present case, the complaint was filed by the Board through its Environmental Engineer after it had resolved *vide* Ex. PA to file complaints against industrial units, list whereof had been appended to the said resolution, for not applying for the consent of the Board. No fault can be found with the Resolution Ex. PA or the complaint. In view of the above discussion, his Lordship does not find any fault with the judgment passed by Additional Sessions Judge, Ludhiana, which is confirmed. Resultantly, this revision petition fails and is hereby dismissed.[1]

There is no provision for giving any sanction for prosecution. What Sec. 49 of the Act of 1974 requires is that the cognizance of an offence should be taken by the Metropolitan Magistrate or a Judicial Magistrate of first class on a complaint and such complaint must be filed by the authorities or persons mentioned in Clauses (*a*) and (*b*) of sub-section (1) of Sec. 49 of the Act of 1974. Under clause (*a*) the Board or any officer authorised by the Board is competent to file a complaint and under clause (*b*) any person who has given notice of not less than sixty days in the manner prescribed, of the alleged offence and of his intention to make a complaint to the Board or officer, is authorised to make a complaint. Sanction by the Board for prosecution is not required by Sec. 49 of the Act of 1974. The Chief Judicial Magistrate has misdirected himself by assuming that a sanction for prosecution was necessary. Since no sanction for prosecution was necessary under Sec. 49 of the Act of 1974, the powers of the Chief Judicial Magistrate to take cognizance under Sec. 190, Cr. P.C. were not fettered for want of sanction. All that was necessary for him for the purpose of taking cognizance was a complaint submitted by the authorities or persons mentioned in clauses (*a*) and (*b*) of sub-section (1) of Sec. 49 of the Act of 1974, subject, of course, to the requirements of Sec. 190 (1) (*a*), Cr. P.C., 1973. In the instant case it is evident from the record that there was a complaint before the Chief Judicial Magistrate made on behalf of the Board, it was signed by the Member Secretary and it was actually presented before the Court by Shri Nawal Kishore Vyas counsel for the complainant-petitioner. In view of para No. 14 of the complaint in which it was stated that the Board in its 20th meeting had authorised the Member Secretary to file the complaint, it was necessary for the Chief Judicial Magistrate to have enquired whether there was any such resolution of the Board as may be said to authorise the Member Secretary to file the complaint under Sec. 49 (1)(*a*) of the Act No. 6 of 1974. The Chief Judicial Magistrate does not appear to have been taken any pains to make any enquiry in this behalf. In these circumstances, the order passed by the Chief Judicial Magistrate cannot be upheld because once the cognizance has been taken on the basis of a complaint under Sec. 190, Cr. P.C., it was necessary for the Chief Judicial Magistrate to have conducted proper enquiry as to authority of the Member Secretary to file a complaint, when it was urged before him that the proceedings should be dropped for want of proper complaint, Therefore, it deems proper to set aside the order passed by the Chief Judicial Magistrate, Pali and hereby remand the case back to him with the direction that he will give an opportunity to the complainant to produce such evidence as the complainant may like to produce in support of the contents of para No. 14 of the complaint and after giving the aforesaid opportunity.the Chief Judicial Magistrate shall hear both the parties and decide the question whether the proceedings instituted on the complaint deserve to be dropped on the ground that it has not been instituted in accordance with clause (*a*) of sub-section (1) of Sec. 49 of the Act of 1974. If the Chief Judicial Magistrate comes to the conclusion that the complaint on which the cognizance was taken by him is a complaint within the meaning of Sec. 49(1)(*a*) of the Act of 1974, he shall proceed to take further steps in accordance with law *viz*, give an opportunity to the complainant to produce its evidence under Sec. 244, Cr. P.C. and thereafter proceed in accordance with law. If the complainant fails to establish that the Member Secretary authorised by the Board to file the complaint and if the Chief Judicial Magistrate comes to the conclusion after conducting inquiry as directed above that the complaint on record is not a complaint under Sec. 49(1) (*a*) of the Act of 1974, he shall drop the proceedings in place of discharging the accused.[1]

[1] Shiroga International (P) Ltd. *v.* Punjab State Board for the Prevention and Control of Water Pollution, 1993(3) Crimes 871 at pp. 872, 873 (P. & H.).

2. Water pollution is among the worst form of anti-social offences.— The allegations in this case concern alleged acts of water pollution. There is a serious charge against the pollution control authorities that action is not being taken against the errant individuals and corporate bodies who are polluting water sources and waterways with impunity and that the flora and fauna not to mention every conceivable form of marine life is being devastated in the process. Water pollution is among the worst form of anti-social offences that can be committed because the destruction is not only permanent but abnormally far reaching in so far as whole sectors of human population as well as animal and bird life, which are dependent on this water, are being poisoned. In certain instances, epidemics have broken out due to such poisoning and in others, serious biological damage has been done, the latest example being of an entire generation of horribly deformed frongs in the U.S. which have emerged with all sorts of mutations such as absence of limbs, extra organs in certain cases and the like. The majority of these pollutants being chemical substances of harmful effluents of a carcinogenic character. Research has demonstrated that the incidence of cancer is directly attributable to these substances. Unfortunately, the matter is bring taken very lightly and the pollution control authorities either do not act or, sabotage the Court proceedings in total collusion with the offender. In the course of the hearing of this petition, the Karnataka High Court had occasion to being it to the notice of the learned Advocate who represents the board who in turn was directed to convey to the officers and the Board whom he represents, that the high Court will, hereafter direct personal action against the Board and its officers, if a single such case goes unattended to. While the entire countryside is being defiled and destroyed and the very existence of the population is being seriously threatened. Inaction on the part of the very authorities that have been specially set up and equipped to monitor, prevent and control instances of pollution is something that cannot be allowed to continue.[1]

---

[1] Rajasthan Board for Prevention and Control of Pollution *v.* Man Processors, 1996 Cr. L.J. 4407 at pp. 4411, 4412 (Raj.).

3. **The power of the Board to grant sanction for prosecution.**— The power of the Board to grant sanction for prosecution under Sec. 49, can be the subject delegation by it and the exercise of the power by the Chairman in that behalf will be valid and legal. A complaint filed under the sanction granted by Chairman will not be bad and a competent court will be justified to take cognizance of the offence alleged under such circumstances. The complaints have to be laid down by an officer duly empowered to do so. As stated, the complaints in these cases are laid by the first respondent as per sanction granted by the Chairman. No doubt, reference had been made in the complaints to an order dated 8th November, 1989 of the Board, which is actually the order of the Chairman and not of the Board as such. But then that made no difference at all, since it is a valid sanction for prosecution. The contentions of the petitioners on the contrary are unacceptable. The Court below, rightly took congnizance of the offences on the complaints laid against them. In his Lordship's view, having regard to the background of the prosecution and the nature of the allegations raised in the complaints where a *prima facie* case had been made out, these; at any rate are not fit cases where Kerala High Court will be justified to interfere with the proceedings under Sec. 482, of the Code of Criminal Procedure.[2]

4. **Requirements of the section.—Full compliance of.**—In the instant case the Board resolved to file the complaint, therefore, naturally the act of filing complaint was to be performed by some officer of the Board well conversant with the facts of the case. Thus, for performing aforesaid act of filing complaint, Board authorised one of its officers to be nominated by Assistant Secretary Accordingly, Assistant Secretary nominated Sri Pramod Misra, Assistant Environmental Engineer. Therefore, mere nomination by Assistant Secretary, does not amount to further delegation of a delegated power or further sub-delegation of sub-delegated power. But in the instant case in Court's opinion, since there is no sub-delegation or further delegation as discussed above, hence the argument as developed is of no avail, on the facts and in the circumstances of the case. However, when a statute of conferring powers imposes, certain duties and functions incidental to the exercise of the power in such a way that they are integrally connected with them, a permissible delegation of the power is effective to delegate duties and functions along with the power. In this context, it is necessary to clarify the legal position that the Board can sue and be sued in its own corporate name, as Board by prescription is a Board of such antiquity that the consent of the severiegn may be presumed. The Board can sue and be sued, but only through its authorised officers, this position is undisputed. Thus, to satisfy the requirements of Sec. 49 of the Act, it is sufficient that the Board passed the resolution to file complaint and authorised its officer, to be nominated by the Assistant Secretary, to file the complaint.[1]

50. Members, officers and servants of Board to be public servants.— All members, officers and servants of a Board when acting or purporting to act in pursuance of any of the provisions of this Act (45 of 1860) and the rules made therèunder shall be deemed to be public servants within the meaning of Sec. 21 of the Indian Penal Code.

SYNOPSIS

1. Public servant . . 266
2. *Gaon Pradhan*-If public servant ... 267
3. Not public servant ... 267
4. Recording of statement under Sec. 200, Cr. P.C., before issue of summons ... 268

Section 50 of the Water Pollution Act, 1974 and Sec. 44 of the Air Pollution Act, 1981 provide that members, officers of the Board to be public servants within the meaning of Sec. 21 of the Indian Penal Code. Section 21 of the Environment (Protection) Act, 1986 is based on the above two Acts.

1. **Public servant.**— Section 21 of Indian Penal Code describes the term by enumeration. The term may generally be defined to signify any person duly appointed and invested with authority to administer any part of the executive power of the Government or to execute any other public duty imposed by law : whether it be judicial, ministerial or mixed, "other person to whom any cause or matter has been referred for decision or report" : The "cause of matter" must be one in controversy.[2] *"Every officer whose duty it is as*

[1] Lipton India Ltd. M/s. *v.* State of Uttar Pradesh, A.I.R. 1996 All. 173 at pp. 176, 177.

[2] Debi Din, (1886) 1 A.W.N. 295.

such officer to take property etc.," means a person employed to exercise to some extent delegated function of Government and he must be either himself armed with some authority of a representative character, or his duties must be immediately auxiliary to those of someone who is so armed.[1] An officer in the service or pay of Government within the terms of Sec. 21 Penal Code, is one who is appointed to some office for the performance of some public duty.[2] When a person who has no general power to execute a judicial process is authorised by a court to execute such a process he is "specially authorised" within the meaning of the section.[3] The Port Trust Estate does not fall within the term village, town or district as used in Cl. (10) of this section.[4]

2. ***Gaon Pradhan*—If public servant.**— There is no manner of doubt that the *Pradhan of Gram Sabha* is an officer within the meaning of the 12th cl. of Sec. 21, I.P.C. A *pradhan* can be deemed to be an officer in the service of the local authority.[5]

3. **Not public servant.**— The Chairman of Co-operative Credit Society would not appear to have been a "public servant".[6] Secretary of the Co-operative Credit Society registered under the Andhra Pradesh Co-operative Societies Act is not a "Public servant" within the meaning of Sec. 21 and Sec. 409, I.P.C.[7] The President of a Co-operative Society is not a public servant within the meaning of the expression in the Penal Code.[8] Nor its secretary.[9] A corporate body cannot be a public servant within the meaning of Sec. 21 of the Indian Penal Code.[10] A member of the Indian Administrative Service, whose services are placed at the disposal of an organization which is neither a local authority, nor a corporation established by or under a Central, Provincial or State Act, nor a Government company, by the Central Government or the Government of a State cannot be treated to be a public servant within the meaning of clause Twelfth of Sec. 21 of the Indian Penal Code for purposes of Sec. 197 of the Code of Criminal Procedure, 1973.[11] The Sanitary Inspector of a Panchayat Board is not a public servant within the contemplation of this section. The fact that he is authorised by the President of the Panchayat Board to collect fees for sealing animals before slaughter would not make him a public servant.[12] It was held in a Calcutta case that there was nothing in the

P.C., says that when a complaint is made in writing by a public servant, the Magistrate need not examine the complainant and the witnesses.[2]

CHAPTER VIII

MISCELLANEOUS

*51. **Central Water Laboratory.**—(1) The Central Government may, by notification in the Official Gazette,—*

(a) establish a Central Water Laboratory, or

(b) specify any laboratory or institute as a Central Water Laboratory, to carry out the functions entrusted to the Central Water Laboratory under this Act.

(2) The Central Government may, after consultation with the Central Board, make rules prescribing—

(a) the functions of the Central Water Laboratory;

(b) the procedure for the submission to the said laboratory of samples of water or of sewage or trade effluent for analysis or tests, the form of the laboratory's report thereunder and the fees payable in respect of such report ;

(c) such other matters as may be necessary or expedient to enable that laboratory to carry out its functions.

*52. **State Water Laboratory.**— (1) The State Government may, by notification in the Official Gazette,—*

(a) establish a State Water Laboratory; or

(b) specify any State laboratory or institute as a State Water Laboratory, to carry out the functions entrusted to the State Water Laboratory under this Act.

(2) The State Government may, after consultation with the State Board, make rules prescribing—

(a) the functions of the State Water Laboratory;

(b) the procedure for the submission to the said laboratory of samples of water or of sewage or trade effluent for analysis or tests, the form of the laboratory's report thereon and the fees payable in respect of such report;

(c) such other matters as may be necessary or expedient to enable that laboratory to carry out its functions.

[1] Municipal Corporation, I.L.R. 3 Cal. 758.

[2] J.S. Huja v. State, 1989 Cr. L.J. 1334 at p. 1336 (All.).

Comment

Section 52 of the Water Pollution Act, 1974 deals with State Water Laboratory, whereas Sec. 28 relates to State Air Laboratory. Section 12 of the Environment (Protection) Act, 1986 deals with "Environmental Laboratories".

53. *Analysts*.— *(1) The Central Government may, by notification in the Official Gazette appoint such person as it thinks fit and having the prescribed qualifications to be Government analysts for the purpose of analysis of samples of water or of sewage or trade effluent sent for analysis to any laboratory established or specified under sub-section (1) of Sec. 51.*

(2) The State Government may, by notification in the Official Gazette, appoint such persons as it thinks fit and having the prescribed qualifications to be Government analysts for the purpose of analysis of water or of sewage or trade effluent sent for analysis to any laboratory established or specified under sub-section (1) of Sec. 52.

(3) Without prejudice to the provisions of sub-section (3) of Sec. 12, the Central Board, or, as the case may be, the State Board may, by notification in the Official Gazette, and with the approval of the Central Government or the State Government, as the case may be, appoint such persons as it thinks fit and having the prescribed qualifications to be Board Analysts for the purpose of analysis of samples of water or of sewage or trade effluent sent for analysis to any laboratory established or recognised under Sec. 16, or, as the case may be, under Sec. 17.

Comment

Section 53 of the Water Pollution Act, 1974 and Sec. 29 of the Air Pollution Act, 1981 relate to Analysts. Section 13 of the Environment (Protection) Act, 1986 also deals with Government Analysts.

54. *Reports of Analysts*.— *Any document purporting to be report signed by a Government Analyst or, as the case may be, a Board Analyst may be used as evidence of the facts stated therein in any proceeding under this Act.*

Comments

This section deals with the evidentiary value of the document purporting to be a report signed by a Government Analyst.

Section 54 of the Water Pollution Act, 1974 and Sec. 30 of the Air Pollution Act, 1981 relate to report of analyst. The report of Government analysts has also been provided in Sec. 14 of the Environment (Protection) Act, 1986.

55. *Local authorities to assist*.— *All local authorities shall render such help and assistance and furnish such information to the Board as it may require for the discharge of its functions, and shall make available to the Board for inspection and examination such records, maps, plans and other documents as may be necessary for the discharge of its functions.*

56. *Compulsory acquisition of land for the State Board*.— *Any land required by a State Board for the efficient performance of its functions under this Act shall be deemed to be needed for a public purpose and such land shall be acquired for the State Board under the provisions of the Land Acquisition Act, 1894 (1 of 1894), or under any other corresponding law for the time being in force.*

Comment

The State Board is empowered to acquire any land for the efficient performance of its functions, and such purpose shall be treated as "public purpose".

57. ***Returns and reports.***—*The Central Board shall furnish to the Central Government, and a State Board shall furnish to the State Government and to the Central Board such reports, returns, statistics, accounts and other information with respect to its fund or activities as that Government, or, as the case may be, the Central Board may, from time to time, require.*

58. ***Bar of jurisdiction.***—*No Civil Court shall have jurisdiction to entertain any suit or proceeding in respect of any matter which an appellate authority constituted under this Act is empowered by or under this Act to determine, and no injunction shall be granted by any Court or other authority in respect of any action taken or to be taken in pursuance of any power conferred by or under this Act.*

Comments

Section 58 of the Water Pollution Act, 1974 and Sec. 46 of the Air Pollution Act, 1981 bars the jurisdiction of Civil Court relating to pollution cases. Section 22 of the Environment (Protection) Act, 1986 also bars the jurisdiction of Civil Court.

The section ousts the jurisdiction of the Civil Court to grant injunction against the action taken or to be taken in pursuance of any power conferred by or under the Act.

Whether Sec. 58 prohibits the jurisdiction of a Civil Court to entertain any suit or proceeding restraining a party to cause pollution.—The preamble says that the Act is to provide for the prevention and control of water pollution and the maintaining or restoring of wholesomeness of water for the establishment and with a view to carrying out the purpose aforesaid, statutory Boards are established. Section 58 of the Water (Prevention and Control of Pollution) Act is intended to preserve the statutory protection given to the Boards untouched by civil actions. Now, the present action is only preventing the defendant from polluting water. But this section is not directed to annul any orders passed by the authority constituted under this Act. Now, it is admitted that no order passed under the Act, and, therefore, any order passed by the Civil Court will not take away the jurisdiction of the authorities constituted under the Act. Hence, Sec. 58 does not prohibit the jurisdiction of a Civil Court to entertain any suit or proceeding restraining the defendant to cause pollution.[1]

59. ***Protection of action taken in good faith.***—*No suit or other legal proceedings shall lie against the Government or officer of Government or any member or officer of a Board in respect of anything which is in good faith done or intended to be done in pursuance of this Act or the rules made thereunder.*

[1] Sreenivasa Distilleries *v.* S.R. Thyagarajan, A.I.R. 1986 A.P. 328 at p. 329.

SYNOPSIS

1. Good faith—Meaning of ... 271
2. Good faith—Belief must be reasonable ... 273
3. Distinction between definition of "good faith" in General Clauses Act and Penal Code . . 273
4. Question of fact ... 274
5. Good faith—Moral element of honesty ... 274
6. Directions and observations to prevent further pollution and the environmental degradation ... 274

This section seeks to exempt the Government, officers of Government, members and officers of the Board from the legal proceedings in respect of anything done or intended to be done in good faith and in pursuance of the Act.

Section 59 of the Water Pollution Act, 1974 and Sec. 42 of the Air Pollution Act, 1981, provide protection of action taken in good faith. Section 18 of the Environment (Protection) Act, 1986 also provides the same protection.

1. Good faith—Meaning of.—The meaning of the term "good faith" can be gathered from the following *Law Lexicons :*

Ronald Burrows : *Words and Phrases judicially defined :*

> " 'Good faith' requires not, indeed, logical infallibility, but due care and attention". 'Good faith', therefore means absence of knowledge that a preference was intended".

Funk and Wagnall's *New Standard Dictionary of the English Language* (1953) :

> " 'Good faith'—The observance of, or the intention to observe honesty and fair dealing; absence of intention to deceive"

Stroud's *Judicial Dictionary,* 3rd Ed. (1953) :

> "Good faith" in Bankruptcy Act, 1883, would seem to mean innocent of the knowledge, and of the means of knowledge, that there is an adverse bankruptcy.
>
> "A thing is to be deemed to be done in good faith, within the meaning of this Act, where it is, in fact, done honestly, whether it is done negligently or not".
>
> "That section is obviously founded on the distinction pointed out, in *Jones* v. *Gordon,*[1] by Lord Blackburn between the case of a person who was 'honestly blundering and careless' and the case of a person, who has acted not honestly, that is, not necessarily with the intention to defraud, but not with an honest belief that the transaction was a valid one, and that he was dealing with a good will".
>
> "Sale of Goods Act, 1893—A thing is done 'in good faith' when it is, in fact, done honestly whether it be done negligently or not". Valentine: *Law Dictionary* (U.S.A.)
>
> "A statutory definition of the term is, an honest intention to abstain from taking any unconscientious advantage of another, even though the forms and technicalities of law, together with an absence

---

[1] (1887) I.L.R. 2 A.C. 616.

of all information or belief of facts, which would render the transaction unconscientions.

As applied to the holder of a forged cheque, to establish good faith there must not only be an absence of knowledge of any invalidity, but an absence of circumstances, which would put an ordinarily prudent man upon inquiry.

As an element tending to rebut malice in libel and slander, good faith requires proper consideration for the character and reputation of the person, whose character is likely to be injuriously affected by the publication. There must be absence, not only of all improper motives, but of negligence".

The *Law Lexicon of British India* by P. Ramanatha Iyer (M.L.J.) :

"Good faith defined —Act 45 of 1860, Sec. 52; Act 9 of 1908, Sec. 2 (7); Act 10 of 1897, Sec. 3 (20); Bengal Act 1 of 1899, Sec. 3 (17); Bombay Act 1 of 1904, Sec. 3 (20); Burma Act 1 of 1898, Sec. 2(25); E.B. & A. Act 1 of 1909, Sec. 5 (21); Madras Act 1 of 1891, Sec. 3 (II); Punjab Act 1 of 1898, Sec. 2 (22); U.P. Act 1 of 1904, Sec. 4 (17).

Good faith—Honesty, absence of fraud, collusion or deceit.

Nothing is said to be done or believed in good faith, which is done or believed without due care and attention (Penal Code, Sec. 52).

A thing shall be deemed to be done in "good faith" where it is in fact, done honestly, whether it is done negligently or not. Act 10 of 1897 (General Clauses), Sec 3 (20) ; English Bill of Exchange Act, Sec. 90.

Nothing shall be deemed to be done in good faith which is not done with due care and attention.[1]

Under the definition of the term in the Limitation Act "nothing shall be deemed to be done in good faith which is not done with due care and attention". This is a stricter definition than the one adopted in Sec. 3(20) of the General Clauses Act, 1898, under which "a thing shall be deemed to be done in 'good faith' where it is, in fact, done honestly whether it is done negligently or not".

The words "good faith" have no technical legal signification, but are to be taken in their ordinary acceptation, and mean simply, honestly in belief, purpose, or conduct.[2]

This definition of "good faith" is merely a negative one. It does not define "good faith" but rests content with stating what it is not. The positive aspect of the term is presented by the General Clauses Act (Act X of 1897). No definition of the term existed in the earlier Acts in which it is thus defined :

"3(22). A thing shall be deemed to be done in 'good faith' where it is in fact done honestly, whether it is done negligently or not".

This definition in the General Clauses Act is the verbatim reproduction of the definition of the term as given in the English Bills of Exchange Act,

---

[1] Act IX of 1908 (Limitation), Sec. 2(7).

[2] C.F. Butcher *v.* Stead, (1875) L.R. 7. H.L. 839; *In re*, Avery, (1887) L.R. 36 Ch. D. 307; *Ex-parte* Watson, (L.R.) (1888) 21 Q.B.D. 301.

1882, 45 & 46 Vict., C. 61, Sec. 90 and the Sale of Goods Act, 1893. [56 & 57 Vict, c. 71 Sec. 62, sub-section (2)].

As regards good faith, bearing in mind the negative definition of "good faith" as given in Sec. 52 of the Indian Penal Code, it must be safely stated that good faith has no reference to the moral elements of honesty and right motive which are involved in the popular significance of "good faith" and which are predominant in the positive definition enacted in the other Acts of the Legislature. To establish "good faith" under the Indian Penal Code it is necessary to prove that the person pleading good faith acted with due care and attention and an honest blunderer cannot be protected under Sec. 52 without establishing the exercise of due care, and attention. Of course, good faith requires no logical infallibility but due care and attention. How far erroneous actions or statements are to be imputed to want of due care and caution must, in each case, be considered with reference to the general circumstances and the capacity and the intelligence of the person whose conduct is in question.[1]

The element of honesty which is introduced by the definition prescribed by the General Clauses Act is not introduced by the definition of the Code.[2]

The phrase "in good faith" simply means "honestly, without fraud, collusion, or deceit, really, actually, without pretence and without intent to assist or act in furtherance of a fraudulent or otherwise unlawful scheme. [see *Words and Phrases*, Permanent Edition, Vol. 18A, p. 91]. Although the meaning of 'good faith' may vary in the context of different statutes, subjects and situations, honest intent free from taint of fraud or fraudulent design, is a constant element of its connotation. Even so, the quality and quantity of the honesty requisite for constituting "good faith" is conditioned by the context and subject of the statute in which this term is employed. It is a cardinal canon of construction that an expression which has no uniform, precisely fixed meaning takes its colour, light and content from the context.[3]

A mere mistake of fact is not enough. It must be an honest mistake and it must not be known to the actor as a mistake when the deed was done. If the doer knew that he was impelled by mistake to a deed which he knows to be wrong, he has no defence, save that of insanity. It is only an honest faith in a person's act, as a righteous act, that is entitled to legal protection. The fact may not exist, but he must honestly believe in its existence. On the other hand, if the fact exists, and he does not believe in its existence, there is no belief in "good faith" and consequently no protection.[4]

2. Good faith—Belief must be reasonable.— In order to establish belief in good faith, a person's simple belief in good faith that circumstances, are such and such, ought not to be sufficient : there ought to be sufficiently strong and just grounds for his belief.[5]

3. Distinction between definition of "good faith" in General Clauses Act and Penal Code.— The term "good faith" is defined both in Sec. 3 (22) of the General Clauses Act (No. X of 1897), and also in Sec. 52 of the Penal Code.

---

[1] Dhanna *v.* State of Rajasthan, 1964 Raj. L.W. 126 at p. 139.

[2] Harbhajan Singh *v.* State of Punjab, A.I.R. 1966 S.C. 97 at p. 103.

[3] Brijendra Singh *v.* State of U.P., A.I.R. 1981 S.C. 636 at p. 639.

[4] Leete *v.* Hart, L.R. 3. C.P. 322 at p. 325.

[5] First Report, Sec. 161.

The definition of "good faith" in the Penal Code is a negative one. The term "good faith" is not attempted to be defined there but all that is stated is that if an act is not done with due care and attention it would not be said to be done in "good faith". This definition comes into conflict with the definition in the General Clauses Act to this extent only that if a thing has been done negligently, though honestly, it would not be deemed to have been done in "good faith". The definition of term in the General Clauses Act lays stress on one aspect only, but, that in the Penal Code places emphasis on two aspects, namely the honesty of intention along with due care and attention. Thus Sec. 52, I.P.C, excludes the element of negligence from the purview of "good faith" Both the definitions retain the real essence of "good faith" which is that a thing is done "honestly". This is a feature common to both definitions without which the term "good faith" will lose its real meaning. "Good faith" therefore implies, not only an upright mental attitude, and clear conscience of a person, but also the doing of an act, showing that ordinary prudence has been exercised according to the standards of a reasonable person. "Good faith" contemplates an honest effort to ascertain the facts upon which exercise of the power must rest. It must, therefore, the summed as "an honest determination from ascertained facts". "Good faith" precludes pretence or deceit and also negligence and recklessness. A lack of diligence, which an honest man of ordinary prudence is accustomed to exercise, is, in law, a want of good faith Once this is shown, good faith does not require a sound judgment.[1]

4. **Question of fact.**—The law does not exact the same degree of care and attention from all persons. It varies with the positions they occupy.[2] In this sense, the question of "good faith" is always a question of fact to be determined in accordance with the proved facts and circumstances of each case. The standard of "due care and attention" is not the standard of the hypothetically "reasonable man". But it is the standard of the man whose "good faith" is on trial. The Court has to see whether he, circumstanced as he was, had exercised the care and attention which might be excepted of him.[3]

5. **Good faith—Moral element of honesty.**—Section 52, I.P.C. makes no reference to the moral elements of honesty and right motive which are involved in the popular significance of "good faith" and which are prominent in the positive definition enacted in other Acts of the Legislature.[4]

6. **Directions and observations to prevent further pollution and the environmental degradation.**—Nainital, a beautiful butterfly, is said to be turning into an ugly caterpillar. According to the petitioner, this is due to : (1) water pollution : (2) air pollution; (3) noise pollution; and (4) "VIP Pollution". This has naturally caused concern to all natural lovers and environmentalists, apart from the enlightened residents of Nainital. The environmental degradation has taken place, *inter alia*, because of increase in pollution, over-grazing, lopping and hacking of oak forests, forests fires, land slides,

quarrying etc. The pollution in the lake is because of both inorganic and organic causes. The nearby, minerals, namely, manganese, lead salts, copper cobalt and zinc make the lake life toxic. The discharge of waste water in the lake is another polluting factor. The Commissioner has made certain recommendations, of which the following deserve to be noted :

(*i*) Group housing and commercial complexes should be banned absolutely with immediate effect. Only small houses in flat areas, where there is no hill cutting or felling of trees, should be allowed for residential purposes.

(*ii*) Heavy vehicles must be banned on the Mall Road and bridle paths.

(*iii*) Immediate steps must be taken on a war footing to stabilize the Ballia Ravine and Ballia Nala.

(*iv*) Lake must be cleaned and prevented from further pollution, for which purposes drains entering the lake must be maintained and the horses must not be permitted to go around the lake.

(*v*) Felling of trees should be made cognizable offence.

There cannot be two opinions about some preventive and remedial measures to be taken on war footing, as any delay would cause further degradation and complicate the matter. The following steps deserve to be taken urgently :—

(*i*) Sewage water has to be prevented at any cost from entering the lake.

(*ii*) So far as the drains which ultimately fall in the lake are concerned, it has to be seen that building materials are not allowed to be heaped on the drains to prevent siltation of the lake.

(*iii*) Care has been taken to see that horse dung does not reach the lake. If for this purpose the horse stand has to be shifted somewhere, the same would be done. The authorities would examine whether trotting of horses around the lake is also required to be prevented.

(*iv*) Multi-storeyed group housing and commercial complexes have to be banned in the town area of Nainital. Building of small residential houses on flat areas could, however, be permitted.

(*v*) The offence of illegal felling of trees is required to be made cognizable.

(*vi*) Vehiclular traffic on the Mall Road has to be reduced. Heavy vehicles may not be permitted to ply on Mall.

(*vii*) The fragile nature of Ballia Ravine has to be taken care of. The cracks in the revetment of Ballia Nala have to be repaired urgently. Their Lordships do hope that all concerned would take concerted steps. For this purpose, a monitoring committee, with one highly placed official of each of the concerned authorities/ department, may be constituted. 2 or 3 leading men of the public having interest in the matter, like the petitioner, may be co-opted in the Committee. The Committee may hold its meeting, to start with every month, and then every two months. The petition is disposed of with the aforesaid directions and observations.[1]

*60. **Overriding effect.**—The provisions of this Act shall have effect notwithstanding anything inconsistent therewith contained in any enactment other than this Act.*

Comments

Section 60 of the Water Pollution Act, 1974 and Sec. 52 of the Air Pollution Act, 1981 deal with overriding effects of the Act. Section 24 of the Environment (Protection) Act, 1986 also provides the effect of other laws.

Provisions of.—It is clear that there is no direct conflict between the two provisions. The legislature intended to lay down an exhanstive Code in respect of the subject-matter replacing the earlier law, the two laws occupy the same field. Under the circumstances, it cannot be said that there is implied repeal of Sec. 133, Cr. P.C. The Andhra Pradesh High Court in *M/s. Nagarjuna Paper Mills Ltd.* v. *Sub-Divisional Magistrate and Revenue Divisional Officer,*[2] has clearly held that Water (Prevention and Control of Pollution) Act, 1974 has not taken away powers of Sub-Divisional Magistrate under Sec. 133. His Lordship fully agrees with the view taken in the said decision by the Andhra Pradesh High Court. His Lordship holds that these petitions are liable to be dismissed holding that the Sub-Divisional Magistrates have jurisdiction to pass orders under Sec. 133. Cr. P.C., to remove public nuisance, notwithstanding the fact that Water (Prevention and Control of Pollution) Act, 1974 and Air (Prevention and Control of Pollution) Act, 1981 have come into force.[3]

*61. **Power of Central Government to supersede the Central Board and Joint Boards.**—(1) If at any time the Central Government is of opinion—*

- *(a) that the Central Board or any Joint Board has persistently made default in the performance of the functions imposed on it by or under this Act; or*
- *(b) that circumstances exist which render it necessary in the public interest so to do,*

the Central Government may, by notification in the Official Gazette, supersede the Central Board or such Joint Board, as the case may be, for such period, not exceeding one year, as may be specified in the notification :

Provided that before issuing a notification under this sub-section for the reasons mentioned in Cl. (a), the Central Government shall give a reasonable opportunity to the Central Board or such Joint Board, as the case may be, to show cause why it should not be superseded and shall consider the explanations and objections if any, of the Central Board or such Joint Board, as the case may be.

(2) Upon the publication of notification under sub-section (1) superseding the Central Board or any Joint Board,—

- *(a) all the members shall, as from the date of supersession vacate their offices as such;*

1. Ajay Singh Rawat *v.* Union of India, (1995) 3 S.C.J. 245 at pp. 246, 248, 249.
2. 1987 Cri. L.J. 2071.
3. **Harihar Polyfibers *v.* Sub-Divisional Magistrate, 1997 Cr. L.J. 2731 Kant. at p. 2737.**

(b) *all the powers, functions and duties which may, by or under this Act, be exercised, performed or discharged by the Central Board or such Joint Board, shall, until the Central Board or the Joint Board, as the case may be, is reconstituted under sub-section (3) be exercised, performed or discharged by such person or persons as the Central Government may direct;*

(c) *all property owned or controlled by the Central Board or such Joint Board shall, until the Central Board or the Joint Board, as the case may be, is reconstituted under sub-section (3) vest in Central Government.*

(3) On the expiration of the period of supersession specified in the notification issued under sub-section (1), the Central Government may—

(a) *extend the period of supersession for such further term, not exceeding six months, as it may consider necessary; or*

(b) *reconstitute the Central Board or the Joint Board, as the case may be, by fresh nomination or appointment, as the case may be, and in such case any person who vacated his office under Cl. (a) of sub-section (2) shall not be deemed disqualified for nomination or appointment :*

Provided that the Central Government may at any time before the expiration of the period of supersession, whether originally specified under sub-section (1) or as extended under this sub-section, take action under Cl. (b) of this sub-section.

Comments

This section empowers the Central Government to supersede the Central Board and Joint Board, but the limit of period of such supersession should not exceed one and a half year at any rate.

Section 61 of the Water Pollution Act, 1974 and Sec. 48 of the Air Pollution Act, 1981 empowers the Central Government to supersede the Central Board or the State Board in certain cases.

62. ***Power of State Government to supersede State Board.****—(1) If at any time the State Government is of opinion—*

(a) *that the State Board has persistently made default in the performance of the functions imposed on it by or under this Act; or*

(b) *that circumstances exist which render it necessary in the public interest so to do,*

the State Government may, by notification in the Official Gazette, supersede the State Board for such period not exceeding one year, as may be specified in the notification :

Provided that before issuing a notification under this sub-section for the reasons mentioned in Cl. (a), the State Government shall give a reasonable opportunity to the State Board to show cause why it should not be superseded and shall consider the explanations and objections, if any, of the State Board.

(2) Upon the publication of a notification under sub-section (1) superseding the State Board, the provisions of sub-sections (2) and (3) of Sec. 61 shall apply in relation to the supersession of the State Board as they apply in relation to the supersession of the Central Board or a Joint Board by the Central Government.

Comments

This section empowers the State Government to supersede the State Board, but the limit of period of such supersession should not exceed one year.

Section 62 of the Water Pollution Act, 1974 and Sec. 47 of the Air Pollution Act, 1981 empower the State Government to supersede the State Board in certain cases.

State Government is empowered to supersede the State Board.—Section 62 of 1974 Act and Sec 47 of 1981 Act which are almost identical, empower the State Government to supersede the State Board. Section 62 (1) (*a*) of 1974 Act and Sec. 47 (1) (*a*) of 1981 Act, vest power in the government to supersede the State Board if it persistently defaults in the performance of functions imposed on it by or under the Act. Section 62 (1) (*b*) 1974 Act and Sec. 47 (1) (*b*) of 1981 Act also empower the State Government to supersede the Board if it is of the opinion that the circumstances exist, which render it necessary for the Government to do so in public interest. The exercise of power in the former case is subject to the condition that the State Government shall give a reasonable opportunity to the State Board to show cause why it should not be superseded and the explanation/objection, if any, submitted by the State Board is considered before the issuance of notification superseding the Board. However, no such condition is required to be satisfied before the exercise of power in the latter case. This shows that the Legislature has designedly refrained from incorporating the requirement of notice and opportunity of hearing or an opportunity to make representation to the State Board, before the Government can exercise its power under Sec. 62 (1) (*b*) of 1974 Act and Sec. 47 (1) (*b*) of 1981 Act. The use of different languages in the two parts of the same section is clearly indicative of the Legislature's intention to exclude the applicability of principles of natural justice in case of exercise of power under Sec. 62 (1) (*b*) of 1974 Act and Sec. 47 (1) (*b*) of 1981 Act.[1]

*63. **Power of Central Government to make rules.**—(1) The Central Government may, simultaneously with the constitution of the Central Board, make rules in respect of the matters specified in sub-section (2) :*

Provided that when the Central Board has been constituted, no such rule shall be made, varied, amended or repealed without consulting the Board.

(2) In particular, and without prejudice to the generality of the foregoing power, such rules may provide for all or any of the following matters, namely :—

- *(a) the terms and conditions of service of the members (other than the Chairman and member-secretary) of the Central Board under sub-section (8) of Sec. 5;*
- *(b) the intervals and the time and place at which meetings of the Central Board or of any committee thereof constituted under this Act, shall be held and the procedure to be followed at such meetings, including the quorum necessary for the transaction of business under Sec. 8, and under sub-section (2) of Sec. 9;*
- *(c) the fees and allowances to be paid to such members of a committee of*

---

the Central Board as are not members of the Board under sub-section (3) of Sec. 9;

[1][(d) *the manner in which and the purposes for which persons may be associated with the Central Board under sub-section (1) of Sec. 10 and the fees and allowances payable to such persons;]*

(e) *the terms and conditions of service of the Chairman and the member-secretary of the Central Board under sub-section (9) of Sec. 5 and under sub-section (1) of the Sec. 12 ;*

(f) *conditions subject to which a person may be appointed as a consulting engineer to the Central Board under sub-section (4) of Sec. 12;*

(g) *the powers and duties to be exercised and performed by the Chairman and the member-secretary of the Central Board ;*

[2][* * * * *]

(j) *the form of the report of the Central Board Analyst under sub-section (1) of Sec. 22;*

(k) *the form of the report of the Government Analyst under sub-section (1) of Sec. 22,*

[3][(l) *the form in which and the time within which the budget of the Central Board may be prepared and forwarded to the Central Government under Sec. 38;*

(ll) *the form in which the annual report of the Central Board may be prepared under Sec. 39;]*

(m) *the form in which the accounts of the Central Board may be maintained under Sec. 40;*

[4][(mm) *the manner in which notice of intention to make a complaint shall be given to the Central Board or officer authorised by it under Sec. 49;]*

(n) *any other matter relating to the Central Board, including the powers and functions of that Board in relation to Union territories;*

(o) *any other matter which has to be, or may be prescribed.*

(3) Every rule made by the Central Government under this Act shall be laid, as soon as may be after it is made, before each House of Parliament while it is in session for a total period of thirty days which may be comprised in one session or in two or more successive sessions, and if, [5]*[before the expiry of the session immediately following the session or the successive sessions aforesaid], both Houses agree in making any modification in the rule or both Houses agree that the rule should not be made, the rule shall thereafter have effect only in such modified form or be of no effect, as the case may be; so, however, that any such modification or annulment shall be without prejudice to the validity of anything previously done under that rule.*

---

1. Subs. by Act 44 of 1978, Sec. 20, for Cl. (*d*)..
2. Cls. (*h*) and (*i*) omitted by Act 44 of 1978, Sec. 20.
3. Subs. by Act 53 of 1988, Sec. 27.
4. Ins. by Act 53 of 1988, Sec. 27.
5. Subs. by Act 44 of 1978, Sec. 20, for certain words.

Comment

Section 63 of the Water Pollution Act, 1974 and Sec. 53 of the Air Pollution Act, 1981 empower the Central Government to make rules. Section 26 of the Environment (Protection) Act, 1986 also provides the same power to Central Government. The Central Government under Sec. 63 of the Water Act have framed the Water (Prevention and Control of Pollution) Rules, 1975 and the Water Pollution Procedure for Transaction of Business) Rules, 1975.

*64. **Power of State Government to make rules.**—(1) The State Government may, simultaneously with the constitution of the State Board, make rules to carry out the purposes of this Act in respect of matters not falling within the purview of Sec. 63 :*

Provided that when the State Board has been constituted, no such rule shall be made, varied, amended or repealed without consulting that Board.

(2) In particular, and without prejudice to the generality of the foregoing power, such rules may provide for all or any of the following matters namely .

(a) the terms and conditions of service of the members (other than the Chairman and the member-secretary) of the State Board under sub-section (8) of Sec. 5;

(b) the time and place of meetings of the State Board or of any committee of that Board constituted under this Act and the procedure to be followed at such meeting, including the quorum necessary for the transaction of business under Sec. 8 and under sub-section (2) of Sec. 9,

(c) the fees and allowances to be paid to such members of a committee of the State Board as are not members of the Board under sub-section (3) of Sec 9;

(d) the manner in which and the purposes for which persons may be associated with the State Board under sub-section (1) of Sec. 10[1]*[and the fees and allowances payable to such persons;]*

(e) the terms and conditions of service of the Chairman and the member-secretary of the State Board under sub-section (9) of Sec. 5 and under sub-section (1) of Sec. 12;

(f) the conditions subject to which a person may be appointed as a consulting engineer to the State Board under sub-section (4) of Sec. 12;

(g) the powers and duties to be exercised and discharged by the Chairman and the member-secretary of the State Board;

(h) the form of the notice referred to in Sec. 21;

(i) the form of the report of the State Board Analyst under sub-section (1) of Sec. 22;

(j) the form of the report of the Government Analyst under sub-section (3) of Sec. 22;

(k) the form of application for the consent of the State Board under sub-section (2) of Sec. 25, and the particulars it may contain;

---

[1] Ins. by Act 44 of 1978, Sec. 21.

(l) *the manner in which inquiry under sub-section (3) of Sec. 25 may be made in respect of an application for obtaining consent of the State Board and the matters to be taken into account in granting or refusing such consent;*

(m) *the form and manner in which appeals may be filed, the fees payable in respect of such appeals and the procedure to be followed by the appellate authority in disposing of the appeals under sub-section (3) of Sec. 28;*

[1][(n) *the form in which and the time within which the budget of the State Board may be prepared and forwarded to the State Government under Sec. 38;*

(nn) *the form in which the annual report of the State Board may be prepared under Sec. 39;]*

(o) *the form in which the accounts of the State Board may be maintained under sub-section (1) of Sec. 40;*

[2][oo) *the manner in which notice of intention to make a complaint shall be given to the State Board or officer authorised by it under Sec. 49;]*

(p) *any other matter which has to be, or may be, prescribed.*

Comment

Section 64 of the Water Pollution Act, 1974 and Sec. 54 of the Air Pollution Act, 1981 empower the State Government to make rules.

---

[1] Subs. by Act 53 of 1988, Sec. 28, for Cl. (*n*).

[2] Ins. by Act 53 of 1988, Sec. 28.

PART I-B

THE WATER (PREVENTION AND CONTROL OF POLLUTION) RULES, 1975

G.S.R. 58 (E), dated the 27th February, 1975.[1]—In exercise of the powers conferred by Sec. 63 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), the Central Government after consultation with the Central Board for the Prevention and Control of Water Pollution, hereby makes the following rules, namely :—

CHAPTER I

PRELIMINARY

1. ***Short title and commencement.***—*(1) These rules may be called the Water (Prevention and Control of Pollution) Rules, 1975.*

(2) They shall come into force on the date of their publication in the Official Gazette.

2. ***Definitions.***—*In these rules unless the context otherwise requires :—*

(a) "Act" means the Water (Prevention and Control of Pollution) Act, 1974;

(b) "Chairman" means the Chairman of the Central Board;

(c) "Central Board Laboratory" means a laboratory established or recognized as such under sub-section (3) of Sec. 16;

(d) "Central Water Laboratory" means a laboratory established or specified as such under sub-section (1) of Sec. 51,

(e) "form" means a form set out in Sch. I;

(f) "member" means a member of the Central Board and includes the Chairman thereof ;

(g) "Member-Secretary" means the Member-Secretary of the Central Board;

(h) "section" means a section of the Act;

(i) "Schedule" means a Schedule appended to these rules;

(j) "year" means the financial year commencing on the first day of April.

Comment

General principle of construction.—There is one principle on which there is complete unanimity of all the Courts in the world and this is that where the words or the language used in a statute are clear and cloudless, plain, simple and explicit unclouded and unobscured, intelligible and pointed so as to admit of no ambiguity, vagueness, uncertainty or equivocation, there is absolutely no room for deriving support from external aids. In such cases, the statute should be interpreted on the face of the language itself without adding, subtracting or omitting words therefrom. Where the language is plain, and unambiguous the Court is not entitled to go behind the language so as to add or supply omission and thus play the role of a political reformer or of a wise counsel to the Legislature.[1]

---

[1] Published in the *Gazette of India, Extraordinary,* Pt. II, Sec. 3(*i*), dated the 27th February, 1975.

CHAPTER II

TERMS AND CONDITIONS OF SERVICE OF THE MEMBERS OF THE CENTRAL BOARD AND OF COMMITTEES OF CENTRAL BOARD

3. *Salaries, allowances and other conditions of service of the Chairman.*—*The Chairman shall be paid a fixed monthly salary or Rs. 3,000.*

[2]*[(2) (a) in addition to the salary specified in sub-rule (1), the Chairman shall be entitled to city compensatory allowance and house-rent allowance as admissible to a Central Government servant in terms of Ministry of Finance (Department of Expenditure) O.M.No. 2 (3)-E. II (B)/64, dated the 27th November, 1965 :*

Provided that where the Chairman is allotted an accommodation by the Central Government, he shall not be entitled to house-rent allowance and shall be required to pay ten per cent of the emoluments drawn by him as house-rent or licence fee.

(b) in respect of journeys undertaken by the Chairman in connection with his duties as Chairman, he shall be entitled to travelling allowance and daily allowance at the rates permissible in the case of a Government officer of equivalent rank under the Supplementary Rules of the Central Government;

(c) the Central Board shall provide to the Chairman, medical facilities as admissible to an officer of the Central Government drawing salary of Rs. 3,000 per mensem.]

(3) notwithstanding anything contained in sub-rules (1) and (2), where a Government servant is appointed as Chairman, the terms and conditions of his service shall be such as may be specified by the Central Government from time to time.

Comment

The Chairman shall not be entitled to the house rent if he has been allotted an accommodation by the Central Government.

4. *Salaries, allowances and other conditions of service of Member-Secretary.*—*(1) The Member-Secretary shall be paid a monthly pay in the scale of Rs. 2,250-125-2,500.*

[3]*[(2) (a) In addition to the salary specified in sub-rule (1) the Member-Secretary shall be entitled to city compensatory allowance and house-rent allowance as admissible to a Central Government servant in terms of Ministry of Finance (Department of Expenditure) O.M. No. 2 (3)-E.II (B)/64, dated the 27th November, 1965 :*

Provided that where the Member-Secretary is allotted an accommodation by the Central Government he shall not be entitled to house-rent allowance and shall be required to pay ten per cent of the emolument drawn by him as house-rent or licence fee.

---

[1] S.P. Gupta *v.* President of India, A.I.R. 1982 S.C. 149 at pp. 304, 314.

[2] Subs. by G.S.R. 515(E), dated 30th October, 1978, published in the *Gazette of India, Extraordinary,* Pt. II, Sec. 3 (*i*), dated the 30th October, 1978.

[3] *Ibid.*

(b) In respect of journeys undertaken by the Member-Secretary in connection with his duties as Member-Secretary he shall be entitled to travelling allowance and daily allowance at the rates permissible in the case of a Government Officer of equivalent rank under the Supplementary Rules of the Central Government;

(c) The Central Board shall provide to the Member-Secretary, medical facilities as admissible to an officer of the Central Government drawing salary in the scale of Rs. 2,250-125-2,500 per mensem.]

(d) the other terms and conditions of service of the Member-Secretary including allowances payable to him, shall be, as far as may be, the same as are applicable to a Grade I Officer of corresponding status of the Central Government.

(3) Notwithstanding anything contained in sub-rules (1) and (2) where a Government servant is appointed as member-secretary, the terms and conditions of his service shall be such as may be specified by the Central Government from time to time.

5. *Terms and conditions of service of members of the Central Board.*— *(1) Non-official members of the Central Board resident in Delhi shall be paid an allowance of* [1]*[rupees seventy-five] per day for each day of the actual meetings of the Central Board.*

(2) Non-official members of the Central Board, not resident in Delhi shall be paid an allowances of rupees [2]*[seventy-five] per day (inclusive of daily allowance) for each day of the actual meetings of the Central Board and also travelling allowance at such rate as is admissible to a Grade I Officer of the Central Government :*

Provided that in case of a member of Parliament who is also a member of the Central Board, the said daily and travelling allowance will be admissible when the Parliament is not in session and on production of a certificate by a member that he has not drawn any such allowance for the same journey and halts from any other Government source.

Comment

Sub-rule (2) provides for the payment of allowance of rupees seventy-five per day to non-official members of the Central Board not resident in Delhi for attending the meetings of the Central Board.

6. *Fees and allowances to be paid to such members of a committee of the Central Board as are not members of the Board under sub-section (3) of Sec. 9.*— *A member of a committee of the Central Board shall be paid in respect of meetings of the committee travelling and daily allowances, if he is a non-official, at the rates specified in rule 5, as if he were a member of the Central Board and, if he is a Government servant, at the rates, admissible under the relevant rules, of the respective Government under whom he is serving.*

CHAPTER III

POWERS AND DUTIES OF THE CHAIRMAN AND MEMBER-SECRETARY AND APPOINTMENTS OF OFFICERS AND EMPLOYEES

7. *Powers and duties of the Chairman.*— *(1) The Chairman shall have overall control over the day-to-day activities of the Central Board.*

(2) (i) The Chairman may undertake tours within India for carrying out the functions of the Central Board :

---

[1] Subs. by G.S.R. 352, dated the 21st February, 1976, published in the *Gazette of India*, Pt. II, Sec. 3 (i), dated the 6th March, 1976.

[2] *Ibid.*

Provided that he shall keep the Central Government (Secretary to the Ministry of Works and Housing) and the Central Board, informed of his tours.

(ii) The Chairman may, with the prior approval of the Central Government, visit any country outside India.

[1][(3)] *In the matter of acceptance to tenders, the Chairman shall have full powers subject to the concurrence of the Central Board :*

Provided that no such concurrence is required for the acceptance of tenders up to an amount of rupees one thousand in each case.

[1][(4)] *Subject to overall sanctioned budget provision, the Chairman shall have full powers to administratively approve and sanction all estimates.*

*8. **Creation and abolition of posts.**—The Central Board may create such posts as it considers necessary for the efficient performance of its functions and may abolish any post, so created :*

Provided that for the creation of, and appointments to, posts, the maximum of the scale of which is above Rs. 1,600 per month, the Central Board shall obtain prior sanction of the Central Government.

Comments

This rule requires the Central Board to obtain prior sanction of the Central Government for making appointments to posts carrying the maximum of the scale above Rs. 1,600 per month.

The power to create and abolish post in different scales—For the efficient performance of the functioning of the Board—Explained.—Under Rule 8 of the Rules, the power to create and abolish post in different scales as considered necessary for the efficient performance of the functioning of the Board and to make appointment against such post and consequently terminate such appointment made against such posts are vested in the Board except with respect to post, the maximum scale of which is above Rs. 2500/- per month. Sub-rule (2) of Rule 8 provides, that subject to rules, if any, made under sub-section (3) of Sec. 12 the State Board shall have full powers in the matter of appointment. The relevant rule 8 is quoted below :

"*Creation and abolition of posts.*— (1) The State Board may create such posts in different scales as it considers necessary for the efficient performance of its function, make appointment against such posts abolish such posts so created and consequently terminate the appointments made against such posts; provided that the State Board shall obtain prior sanction of the State Government for the creation, abolition of and appointment to posts above the maximum pay scale of Rs. 2,500/- (rupees two thousand and five hundred) only per month. Subject to rules, if any, made under sub-section (3) of Sec. 12 the State Board shall have full power in the matters of appointments to posts in different scales, promotion, confirmation, transfer and termination of services of officers and employees of State Board".[2]

---

[1] Rule 3 was omitted and rules (4) and (5) were re-numbered as rules (3) and (4) by G.S.R. 36 (E), dated the 29th January, 1981, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (i), dated the 29th January, 1981.

[2] Shailendra Kumar *v.* State of Bihar, 1996 Lab. I.C. 1631 at p. 1634.

*9. **Powers and duties of the Member-Secretary.**—The Member-Secretary shall be subordinate to the Chairman and shall, subject to the control of the Chairman, exercise the following powers, namely :—*

(1) The Member-Secretary shall be in charge of all the confidential papers of the Board and shall be responsible for preserving them.

(2) The Member-Secretary shall produce such papers whenever so directed by the Chairman or by the Central Board.

(3) The Member-Secretary shall make available to any member of the Central Board, for his perusal, any record of the Board.

(4) The Member-Secretary shall be entitled to call for the services of any officer or employee of the Central Board, and files, papers and documents for study from any department of the Board, as also to carry out inspection of any department at any time including checking of accounts, vouchers, bills and other records and stores pertaining to the Board or regional offices thereunder.

(5) The Member-Secretary may withhold any payment :

Provided that as soon as may be, [1][and in any case not later than three months] after such withholding of payment the matter shall be placed before the Central Board for its approval.

(6) The Member-Secretary shall make all arrangements for holding meetings of the Central Board and meetings of the Committees constituted by the Central Board.

(7) All orders or instructions to be issued by the Central Board shall be over the signature of the Member-Secretary or of any other officer authorized in this behalf by the Chairman.

(8) The Member-Secretary shall authorize, sanction or pass all payments against allotments made or estimates sanctioned.

(9) The Member-Secretary shall write and maintain confidential reports of all Class I and Class II officers of the Central Board and shall get them countersigned by the Chairman.

(10) The Member-Secretary shall countersign the confidential reports of all the Class III employees of the Central Board.

(11) (i) The Member-Secretary shall sanction the annual increments of Class I and Class II Officers of the Central Board :

Provided that the increment of Class I and Class II officers shall be withheld only with the approval of the Chairman.

(ii) The annual increments of other employees of the Central Board not referred to in Cl (i) shall be sanctioned by officers authorized in this behalf by the Member-Secretary.

(12) The Member-Secretary shall have full powers for according technical sanction to all estimates.

---

[1] Subs. by G.S.R. 352, dated the 21st February, 1976, published in the *Gazette of India*, Pt. II, Sec. 3 (i), dated the 6th March, 1976.

(13) The Member-Secretary shall exercise such other powers and perform such other functions as may be delegated to him from time to time either by the Board or by the Chairman.

Comment

This rule enumerates the power and duties of the Member-Secretary *viz.*, to authorize or sanction all payments against allotments made.

CHAPTER IV

TEMPORARY ASSOCIATION OF PERSONS WITH CENTRAL BOARD

10. Manner and purpose of association of persons with Central Board.—*(1) The Central Board may invite any person, whose assistance or advice it considers useful to obtain in performing any of its functions, to participate in the deliberations of any of its meetings.*

(2) If the person associated with the Board under sub-rule (1) happens to be a non-official, resident in Delhi, he shall be entitled to get an allowance of [1][rupees seventy-five] per day for each day of actual meeting of the Central Board in which he is so associated.

(3) If such person is non-resident in Delhi, he shall be entitled to get an allowance of rupees seventy-five per day (inclusive of daily allowance) for each day of actual meeting of the Central Board in which he is so associated and also to travelling allowance at such rates as admissible to a Grade I Officer of the Central Government.

(4) Notwithstanding anything in sub-rules (2) and (3), if such person is a Government servant or an employee in a Government undertaking he shall be entitled to travelling and daily allowances only at the rates admissible under the relevant rules applicable to him.

CHAPTER V

CONSULTING ENGINEER

11. Appointment of consulting engineer.—*For the purpose of assisting the Central Board in the performance of its functions, the Board may appoint a consulting engineer to the Board for a specified period not exceeding four months :*

Provided that the Board may, with the prior approval of the Central Government extend the period of the appointment from time to time :

Provided further that if at the time of the initial appointment the Central Board had reason to believe that the services of the consulting engineer would be required for a period of more than four months, the Central Board shall not make the appointment without the prior approval of the Central Government.

12. Power to terminate appointments.—*Notwithstanding the appointment of a consulting engineer for a specified period under rule 11, the Central Board shall have the right to terminate the services of the consulting engineer before the expiry of the specified period, if, in the opinion of the Board, the consulting engineer is not discharging his duties properly or to the satisfaction of the Board or such a course of action is necessary in the public interest :*

---

[1] **Subs. by G.S.R. 352, dated the 21st February, 1976, published in the *Gazette of India*, Pt. II, Sec. 3(*i*), dated the 6th March, 1976.**

[1][*Provided that the services of a consulting engineer shall not be terminated under this rule by the Central Board except after giving him a reasonable opportunity of showing cause against the proposed action.]*

*13. **Emoluments of the consulting engineer.**—The Central Board may pay the consulting engineer suitable emoluments or fees depending on the nature of work, and the qualifications and experience of the consulting engineer :*

Provided that the Central Board shall not appoint any person as consulting engineer without the prior approval of the Central Government if the emoluments or fees payable to him exceeds rupees two thousand per month.

*14. **Tours by consulting engineer.**—The consulting engineer may undertake tours within the country for the performance of the duties entrusted to him by the Central Board and in respect of such tours he shall be entitled to travelling and daily allowances as admissible to a Grade I officer of the Central Government. He shall, however, get the prior approval of the Member-Secretary to his tour programme.*

*15. **Consulting engineer not to disclose information.**—The consulting engineer shall not disclose any information either given by the Central Board or obtained during the performance of the duties assigned to him either from the Central Board or otherwise, to any person other than the Central Board without the written permission of the Board.*

Comment

The word "shall"—Meaning of.—It has been laid down consistently by the Supreme Court that the mere use of the word "shall" by itself in the statute does not make the provision mandatory, but it is the duty of the Courts of justice to try to get at the real intention of the Legislature by carefully attending to the whole scope of the statute to be construed. In each case, one has to look to that subject-matter, consider the importance of the provisions and the relation of the provision with the general object intended to be secured by the Act and upon the review of the case in that aspect decide whether the enactment is mandatory or only directory.[2]

*16. **Duties and functions of the consulting engineer.**—The consulting engineer shall discharge such duties and perform such functions as are assigned to him, by the Central Board and it will be his duty to advise the Board on all technical matters referred to him by the Board.*

CHAPTER VI

BUDGET OF THE CENTRAL BOARD

*17. **Form of budget estimates.**—(1) The budget in respect of the year next ensuing showing the estimated receipts and expenditure of the Central Board shall be prepared in Forms I, II, III and IV and submitted to the Central Government.*

(2) The estimated receipts and expenditure shall be accompanied by the revised budget estimates for the current year.

(3) The budget shall, as far as may be, based on the account heads specified in Sch. II.

---

[1] Ins. by G.S.R. 352, dated the 21st February, 1976, published in the *Gazette of India*, Pt. II, Sec. 3 (i), dated the 6th March, 1976.

[2] Mohammad Mahboob Khan *v.* State Transport Appellate Tribunal, U.P., 1982 A.L.J. 300 at p. 301.

***18. Submission of budget estimates to the Central Board.**—(1) The budget estimates as compiled in accordance with rule 17 shall be placed by the Member-Secretary before the Central Board by the 5th October each year for approval.*

(2) After approval of the budget estimates by the Central Board, four copies of the final budget proposals incorporating therein such modifications as have been decided upon by the Central Board shall be submitted to the Central Government by the 15th October each year.

Comment

Sub-rule (2) requires the Central Board to submit the four copies of the final budget proposals to the Central Government by the 15th October each year.

***19. Estimates of establishment expenditure and fixed recurring charges.**— (1) The estimates of expenditure on fixed establishment as well as fixed monthly recurring charges on account of rent, allowances, etc., shall provide for the gross sanctioned pay without deductions of any kind.*

(2) To the estimates referred to in sub-rule (1) shall be added a suitable provision for leave salary based on past experience with due regard to the intention of the members of the staff in regard to leave as far as the same can be ascertained.

(3) If experience indicates that the total estimate for fixed charges referred to in sub-rules (1) and (2) is not likely to be fully utilized, a suitable lump sum deduction shall be made from the total amount estimated.

***20. Re-appropriations and emergent expenditure.**—No expenditure which is not covered by a provision in the sanctioned budget estimates, or which is likely to be in excess over the amount provided under any head, shall be incurred by the Central Board without provision being made by re-appropriation from some other head under which savings are firmly established and available.*

***21. Power to incur expenditure.**—The Central Board shall incur expenditure out of the funds received by it in accordance with the instructions laid down under the General Financial Rules of the Central Government and other instructions issued by the Government from time to time.*

***22. Operation of fund of the Central Board.**—The fund of the Central Board shall be operated by the Member-Secretary of the Central Board or in his absence by any officer of the Central Board who may, subject to the approval of the Central Government, be so empowered by the Central Board.*

***23. Saving.**—Nothing in the chapter shall apply to a budget already finalized before the commencement of these rules.*

CHAPTER VII

ANNUAL REPORT OF THE CENTRAL BOARD

***24. Form of the annual report.**—The annual report in respect of the year last ended giving a true and full account of the activities of the Central Board during the previous financial year shall contain the particulars specified in the Sch. III.* [1][****].

---

[1] Omitted by G.S.R. 717 (E), dated 27th July 1989 [w.e.f. 27th July, 1989].

CHAPTER VIII

ACCOUNT OF THE CENTRAL BOARD

. ***Form of annual statement of accounts of the Central Board.***—*The tatement of accounts of the Central Board shall, be in Forms V to IX.*

CHAPTER IX

REPORT OF CENTRAL BOARD ANALYST [1][AND THE QUALIFICATION OF ANALYSTS]

. ***Form of report of Central Board Analyst.***—*When a sample of any wage or trade effluent has been sent for analysis to a laboratory established or d by the Central Board, the Central Board analyst appointed under sub-section (3) 3 shall analyse the sample and submit to the Central Board a report in triplicate X of the result of such analysis.*

Comment

ıis rule prescribes the Form X for recording the findings by the Central aboratory of analysis of any samples of water, sewage or trade effluent l by it from the officer authorized by the Central Board.

26-A. *Persons possessing the following qualifications are eligible for nent as Government analysts or as Board analysts under sub-section (1) or ion (3), as the case may be, of Sec. 53, namely ·*

ssential :—(i) M. Sc. Degree in Chemistry or equivalent or Bachelor Degree ıical Engineering or Bio-chemical Engineering; and

i) 10 years' experience in analysis of water, sewage or industrial wastes in , research or Government Laboratory.

esirable :—(i) Doctorate Degree in Chemistry or Bio-chemistry or Master's in Chemical Engineering or Bio-chemical Engineering;

ii) Evidence of published papers in the field.]

CHAPTER X

CENTRAL WATER LABORATORY

7. ***Functions of the Central Water Laboratory.***—*The Central Water ory shall cause to be analysed any samples of water, sewage or trade effluent l by it from any officer authorized by the Central Board for the purpose, and lings shall be recorded in a report in triplicate in Form XI.*

[3][28. ***Fee for report.***—*The fees payable in respect of each report of the Central Laboratory on any analysis or test mentioned in column (2) of Sch. IV shall be rates specified in the corresponding entry in column (3) thereof.]*

---

ubs. by G.S.R. 377 (E), dated 20th July, 1978, published in the *Gazette of India, Extraordinary*, Pt. II, ec. 3 (*i*), dated the 20th July, 1978.

ıs. by G.S.R. 1260, dated 17th August, 1976.

ubs. by G.S.R. 377 (E), dated the 20th July, 1978, published in the *Gazette of India, Extraordinary*, t. II, Sec. 3 (*i*), dated the 20th July, 1978.

CHAPTER XI

POWERS AND FUNCTIONS OF THE CENTRAL BOARD IN RELATION TO UNION TERRITORIES

*29. **Central Board to act as State Board for Union Territories.**—The Central Board shall act as State Board for Union Territories under sub-section (4) of Sec. 4.*

*30. **Power to take samples.**—The Central Board or any officer empowered by it in this behalf shall have power to take for the purpose of analysis samples of water from any stream or well or samples of sewage or trade effluent which is passing from any plant or vessel or from or over any place into any such stream or well in any Union territory.*

Comment

This rule empowers the Central Board and its officers to take samples of water from any stream or well or samples of sewage or trade effluent from any place in any Union Territory.

*31. **Form of notice.**—A notice under Cl. (a) of sub-section (3) of Sec. 21 shall, in the case of a Union territory, be in Form XII.*

[1][*32. **Application for consent.**—An application for obtaining the consent of the Central Board for establishing or taking any steps to establish any industry, operation or process or any treatment and disposal system or any extension or addition thereto, which is likely to discharge sewage or trade effluent into a stream or well or sewer or on land (such discharge being hereinafter in this rule referred to as discharge of sewage); or for bringing into use any new or altered outlet for the discharge of sewage or beginning to make any new discharge of sewage under Sec. 25 or for continuing an existing discharge of sewage under Sec. 26 shall be made to the Central Board in Form XIII.*]

Comment

This rule prescribeds the Form XIII for making application for securing consent under Sec. 25 or Sec. 26 of the Central Board.

33. Procedure for making inquiry into application for consent.— (1) On receipt of an application for consent under Sec. 25 or Sec. 26, the Central Board may depute any of its officers, accompanied by as many assistants as may be necessary, to visit the premises of the applicant, to which such application relates, for the purpose of verifying the correctness or otherwise of the particulars furnished in the application or for obtaining such further particulars or information as such officer may consider necessary. Such officer may, for that purpose, inspect any place where water or sewage or trade effluent is discharged by the applicant, or treatment plants, purification works or disposal systems of the applicant and may require the applicant to furnish to him any plans, specifications and other data relating to such treatment plants, purification works or disposal systems or any part thereof, that he considers necessary.

(2) Such officer shall before visiting any premises of the applicant for the purpose of inspection under sub-rule (1) above, give notice to the applicant of his intention to do so in Form XIV. The applicant shall furnish to such officer all facilities that such officer may legitimately require for the purpose.

---

[1] Subs. by G.S.R 717 (E), dated 27th July, 1989 (w.e.f. 27th July, 1989).

(3) An officer of the Central Board may, before or after carrying out an inspection under sub-rule (1) above, require the applicant to furnish to him, orally or in writing such additional information or clarification, or to produce before him such documents, as he may consider necessary for the purpose of investigation of the application and may, for that purpose, summon the applicant or his authorized agent to the office of the Central Board.

[1][34. ***Directions.***— *(1) Any direction issued under Sec. 33-A shall be in writing.*

(2) The direction shall specify the nature of action to be taken and the time within which it shall be complied with by the person, officer of the authority to whom such direction is given.

(3) The person, officer or authority to whom any direction is sought to be issued shall be served with a copy of the proposed direction and shall be given an opportunity of not less than fifteen days from the date of service of a notice to file with an officer designated in this behalf the objections, if any, to the issue of the proposed direction.

(4) Where the proposed direction is for the stoppage or regulation of electricity or water or any other services affecting the carrying on any industry, operation or process and is sought to be issued to an officer or an authority, a copy of the proposed direction shall also be endorsed to the occupier of the industry, operation or process, as the case may be, and objections, if any, filed by the occupier with an officer designated in this behalf shall be dealt with in accordance with the procedures under sub-rules (3) and (5) of this rule :

Provided that no opportunity of being heard shall be given to the occupier, if he had already been heard earlier and the proposed direction referred to in sub-rule (3) above for the stoppage or regulation or electricity or water or any other service was the resultant decision of the Central Board after such earlier hearing.

(5) The Central Board shall within a period of 45 days from the date of receipt of the objections, if any, or from the date upto which an opportunity is given to the person, officer or authority to file objections whichever is earlier, after considering the objections, if any, sought to be directed and for reasons to be recorded in writing, confirm, modify or decide not to issue the proposed direction.

(6) In a case where the Central Board is of the opinion that in view of the likelihood of a grave injury to the environment it is not expedient to provide an opportunity to file objections against the proposed direction, it may, for reasons to be recorded in writing, issue directions without providing such an opportunity.

(7) Every notice or direction required to be issued under this rule shall be deemed to be duly served :—

- *(a) Where the person to be served is a company, if the document is addressed in the name of the company at its registered office or at its principal office or place of business and is either —*
  - *(i) sent by registered post; or*
  - *(ii) delivered at its registered office or at the principal office or place of business;*

---

1. Ins. by G.S.R. 717 (E), dated 27th July, 1989 (w.e.f. 27th July, 1989).

(b) Where the person to be served is an officer serving Government, if the document is addressed to the person and a copy thereof is endorsed to his Head of the Department and also to the Secretary to the Government as the case may be, incharge of the Department in which for the time being the business relating to the Department in which the officer is employed is transacted and is either :—

(i) sent by registered post, or

(ii) is given or tendered to him;

(c) in any other case, if the document is addressed to the person to be served and—

(i) is given or tendered to him; or

(ii) if such person cannot be found, is affixed on some conspicuous part of his last known place of residence or business or is given or tendered to some adult members of his family or is affixed on some conspicuous part or the land or building, if any, to which it relates, or

(iii) is sent by registered post to that person.

Explanation.—For the purpose of this sub-rule :—

(a) "company' means any body corporate and includes a firm or other association of individuals;

(b) "a servant" is not a member of the family.

[1][35. ***Manner of giving notice.***—*The manner of giving notice under Cl. (b) of sub-section (1) of Sec. 49 shall be as follows, namely :—*

(1) The notice shall be in writing in Form XV ;

(2) If the alleged offence has taken place in a Union Territory, the person giving notice may send notice to :—

(i) the Central Board, and

(ii) the Ministry of Environment and Forests (represented by the Secretary to the Government of India) ;

(iii) the Administrator of the Union Territory (represented by the Secretary/Head incharge of Environment).

(3) The notice shall be sent by registered post acknowledgment due; and

(4) The period of sixty days mentioned in Cl. (b) of sub-section (1) of Sec. 49. of the Act shall be reckoned from that date it is first received by one of the authorities mentioned in sub-rule (2).]

---

1. Ins. by G.S.R. 717 (E), dated 27th July, 1989 (w.e.f. 27th July, 1989).

Application for consent for establishing or taking any steps for establishment of Industry/operation/process/or any treatment/disposal system for discharge, continuation of discharge under Sec. 25 or 26 of the Water (Prevention and Control of Pollution) Act, 1974

(*see* rule 32)

From Date .. . .

....
....
....
....

To
The Member-Secretary
Central Pollution Control Board,

Sir,

I/We hereby apply for Consent/Renewal of Consent under Sec 25 or Sec. 26 of the Water Prevention and Control of Pollution Act, 1974 (6 of 1974) for establishing or taking any steps for establishment of Industry/operation/process/or any treatment/disposal system to bring into use any new/altered outlet for discharge of *sewage/trade effluent*/to continue to discharge*/sewage/trade effluent* from land/premises owned by.. . .. .

The other relevant details are as below :—

1. Full name of the applicant..
2. Nationality of the applicant..
3. Status of the applicant :
   - (*a*) Individual
   - (*b*) Proprietary concern
   - (*c*) Partnership firm (whether registered or unregistered)
   - (*d*) Joint family concern
   - (*e*) Private Limited Company
   - (*f*) Public Limited Company
   - (*g*) Government Company
     - (1) State Government
     - (2) Central Government
     - (3) Union Territory

---

[1] Subs. by G.S.R. 717(E), dated 27th July, 1989 (w.e.f. 27th July, 1989).

(*h*) Foreign Company
(If a foreign company/the details of registration incorporation, etc.)

(*i*) Any other Association or Body :

4. Name, Address and Telephone Nos. of the Applicant.

(the full list of individuals, partners, persons. Chairman (full time or part-time), Managing Directors, Managing Partners, (Directors (full time or part-time), other kinds of office-bearers are to be furnished with their period of tenure in the respective office with telephone Nos. and address).

5. Address of the Industry

(Survey No; *Khasra* No. Location as per the revenue record, Village . Firka, Tehsil, District, Police Station or SHO, jurisdiction of the First Class Magistrate).

6. Details of commissioning *etc* :—

(*a*) Appropriate date of the proposed commissioning of work.

(*b*) Expected date of production ·

7. Total number of employees expected to be employed.

8 Details of licence, if any obtained under the provisions of Industrial Development (Regulation) Act, 1951,—

9. Name of the person authorised to sign this form
(the original authorisation except in the case of individual/proprietary concern is to be enclosed)

10. (*a*) attach the list of all raw materials and chemicals used per month.

(*b*) Licenced Annual Capacity of the Factory/Industry.

11. State daily quantity of water in kilolitres utilised and its source.
(domestic/industrial/process/bodies/boiler/cooling/others)

12. (*a*) State the daily maximum quantity of effluents and mode of disposal (sewer or drains or river).
Also attach analysis report of the effluents. Type of efficient quantity in kilolitres, mode of disposal.
(*i*) Domestic
(*ii*) Industrial

(*b*) Quality of effluent currently being discharged or expected to be discharged.

(*c*) What monitoring arrangement is currently there or proposed.

13. State whether you have any treatment plant for industrial, domestic or combined effluents.

Yes/No

If yes, attach a description of the process of treatment in brief. Attach information on the quality of treated effluent *vis-a-vis* the standards.

14. State details of solid waters generated in the process or during waste treatment.

Description	Quantity	Method of collection	Method of disposal

15. I/We further declare that the information furnished above is correct to the best of my/our knowledge

16. I/We hereby submit that in case of change either of the point of discharge or the quantity of discharge of its quality, a fresh application for consent shall be made and until such consent is granted no change shall be made

17 I/We hereby agree to submit to the Central Board an application for renewal of consent one month to advance of the date of expiry of the consented period for outlet/discharge if to be continued thereafter.

18 I/We undertake to furnish any other information within one month of its being called by the Central Board.

19. I/We enclose herewith cash receipt no./bank draft no.. dated . .. for Rs .... (Rupees. .. ..) in favour of the Central Pollution Control Board, New Delhi, as fees payable under Sec 25 of the Act.

Yours faithfully,

Signature of the applicant

Note : *Strike out which is not relevant]

NOTIFICATIONS

SCHEDULE OF FEE FOR ANALYSIS OF VARIOUS ANALYTICAL PARAMETERS IN CPCB LABORATORIES

S.O. 296 (E), dated 31th March 1994.[1]— In exercise of the power vested under sub-section (4) of Sec 4 of the Water (Prevention and Control of Pollution) Act, 1974, the Central Pollution Control Board pursuant to Sec 17(2) of the said Act, has established the Board Laboratory located at Parivesh Bhawan, East Arjun Nagar, Shahdara, Delhi

The fees payable to the Board's Laboratory in respect of each report of the analysis for various Physico-chemical parameters shall be as per the rates given in Schedule annexed

The rates shall come into force from the date of issue of this notification

PART I-C

THE CENTRAL BOARD FOR THE PREVENTION AND CONTROL OF WATER POLLUTION (PROCEDURE FOR TRANSACTION OF BUSINESS) RULES, 1975

G.S.R. 3 (E), dated 10th January, 1975.[1] —In exercise of the powers conferred by Sec 63 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), the Central Government after consultation with the Central Board for the Prevention and Control of Water Pollution hereby makes the following rules, namely :

1. *Short title and commencement.*—*(1) These rules may be called the Central Board for the Prevention and Control of Water Pollution (Procedure for Transaction of Business) Rules, 1975*

(2) They shall come into force on the date of their publication in the Official Gazette

2. *Definitions.*—*In these rules, unless the context otherwise requires :*

- *(a) "Act" means the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974);*
- *(b) "Government" means the Central Government,*
- *(c) "Chairman" means the Chairman of the Central Board;*
- *(d) "Member" means a member of the Central Board and includes the Chairman thereof ;*
- *(e) "Member-Secretary" means the Member-Secretary of the Central Board;*
- *(f) "Meeting" means a meeting of the Central Board;*
- *(g) "Section" means a section of the Act,*

3. *Notice of Meetings.*—*(1) Meetings of the Central Board shall ordinarily be held at Delhi on such dates as may be fixed by the Chairman.*

(2) The Chairman shall, upon the written request of not less than five members of the Central Board or upon a direction of the Central Government, call a special meeting of the Central Board.

(3) Fifteen clear days' notice of an ordinary meeting and three clear days' notice of a special meeting specifying the time and the place at which such meeting is to be held and the business to be transacted thereat, shall be given by the Member-Secretary to the members.

(4) Notice of a meeting may be given to the member by delivering the same by messenger or sending it by registered post to his last known place of residence or business or in such other manner as the Chairman may, in the circumstances of the case, thinks fit.

(5) No member shall be entitled to bring forward for the consideration of the meeting any matter of which he has not given ten clear days' notice of the Member-Secretary, unless the Chairman, in his discretion, permits him to do so.

[2][*(6) (a) The Central Board may adjourn its meetings from day to day or to any particular date.*

---

1. Published in the *Gazette of India, Extraordinary,* Pt. II, Sec. 3 (*i*), dated 10th January, 1975.
2. Subs. by G.S.R. 1489, dated 11th October, 1976, published in the *Gazette of India,* Pt. II, Sec. 3 (*i*), dated the 16th October, 1976.

(b) Where a meeting of the Central Board is adjourned from day to day, notice of such adjourned meeting shall be given to the members available in the city, town or other place where the meeting which is adjourned if held, either by telephone or by special messenger and it shall not be necessary to give notice of the adjourned meeting to other members.

(c) Where a meeting of the Central Board is adjourned not from day to day but from the day on which the meeting is held to another date, notice of such meeting shall be given to all the members as provided in sub-rules (3) and (4)];

(7) [1]*[* * *]*

Comment

This rule fixes the minimum limit of notice for the ordinary and special meeting viz., fifteen days and three days respectively.

4. ***Presiding Officer.***—*Every meeting shall be presided over by the Chairman and, in his absence, by a Chairman for the meeting to be elected by the members present from amongst themselves.*

Comment

The word "shall"—Meaning of.—It has been laid down consistently by the Supreme Court that the mere use of the word "shall" by itself in the statute does not make the provision mandatory, but it is the duty of the courts of justice to try to get at the real intention of the Legislature by carefully attending to the whole scope of the statute to be construed. In each case, one has to look to the subject-matter, consider the importance of the provisions and the relation of that provision with the general object intended to be secured by the Act and upon the review of the case in that aspect decide whether the enactment is mandatory or only directory.[2]

5. ***All questions to be decided by majority.***—*(1) All questions at a meeting shall be decided by a majority of votes of members present, and voting shall be by raising of hands in favour of the proposal.*

(2) In case of an equality of votes, the presiding officer shall have a second or casting vote.

Comment

This rule gives the second or casting vote to the presiding officer when there is an equality of votes.

6. ***Quorum.***—*(1) Five members shall form the quorum for any meeting.*

(2) If at any time fixed for any meeting or during the course of any meeting a quorum is not present, the presiding officer shall adjourn the meeting and if a quorum is not present on the expiration of fifteen minutes from such adjournment the presiding officer shall adjourn the meeting to such hours on the following or on some other future date as he may fix.

(3) No quorum shall be necessary for the adjourned meeting.

(4) No matter which had not been on the agenda of the original meeting shall be discussed at such adjourned meeting.

[3]*[(5) (a) Where a meeting of the Central Board is adjourned under sub-rule (2) for want of quorum to the following day, notice of such adjourned meeting shall be*

---

[1] Omitted by G.S.R. 1489, dated the 11th October, 1976, published in the *Gazette of India*, Pt. II, Sec. 3 (*i*), dated 16th October, 1976.

[2] Mohammad Mahboob Khan *v.* State Transport Appellate Tribunal, U.P., 1982 A.L.J. 300 at p. 301.

[3] Subs. by G.S.R. 1489, dated the 11th October, 1976, published in the *Gazette of India*, Pt. II, Sec. 3 (*i*), dated 16th October, 1976.

given to the members available in the city, town or other place where the meeting which is adjourned is held, either by telephone or by special messenger and it shall not be necessary to give notice of the adjourned meeting to other members.

(b) Where a meeting of the Central Board is adjourned under sub-rule (2) for want of quorum not to the following day but to another date, notice of such adjourned meeting shall be given to all the members as provided in sub-rules (3) and (4).]

Comment

Sub-rule (3) dispenses with the requirement of the quorum of five members in the case of the adjourned meeting.

7. ***Minutes.***—*(1) Record shall be kept of the names of members who attend the meeting and of the proceedings at the meeting in a book to be maintained for that purpose by the Member-Secretary.*

(2) The minutes of the previous meeting shall be read at the beginning of every succeeding meeting, and shall be confirmed and signed by the presiding officer at such meeting.

(3) The proceedings shall be open to inspection by any member at the office of Central Board during office hours.

Comment

This rule requires for keeping of the record of the names of the members who attend the meeting by the Member-Secretary.

8. ***Maintaining order at meeting.***—*The presiding officer shall preserve order at a meeting.*

9. ***Business to be transacted at meeting.***—*Except with the permission of the presiding officer, no business which is not entered in the agenda or of which notice has not been given by a member under sub-rule (5) of rule 3, shall be transacted at any meeting.*

Comment

The business other than which is entered in the agenda can be transacted at meeting only with the permission of the presiding officer.

10. ***Order of business.***—*(1) At any meeting business shall be transacted in the order in which it is entered in the agenda.*

(2) Either at the beginning of the meeting or after the conclusion of the debate on a motion during the meeting the presiding officer or a member may suggest a change in the order of business as entered in the agenda and if the meeting agrees, such a change shall take place.

11. ***Procedure for transaction of business of Committees constituted by the Board.***—*(1) The time and place of the meetings of the committees constituted by the Central Board under sub-section (1) of Sec. 9 shall be as specified by the Chairman.*

(2) The quorum for a meeting of a committee constituted under sub-section (1) of Sec. 9 shall be one-half of the total number of members of the committee.

(3) Subject to sub-rule (1) and sub-rule (2) the meetings of any of the committees constituted under sub-section (1) of Sec. 9 shall, as far as may be governed by the rules applicable to the meetings of the Central Board.

Comment

This rule fixes the quorum for a meeting of a committee, viz., one-half of the total number of members of the committee.

NOTIFICATIONS

CHANDIGARH

S.O. 199 (E) New Delhi, dated the 15th March, 1991.—In exercise of the powers conferred by Sec. 4, Cl. (4) of the Water (Prevention and Control of Pollution) Act, 1974, and Sec. 6 of the Air (Prevention and Control of Pollution) Act 1981, the Central Pollution Control Board delegates all the powers vested in the said Board under the Water (Prevention and Control of Pollution) Act, 1974, and the Air (Prevention and Control of Pollution) Act, 1981, in respect of the Union Territory of Chandigarh to the undermentioned committee specified by the Central Government :—

1.	Chief Conservator of Forests -cum-Deputy Secretary Home	Chairman
2.	Divisional Forest Officer	Member
3.	Scientist 'SD'	Member Secretary

This Notification shall come into force with effect from 1st day of April 1991.

STANDARDS FOR COMPLIANCE BY SMALL-SCALE INUSTRIES LOCATED IN UNION TERRITORIES

No. 1/2 (71)/87 Plg New Delhi, the 7th April, 1988.—In exercise of the powers conferred under Sec. 4 (4) of the Water (Prevention and Control of Pollution) Act, 1974, the Central Board for the Prevention and Control of Water Pollution pursuant to Sec. 17 (1) (*m*) of the said Act lays down the following standards for compliance by small-scale industries located in the Union Territories, in respect of which Minimal National standards have not been yet evolved :

while issuing consents pursuant to Secs. 25 and 26 of the Water (Prevention and Control of Pollution) Act, 1974.

Sl. No.	Parameters	Concentration not to exceed
1.	Total Concentration of Mercury (Hg.) in the final (Combined) effluent	0.01 mg/l
2.	pH	5.5—9.0
3.	Suspended Solids	250 mg/l
4.	Biochemical Oxygen Demand	150 mg/l
5.	Temperature	Shall not exceed 5°C above the ambient Temp. of the receiving body.
6.	Free available chlorine	0.5 mg/l
7.	Oil & Grease	10 mg/l
8.	Cu (Total)	3.0 mg/l
9.	Iron (total)	3.0 mg/l
10.	Zinc	5.0 mg/l
11.	Cr. (Total)	2.0 mg/l
12.	Phosphate (as P)	5.0 mg/l
13	Bio-assay test	90% of test animals after 96 hours with 1 : 8 dilution.
14	Sulphide (as S)	2 mg/l
15.	Phenolic Compounds (as C_6H_5OH)	5 mg/l
16	Hexavalent Chromium (as Cr)	0.1 mg/l
17.	Nickel (as Ni)	3.0 mg/l
18.	Cadmium (Cd)	2.0 mg/l
19.	Chloride (as Cl)	9000 mg/l
20.	Sulphate (as SO_4)	1000 mg/l
21.	Cynides (as CN)	0.2 mg/l
22.	Ammonical Nitrogen (as N)	50 mg/l
23.	Lead (as Pb)	0.01 mg/l
24.	Total Metal	10.0 mg/l

The standards may be relaxed in cases where the water from small-scale industrial units are collected and treated in a Terminal Treatment Plant. These standards are laid down without prejudice to the Board varying or modifying them.

PART I-D

THE WATER (PREVENTION AND CONTROL OF POLLUTION) CESS ACT, 1977[1]

(ACT NO 36 OF 1977)

[*7th December, 1977*]

An Act to provide for the levy and collection of a cess on water consumed by persons carrying on certain industries and by local authorities, with a view to augment the resources of the Central Board and the State Boards for the prevention and control of water pollution constituted under the Water (Prevention and Control of Pollution) Act, 1974.

[2][STATEMENT OF OBJECTS AND REASONS

The Water (Prevention and Control of Pollution) Act, 1974 has been enacted by Parliament under Art. 252 of the Constitution with a view to control the pollution of rivers and streams which has assumed considerable importance and urgency in recent years as a result of increasing industrialization and urbanization. The Act is intended to ensure that the domestic and industrial effluents are not allowed to be discharged into water courses without adequate treatment. This Act is now in force in fifteen States and in all Union territories. The other remaining States are also likely to adopt the Act in the near future.

2. According to the provisions of the Act, the Central Government and the State Governments have to provide funds to the Central Board and State Boards for prevention and control of water pollution respectively, for implementing the provisions of the Act. However, due to pressure on the limited resources, the State Governments are not able to provide adequate funds to the State Boards for their effective functioning. It is, therefore, proposed to levy a cess on local authorities which are entrusted with the duty of supplying water under the law by or under which they are constituted and on certain specified industries. The cess proposed to be levied will be on the basis of water consumed by such local authorities and industries. The cess will be collected by the State Governments concerned and will be paid to the Central Government and the Central Government, after due appropriation made by Parliament by law, will pay, having regard to the amount of cess collected by the concerned State Governments, such sums of money as it may think fit to the Central Board and the State Boards.]

BE it enacted by Parliament in the Twenty-eighth Year of the Republic of India as follows :

1. ***Short title, extent, application and commencement.***—*(1) This Act may be called be Water (Prevention and Control of Pollution) Cess Act, 1977.*

(2) It extends to the whole of India except the State of Jammu and Kashmir.

---

[1] Received the assent of the President on 7th December, 1977, published in *Gazette of India, Extraordinary*, Pt. II, Sec. 1, dated 7th December, 1977.

[2] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 2, dated 14th November, 1977.

(3) Subject to the provisions of sub-section (2), it applies to all the States to which the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), applies and the Union territories.

(4) It shall come into force on such date[1] *as the Central Government may, by notification in the Official Gazette, appoint.*

SYNOPSIS

1. Purpose for enactment ... 331
2. Object of the enactment ... 332
3. Construction of statute—Guiding principles ... 332
4. Construction of the terms and expressions used in an Act of Parliament—The two rules ... 333
5. Rayon Grade Pulp—If chemical industry or textile industry or paper industry ... 333
6. Metallurgical industry and engineering industry—Difference .. 333
7. Tata Engineering and Locomotive Co. Ltd.—If metallurgical industry . . 334
8. Applicability of the Act to Tata Engineering and Locomotive Co. Ltd. ... 334
9. Liability of Tata Engineering and Locomotive Co. Ltd., Jamshedpur for levy of cess ... 334

1. Purpose for enactment.—The Water (Prevention and Control of Pollution) Act, 1974, was passed by the Parliament to "provide for the prevention and control of water pollution and the maintaining or restoring of wholesomeness of water, for the establishment, with a view to carrying out the purposes aforesaid, of Boards for the prevention and control of water pollution, for conferring on and assigning to such Boards powers and functions relating thereto and for matters connected therewith". For the aforesaid purposes, the Act contemplated creation of State Boards at State level and the Central Board at the national level. Thereafter, the Water (Prevention and Control of Pollution) Cess Act, 1977 being Act 36 of 1977 was passed. The preamble to the later Act states that the said Act was "to provide for the levy and collection of cess on water consumed by persons carrying on certain industries and by local authorities, with a view to augment the resources of the Central Board and the State Boards for the prevention and control of water pollution constituted under the Water (Prevention and Control of Pollution) Act, 1974". Therefore, the said Act was passed only for the purpose of providing for levy and collection of cess on water consumed by persons carrying on certain industries with a view to augment the resources of the Central Board and the State Boards.[2]

The preamble makes it clear that the purpose is to augment the resources of the Central Board and the State Board, for the prevention and control of water pollution, constituted under the Water (Prevention and Control of Pollution) Act, 1974. It is very difficult to ignore the purpose for which Water (Prevention and Control of Pollution) Act, 1974 was enacted. The objects and reasons as stated, for this enactment read :

---

[1] This Act came into force on 1st April, 1978, *vide* G.S.R. 189 (E), dated 23rd March, 1978, published in the *Gazette of India, Extraordinary,* Pt. II, Sec. 3 (*i*), dated 27th March, 1982.

[2] Member-Secretary, Andhra Pradesh State Board for Prevention and Control of Water Pollution *v.* Andhra Pradesh Rayons Ltd., (1988)3 S.C.J. 666 at pp. 667, 678 : (1989)1 S.C.C. 44 : A.I.R. 1989 S.C. 611 at pp. 612, 613, 615.

"An Act to provide for the prevention and control of water pollution and the maintaining or restoring of wholesomeness of water, for the establishment, with a view to carrying out the purposes aforesaid, of Board for the prevention and control of water pollution for conferring on and assigning to such Boards powers and functions relating thereto and for matters connected therewith.

The intention of the two enactments is for preventing pollution of water and maintain efforts for restoring water to its natural state, after industrial use. Water unquestionably is a natural resource the pollution of which is to be prevented. The purpose of the two legislations is that this element of nature is not abused, and to strike a balance to return to nature, as part of the ecological balance system, what was taken from it, otherwise, a process of depletion may set in. The price of industrialisation, and mass consumption of natural resources is to remove contamination in the present context, which pollute water".

Art. 226 of the Constitution of India is not for interfering with steps which protect the environment and the ecology.[1]

2. **Object of the enactment.**—Under the provisions of the Water (Prevention and Control of Pollution) Act of 1974, the Central Government and the State Governments have to provide funds to the Central Board and the State Boards for prevention and control of water pollution respectively for implementing the provisions of the said Pollution Act. Due to the pressure on the water resources the State Governments were found to be not able to provide adequate funds to the State Board for their effective functioning. It was, therefore, proposed to levy cess on the local authority and on certain "specified industries". It was proposed to levy cess on the basis of water consumption by such local authorities and "specified industries". It was with this object that the Water (Prevention and Control of Pollution) Cess Act of 1977, was enacted to provide for levy and collection of cess on water consumption by persons carrying on certain industries and by local authorities.[2]

3. **Construction of statute—Guiding principles.**—To find out the intention of the legislation, if possible it should be found out from the language used in case of doubt. The purpose of legislation should be sought for to clarify the ambiguity only, if any. The fairest and most rational method, says. Blackstone, to interpret the will of the legislator is by exploring his intentions at the time when the law was made, by signs the most natural and probable. And these signs are either the words, the context, the subject-matter, the effects and consequence, or the spirit and reason of the law. The words are generally to be understood' "in their usual and most known signification", although terms of art must be taken according to the *acceptation* of the learning in each art, trade and science. If words happen still to be dubious, one may establish their meaning from the context, which includes the preamble to the statute and laws made by the same legislator on the same subject. Words are always to be understood as having regard to the subject matter of the legislation. The dominant purpose in construing a statute is to ascertain the intention of the Parliament. One of the well recognised canons of construction is that the Legislature speaks its mind by use of correct expression and unless

---

[1] Chandra Enterprises *v.* Cess Appellate Committee, 1991 All. L.J. 729 at pp. 730, 731.

[2] Tata Engineering and Locomotive Co. Ltd., Jamshedpur *v.* State of Bihar, A.I.R. 1989 Pat. 23 at p. 26 : 1988 (36) B.L.J.R. 707.

there is any ambiguity in the language of the provision the Court should adopt literal construction if it does not lead to an absurdity. Therefore, the first question to be posed is whether there is any ambiguity in the language used. If there is none, it would mean the language used, speaks the mind of Parliament and there is no need to look somewhere else to discover the intention or meaning. If the literal construction leads to an absurdity, external aids to construction can be resorted to. To ascertain the literal meaning it is equally necessary first to ascertain the juxtaposition in which the rule is placed, the purpose for which it is enacted and the object which it is required to subserve and the authority by which the rule is framed.[1]

4. **Construction of the terms and expressions used in an Act of Parliament—The two rules.**—Craies on *Statute Law* says that there are two rules as to the way in which terms and expressions are to be construed when used in an Act of Parliament. The first rule is that general statutes will *prima facie* be presumed to use words in their popular sense. In other words the words which are not applied to any particular science or art are to be construed as they are understood in common language. The obvious and popular meaning of the language should be followed. If a statute contains language which is capable of being construed in a popular sense, such a statute is not to be construed according to the strict or technical meaning of the language, contained in it, but it is to be construed in its popular sense that people conversant with the subject-matter with which the statute is dealing could attribute to. The next rule is with regard to the scientific and technical language in a statute. If the statute is with reference to a particular trade, business or transaction, then the word used therein which everybody conversant with that trade, business or transaction knows and understands to have a particular meaning of it, then those words should be construed as having that particular meaning which may differ from the ordinary or popular meaning.[2]

5. **Rayon grade pulp—If chemical industry or textile industry or paper industry.**—In the undernoted case the Supreme Court held that Rayon Grade Pulp would not be considered even remotely connected as such with chemical industry or textile industry or paper industry. In all preparations, there is certain chemical process but that does not make all industries chemical industries. Broadly and literally it can be said that the Rayon Grade Pulp is neither chemical industry nor textile industry nor paper industry.[3]

6. **Metallurgical industry and engineering industry—Difference.**—The dominant purpose of a metallurgical industry in its technical and popular sense appears to be extracting ores, refining it and converting it into the stock of steel and that is where it ends. On the other hand, the dominant purpose of an engineering industry is to manufacture automobiles and the other consumable articles by using and converting that steel into a finished product.[4]

[2] Tata Engineering and Locomotive Co. Ltd. Jamshedpur *v.* State of Bihar, A.I.R. 1989 Pat. 23 at p. 30.

[3] Member-Secretary Andhra Pradesh State Board for Prevention and Control of Water Pollution *v.* Andhra Pradesh Rayons Ltd., (1988) 3 S.C.J. 666 at p. 671 : (1989) 1 S.C.C. 44 : A.I.R. 1989 S.C. 611 at p. 615.

[4] Tata Engineering and Locomotive Co. Ltd., Jamshedpur *v.* State of Bihar, A.I.R. 1989 Pat. 23 at p. 31 : 1988 (36) B.L.J.R. 707.

7. **Tata Engineering and Locomotive Co. Ltd.—If metallurgical industry.**—In the common parlance, the petitioner is an engineering industry which starts from where the metallurgical industry ends. The nature of the petitioner industry being essentially and predominantly engineering is not covered by Schedule I.[1]

8. **Applicability of the Act to Tata Engineering and Locomotive Co. Ltd.**—The Water (Prevention and Control of Pollution) Cess Act, 1977 does not apply to the industry run by the petitioner in-as-much as, it is not one of the specified industry within the meaning of Sec. 2 (c) of the Cess Act, since it is not included in the Schedule.[2]

9. **Liability of Tata Engineering and Locomotive Co. Ltd., Jamshedpur for levy of cess.**—The petitioner company is engaged in the manufacture of automobiles, hydraulic excavation, long crawlers, shovels, dragline, claim shell and back hoe and is known and called as an Engineering Industry. Therefore it was held that the Cess Act, does not apply to the industry run by the petitioner, inasmuch as, it is not one of the specified industry within the meaning of Sec. 2 (c) of the Cess Act, since it is not included in the Schedule.[3]

2. ***Definitions.***—*In this Act, unless the context otherwise requires,—*

(a) "local authority" means a municipal corporation or a municipal council (by whatever name called) or a cantonment board or any other body, entrusted with the duty of supplying the water under the law by or under which it is constituted ;

(b) "prescribed" means prescribed by rules made under this Act;

(c) "specified industry" means any industry specified in Schedule I;

(d) words and expressions used but not defined in this Act and defined in the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), shall have the meanings respectively assigned to them in that Act

3. ***Levy and collection of cess.***—*(1) There shall be levied and collected a cess for the purpose of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), and utilization thereunder.*

(2) The cess under sub-section (1) shall be payable by—

(a) every person carrying on any specified industry ; and

(b) every local authority,

and shall be calculated on the basis of the water consumed by such person or local authority, as the case may be, for any of the purposes specified in column (1) of Schedule II, at such rate, not exceeding the rate specified in the corresponding entry in column (2) thereof, as the Central Government may, by notification in the Official Gazette, from time to time, specify.

[4]*[(2A) Where any person carrying on any specified industry or any local authority consuming water for domestic purpose liable to pay cess fails to comply with any of the provisions of Sec. 25 of the Water (Prevention and Control of Pollution)*

3. Tata Engineering and Locomotive Company Ltd., Jamshedpur *v.* State of Bihar, A.I.R. 1989 Pat. 23 at pp. 25, 29, 31 : 1988 (36) B.L.J.R. 707.
4. Ins by, Act 53 of 1991, Sec. 2 (w.e.f. 26th January, 1992).

Act, 1974 (6 of 1974) or any of the standards laid down by the Central Government under the Environment (Protection) Act, 1986 (29 of 1986), cess shall be, notwithstanding, anything contained in sub-section (2) of this section, calculated and payable at such rate, not exceeding the rate specified in column (3) of Schedule II, as the Central Government may, by notification in the Official Gazette, from time to time, specify].

(3) Where any local authority supplies water to any person carrying on any specified industry or to any other local authority and such person or other local authority is liable to pay cess (2) [1][under sub-section (2) or sub-section (2A)] in respect of the water so supplied, then, notwithstanding anything contained in [1][in those sub-sections] the local authority first mentioned shall not be liable to pay such cess in respect of such water.

Explanation.—For the purpose of this section and Sec. 4, "consumption of water" includes supply of water.

Comments

Industry—Meaning of.—The word "Industry" while referring to the specified items should be understood as an industry where manufacturing processes are going on, product whereof is the item mentioned in the Schedule. In other words, a sugar industry must be held to be meaning an industry where the end product is the "sugar", similarly a chemical industry means an industry where the end product is a chemical and a processing of animal or vegetable, products industry means an industry where animal and vegetable products are processed.[2]

The cess is to be levied on the water consumed.—As pointed out earlier, the science has developed and from the ceramic, glass can be prepared ... Dr. H.N. Tripathi, learned counsel for the respondents has made a reference to a decision reported in (1989) I UPLBEC 174 (*Modi Industries Ltd., Modinagar, Ghaziabad* v. *Union of India,*) regarding the point that glass industry falls under the ceramic industry. The point was not involved but finding was given. It was observed that the entries in Schedule I have to be construed broadly and not in a narrow, restricted sense. They are more a description of the class of industries rather than of individual industries. The entries mention the genus and not the species. So constructed, it is impossible to hold that glass industry is not covered under Entry 8. So in our view, the glass industry also falls under the non-ferrous metallurigical industry.

Therefore, it follows that the plea of petitioner that no water is consumed during the process is not tenable and this plea would have been available to him by way of taking the matter in appeal under Sec. 13 of the Water (Prevention and Control of Pollution) Cess Act, 1977. The cess is to be levied on the water consumed.[3]

4. Affixing of meters.—(1) For the purpose of measuring and recording the quantity of water consumed, every person carrying on any specified industry and every local authority shall affix meters of such standards and at such places as may be prescribed and it shall be presumed that the quantity indicated by the meter has

been consumed by such person or local authority, as the case may be, until the contrary is proved.

(2) Where any person or local authority fails to affix any meter as required by sub-section (1), the Central Government shall, after notice to such person or local authority, as the case may be, cause such meter to be affixed and the cost of such meter, together with the cost for affixing the meter may be recovered from such person or local authority by the Central Government in the same manner as an arrear of land revenue.

[1]*[5]. **Furnishing of returns.**—(1) Every person carrying on any specified industry and every local authority, liable to pay the cess under Sec. 3, shall furnish such returns, in such form, at such intervals and containing such particulars to such officer or authority, as may be prescribed.*

[2]*[(2) If a person carrying on any specified industry or a local authority, liable to pay the cess under Sec. 3, fails to furnish any return under sub-section (1), the officer or the authority shall give a notice requiring such person or local authority to furnish such return before such date as may be specified in the notice.]*

Comment

This section requires the person carrying on any specified industry and the local authority liable to pay the cess under Sec. 3 to furnish returns.

*6. **Assessment of cess.**—(1) The officer or authority to whom or which the return has been furnished under Sec. 5 shall, after making or causing to be made such inquiry as he or it thinks fit and after satisfying himself or itself that the particulars stated in the return are correct, by order, assess the amount of cess payable by the concerned person carrying on any specified industry or local authority, as the case may be.*

[3]*[(1A) If the return has not been furnished to the officer or authority under sub-section (2) of Sec. 5, he or it shall, after making or causing to be made such inquiry as he or it thinks fit, by order, assess the amount of cess payable by the concerned person carrying on any specified industry or local authority, as the case may be.]*

(2) An order of assessment made under sub-section (1) [4]*[or sub-section (1A)] shall specify the date within which the cess shall be paid to the State Government.*

(3) A copy each of the order of assessment made under sub-section (1) or sub-section (1A) shall be sent to the person or, as the case may be, to the local authority concerned and to the State Government.

(4) The State Government shall, through such of its officers or authorities as may be specified by it in this behalf by notification in the Official Gazette collect the cess from the person or local authority liable to pay the same and pay the amount so collected to the Central Government in such manner and within such time as may be prescribed.

*7. **Rebate.**—Where any person or local authority, liable to pay the cess under*

this Act, instals any plant for the treatment of sewage or trade effluent, such person or local authority shall, from such date as may be prescribed be entitled to a rebate of [1]*[twenty five per cent] of the cess payable by such person or, as the case may, be, local authority :*

[2]*[Provided that a person or local authority shall not be entitled to any rebate, if he or it—*

(a) consumes water in excess of the maximum quantity as may be prescribed in this behalf for any specified industry or local authority ; or

(b) fails to comply with any of the provisions of Sec. 25 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974) or any of the standards laid down by the Central Government under the Environment (Protection) Act, 1986 (29 of 1986).]

Comments

This section seeks to grant the rebate of twenty five per cent of the cess to the person or local authority liable to pay the cess on account of installing any plant for the treatment of sewage or trade effluent.

Question of Rule 6 of the Water (Prevention and Control of Pollution) Cess Rules overshooting the boundaries sketched by Sec. 7 of the Water (Prevention and Control of Pollution) Cess Act.—Section 7 of the Water (Prevention and Control of Pollution) Cess Act, 1977, will enable an industry to earn a rebate if, and only if, it subserves the purposes of the Pollution Act, namely controlling the deterioration in the quality of the trade effluent. If the plant installed is one which gives a satisfactory treatment of the trade effluent, rebate could be given to such an industrialist and so long as the treatment of the trade effluent is effective from the point of view of the Pollution Act. On a proper interpretation of the section, therefore, rebate cannot be earned by the mere installation of some plant, which will be due only if, the plant is able to achieve the results. The period during which rebate could be claimed is only that period during which the trade effluent gets properly and satisfactorily treated by the plant. It is precisely this idea, which is implicit in the section itself, that has been elaborated while framing rule 7. Rule 7, therefore, does not add to or amplify the scope and content of Sec. 6. There is, therefore, no question of rule 6 of the Water (Prevention and Control of Pollution) Cess Rules 1978, overshooting the boundaries sketched by Sec. 7. The rule does not rise above the source of the provision in the Act, as assumed by the learned Judge. Viewed in that perspective, it cannot be said that the Rule has roped in matters unprovided by the section or unintended by the Parliament. Thus it is impossible to share the view of the learned single Judge that the rule-making authority has cut down the sweep of the section or added further conditions of its own.[3]

8. Crediting proceeds of cess to Consolidated Fund of India and application thereof.*—The proceeds of the cess levied under Sec. 3 shall first be credited to the Consolidated Fund of India and the Central Government may, if Parliament by appropriation made by law in this behalf, so provides, pay to the*

Central Board and every State Board, from time to time, from out of such proceeds, after deducting the expenses on collection, such sums of money as it may think fit for being utilised under the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974) :

Provided that while determining the sum of money to be paid to any State Board under this section, the Central Government shall have regard to the amount of cess collected by the State Government concerned under sub-section (4) of Sec 6.

Explanation.—For the purpose of this section, "State Board" includes a Joint Board, if any, constituted under Sec. 13 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974).

*9. **Power of entry.**—Any officer or authority of the State Government specially empowered in this behalf by that Government may,—*

(a) with such assistance, if any, as he or it may think fit, enter at any reasonable time any place which he or it considers it necessary to enter for carrying out the purposes of this Act including the testing of the correctness of the meters affixed under Sec 4,

(b) do within such place anything necessary for the proper discharge of his or its duties under this Act; and

(c) exercise such other powers as may be prescribed.

Comment

This section enables the officer or authority of the State Government specially empowered in this behalf to enter at any place for carrying out the purposes of the Act.

*10. **Interest payable for delay in payment of cess.**—If any person carrying on any specified industry or any local authority fails to pay any amount of cess payable under Sec. 3 to the State Government within the date specified in the order of assessment made under Sec. 6, such person or local authority, as the case may be, shall be liable to pay [1][interest on the amount to be paid at the rate of two per cent, for every month or part of a month comprised in the period from the date on which such payment is due till such amount is actually paid.]*

*11. **Penalty for non-payment of cess within the specified time.**—If any amount of cess payable by any person carrying on any specified industry or any local authority under Sec. 3 is not paid to the State Government within the date specified in the order of assessment made under Sec. 6, it shall be deemed to be in arrears and the authority prescribed in this behalf may after such inquiry as it deems fit, impose on such person or, as the case may be, local authority, a penalty not exceeding the amount of cess in arrears :*

Provided that before imposing any such penalty, such person or, as the case may be, the local authority shall be given a reasonable opportunity of being heard and if after such hearing the said authority is satisfied that the default was for any good and sufficient reason, no penalty shall be imposed under this section.

Comment

Penalty for non-payment of cess within the specified time may be avoided on the ground of any good and sufficient reason for failure in making the payment.

*12. **Recovery of amount due under the Act.**—Any amount due under this Act (including any interest or penalty payable under Sec. 10 or Sec. 11, as the case may be)*

---

[1] Subs. by Act 53 of 1991, Sec. 6 (w.e.f. 26th January, 1992).

from any person carrying on any specified industry or from any local authority may be recovered by the Central Government in the same manner as an arrear of land revenue.

Comment

The Central Government is entitled to recover any amount due under the Act in the same manner as arrear of land revenue.

13. ***Appeals.****—(1) Any person or local authority aggrieved by an order of assessment made under Sec. 6 or by an order imposing penalty made under Sec. 11 may, within such time as may be prescribed, appeal to such authority in such form and in such manner as may be prescribed.*

(2) Every appeal preferred under sub-section (1) shall be accompanied by such fees as may be prescribed.

(3) After the receipt of an appeal under sub-section (1), the appellate authority shall, after giving the appellant an opportunity of being heard in the matter, dispose of the appeal as expeditiously as possible.

(4) Every order passed in appeal under this section shall be final and shall not be called in question in any court of law.

Comment

The word "shall"—Meaning of.—It has been laid down consistently by the Supreme Court that the mere use of the word "shall" by itself in the statute does not make the provision mandatory, but it is the duty of the courts of justice to try to get at the real intention of the Legislature by carefully attending to the whole scope of the statute to be construed. In each case, one has to look to the subject-matter, consider the importance of the provisions and the relation of that provision with the general object intended to be secured by the Act and upon the review of the case in that aspect decide whether the enactment is mandatory or only directory.[1]

14. ***Penalty.****—(1) Whoever, being under an obligation to furnish a return under this Act, furnishes any return knowing, or having reason to believe, the same to be false shall be punishable with imprisonment which may extend to six months or with fine which may extend to one thousand rupees or with both.*

(2) Whoever, being liable to pay cess under this Act, wilfully or intentionally evades or attempts to evade the payment of such cess shall be punishable with imprisonment which may extend to six months or with fine which may extend to one thousand rupees or with both.

(3) No Court shall take cognizance of an offence punishable under this section save on a complaint made by or under the authority of the Central Government.

Comment

The Court shall take cognizance of the offence only on the complaint made by or under the authority of the Central Government.

15. ***Offences by companies.****—(1) Where an offence under this Act has been committed by a company, every person who at the time the offence was committed, was in charge of, and was responsible, to the company for the conduct of the business of the company, as well as the company, shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :*

Provided that nothing contained in this sub-section shall render any such

---

[1] Mohammad Mahboob Khan *v.* State Transport Appellate Tribunal, U.P., 1982 A.L.J. 300 at p. 301.

person liable to any punishment, if he proves that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offence.

(2) Notwithstanding anything contained in sub-section (1), where an offence under this Act has been committed by a company and it is proved that the offence has been committed with the consent or connivance of, or is attributable to any neglect on the part of, any director, manager, secretary or other officer of the company, such director, manager, secretary or other officer shall also be deemed to be guilty of that offence and shall be liable to be proceeded against and punished accordingly.

Explanation.—For the purpose of this section,—

- *(a) "company" means any body corporate and includes a firm or other association of individuals; and*
- *(b) "director", in relation to a firm, means a partner in the firm.*

Comment

The director or manager or secretary of the company shall be liable for the offence committed by the company if it is proved that the offence has been committed with his consent or connivance.

*16. **Power to amend Schedule I.**—(1) The Central Government may, by notification in the Official Gazette, add to Sch. I any industry having regard to the consumption of water in the carrying on of such industry and the consequent discharge thereof resulting in pollution of any stream and thereupon Sch. I shall, subject to the provisions of sub-section (2), be deemed to be amended accordingly.*

(2) Every such notification shall be laid before each House of Parliament, if it is sitting, as soon as may be after the issue of the notification, and if it is not sitting, within seven days of its reassembly and the Central Government shall seek the approval of Parliament to the notification by a resolution moved within a period of fifteen days beginning with the day on which the notification is so laid before the House of the People, and if Parliament makes any modification in the notification or directs that the notification should cease to have effect, the notification shall thereafter have effect only in such modified form or be of no effect, as the case may be, but without prejudice to the validity of anything previously done thereunder.

*17. **Power to make rules.**—(1) The Central Government may make rules for carrying out the purposes of this Act.*

(2) Without prejudice to the generality of the foregoing power, such rules may, provide for all or any of the following matters, namely :—

- *(a) the standards of the meters to be affixed and the places at which such meters are to be affixed under sub-section (1) of Sec. 4;*
- *(b) the returns to be furnished under Sec. 5, the form in which and the intervals at which such returns are to be furnished, the particulars which such returns shall contain and the officer or authority to whom or which such returns shall be furnished;*
- *(c) the manner in which and the time within which the cess collected shall be paid to the Central Government under sub-section (4) of Sec. 6;*
- *(d) the date from which any person or local authority liable to pay cess shall be entitled to the rebate [1][and the maximum quantity of water in excess of consumption whereof any person or local authority shall not be entitled to the rebate] under Sec. 7;*

---

[1] Ins. by Act 53 of 1991, Sec. 7 (w.e.f. 26th January, 1992).

(e) *the powers which may be exercised by the Officer or authority under Sec. 9;*

(f) *the authority which may impose penalty under Sec. 11;*

(g) *the authority to which an appeal may be filed under sub-section (1) of Sec. 13 and the time within which and the form and manner in which such appeal may be filed;*

(h) *the fees which shall accompany an appeal under sub-section (2) of Sec 13 ; and*

(i) *any other matter which has to be or may be prescribed.*

(3) Every rule made under this Act shall be laid, as soon as may be after it is made, before each House of Parliament while it is in session for a total period of thirty days which may be comprised in one session or in two successive sessions and if, before the expiry of the session immediately following the session or the successive sessions aforesaid, both Houses agree in making any modification in the rule or both Houses agree that the rule should not be made, the rule shall thereafter have effect only in such modified form or be of no effect, as the case may be; so, however, that any such modification or annulment shall be without prejudice to the validity of anything previously done under that rule.

Comment

Whether the generality of the power under Sec. 17 can be overlooked.—Instances are many, where statutory intent is couched in one section or two and the rest are all left to be regulated by the rule-making power. Notwithstanding the general character of Sec. 6, it would then be possible for the rule-making authority to prescribe precisely and specifically an regards the conditions to be satisfied for earning the rebate generally referred to in that section. Yet another aspect to be adverted to in this connection is the fact that these rules have to be placed before the Parliament under Sec. 17 (2). Thereunder, it is open to the Parliament either to approve or to modify or vary such rules. There is no case that these rules, including rule 7, have been modified or varied by the Parliament. The Parliament which has made the enactment has thus chosen to approve all these rules. Not that circumstance has in any way weighed with or swayed in relation to the interpretation of Sec. 6 and rule 7. The Courts are not unaware that distinction which has been made between the rules which when framed, are to be treated as part of the enactment itself and other rules which are only to be placed before the Parliament for its approval. Different considerations would arise if the rules partake of the former character. This aspect has been dealt with by the Court of Appeal in *Institute of Patent Agents* v. *Joseph Lockwood.*[1] The law Lords were not unanimous in their view about the character and effect of such rules. The view of Lord Herschell appears to have appealed to the Supreme Court in the decision. *Associated Cement Co. Ltd* v. *Commercial Tax Officer, Kota,*[2] which considered a rule framed under the Rajasthan Sales Tax Act. Section 26 (5) of that Act declared that the rules made would have effect as if enacted in the Act. The effect of such a rule was discussed by Venkataramiah, J., in para 21, approvingly quoting the following observations of Lord Herschell :

> "I own I feel very great difficulty in giving to this provision that they shall be of the same effect as if they were contained in this Act, any other meaning than this, that you shall for all purposes of

---

[1] (1894) A.C. 347.

[2] A.I.R. 1981 S.C. 1887.

> construction or obligation or otherwise treat them exactly as if they were in the Act. No doubt there might be some conflict between a rule and a provision of the Act. Well, there is a conflict sometimes between two sections to be found in the same Act, You have to try and reconcile them as best you may. If you cannot, you have to determine must which is the leading provision and which the subordinate provision and which must give way to the other. That would be so with regard to the enactment and with regard to rules which are to be treated as if within the enactment".

The existence of necessary sanctions under the Pollution Act, does not in any way control the interpretation of the Cess Act. The fact that there are such sanctions does not inhibit the rule-making authority from framing a meaningful and purposive rule, visualized under the Cess Act and for the effective implementation of the objective underlying Sec. 7. of the Act. The learned Judge further observed :

> "If the company's plant is defective, if its performance is below standard, and if its operation are containing the water of Chaliyar river, there are enough remedies under the Act which defines pollution and creates the machinery for its control. Those reluctant to take action under those provisions cannot try to ease their conscience by extracting a few more rupees from the company under the Cess Act, if the company is showing scant regard to public health".

The justifiable anger or anguish of the Courts in the unsatisfactory style of functioning of a statutory Board again have no bearing on the interpretation of the provisions of the Cess Act and the Rules framed thereunder.

The learned Judge was substantially carried away by the wording of Sec. 7. Such an approach overlooks the generality of the rule-making power conferred under Sec. 17 (1). According to the learned single Judge, the effect of rule 6 is to give to the Board the power to decide the success and effectiveness of the plant and by such a process, "the will of the Parliament as reflected in Sec. 7 of the Act is placed by the rule-making authority at the mercy of an outside agency". This approach is also unacceptable. The interconnection between the Cess Act and the Pollution Act has been already indicated above. The Board is not an outside agency. On a proper understanding of the Cess Act, and its connection with the Pollution Act, the very purpose of levy of cess is for the purposes of the Pollution Act, and utilisation thereunder. It is essentially, if not entirely, for the Board to oversee activities of the industries and the local authorities with a view to check and control pollution. It is such a Board, that attends to every detail relating to the prevention of the pollution of water. The Board cannot then be treated as an outside agency. Nor can its decisions be characterised as having the effect of replacing the will of the Parliament. The Board in truth and substance, only carries out, in effect and practice, all those function and acts as detailed by the Parliament and specifically directed to be within the province and competence of such a Board.

The learned Judge has taken the view that it is not permissible for the Courts to add words to a statute. Reliance has been placed on some early decisions under the Income-tax Act, in support of that proposition. It is doubtful whether this approach can any longer be enthusiastically adopted by the Courts in India after the decision of the Supreme Court in the case of *McDowell and Company Ltd.* v. *Commercial Tax Officer.*[1] As regards the reliance was placed by the learned single Judge on a recent decision of the Supreme Court in *Priti Pal Singh* v. *Union of India.*[1] There could not be any doubt about the proposition. However, it is useful in that connection to refer to one of the latest decisions rendered by the Supreme Court in *B. Prabakar Rao* v. *State of Andhra Pradesh,*[2] which is more apposite in the present context. The Supreme Court reminded that justice may be blind but it is not to be deaf. Judges are not to sit in sound-proof rooms. The Court observed :

---

[1] (1985) 3 S.C.C. 230 : A.I.R. 1986 S.C. 649.

> "Committee reports, Parliamentary debates, policy statements and public utterances of official spokesmen are of relevance in statutory interpretation. But the comity, the courtesy and respect that ought to prevail between the two prime organs of the State, the Legislature and the Judiciary, require the Courts to make skilled evaluation of the extra-textual material placed before it and exclude of the essentially unreliable. Nevertheless the Court as master of its own procedure, retains a residuary right to admit them where, in rare cases, the need to carry out the legislator's intention appears to the Court so to require. No rule prevents the Court from inspecting in private whatever materials, it thinks fit to ensure that it is well informed, whether in relation to the case before it or generally. Where these materials constitute publicly available enacting history, the Court takes judicial notice to them. The Court has an inherent power to inspect any material brought before it. (Francis Bennign : *Statutory Interpretation*). This is to enable the Court to determine whether the material is relevant to the point of construction in question, and if so whether it should be admitted. This has to be done with a degree of inhibition and an amount of circumspection".

The passage extracted above would justify a reference to legal and technical literature all over the world in relation to the prevention of pollution of water even when courts are evaluating a section under the Cess Act, and a rule framed thereunder, impacts and influences on activities with a direct nexus to the life and health of the people. That broader view is essential while approaching the problem, understanding it and answering it. Such a search for the larger horizons had been made when the enactments in question have bearings on expansive areas and wide ranging objects. A reference to treaty, international protocol or conventions is permissible while interpreting laws which have a link or background with such treaty, protocol or convention. Little planet has water as 70 per cent of its content. Ninety-five per cent of the nations in the world have watery coasts. Water influences the life and health of the people, prominently and pronouncedly. It constitutes an important and integral part of our environment. Preservation of the purity of water has engaged attention of the administrators all over the world even from ancient times. H.A. Hawkes states :

> "The sanitary laws of Moses are well known, and the ancient Persians at least controlled river pollution, they were forbidden by law from discharging organic refuse and other filth into rivers".[3]

Pollution of a natural stream under common law is an actionable wrong, actionable without proof of actual damage.[4] Similar views are expressed in authoritative treatises like Salmond on the *Law of Torts* and Kerr's *Treatise on the Law of Practice of Injunctions*. The case law starting with *Wood* v. *Wood*,[1] indicates the legal fight for potable water. As observed in *Pride of Derby and Derbyshire. Angling Association Ltd.* v. *British Celanese Ltd.*[2] :

> "......pouring a polluting effluent into the river makes them guilty of nuisance .... they are liable for it at common law unless they can defend themselves by some statutory authority'

In India also, the legal action had been pursued on the basis of common law to maintain acceptable limit of purity of water.[3]

More than a century back, the framers of Indian Penal Code were alive to the necessity of protecting the rivers and streams. This is clearly evident from Sec. 277 of the Indian Penal Code, reading :

> "*Fouling water of public spring or reservoir.*—Whoever voluntarily corrupts or fouls the water of any public spring or reservoir, so as to render it less fit for the purpose for which it is ordinarily used, shall be punished, with imprisonment of either description for a term which may extend to five hundred rupees, or with both".[4]

Realisation of the hazard of unpotable water was keenly felt during the last few decades. When it is said that five litres of water has only a teaspoon of sweet water in it, the Courts get an idea of the seriousness of the situation. Late President Kennedy described water pollution as a national disgrace. As H.B.N. Hynes (of the Department of Zoology, University of Liverpool) observed in *A Survey of Water Pollution Problems* :

> "Loss of amenity is bad enough, but much more serious, although less evident, is loss of water in usable form".[5]

The seriousness attached to the problem is evident from the fact in all advanced countries; scientists and administrators, have given serious thought to such problems. The Department of Environment is vigrant with activities in many such advanced countries. The 1972 United Nations' Conference on the Human Environment at Stockholm in June 1972, was an important landmark in such attempts. In England, attempts at prevention of river pollution started early enough, presumably in the wake of the industrialisation of that country. The Rivers Pollution Prevention Act, 1876 and the Rivers Pollution Prevention Act, 1951, were some of the earlier enactments. The Control of Pollution Act, 1974 brought in a comprehensive legislation and with that many earlier enactments stood virtually repealed. Enactments on water protection had been made in America even from 1948.[6] Such legislative exercises were made in Germany and Japan in 1970. As observed in the article "Overlapping International and European Laws"; "Environmental protection has become a

fertile source of laws, international, European and national since the U.N. sponsored the Stockholm Conference of 1972 and its Declaration on, and Action Programme for, the Human Environment. Numerous Convention between States which turn out to be geographically interdependent have been hammered out, a few before but most since that date, covering such matters as the prevention of the pollution of the seas in general, or of particular seas, or common rivers, the reduction of air pollution and laterly the safeguarding of flora and fauna".[1] Protection and improvement of the environment is one of the Directive Principles of State Policy.[2] Under Art. 51-A (*g*), it shall be the duty of every citizen of India "to protect and improve the natural environment including forests, lakes, rivers and wild life......". Intensive efforts were made in relation to the protection of water in India even in the 1960's. An Expert Committee was appointed in October, 1962 to study the question and submit a draft legislation. Opinions of State Governments were also elicited. The draft Bill was introduced in 1969. A Joint Committee of both Houses submitted its report after examining the provisions of the Bill thoroughly and making intensive indepth studies. The Pollution Act which was ultimately enacted was the result of such massive efforts of brain and brawn. When through the Cess Act, Parliament has declared connection with the comprehensive Pollution Act, it is not proper or permissible for the Court to neglect or forget such connection.[3]

SCHEDULE I

[*See* Sec. 2 (*c*)]

1. Ferrous metallurgical industry.
2. Non-ferrous metallurgical industry.
3. Mining Industry.
4. Ore processing industry.
5. Petroleum industry.
6. Petro-chemical industry.
7. Chemical industry.
8. Ceramic industry.
9. Cement industry.
10. Textile industry [4][including cotton, synthetic and semi-synthetic fibres manufactured from these fibres.]
11. Paper industry.
12. Fertilizer industry.
13. Coal (including coke) industry.
14. Power (thermal, diesel) and [5][Hydel] generating industries,
15. Processing of animal or vegetable products industry [6][including processing of milk, meat, hides and skins, all agricultural products and their wastes].

[7][16. Engineering industry.]

SYNOPSIS

1. True meaning and scope of the entries of the First Schedule .. 346
2. Industries engaged in processing milk into milk products—If falls within the ambit of entry 15 346
3. Glass industry —If covered under entry 8 .. 346
4. Sugar industry —If falls under item 15 .. 346
5. Sugarcane is vegetable . 346

1. **True meaning and scope of the entries of the First Schedule.**—In construting the provisions of the Cess Act, the purpose and object of the 1974 Act must be kept in view. The true meaning and scope of the Entries of the First Schedule of the Cess Act, hence cannot be ascertained and appreciated divorced from the context of the 1974 Act. This has been made explicit by the Statement of Objects and Reasons of the Cess Act, which unmistakably indicates that the Cess Act, was being enacted for providing adequate funds to the State Boards for their effective functioning, i.e., for the efficient discharge of the statutory functions and duties cast on the State Boards under the 1974 Act.[1]

2. **Industries engaged in processing milk into milk products—If falls within the ambit of entry 15.**—An industry which is engaged in the business of processing milk products would undoubtedly fall within the ambit of entry 15, milk being animal product.[2]

3. **Glass industry—If covered under entry 8.**—The entries in Schedule I have to be construed broadly and not in a narrow, restricted sense. They are more a description of the class of industries rather than of individual industries. The Entries mention the genus and not the species. So construed, it is impossible to hold that glass industry is not covered under Entry 8.[3]

4. **Sugar industry—If falls under item 15.**—Sugarcane being not a vegetable, processing of sugarcane into sugar does not make the "sugar industry" an industry for processing of vegetable products industries.[4]

5. **Sugarcane is vegetable.**—Sugar industry is one of the main sources of causing water pollution. Under the Water (Prevention and Control of Pollution) Cess Act, 1977, its activities can be controlled and guided. Consequently, the Parliament thought of providing a provision in the Cess Act which levies cess on the water consumed by an industry engaged for the purposes specified in column (1) of Schedule II. The Parliament could not have specifically dealt with each industry separately and it was for this reason that the industries falling were lumped up together for the purposes of covering them under Schedule I. If Courts were to examine the Schedule it is to be so established by finding that each particular industry is not named therein. The industries in Schedule I have been broadly mentioned. These entries would apply to the industries falling in one or the other entry of Schedule I irrespective of the fact that by name it is not so described. Interpreting Entry 15 of Schedule I of the Cess Act one has to keep in mind the words used therein which are "processing animal, vegetable products".

[1] Modi Industries Ltd. *v.* Union of India, 1989 All. C.J. 93 at pp. 94, 95 : 1989 (15) All. L.R. 271 at p. 274.

[2] Modi Industries Ltd. *v.* Union of India, 1989 All. C.J. 93 at p. 96.

[3] *Ibid.*

[4] M/s. Champaran Sugar Company Ltd. *v.* State of Bihar, 1989 P.L.J.R. 543 at p. 547.

The word "vegetable" has been used in opposition to the expression "animal". This word cannot be given the meaning of vegetables which are kept on the dining tables for dinner purposes. It has a wider amplitude. Sugarcane, would be covered by this entry inasmuch as the expression vegetable has been used in a comprehensive sense.[1]

PART I-E

THE WATER (PREVENTION AND CONTROL OF POLLUTION) CESS RULES, 1978[1]

G.S.R. 378 (E), dated the 24th July, 1978.—In exercise of the powers conferred by Sec. 17 of the Water (Prevention and Control of Pollution) Cess Act, 1977 (36 of 1977), the Central Government hereby makes the following rules, namely :—

1. ***Short title and commencement.***—*(a) These rules may be called the Water (Prevention and Control of Pollution) Cess Rules, 1978.*

(b) They shall come into force on the date of their publication in the Official Gazette.

2. ***Definitions.***—*In these rules, unless the context otherwise requires :—*

(a) "Act" means the Water (Prevention and Control of Pollution) Cess Act, 1977 (36 of 1977);

(b) "assessing authority" means—

(i) [2][in relation to a Union Territory, the member-secretary of the Central Pollution Control Board and in those Union Territories where Pollution Control Committees have been constituted by the Administrator/Lt. Govornor, a member nominated by the Administrator/Lt. Governor, a member nominated by the Chairman thereof, and]

(ii) in relation to a State, the member-secretary of the State Board;

(c) "consumer" means a person or local authority by whom the cess under sub-section (1) of Sec. 3 is payable under sub-section (2) of that section;

(d) "form" means a form annexed to these rules;

(e) "section" means a section of the Act;

(f) "State Government", in relation to a Union Territory, means the Administrator thereof appointed under Art. 239 of the Constitution.

3. ***Standards of meters and places where they are to be affixed.***—*(1) For the purposes of measuring and recording the quantity of water consumed, every consumer shall affix water meters, venturi meters or orifice meters with integrators and recorders in conformity with the standards laid down by the Indian Standards Institution and where no standards have been laid down by that institution in conformity with such standards as may be specified by the Board.*

(2) Wherever the meters referred to in sub-section (1) are not available, the consumer shall instal Vee notches or rectangular notches, with indicators or pressure gauges and pumping installations, after obtaining the permission of the assessing authority.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 24th July, 1978.

[2] Subs. by G.S.R. 504 (E) dated 25th July, 1991, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (i), dated 25th July, 1991; further subs. by G.S.R. 501 (E), dated 6th July, 1992, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 6th July, 1992.

(3) Every consumer shall provide a separate meter for assessing the quantity of water used for each of the four purposes mentioned in column (1) of Schedule II to the Act.

(4) The meters shall be affixed at the entrance of the water supply connections within the premises of the consumer or at any other place to be approved by the assessing authority, so that such meters are easily accessible for inspection and maintenance and for other purposes of the Act :

Provided that the place where the meter is affixed shall, in no case, be at a point before which water has been tapped by the consumer for utilisation for any purpose whatsoever.

Comment

Sub-rule (4) requires the meter not to be affixed at a point before which water has been tapped for utilisation for any purpose whatsoever.

*4. [1][(1) **Furnishing of returns.**—Every consumer shall furnish on or before the 5th of every calendar month, to the assessing authority, a return in Form I showing the quantity of water consumed in the previous month.]*

[2][(2) If the Consumer fails to submit the return as specified in sub-rule (1) the assessing authority or the officer authorised in this regard shall issue a notice in Form I-A.]

Comment

The word "shall" —Meaning of.—It has been laid down consistently by the Supreme Court that the mere use of the word "shall" by itself in the statute does not make the provision mandatory, but it is the duty of the courts of justice to try to get at the real intention of be Legislature by carefully attending to the whole scope of the statute to be construed. In each case, one has to look to the subject-matter, consider the importance of the provisions and the relation of that provision with the general objects intended to be secured by the Act and upon the review of the case in that respect decide whether the enactment is mandatory or only directory.[3]

*5. **Manner of payment of the cess to the Central Government and the time within which it shall be paid.**—(1) Every State Government shall remit to the Central Government, the amount of cess collected from the consumer before the 10th day of the calendar month succeeding the month in which it is collected from the consumer.*

(2) The amount of cess referred to in sub-rule (1) shall be remitted to the Central Government in the form of a bank draft in favour of the [4][Pay and Accounts Officer, Department of Environment] New Delhi in whose books of accounts, the receipts would be adjusted finally.

(3) On receiving the bank draft, the Ministry of Works and Housing shall remit through a challan into the Reserve Bank of India, New Delhi, for the purpose of crediting under relevant Major Head.

---

[1] Renumbered by G.S.R. 311(E), dated 28th Feburary, 1992, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 5th March, 1992.

6. ***Rebate.****—Where a consumer instals any plant for the treatment of sewage or trade effluent, such consumer shall be entitled to the rebate under Sec. 7 on and from the expiry of fifteen days from the date on which such plant is successfully commissioned and so long as it functions successfully :*

[1]*[Provided that a consumer shall not be entitled to the rebate if he;*

- *(a) Consumes water in excess of the maximum quantity specified in column (3) of the First Schedule appended to these rules for the category of industries specified in the corresponding entry in column (3) relating to the specified industry given in column (2) thereto, or*
- *(b) Fails to comply with any of the provisions of Sec. 25 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), or any of the standards laid down by the Central Government, under the Environment (Protection) Act, 1986 (29 of 1986).]*

Comments

The word "commissioned" and "so long as it functions successfully".—There is no controversy that the prescription of a date from which the entitlement of rebate reckoned is within the rule making power. Objection was raised about the emphasis and specification contained in the rule that the rebate is claimable only when the plant is successfully commissioned, and the delineation of the duration of the period during which such rebate could be claimed, viz., "so long as it functions successfully". It is not correct to say that the words in the rule which insist on the successful commissioning of the plant and the successful functioning are beyond the rule making powers of the Government. Thus rule 6 is fully within the rule making powers of the Cess Act and has a full force effect as such.[2]

Vires, scope and amplitude of Rule 6 of the Water (Prevention and Control of Pollution) Cess Rules, 1978.—Rule 6 of the Water (Prevention and Control of Pollution) Cess Rules, 1978, has been framed under the Water (Prevention and Control of Pollution) Cess Act, 1977, the petitioner-company commissioned in 1963 a Pulp Factory in Kozhikode District. It was located on the bank of the Chaliyar river at Mavur. Mavur was formerly a beauty spot which had elicited admiration of the administrators and appreciation of literary men. Not surprisingly, beyond and around it were the swelling hills of greenery. The pellucid waters of Chaliyar river flowed along the pebbly bed before they fell into the Beypore Bay. The installation of the factory was not without its deleterious effects on the purity and clarity of the river water. The factory had a rated capacity of 200 M.Ts of pulp per day. The manufacturing process takes in various activities, it involves the conversion of bamboo, eucalyptus and other suitable species of wood into pulp. The raw materials are washed by a continuous stream of water sprayed on to the conveyors before they are fed into chippers. After the chips are reduced to uniform sizes, they are conveyed to the digesters and subjected to acid prehydrolysis, using dilute sulphuric acid solution. The spent liquor is then drained out, and the chips washed to remove the acid. The chips are thereafter cooked using a solution containing cooking chemicals at high temperature of above 160° C. The cooked pulp is later sent to Knotter Screen to remove the uncooked particles. The pulp is washed in a series of washers in a counter-current manner. Other processes are also resorted to. The washed pulp is bleached in a multi-staged bleaching plant. It is quite understandable that these activities of the company result in large pollution of water. The Water Pollution Board constituted under the Pollution Act, is empowered under the Cess Act, to levy a cess for partly meeting the finances required for its working. The Cess Act, grants a rebate in the cess payable to those who had installed a plant for the treatment of sewage or trade effluent. The company claimed that it had installed a treatment plant and was therefore entitled to the rebate. Separate claims have been made through the pulp division and the "staple fibre division" of the company. Whether such a splitting of a single legal entity the company is permissible for making separate claims is a question which does not directly arise for consideration. The claim for rebate was declined in some cases and drastically reduced in others. The legality of the levy of cess was thereupon challenged in the writ petitions before the learned single Judge who held that rule 6 had to read down. Rules were framed under the Cess Act in 1978. They were published on 24th July, 1978. In the present case, the treatment plant was established by the company before the Cess Act came into force, even before the Pollution Act. The word "instal" has been interpreted as contemplating an action at the inception and not its continuous user.[1] According to Lord Denning :

---

[1] Added by G.S.R. 311 (E), dated 28th February, 1992, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 5th March, 1992.

[2] Member-Secretary, Kerala State Board for Prevention and Control of Water Pollution, Kawadiar, Trivandrum *v.* Gwalior Rayon Silk Manufacturing (Weaving) Company Ltd., Kozhikode, A.I.R. 1986 Ker. 256 at pp. 260, 267.

> "The word 'installation' means—the bringing of an entire piece of plant on to a site and putting it into position on the site".[2]

In *Bangalore City Municipality* v. *N. Sirur and Company*,[3] the Court held :

> "To 'instal' anything means establishing it and has reference to the stage or time when it comes into existence to the initial act and not continuance of what is done previously".

If the word "instal" is understood, it is doubtful whether the company could claim any rebate at all. Section 7 of the Act is contained in the enactment which is by and large skeletal in its form. The enactment itself envisages supplying of the flesh and blood to that skeletal system by the rules framed in that behalf and the form prescribed thereunder. The rates of cess have to be prescribed, the standards of the metre and the place of their location are again to be provided by the Rules. The form of returns for cess, the particulars such forms should contain, the authorities to whom such forms have to be submitted and the intervals within which they have to be so submitted, are all to be provided by the Rules. The officers through whom cess has to be collected have to be notified by the Government. The officers or authorities referred to in Sec. 9 can exercise such additional powers as may be prescribed under the Rules. The time within which the appeals have to be filed under Sec. 13 and the authorities to whom such appeals have to be preferred, and the fees to accompany such appeals are all to be provided by the Rules. This general feature to the enactment will indicate the proper approach to be placed on Sec. 7 of the Act and rule 6 of the Rules. Section 7 dealing with rebate is general in its form. On a plain interpretation, it may even mean that rebate could be earned by merely installing any plant—good, bad or indifferent, small, medium or big, effective and sufficient or ineffective or inefficient. It may even mean that installation of a nominal plant would be sufficient to earn the rebate or that a plant ineffective and malfunctioning throughout would also qualify for rebate, for the only reason that the plant has been installed. Or again, when the industrial establishment is a mighty giant, the plant installed can be a tiny tot. Literally interpreted, rebate is due even in such a situation. An honest entrepreneur installing a plant effective and efficient in neutralising the ill effects of the trade effluents would, in such a situation, be placed in the same position as a dishonest industrial speculator, who nominally instals a junk which would not in any way decelerate the deterioration of the trade effluent. In that sense, the section itself may treat dissimilar person similarly, and result in a vicious discrimination. Section 7 cannot be given such an absurd and anomalous interpretation. The section has to be given a meaningful interpretation, an interpretation which serves a purpose. It is in that context that the object behind the levy of cess and the reason for a reward in the form of rebate to the deserving have to be understood. The Cess Act is not to be read in vacuum or in a manner dissociated with the Pollution Act. The learned single Judge felt that the Cess Act could be viewed in isolation and interpreted in isolation. That is evident from the following observations contained in the judgment :

---

[1] *See* Muthu Balu Chettiar *v.* Chairman, Madura Municipality, 1927 M.W.N. 835 : A.I.R. 1927 Mad. 961 and Arunchala Chetty *v.* Emperor, 1931 M.W.N. 495 : A.I.R. 1931 Mad. 490 (1).

[2] *See* Engineering Industry Training Board *v.* Foster Wheeler John Brown Boilers Ltd., (1970) 1 W.L.R. 881.

[3] A.I.R. 1955 Mys. 147.

> "The purpose of the Pollution Act, is to control water pollution, but the purpose of the Cess Act, is only to levy and collect a cess, i.e., a tax for a special administrative purpose You cannot make rules under the Cess Act, to achieve the purposes of another Act".

The above observations overlook the background of the legislations on environmental protection in general and water pollution in particular. The Cess Act was enacted three years after the Pollution Act, had been brought into force. By that time, the Parliament had before it the experience in the working of the Pollution Act. The financial constraints under which the State Boards had been functioning had received the attention of the Central Government. In the light of that experience, ways and means were devised to overcome the situation of the financial constraints of the State Boards. That is specifically referred to in the Statement of Objects and Reasons of the Cess Act, as is evident from the following passage occurring therein :

> "However, due to pressure on the limited resources, the State Governments are not able to provide adequate funds to the State Boards for their effective functioning. It is, therefore, proposed to levy a cess ...."

That is also indicated in the preamble to the Act reading :

> "An Act to provide for the levy and collection of a cess on water consumed by persons carrying on certain industries and by local authorities, with a view to augment the resources of the Central Board and the State Boards for prevention and control of water pollution constituted under the Water (Prevention and Control of Pollution) Act, 1974".

Strong indications are available in the enactments itself about the intertwining and interlacing of the two enactments. The Cess Act, is dovetailed into the Pollution Act. The charging section itself explicitly states that the levy of the cess is for the purposes of the Water (Prevention and Control of Pollution) Act, 1974, and utilisation thereunder. In the face of such specific and express words, it is impossible to understand or construe the Cess Act, *dehores* the provisions of the Pollution Act. There are other indications also, under Sec. 2 (*d*) the word and expressions of the Cess Act, not specifically defined are to have the meanings assigned under the Pollution Act. Virtually this will mean that all words and expressions in the Cess Act, would have their meanings as assigned under the Pollution Act, for, the Cess Act, had chosen to define only three words or expression—"Local authority", "prescribed" and "specified industry". Section 8 also gives an indication as to how the aggregate funds collected by way of cess have to be dealt with and utilised. The net proceeds of the case, it is clearly specified in Sec. 8 are to be "utilised under the Water (Prevention and Control of Pollution) Act, 1974". In view of the interconnection of the two enactments it is clear view that Sec. 6 has to be understood only in the background of the provisions of the Pollution Act.

The enactment of Pollution Act, strives to prevent, check or control the prevention of water pollution. This is achieved substantially by insisting on adequate safeguards in the treatment of effluents, as a condition precedent for the commencement or continuance of an industry. The Pollution Act envisages active work by the State Boards and a co-ordinatory effort on the part of the Central Board, controlling powers exist both for the Central and State enactments over the functioning of the respective Boards. Under the Pollution Act, the Boards is enabled to take measures necessary for preventing the deterioration of water. Consent orders are necessary for the establishment of new factories. Even for the old factories, consent has to be given for their continuance. While giving consent, matters necessary to prevent the degradation of water beyond permissible limits, could be provided for. Sections 20 to 27 occurring in, Chapter V relating to Prevention and Control of Water Pollution confer wide powers on the Board in obtaining information, taking samples of effluents, having reports of the result of analysis on samples, and in the entry and inspection of premises—all being such steps necessary to collect, collate and co-ordinate the information and data regarding the quality of water and effluents, with a view to check or control pollution. Under Sec. 17 (*j*) of the Pollution Act, the important functions of the State Board is mentioned. Section 24 contains a prohibition on use of stream or well for disposal of polluting matter, otherwise than in accordance with the standards laid down by the Board. A new or altered outlet or trade effluent into a stream cannot be made without previous consent of the Board. These provisions obviously apply to new industries. In respect of industries already in existence at the commencement of the Act, the same procedure is made applicable. The only difference is that consent need be obtained only within three months of the commencement of the Act. These provisions, therefore, make it clear that the main function of the Board is to ensure that the trade effluent discharged into the river is so regulated as not to cause any health hazard to the public. The rules framed under the Pollution. Act, contain very many matters of minute detail to achieve this object. It is unnecessary to refer to all the provisions of the Pollution Rules in that regard. An application for consent as envisaged under Secs. 25 and 26, has to conform to the requirements of rule 32 and has to be given in Form XIII. The annexure to Form XIII, exhaustively refers to all matters which could have any relevance in the ascertainment of the quality of the trade effluent, the impact which the trade effluent may have on the purity of the river or stream to which it is discharged and other relevant matter. The location of the factory, the period during which it is expected to function, the working force in the factory, the raw materials employed in the manufacturing process, the products and by-products and intermediate products that are manufactured, the quantity of water used every day, with sub-classification into domestic, industrial, agriculture and other, the hourly maximum and daily maximum quantity of effluents with sub-classifications, the details of taking measurements in relation thereto are some among those particulars. In relation to effluents, again, minute particulars are called for under items 14 to 25. Whether storm water drains are kept separate from industrial domestic effluents and whether domestic effluent is allowed to get mixed with industrial effluent are some of the queries raised in items 14 and 15. Item 16 poses the query whether any treatment is made. It is sufficient to note that in any other particulars relating to the disposal of the effluent the quantities of the effluents so disposed, and the portions having toxicity therein, are all dealt with in the subsequent entries. In short, care has been taken to exhaustively collect facts and data for ensuring the safe tolerance limits of the effluents. Technical details, thought tedious are also to be taken note of in that context. The Indian Standard Institute has done substantial work to prescribe different tolerance limits for surface effluents discharged into inland surface waters (1974) of Industrial effluents (1982) and of inland surface water subject to Pollution (1982).[1] Thus, rule 6 is fully within the rule-making powers of the Cess Act, and has a full force effect as such.[2]

[3][*"6-A. Collection by States/Union Territories.—The Cess Collecting Authority of the State/Union Territory shall furnish a statement with the Central Government before the 10th day of the calendar month of January, April, July and October showing assessment of cess of specified industries, its collection and arrears".*]

*7. **Powers to be exercised by the Officer or the Authority of the State Government under Sec. 9**—The officer or authority of the State Government specially empowered under Sec. 9 shall have, in addition to the powers referred to in Cls. (a) and (b) of that section, the power to :—*

(i) inspect the manufacturing process or plants of the consumer;

(ii) inspect the water supply systems and installations in the plant of the consumer;

(iii) inspect waste treatment system and installations in the plant of the consumer;

(iv) inspect the drainage system and installations, including storm water disposal in the plant of the consumer;

(v) call for and inspect records relating to the use and consumption of

*8. **Authority to impose penalty under Sec. 11.**—The authority to impose penalty under Sec. 11 shall be the assessing authority.*

*9. **Appeal.**—(1) Any consumer aggrieved by an order of assessment made under Sec. 6 or by an order imposing penalty made under Sec. 11 may appeal in Form II annexed hereto, to a Committee (hereinafter referred to as the appellate committee) consisting of—*

(a) where the assessing authority is the member-secretary of the Central Board, the Chairman of the Board, who shall be the Chairman of the Committee, and two members of that Board, to be nominated by the Chairman thereof, [1][and in those Union Territories where Pollution Control Committees have been constituted by the Administrator/Lt. Governor, the Chairman of such committee and two members to be nominated by the Chairman thereof];

(b) where the assessing authority is the member-secretary of the State Board, the Chairman of that Board, who shall be the Chairman of the Committee, and two members of that Board, to be nominated by the Chairman thereof.

(2) Such appeal shall state the facts of the case and the grounds relied upon by the appellant for preferring the appeal and shall be accompanied by a copy of the order of assessment made under Sec. 6 or a copy of the order imposing penalty made under Sec. 11, as the case may be.

(3) Such appeal shall be preferred within a period of thirty days from the date of communication of the order of assessment or the order imposing penalty on the appellant :

Provided that if the Chairman of the appellate Committee is satisfied that there was good and sufficient reason for the delay in preferring the appeal, he may, for reasons to be recorded in writing, allow the appeal to be preferred after the expiry of the aforesaid period of thirty days and before the expiry of forty-five days from the date of communication of the order of assessment, or the order imposing penalty, on the appellant.

(4) Every appeal shall be accompanied by fees of rupees fifty.

Comment

The period of limitation for preferring appeal may be relaxed by the Chairman from 30 days to 45 days to on the ground of good and sufficient reason for the delay in preferring the appeal.

PART II-A

THE AIR (PREVENTION AND CONTROL OF POLLUTION) ACT, 1981[1]

(ACT NO. 14 OF 1981)

[29*th March, 1981*]

An Act to provide for the prevention, control and abatement of air pollution, for the establishment, with a view to carrying out the aforesaid purposes, of Boards, for conferring on and assigning to such Boards powers and functions relating thereto and for matters connected therewith.

WHEREAS decisions were taken at the United Nation Conference on the Human Environment held in Stockholm in June, 1972, in which India participated, to take appropriate steps for the preservation of the natural resources of the earth which, among other things, include the preservation of the quality of air and control of air pollution,

AND WHEREAS it is considered necessary to implement the decisions aforesaid in so far as they relate to the preservation of the quality of air and control of air pollution;

BE it enacted by Parliament in the Thirty-second Year of the Republic of India as follows :—

STATEMENT OF OBJECTS AND REASONS[2]

1. With the increasing industrialisation and the tendency of the majority of industries to congregate in areas which are already heavily industrialised, the problem of air pollution has begun to be felt in the country. The problem is more acute in those heavily industrialised areas which are also densely populated. Short-term studies conducted by the National Environmental Engineering Research Institute, Nagpur, have confirmed that the cities of Calcutta, Bombay, Delhi, etc., are facing the impact of air pollution on a steadily increasing level.

2. The presence in air, beyond certain limits, of various pollutants discharged through industrial emission and from certain human activities connected with traffic, heating, use of domestic fuel, refuse incinarations, etc., has a detrimental effect on the health of the people as also on animal life, vegetation and property.

3. In the United Nations Conference on the Human Environment held in Stockholm in June, 1972, in which India participated, decisions were taken to take appropriate steps for the preservation of the natural resources of the earth which, among other things, include the preservation of the quality of air and control of air pollution. The Government has decided to implement these decisions of the said Conference in so far as they relate to the preservation of the quality of air and control of air pollution.

[2] Published in the *Gazette of India, Extraordinary,* Pt. II, Sec 2, dated the 24th November, 1980.

4. It is felt that there should be an integrated approach for tackling the environmental problems relating to pollution. It is, therefore, proposed that the Central Board for the Prevention and Control of Water Pollution constituted under the Water (Prevention and Control of Pollution) Act, 1974, will also perform the functions of the Central Board for the Prevention and Control of Air Pollution and of a State Board for the Prevention and Control of Air Pollution in the Union territories. It is also proposed that the State Boards constituted under the said Act will also perform the functions of State Boards in respect of prevention, control and abatement of air pollution. However, in those States in which State Boards for the Prevention and Control of Water Pollution have not been constituted under that Act, separate State Boards for the Prevention and Control of Air Pollution are proposed to be constituted.

Notes on Clauses appended to Air (Prevention and Control of Pollution) Act, 1981.—The Notes on Clauses give the reasons and explanations assigned to the various clauses of the Bill. It is as follows :

Notes on Clauses

Clause 1 provides for bringing the proposed legislation into force in the whole of India on such date as the Central Government may, by notification in the Official Gazette, appoint.

Clause 2 seeks to define certain expressions used in the Bill.

Clause 3 empowers the Central Board for the Prevention and Control of Water Pollution constituted under the Water (Prevention and Control of Pollution) Act, 1974, shall also to exercise the powers and perform the functions of the Central Board for the Prevention and Control of Air Pollution under this Bill.

Clause 4 provides that the State Boards for the Prevention and Control of Water Pollution constituted under the Water (Prevention and Control of Pollution) Act, 1974, shall also exercise the powers and perform the functions of the Central Board for the Prevention and Control of Air Pollution under this Bill.

Clause 5 provides for the constitution of the State Board for the Prevention and Control of Air Pollution under this Bill in such a State which have not yet constituted a State Board for the Prevention and Control of Water Pollution under the Water (Prevention and Control of Pollution) Act, 1974.

Clause 6 empowers the Central Board to exercise the powers and perform the functions of a State Board for a Union territory under this Bill.

Clauses 7 to 10 lay down the terms and conditions of service of the members of a State Board constituted under this Bill, disqualification for membership and vacancy arising therefrom and meetings, of a Board for the purposes of this Bill.

Clauses 11 provides for the constitution of committees, the procedure for transaction of business in such committees and for payment of fees and allowances to the members of the committees.

Clause 12 provides for the temporary association of persons with a Board for purposes of advice or assistance.

Clause 13 lays down that a vacancy in a Board or in a committee thereof shall not invalidate acts or proceedings of such Board or committee.

Clause 14 deals with the terms and conditions of service of the member-secretary of a State Board constituted under this Bill. It also provides for the appointment and the terms and conditions of service of officers and other employees of a State Board. It also provides for appointment of and the salary and allowances payable to, a consultant to the State Board.

Clause 15 provides for the delegation of its powers by a State Board to the Chairman or the member-secretary or any other officer thereof.

Clause 16 provides that the main functions of the Central Board shall be to improve the quality of air and to prevent, control or abate air pollution in the country. It also specifies, in particular, certain functions of the Central Board which *inter alia* relate to laying down the standards for the quality of air and establishment of laboratories.

Clause 17 deals with the functions of the State Boards which *inter alia* relate to laying down the standards for emission of air pollution into the atmosphere from industrial plants, etc., or recognition and the establishment of laboratories.

Clause 18 provides that the Central Board shall be bound by such directions as the Central Government may give to it and every State Board shall be bound by such directions as the Central Board or the State Government may give to it.

Clause 19 empowers the State Governments to declare, by notification in the Official Gazette, air pollution control areas and to do certain other acts in relation thereto. It also empowers the State Government to prohibit, by notification in the Official Gazette, the use of any fuel other than approved fuel, which is likely to cause air pollution, with effect from such date which may not be less than three months from the date of publication of the notification in the Official Gazette. Under this clause the State Governments have also been empowered to direct that no appliance, other than an approved appliance, shall be used in the premises situated in an air pollution control area from a specified date. It also empowers the State Governments to prohibit the burning of any material (not being fuel), which is likely to cause air pollution in any air pollution control area or part thereof.

Clause 20 empowers the State Governments to give instructions to the concerned authorities in charge of registration of motor vehicles under the Motor Vehicles Act, 1939, for ensuring standards for emission from automobiles.

Clause 21 provides that no person shall operate any industrial plant for the purpose of any industry specified in the schedule to the Bill. In an air pollution control area without the previous consent of the State Board. The clause also lays down the procedure to be followed in respect of such consent. The conditions subject to which such consent shall be granted have also been provided in this clause.

Clause 22 provides that no person carrying on any industry specified in the Schedule to the Bill or operating any industrial plant, in any air pollution control area shall allow emission of any air pollution in excess of the standards laid down by the State Board.

Clause 23 deals with a case wherein any air pollution control area the emission of any air pollutant into the atmosphere in excess of the standards laid down by the State Board occurs or is apprehended to occur for any reason. It provides that in such a case the person in charge of such premises shall forthwith intimate the fact of such occurrence or apprehension thereof to the State Board and to such authorities or agencies as may be prescribed. It also provides that the State Board and the authorities or agencies can themselves cause to be taken the remedial measures necessary to mitigate the emission of such air pollutants and recover the expenditure incurred from the industry as arrears of land revenue or of public demand.

Clause 24 empowers persons authorised by a State Board in this behalf to enter and inspect any place for the purpose of performing any of the functions of the State Board and for determining as to whether the provisions of this Bill or rules framed thereunder have been complied with. It also provides that for any search or seizure, the provisions of Code of Criminal Procedure, 1973, or the corresponding law in force in State or an area, shall be applicable.

Clause 25 empowers the State Boards and officers empowered in this behalf to obtain information relating to air pollution and to inspect the concerned premises with a view to verifying the correctness of such information.

Clause 26 empowers the State Board or any officer authorised by the Board to take samples of air or emission for analysis from any chimney, flue or duct or any other outlet in the prescribed manner and also lays down the procedure to be followed while taking such samples for analysis.

Clause 27 deals with the manner of dealing with the reports of the result of analysis on samples of emission taken under Cl. 26. The clause also provides that any cost incurred in getting any samples analysed at the request of the occupier or his agent or when he wilfully absents himself or refuses to sign the container of containers or samples shall be payable by such occupier or his agent.

Clause 28 provides for the establishment of one or more State Air Laboratories. It also provides for specifying one or more laboratories or institutes as State Air Laboratories to carry out the functions entrusted to the State Air Laboratory under this Bill. The clause also empowers the State Government to make rules to provide for the functions of the laboratory and other matters.

Clause 29 deals with the appointment of Government analysts and the Board analysts.

Clause 30 provides for the reports of analysts being used as evidence in any proceeding under this Bill.

Clause 31 makes provision for an appeal against the orders passed by the State Board.

Clause 32 provides for the contributions by the Central Government to the State Board to enable them to perform their functions under this Bill. It also provides that nothing in the clause shall apply to any State Board for the Prevention and Control of Water Pollution constituted under Sec. 4 of the Water (Prevention and Control of Pollution) Act, 1974, which is empowered by the Act to expand from its fund thereunder for the purposes of this Bill also.

Clauses 33 to 36 contain the usual provisions relating to funds, budget annual report, accounts and audit of the Central Board and the State Boards.

Clauses 37 to 41 provide for penalties in respect of offences committed under this Bill.

Clause 42 seeks to give protection to the Government or any officer of the Government, or any member, officer or other employees of a Board in respect of acts done or intended to be done in good faith in pursuance of this Bill or the rules made thereunder.

Clause 43 lays down that no Court shall take cognizance of any.offence under this Bill except on a complaint made by, or with the previous sanction in writing of the State Board, and also that no Court inferior to that of a Metropolitan Magistrate or a Judicial Magistrate of the first class shall try any offence punishable under this Bill.

Clause 44 provides that members, officers and other employees of a Board when acting or purporting to act in pursuance of any of the provisions of this Bill or the rules made thereunder shall be deemed to be public servants within the meaning of Sec. 21 of the Indian Penal Code.

Clause 45 lays down that the Central Board and the State Boards shall furnish to the Central Government and the State Governments, respectively such reports, returns, statistics, accounts and other information with respect to their activities under this Bill as may be called for by the respective Governments.

Clause 46 bars the jurisdiction of courts in respect of any matters which the Appellate Authority constituted under this Bill is empowered to determine under this Bill.

Clause 47 empowers the State Government to supersede a State Board constituted under this Bill under certain circumstances.

Clause 48 makes a special provision to deal with a case of supersession of the Central Board or the State Board constituted under the Water (Prevention and Control of Pollution) Act, 1974. It has been provided in this clause that in such a situation the powers, functions and duties of the Central Board or such State Board under this Bill shall be exercised, performed or discharged during the period of such supersession by the person or persons exercising, performing or discharging the powers, functions and duties of the Central Board or such State Board under the Water (Prevention and Control of Pollution) Act, 1974, during such period.

Clause 49 provides that as and when the Water (Prevention and Control Pollution) Act, 1974, comes into force in a State and the State Government constitutes a State Board for the Prevention and Control of Water Pollution under that Act, the State Board constituted by the State Government under this Bill shall stand dissolved and the Board first-mentioned shall exercise the powers and perform the functions of the Board second-mentioned in that State. This clause also makes other consequential provisions in this behalf.

Clause 50 empowers the Central Government to amend the Schedule

Clause 51 provides for the maintenance of a register regarding particulars as regards consents granted by a State Board.

Clause 52 lays down that, save as otherwise provides under the Atomic Energy Act, 1962, in relation to radio-active air pollution, the provisions of this Bill have overriding effect in case of inconsistency with any other enactment.

Clauses 53 and 54 empower the Central Government and the State Governments respectively to make rules in consultation with the Central Board or, as the case may be, the State Board.

The Schedule specifies the industries referred to in Cls. 21, 22, 24 and 50.

FINANCIAL MEMORANDUM

The scheme of the Bill is to achieve co-ordination in the matter or environmental pollution control. Hence, it has been provided that the Boards constituted under the Water (Prevention and Control of Pollution) Act, 1974, will also perform the functions relating to prevention, control and abatement of air pollution under this Bill (*vide* Cls. 3 and 4). In the States in which the State Boards for the Prevention and Control of Water Pollution have not been constituted under that Act, separate State Boards for the Prevention and Control of Air Pollution will be constituted under this Bill (*vide* Cl. 5) and the expenditure for the same will be borne by the Central Government. However, as and when the Water (Prevention and Control of Pollution) Act, 1974, comes into force in any such State and that State Government constitutes a State Board for the Prevention and Control of Water Pollution under that Act, The State Board constituted under this Bill will stand dissolved and the liability of the Central Government to meet the expenditure will also cease.

2. In the 15 States which have so far adopted the Water (Prevention and Control of Pollution) Act, 1974 the intention is that the Boards constituted under that Act should also perform the functions relating to prevention, control and abatement of air pollution under this Bill. The Water (Prevention and Control of Pollution) Act, 1974, has accordingly been amended to enable the Boards constituted under that Act to spend also for the work relating to prevention, control and abatement of air pollution under this Bill.

3. Under Cl. 32, the Central Government have to make contributions to the State Boards to perform their functions under this Bill. However, this is covered by a proviso that nothing in this clause shall apply to any State Board constituted under Sec. 4 of the Water (Prevention and Control of Pollution) Act, 1974, which is empowered by that Act to expense money from its fund thereunder for the purposes of this Bill also.

4. Under Cl. 3, the Central Board for the Prevention and Control of Water Pollution constituted under the Water (Prevention and Control of Pollution) Act, 1974, will also perform the functions of the Central Board for

the Prevention and Control of Air Pollution, and of a State Board in the Union territories under Cl. 6 of the Bill.

5. Under Cl. 28, the State Government may establish or specify one or more State Air Laboratories to carry out the functions assigned to it under the Bill. In respect of Union territories, it is proposed to specify the Central Water Laboratory established under Sec. 51 of the Water (Prevention and Control of Pollution) Act, 1974, to perform the functions of the State Air Laboratory also under this Bill.

6. Clause 11 provides for the constitution of committees by a Board. Sub-clause (3) thereof provides for the payment of such fees and allowances as may be prescribed to the members of a committee, other than the members of the Boards, for attending the meetings and for attending to any other work of the Board. The said Central Board for the Prevention and Control of Water Pollution, while performing the functions of the Central Board for the Prevention and Control of Air Pollution and as a State Board for the Prevention and Control of Air Pollution in the Union territories under this Bill, may constitute such committees, for the purposes of this Bill. This may involve some additional expenditure. Similarly, under sub-clause (3) of Cl. 12 any person associated with the Central Board under sub-clause (1) of Cl. 12, shall be paid such fees and allowances as may be prescribed.

7. The actual expenditure which the Central Government would be required to incur for implementing the provision of this Bill cannot be correctly estimated at present. The expenditure on the Central Government in implementing the provisions of this Bill is estimated at Rs. 20 lakhs. This will be a recurring expenditure till all the remaining seven States adopt the Water (Prevention and Control of Pollution) Act, 1974, and constitute State Boards under that Act. Besides, there will be certain additions to the expenditure in respect of the Central Board for the Prevention and Control of Water Pollution as it has to perform the work relating to prevention, Control, abatement of air pollution also in the Union territories in addition to its function as the Central Board for the Prevention and Control of Air Pollution under this Bill. This is estimated at Rs. 10.78 lakhs, out of which Rs. 5.73 lakhs will be recurring expenditure and the remaining will be non-recurring. However, this may be off-set by the revenues expected from the Water (Prevention and Control of Pollution) Cess Act, 1977.

MEMORANDUM REGARDING DELEGATED LEGISLATION

Clause 53 of the Bill empowers the Central Government, after consultation with the Central Board, to make rules for the purpose of giving effect to the provisions of this Bill in respect of matters specified therein.

2. Likewise, Cl. 54 empower the State Government to make rules, after consultation with the State Board if that Board has been constituted, in respect of matters not falling within the purview of Cl. 53.

3. Sub-clause (1) of Cl. 53 and sub-clause (2) of Cl. 54 enmerate the various matters with respect to which rules may be made respectively by the Central Government and the State Government. These matters pertain to procedure, form or administrative detail and, as such, the delegation of legislation power is of a normal character.

CHAPTER I

PRELIMINARY

1. ***Short title, extent and commencement.***— *(1) This Act may be called the Air (Prevention and Control of Pollution) Act, 1981.*

(2) It extends to the whole of India.

(3) It shall come into force on such date,[1] *as the Central Government may, by notification in the Official Gazette, appoint.*

2. ***Definitions.*** — *In this Act, unless the context otherwise requires,—*

(a) *"air pollutant" means any solid, liquid or gaseous substance* [2]*[(including noise)] present in the atmosphere in such concentration as may be or tend to be injurious to human beings or other living creatures or plants or property or environment;*

(b) *'air pollution" means the presence in the atmosphere of any air pollutant;*

(c) *"approved appliance" means any equipment or gadget used for the burning of any combustible material or for generating or consuming any fume, gas or particulate matter and approved by the State Board for the purpose of this Act;*

(d) *'approved fuel" means any fuel approved by the State Board for the purposes of this Act;*

(e) *"automobile" means any vehicle powered either by internal combustion engine or by any method of generating power to drive such vehicle by burning fuel;*

(f) *"Board" means the Central Board or a State Board;*

(g) *"Central Board" means the* [3]*[Central Pollution Control Board] constituted under Sec. 3 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974);*

(h) *"chimney" includes any structure with an opening or outlet from or through which any air pollutant may be emitted;*

(i) *"control equipment" means any apparatus, device, equipment or system to control the quality and manner of emission of any air pollutant and includes any device used for securing the efficient operation of any industrial plant;*

(j) *"emission" means any solid or liquid or gaseous substance coming out of any chimney, duct or flue or any other outlet;*

(k) *"industrial plant" means any plant used for any industrial or trade purposes and emitting any air pollutant into the atmosphere;*

---

[1] The Act came into force on 16th May, 1981 *vide* notification No. G.S.R. 351 (E) dated 15th May, 1981, published in the *Gazette of India, Extraordinary*, Part, II, Sec. 3 (*i*), dated 15th May, 1981.

[2] Ins. by Act 47 of 1987, Sec. 2 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

[3] Subs. by Act 47 of 1987, Sec. 2, (date to be notified) for the words "Central Board for the Prevention and Control of Water Pollution".

(*l*) *"member" means a member of the Central Board or a State Board, as the case may be, and includes the Chairman thereof;*

[1][(*m*) *"occupier", in relation to any factory or premises, means the person who has control over the affairs of the factory or the premises, and includes, in relation to any substance, the person in possession of the substance;]*

(*n*) *"prescribed" means prescribed by rules made under this Act by the Central Government or, as the case may be, the State Government;*

(*o*) *"State Board" means .—*

(*i*) *in relation to a State in which the Water (Prevention and Control of Pollution) Act, 1974, is in force and the State Government has constituted for that State a* [2]*[State Pollution Control Board] under Sec. 4 of that Act, the said State Board, and*

(*ii*) *in relation to any other State, the State Board for the Prevention and Control of Air Pollution constituted by the State Government under Sec. 5 of this Act*

Comment

General principle of construction.—There is one principle on which there is complete unanimity of all the courts in the world and this is that where the words or the language used in a statute are clear and cloudless, plain, simple, and explicit, unclouded and unobscured, intelligible and pointed so as to admit of no ambiguity, vagueness, uncertainty or equivocation, there is absolutely no room for deriving support from external aids In such cases, the statute should be interpreted on the face of the language itself without adding, subtracting or omitting words therefrom. Where the language is plain, and unambiguous the Court is not entitled to go behind the language so as to add or supply omissions and thus play the role of a political reformer or of a wise counsel to the Legislature.[3]

CHAPTER II

CENTRAL AND STATE BOARDS FOR THE PREVENTION AND CONTROL OF AIR POLLUTION

[4][3. ***Central Pollution Control Board.****—The Central Pollution Control Board constituted under Sec. 3 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), shall, without prejudice to the exercise and performance of its powers and functions under that Act, exercise the powers and perform the functions of the Central Pollution Control Board for the prevention and control of air pollution under this Act.]*

[4][4. ***State Pollution Control Boards constituted under Sec. 4 of Act 6 of 1974 to be State Boards under this Act.****—In any State in which the Water (Prevention and Control of Pollution) Act, 1974, is in force and the State Government has constituted for that State a State Pollution Control Board under*

---

[1] Subs. by Act 47 of 1987, Sec. 2, for Cl. (*m*) (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

[2] Subs. by Act 47 of 1987, Sec. 2 for the words "State Board for the Prevention and Control of Water Pollution" (date to be notified).

[3] S.P. Gupta *v.* President of India, A.I.R. 1982 S.C. 149 at pp. 304, 314.

[4] Subs. by Act 47 of 1987, Sec. 3 (date to be notified).

Sec. 4 of that Act, such State Board shall be deemed to be the State Board for the Prevention and Control of Air Pollution constituted under Sec. 5 of this Act, and accordingly that State Pollution Control Board shall, without prejudice to the exercise and performance of its powers and functions under that Act, exercise the powers and perform the functions of the State Board for the prevention and control of air pollution under this Act.]

*5. **Constitution of State Boards.**—(1) In any State in which the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), is not in force or that Act is in force but the State Government has not constituted a [1][State Pollution Control Board] under that Act, the State Government shall, with effect from such date as it may, by notification in the Official Gazette, appoint, constitute a State Board for the Prevention and Control of Air Pollution under such name as may be specified in the notification, to exercise the powers conferred on, and perform the functions assigned to, that Board under this Act.*

(2) A State Board constituted under this Act shall consist of the following members, namely :—

(a) a Chairman, being a person having special knowledge or practical experience in respect of matters relating to environmental protection to be nominated by the State Government :

Provided that the Chairman may be either whole-time or part-time as the State Government may think fit;

(b) such number of officials, not exceeding five, as the State Government may think fit, to be nominated by the State Government to represent that Government;

(c) such number of persons, not exceeding five, as the State Government may think fit, to be nominated by the State Government from amongst the members of the local authorities functioning within the State;

(d) such number of non-officials, not exceeding three, as the State Government may think fit to be nominated by the State Government to represent the interests of agriculture, fishery or industry or trade or labour or any other interest, which in the opinion of that Government, ought to be represented;

(e) two persons to represent the companies or corporation owned, controlled or managed by the State Government, to be nominated by that Government;

[2][(f) a full-time member-secretary having such qualifications, knowledge and experience of scientific, engineering or management aspects of pollution control as may be prescribed, to be appointed by the State Government :]

Provided that the State Government shall ensure that not less than two of the members are persons having special knowledge or practical experience in respect of matters relating to the improvement of the quality of air or the prevention, control or abatement of air pollution.

---

[1] Subs. by Act 47 of 1987, Sec. 4, for the words "State Board for the Prevention and Control of Water Pollution" (date to be notified).

[2] Subs. by Act 47 of 1987, Sec. 4. for Cl. (*f*) (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

(3) Every State Board constituted under this Act shall be a body corporate with the name specified by the State Government in the notification issued under sub-section (1), having perpetual succession and a common seal with power, subject to the provisions of this Act, to acquire and dispose of property and to contract, and may by the said name sue or be sued.

SYNOPSIS

1. Wrong observation against U.P. Pollution Board and District Administration, whether could be justified ... 372
2. Chairman—Qualifications of ... 372

Section 4 of Water Pollution Act, 1974 as well as Sec. 5 of Air Pollution Act, 1981 relates to the constitution of State Boards.

1. Wrong observation against U.P. Pollution Board and District Administration, whether could be justified.—It appears that the Chief Judicial magistrate has virtually dismissed the petition by not taking any action. He has made a wrong observation, joined the attention of the State Government, U.P. Pollution Board and District Administration. Their rights could be controlled by the Air Pollution Act, 1981, issuing a direction that they may take action under these provisions of law. Paragraph 12 of the Order will, therefore, stand quashed and there will be no direction to the U.P. Government or U.P. Pollution Board or the District Administration in the matter and the application which the learned Chief Judicial Magistrate, concerned was considering shall be deemed to have been dismissed.[1]

2. Chairman—Qualifications of.— Section 5 (2) (*a*) of the Act mandates that, the Chairman has to be a person having special knowledge or practical experience in respect of the matters relating to environment protection. The State Government has been empowered to nominate the person as Chairman having the said expertise. Therefore, the person who is appointed as Chairman has to the presumed as having sufficient knowledge of statutory provisions as well. But this presumption has been completely defied by the Chairman by acting in an uncomprehensively irresponsible manner, which is *ex facie ultra vires* his powers. His Lordship wishes that the State Government would seriously apply itself, as to whether such person could still be continued as Chairman of a Statutory Board like the present one, which has been armed stringent powers under the Act, having far-reaching bearing on the competing requirements of maintining the environment, air and water pollution prevention and control and the existence and survival of industries falling within the mischief of the regulatory statutes.[2]

***6. Central Board to exercise the powers and perform the functions of a State Board in the Union territories.**—No State Board shall be constituted for a Union territory and in relation to a Union territory, the Central Board shall exercise the powers and perform the functions of a State Board under this Act for that Union territory :*

---

[1] A.R.C. Cement Ltd., Messrs *v.* Chief Judicial Magistrate, 1986 U.P. Cr. R. 240 at p. 240.

[2] **Suma Traders, Bangalore *v.* The Chairman, Karnataka State Pollution Control Board, Bangalore, 1997 (3) Kant. L.J. 436 at p. 441.**

Provided that in relation to any Union territory the Central Board may delegate all or any of its powers and functions under this section to such person or body of persons as the Central Government may specify.

Comments

This section specifically puts the restriction on the constitution of the State Board in a Union territory.

Section 6 of the Water Pollution Act, 1974, as well as Sec. 8 of the Air Pollution Act, 1981 relate to the disqualifications of members to be appointed in the Board

7. ***Terms and conditions of service of members.***—*(1) Save as otherwise provided by or under this Act, a member of a State Board constituted under this Act, other than the member-secretary, shall hold office for a term of three years from the date on which his nomination is notified in the Official Gazette:*

Provided that a member shall, notwithstanding the expiration of his term, continue to hold office until his successor enters upon his office.

(2) The term of office of a member of a State Board constituted under this Act and nominated under Cl. (b) or (e) of sub-section (2) of Sec. 5 shall come to an end as soon as he ceases to hold the office under the State Government as the case may be, the company or corporation owned, controlled or managed by the State Government, by virtue of which he was nominated.

(3) A member of a State Board constituted under this Act, other than the member-secretary, may at any time resign his office by writing under his hand addressed,—

(a) in the case of the Chairman, to the State Government; and

(b) in any other case, to the Chairman of the State Board and the seat of the Chairman or such other member shall thereupon become vacant.

(4) A member of a State Board constituted under this Act, other than the member-secretary, shall be deemed to have vacated his seat, if he is absent without reason, sufficient in the opinion of the State Board, from three consecutive meetings of the State Board or where he is nominated under Cl. (c) of sub-section (2) of Sec. 5, he ceases to be a member of the local authority and such vacation of seat shall, in either case, take effect from such date as the State Government may, by notification in the Official Gazette, specify.

(5) A casual vacancy in a State Board constituted under this Act shall be filled by a fresh nomination and the person nominated to fill the vacancy shall hold office only for the remainder of the term for which the member whose place he takes was nominated.

(6) A member of a State Board constituted under this Act shall be eligible for renomination [1][* * *].

---

[1] The words "but not for more than two terms" *omitted* by Act 47 of 1987, Sec. 5 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

(7) The other terms and conditions of service of the Chairman and other members (except the member-secretary) of a State Board constituted under this Act shall be such as may be prescribed.

Comments

Section 5 of the Water Pollution Act, 1974 as well as Sec. 7 of the Air Pollution Act, 1981 relate to the terms and conditions of service of members of Board.

8. ***Disqualifications.***—*(1) No person shall be a member of a State Board constituted under this Act, who—*

- *(a) is, or at any time has been, adjudged insolvent, or*
- *(b) is of unsound mind and has been so declared by a competent court, or*
- *(c) is, or has been convicted of an offence which, in the opinion of the State Government, involves moral turpitude, or*
- *(d) is, or at any time has been, convicted of an offence under this Act, or*
- *(e) has directly or indirectly by himself or by any partner, any share or interest in any firm or company carrying on the business of manufacture, sale, or hire of machinery, industrial plant, control equipment or any other apparatus for the improvement of the quality of air or for the prevention, control or abatement of air pollution, or*
- *(f) is a director or a secretary, manager or other salaried officer or employee of any company or firm having any contract with the Board, or with the Government constituting the Board or with a local authority in the State, or with a company or corporation owned, controlled or managed by the Government, for the carrying out of programmes for the improvement of the quality of air or for the prevention, control or abatement of air pollution, or*
- *(g) has so abused, in the opinion of the State Government, his position as a member, as to render his continuance on the State Board detrimental to the interest of the general public.*

(2) The State Government shall, by order in writing, remove any member who is, or has become, subject to any disqualification mentioned in sub-section (1) :

Provided that no order of removal shall be made by the State Government under this section unless the member concerned has been given a reasonable opportunity of showing cause against the same.

(3) Notwithstanding anything contained in sub-section (1) or sub-section (6) of Sec. 7, a member who has been removed under this section shall not be eligible to continue to hold office until his successor enters upon his office, or, as the case may be, for renomination as a member.

Comment

Sub-section (2) embodies the principle of natural justice that the member of the Board before his removal on the ground of disqualification must be afforded a reasonable opportunity of being heard.

*9. **Vacation of seats by members.**—If a member of a State Board constituted under this Act becomes subject to any of the disqualifications specified in Sec. 8, his seat shall become vacant.*

Comment

Section 7 of the Water Pollution Act, 1974 as well as Sec. 9 of the Air Pollution Act, 1981 relates to the vacation of seats by members of the Board.

*10. **Meeting of Board.**—(1) For the purposes of this Act, a Board shall meet at least once in every three months and shall observe such rules of procedure in regard to the transaction of business at its meetings as may be prescribed :*

Provided that if, in the opinion of the Chairman, any business of an urgent nature is to be transacted, he may convene a meeting of the Board at such time as he thinks fit for the aforesaid purpose.

(2) Copies of the minutes of the meetings under sub-section (1) shall be forwarded to the Central Board and to the State Government concerned.

Comments

Section 8 of the Water Pollution Act, 1974, as well as Sec. 10 of the Air Pollution Act, 1981 relate to the meetings of Board.

Section 10 empowers the Chairman to convene the meeting at any time for the purposes of the Act.

*11. **Constitution of committees.**— (1) A Board may constitute as many committees consisting wholly of members or partly of members and partly of other persons and for such purpose or purposes as it may think fit.*

(2) A committee constituted under this section shall meet at such time and at such place, and shall observe such rules of procedure in regard to the transaction of business at its meetings, as may be prescribed.

(3) The members of a committee other than the members of the Board shall be paid such fees and allowances, for attending its meetings and for attending to any other work of the Board as may be prescribed.

Comments

The committees constituted under this section may consist wholly of members or partly of members and partly of other persons.

Section 9 of the Water Pollution Act, 1974 as well as Sec. 11 of the Air Pollution Act, 1981, relate to the constitution of committees.

*12. **Temporary association of persons with Board for particular purposes.**— (1) A Board may associate with itself in such manner, and for such purposes, as may be prescribed, any person whose assistance or advice it may desire to obtain in performing any of its functions under this Act.*

(2) A person associated with the Board under sub-section (1) for any purpose shall have a right to take part in the discussions of the Board relevant to that purpose, but shall not have a right to vote at a meeting of the Board and shall not be a member of the Board for any other purpose.

(3) A person associated with a Board under sub-section (1) shall be entitled to receive such fees and allowances as may be prescribed.

Comment

Section 10 of the Water Pollution Act, 1974, as well as Sec. 12 of the Air ollution Act, 1981 relate to the temporary association of persons with Board r particular purposes.

13. ***Vacancy in Board not to invalidate acts or proceedings.***—*No act or oceeding of a Board or any committee thereof shall be called in question on the ound merely of the existence of any vacancy in, or any defect in the constitution of, Board of such committee, as the case may be.*

Comment

Section 11 of the Water Pollution Act, 1974 as well as Sec. 13 of the Air llution Act, 1981 provide that vacancy in Board shall not invalidate acts or ceedings.

14. ***Member-secretary and officers and other employees of State ards.***— *(1) The terms and conditions of service of the member-secretary of a State rd constituted under this Act shall be such as may be prescribed.*

[1]*[(2) The member-secretary of a State Board, whether constituted under this Act ot, shall exercise such powers and perform such duties as may be prescribed, or as , from time to time, be delegated to him by the State Board or its Chairman.]*

(3) Subject to such rules as may be made by the State Government in this lf, a State Board, whether constituted under this Act or not, may appoint such ers and other employees as it considers necessary for the efficient performance of unctions under this Act.

(4) The method of appointment, the conditions of service and the scale of pay of officers (other than the member-secretary) and other employees of a State Board inted under sub-section (3) shall be such as may be determined by regulations e by the State Board under this Act.

(5) Subject to such conditions as may be prescribed, a State Board constituted r this Act may from time to time appoint any qualified person to be a consultant e Board and pay him such salary and allowances of fees, as it thinks fit.

Comment

Section 12 of the Water Pollution Act, 1974 as well as Sec. 14 of the Air ution Act, 1981, relate to the member-secretary and officers and other loyees of the Board.

15. ***Delegation of powers.***— *A State Board may, by general or special order, ate to the Chairman or the member-secretary or any other officer of the Board ct to such conditions and limitations, if any, as may be specified in the order, of its powers and functions under this Act as it may deem necessary.*

Comment

Section 11-A of the Water Pollution Act, 1974 as well as Sec. 15 of the ollution Act, 1981 relate to the delegation of powers. Section 23 of the onment (Protection) Act, 1986 provides the same power.

Subs. by Act 47 of 1987, Sec. 6 for sub-section (2) (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

CHAPTER III

POWERS AND FUNCTIONS OF BOARDS

16. ***Functions of Central Board.***— *(1) Subject to the provisions of this Act, and without prejudice to the performance of its functions under the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974),the main functions of the Central Board shall be to improve the quality of air and to prevent, control or abate air pollution in the country.*

(2) In particular and without prejudice to the generality of the foregoing functions, the Central Board may—

(a) advice the Central Government on any matter concerning the improvement of the quality of air and the prevention, control or abatement of air pollution;

(b) plan and cause to be executed a nationwide programme for the prevention, control or abatement of air pollution;

(c) co-ordinate the activities of the State Boards and resolve disputes among them;

(d) provide technical assistance and guidance to the State Boards, carry out and sponsor investigations and research relating to problems of air pollution and prevention, control or abatement of air pollution;

[1]*[(dd) perform such of the functions of any State Board as may be specified in an order made under sub-section (2) of Sec. 18;]*

(e) plan and organise the training of persons engaged or to be engaged in programmes for the prevention, control or abatement of air pollution on such terms and conditions as the Central Board may specify;

(f) organize through mass media a comprehensive programme regarding the prevention, control or abatement of air pollution ;

(g) collect, compile and publish technical and statistical data relating to air pollution and the measures devised for its effective prevention, control or abatement and prepare manuals, codes or guides relating to prevention, control or abatement of air pollution ;

(h) lay down standards for the quality of air ;

(i) collect and disseminate information in respect of matters relating to air pollution ;

(j) perform such other functions as may be prescribed.

(3) The Central Board may establish or recognise a laboratory or laboratories to enable the Central Board to perform its functions under this section efficiently.

(4) The Central Board may—

(a) delegate any of its functions under this Act generally or specially to any of the committees appointed by it ;

(b) do such other things and perform such other acts as it may think necessary for the proper discharge of its functions and generally for the purpose of carrying into effect the purposes of this Act.

---

1. Ins. by Act 47 of 1987, Sec. 7 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

Comments

Section 16 of the Water Pollution Act, 1974 as well as Sec 16 of the Air Pollution Act, 1981 relate to the functions of Central Board.

Sub-section (4) empowers the Central Board to delegate any of its functions to any of the Committees appointed by it.

*17. **Functions of State Boards.**— (1) Subject to the provisions of this Act, and without prejudice to the performance of its functions, if any, under the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), the functions of a State Board shall be—*

(a) to plan a comprehensive programme for the prevention, control or abatement of air pollution and to secure the execution thereof;

(b) to advise the State Government on any matter concerning the prevention, control or abatement of air pollution ;

(c) to collect and disseminate information relating to air pollution ;

(d) to collaborate with the Central Board in organizing the training of persons engaged or to be engaged in programmes relating to prevention, control or abatement of air pollution and to organise mass-education programme relating thereto ;

(e) to inspect, at all reasonable times, any control equipment, industrial plant or manufacturing process and to give, by order, such directions to such persons as it may consider necessary to take steps for the prevention, control or abatement of air pollution ;

(f) to inspect air pollution control areas at such intervals as it may think necessary, assess the quality of air therein and take steps for the prevention, control or abatement of air pollution in such areas ;

(g) to lay down, in consultation with the Central Board and having regard to the standards for the quality of air laid down by the Central Board, standards for emission of air pollutants into the atmosphere from industrial plants and automobiles or for the discharge of any air pollutant into, the atmosphere from any other source whatsoever not being a ship or an aircraft :

Provided that different standards for emission may be laid down under this clause for different industrial plants having regard to the quantity and composition of emission of air pollutants into the atmosphere from such industrial plants;

(h) to advise the State Government with respect to the suitability of any premises or location for carrying on any industry which is likely to cause air pollution;

(i) to perform such other functions as may be prescribed or as may, from time to time, be entrusted to it by the Central Board or the State Government;

(j) to do such other things and to perform such other acts as it may think necessary for the proper discharge of its functions and generally for the purpose of carrying into effect the purposes of this Act.

(2) A State Board may establish or recognize a laboratory or laboratories to enable the State Board to perform its functions under this section efficiently.

SYNOPSIS

1. Noise Pollution—Horn-type loudspeaker—Use of 379
2. Directions issued to board for implemention ... 379
3. State Board had no descrition to grant exemption ... 380
4. Statutory duty of the Board—Not discharged .. 380

Section 17 of the Water Pollution Act, 1974 as well as Sec. 17 of the Air Pollution Act, 1981 both relate to the functions of State Board.

1. **Noise pollution—Horn-type loudspeaker—Use of.**— The use of horn-type loudspeaker is preferable for public announcements and speeches, especially in open areas, for the following reasons :

A cone-type loudspeaker (otherwise known as box-type loudspeakers is able to faithfully reproduce sound in a very wide range of frequencies. In other words it can reproduce very shrill (high frequency) to very high bass (low frequency) sounds. The efficiency of a horn-type loudspeaker, on the other hand, is limited to human speech frequencies. Therefore, a horn-type loudspeaker is more preferable for human speech amplification.

Box-type loudspeakers are not suitable for prolonged use in the open as they do not withstand the vagaries of nature. The horn-type speakers are rugged in construction and are therefore better suited for outside use. Horn-type loudspeaker is more directional and therefore the sound can be better focused towards the intended audience.

Cone/Box-type loudspeakers are suitable for use in areas such as music/conference halls or theatres where the audibility can be restricted to a confined area of audience and where we require faithful reproduction of a wide range of frequencies.

The only restriction stated is that these loudspeakers should be maintained at a height of 3 metres above the ground level. Thus from the above reports, it is clear that there will be no noise pollution in using the horn-type loudspeakers so far as Guruvayur Temple premises is concerned. The judgment in O-P. No. 9560 of 1988 was concerned with the use of all types of loudspeakers. Further, we do not find any data or reason stated in that judgment on the basis of which the restrictions are imposed. In the nature of the above facts, their Lordships are not able to accept the judgement in O.P. No. 9560 of 1988, so far as the facts of this case are concerned.

In the result, the Guruvayur Devaswom is allowed to use horn-type amplifiers in and around the Sreekrishna Temple premises as required by them. If any permission is needed from the police authorities, the police authorities are directed to give sanction to the Managing Committee to erect the horn-type loudspeakers.[1]

2. **Directions issued to Board for implemention.**—Valuable reports and the recommendnations made after a detailed study and survey should be effectively implemented and carried out. In that view of the matter their

---

[1] **Chairman, Guruvayur Devaswom Managing Committee, Guruvayur *v.* Superintendent of Police, Thrissur, A.I.R. 1998 Ker. 122 at p. 124.**

lordships directed the additional respondent No. 6 to monitor and evaluate the performance of the industries and also the corporation of Cochin and other bodies who are responsible in containing the air pollution in and around the city of Cochin and submit yearly reports on or before 31st December of the year, of the action taken in this regard to Kerala High Court. The first such report should be filed before 31st December, 1995. The recommendations made by NEERI and the State Pollution Control Board are binding on all the parties. They shall implement the recommendation within a reasonable time. The yearly report to be submitted by the 6th respondent will contain steps taken by various authorities and bodies in this regard. The Court considered that adequate steps and safeguards should be taken effective by issue of suitable orders under the Air (Prevention & Control of Pollution) Act, 1981 and the Environment (Protection) Act, 1986.[1]

3. **State Board had no descrition to grant exemption.**—Whether any particular industrial plant falls within the purview of the Air Act or not, has to be adjudged with reference to the provisions of the Act itself which provides that the Act will apply to only such industries which emit air pollutants. Therefore, if any industry is not emitting any air pollutant, then *ipso facto* the provisions of the Act will have no application to it. But, if it is emitting air pollutants, irrespective of this extent then neither the State Government nor the State Board has any competence to keep such industries, may be cottage, small scale or tiny to keep them out of the purview of the Act. Accordingly, notification dated 10-3-1992 (Annexure-C) issued by the State Board granting exemption in respect of certain industrial plants is declared as *ultra vires* its powers and functions and accordingly quashed[2]

4. **Statutory duty of the Board—Not discharged.**— In the facts and circumstances of the present case, court refrains from giving an opinion in this regard and come to the conclusion that no standard has been prescribed by the Board. This point may be examined in an appropriate case in future. From the record it was found that regarding the air pollutants there was no examination in the manner prescribed. Therefore Court was constrained to hold that the Board did not take the pain to examine the matters in the manner as it is envisaged. This is a duty assigned to the board. The Board did not address itself regarding the relevant aspect of the matter and simply refused to give consent. As stated earlier, consent can neither be withheld nor granted without proper examination. As nothing has been done in that regard, the Board failed to dishcarge its statutory duty and obligation in accordance with law. In that view of the matter held that refusal to grant consent without valid ground was illegal, without jurisdiction and contrary to the provisions of law.[3]

18. Power to give directions.— [4][(1)] *In the performance of its functions under this Act,—*

(a) the Central Board shall be bound by such directions in writing as the Central Government may give to it; and

(b) every State Board shall be bound by such directions in writing as the Central Board or the State Government may give to it :

[3] Mahabir Coke Industry *v.* Pollution Control Board, A.I.R. 1998 Gau. 10 at p. 17 : 1996 (III) G.L.T. 296 at p. 305.

[4] Sec. 18 renumbered as sub-section (1) thereof by Act 47 of 1987, Sec. 8 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

Provided that where a direction given by the State Government is inconsistent with the direction given by the Central Board, the matter shall be referred to the Central Government for its decision.

[1]*[(2) Where the Central Government is of the opinion that any State Board has defaulted in complying with any directions given by the Central Board under sub-section (1) and as a result of such default a grave emergency has arisen and it is necessary or expedient so to do in the public interest, it may, by order, direct the Central Board to perform any of the functions of the State Board in relation to such area, for such period and for such purposes, as may be specified in the order.*

(3) Where the Central Board performs any of the functions of the State Board in pursuance of a direction under sub-section (2), the expenses, if any incurred by the Central Board with respect to the performance of such functions may, if the State Board is empowered to recover such expenses, be recovered by the Central Board with interest (at such reasonable rate as the Central Government may, by order, fix) from the date when a demand for such expenses is made until it is paid from the person or persons concerned as arrears of land revenue or of public demand.

(4) For the removal of doubts, it is hereby declared that any directions to perform the functions of any State Board given under sub-section (2) in respect of any area would not preclude the State Board from performing such functions in any other area in the State or any of its other functions in that area.]

Comments

Section 18 of the Water Pollution Act, 1974 and the Air Pollution Act, 1981, both relate to the power of giving directions. Similar power has been given under Sec. 5 of the Environment (Protection) Act, 1986.

The word "shall"—Meaning of.— It has been laid down consistently by the Supreme Court that the mere use of the word "shall" by itself in the statute does not make the provisions mandatory, but it is the duty of the courts of justice to try to get at the real intention of the Legislature by carefully attending to the whole scope of the statute to be construed. In each case, one has to look to the subject-matter, consider the importance of the provisions and the relation of that provision with the general object intended to be secured by the Act and upon the review of the case in that aspect decide whether the enactment is mandatory or only directory.[2]

CHAPTER IV

PREVENTION AND CONTROL OF AIR POLLUTION

*19. **Power to declare air pollution control areas.**—(1) The State Government may, after consultation with the State Board, by notification in the Official Gazette declare in such manner as may be prescribed, any area or areas within the State as air pollution control area or areas for the purposes of this Act.*

(2) The State Government may, after consultation with the State Board, by notification in the Official Gazette,—

(a) alter any air pollution control area whether by way of extension or reduction ;

(b) declare a new air pollution control area in which may be merged one or more existing air pollution control areas of any part or parts thereof.

(3) If the State Government, after consultation with the State Board, is of opinion that the use of any fuel, other than an approved fuel, in any air pollution

---

[1] Ins. by Act 47 of 1987, Sec. 8, (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

[2] Mohammad Mahboob Khan *v.* State Transport Appellate Tribunal, U.P., 1982 A.L.J. 300 at p. 301

control area of part thereof, may cause or is likely to cause air pollution, it may, by notification in the Official Gazette, prohibit the use of such fuel in such area or part thereof with effect from such date (being not less than three months from the date of publication of the notification) as may be specified in the notification.

(4) The State Government may, after consultation with the State Board, by notification in the Official Gazette, direct that with effect from such date as may be specified therein, no appliance, other than an approved appliance, shall be used in the premises situated in an air pollution control area :

Provided that different dates may be specified for different parts of an air pollution control area or for the use of different appliances.

(5) If the State Government, after consultation with the State Board, is of opinion that the burning of any material (not being fuel) in any air pollution control area or part thereof may cause or is likely to cause air pollution, it may, by notification in the Official Gazette, prohibit the burning of such material in such area or part thereof.

Comments

Section 19 of the Water Pollution Act, 1974 as well as Sec. 19 of the Air Pollution Act, 1981 relate to the applicability of the Act to certain areas.

Sub-section (5) empowers the State Government after consultation with the State Board to prohibit the burning of any material (not being fuel) in any air pollution control area or part thereof, which may cause or likely to cause air pollution.

Air pollution control areas—Declaration of.— As per Sec. 19, the State Government may, after consultation with the State Board, by notification in the Official Gazette, declare in such manner as may be prescribed, any area or areas within the State are air pollution control area or areas for the purposes of the Act.[1]

*20. **Power to give instructions for ensuring standards for emission from automobiles.**—With a view to ensuring that the standards for emission of air pollutants from automobiles laid down by the State Board under Cl. (g) of sub-section (1) of Sec. 17 are complied with, the State Government shall, in consultation with the State Board, give such instructions as may be deemed necessary to the concerned authority in charge of registration of motor vehicles under the Motor Vehicles Act, (4 of 1939)[2] and such authority shall, notwithstanding anything contained in that Act or the rules made thereunder be bound to comply with such instructions.[3]*

Comments

Plying of commercial vehicle more than fifteen years old.—With a view to tackle problems arising out of chaotic traffic conditions and vehicular pollution and not being satisfied with the steps taken by the concerned authorities in addressing themselves to those problems, this Court issued certain directions accepting the report of Bhure Lala Committee, as it was felt by the Court that any further delay in the performance of its duty by the Administration could not be remitted. At this stage, their lordships were concerned only with the direction issued by this Court to the effect that all commercial vehicles which are more than 15 years old shall not be permitted to ply in the National Capital Territory of Delhi with effect from 2nd October, 1998.[1]

[1] Mahabir Coke Industry *v.* Pollution Control Board, Assam, 1996 (III) G.L.T. 296 at pp. 302, 303 : **A.I.R. 1998 Gau. 10.**

[2] *See* now the Motor Vehicles Act, 1988.

[3] In pursuance of Cl. (1) of Art. 239 of the Constitution, the President hereby directs that the Lieutenant Governor of the National Capital Territory of Delhi shall, subject to the control of the President and until further orders, also exercise the powers and discharge the functions of the Central Government under Sec. 20 of the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981) within the said territory. Issued *vide* S.O. 150 (E), dated 25th February, 1997 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*) dated 26th February, 1997.

21. ***Restrictions on use of certain industrial plants.***—[2][*(1) Subject to the provisions of this section, no person shall, without the previous consent of the State Board, establish or operate any industrial plant in an air pollution control area :*

Provided that a person operating any industrial plant in any air pollution control area immediately before the commencement of Sec. 9 of the Air (Prevention and Control of Pollution) Amendment Act, 1987 for which no consent was necessary prior to such commencement, may continue to do so for a period of three months from such commencement or, if he has made an application for such consent within the said period of three months, till the disposal of such application.]

(2) An application for consent of the State Board under sub-section (1) shall be accompanied by such fees as may be prescribed and shall be made in the prescribed form and shall contain the particulars of the industrial plant and such other particulars as may be prescribed :

Provided that where any person, immediately before the declaration of any area as an air pollution control area, operates in such area any industrial plant [3][***], *such person shall make the application under this sub-section within such period (being not less than three months from the date of such declaration) as may be prescribed and where such person makes such application, he shall be deemed to be operating such industrial plant with the consent of the State Board until the consent applied for has been refused.*

(3) The State Board may make such inquiry as it may deem fit in respect of the application for consent referred to in sub-section (1) and in making any such inquiry, shall follow such procedure as may be prescribed.

(4) Within a period of four months after the receipt of the application for consent referred to in sub-section (1), the State Board shall, by order in writing, [4][*and for reasons to be recorded in the order, grant the consent applied for subject to such conditions and for such period as may be specified in the order, or refuse such consent.]*

[5][*Provided that it shall be open to the State Board to cancel such consent before the expiry of the period for which it is granted or refused further consent after such expiry if the conditions subject to which such consent has been granted are not fulfilled :*

Provided further that before cancelling a consent or refusing a further consent under the first proviso, a reasonable opportunity of being heard shall be given to the person concerned.]

(5) Every person to whom consent has been granted by the State Board under sub-section (4), shall comply with the following conditions, namely :—

(i) the control equipment of such specifications as the State Board may approve in this behalf shall be installed and operated in the premises where the industry is carried on or proposed to be carried on;

---

1. **M.C. Mehta *v.* Union of India, 1998 (3) B.L.J.R. 2194 at p. 2194 (S.C.).**
2. Subs. by Act 47 of 1987, Sec. 9 for sub-section (1) (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).
3. The words "for the purpose of any industry specified in the Schedule" omitted by Act 47 of 1987, Sec. 9 (w.e.f 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).
4. Subs. by Act 47 of 1987, Sec. 9, for the words "either grant or refuse, for reasons to be recorded in the orders, the consent applied for" (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).
5. Ins. by Act 47 of 1987, Sec. 9 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

(ii) *the existing control equipment, if any, shall be altered or replaced in accordance with the directions of the State Board;*

(iii) *the control equipment referred to in Cl. (i) or (ii) shall be kept at all times in good running condition;*

(iv) *chimney, wherever necessary, of such specifications as the State Board may approve in this behalf shall be erected or re-erected in such premises;*

(v) *such other conditions as the State Board, may specify in this behalf; and*

(vi) *the conditions referred to in Cls. (i), (ii) and (iv) shall be complied with within such period as the State Board may specify in this behalf:*

Provided that in the case of a person operating any industrial plant [1][***] *in an air pollution control area immediately before the date of declaration of such area as an air pollution control area, the period so specified shall not be less than six months:*

Provided further that—

(a) *after the installation of any control equipment in accordance with the specifications under Cl. (i), or*

(b) *after the alteration or replacement of any control equipment in accordance with the directions of the State Board under Cl. (ii), or*

(c) *after the erection or re-erection of any chimney under Cl. (iv),*

no control equipment or chimney shall be altered or replaced, or as the case may be, erected or re-erected except with the previous approval of the State Board.

(6) If due to any technological improvement or otherwise the State Board is of opinion that all or any of the conditions referred to in sub-section (5) require or requires variation (including the change of any control equipment, either in whole or in part), the State Board shall, after giving the person to whom consent has been granted an opportunity of being heard, vary all or any of such conditions and thereupon such person shall be bound to comply with the conditions as so varied.

(7) Where a person to whom consent has been granted by the State Board under sub-section (4) transfers his interest in the industry to any other person, such consent shall be deemed to have been granted to such other person and he shall be bound to comply with all the conditions subject to which it was granted as if the consent was granted to him originally.

SYNOPSIS

1. Compliance of the section ... 384
2. Scope and object of the Act ... 385
3. Discrimination and violation of Art. 14 of the Constitution ... 386
4 Guilt not established—Accused rightly acquitted .. 386
5. Violation of the provisions of the Section-in-case of ... 387

1. Compliance of the section.—So far as compliance with the provisions of the Air Act, is concerned, the Central Government in consultation with the Central Board issued a notification under Sec. 19 (1) of the Air Act, notifying certain areas in the Union Territory of Delhi as air pollution control areas. The plants of Shriram are admittedly situated in the air pollution control area and the industries carried on by Shriram also fall within the schedule of industries specified in the Air Act. Shriram was, therefore, required to apply for a consent order from the Central Board under

---

[1] The words "for the purpose of any industry specified in the Schedule" omitted by Act 47 of 1987, Sec. 9 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

Sec. 21 of the Air Act, and an application was accordingly made by Shriram on the basis of which a consent order was issued by the Central Board on 13th June, 1985, authorising Shriram to operate their plants in the air pollution control area, subject to the conditions set out in the consent order. The consent order relates to three plants of Shriram, namely, sulphuric acid plant, super phosphate plant and power plant. Courts are not concerned at the present state with the sulphuric acid and super phosphate plants since permission to restart them is not presently sought by Shriram and it need not therefore pause to consider whether the conditions laid down in the consent order in respect of these two plants have been complied with or not. So far as the power plant of Shriram is concerned, it is not the case of the Central Board that the conditions in the consent order is regard to the operation of the power plant are not being complied with by the management though there is a specific complaint made in the affidavit filed on behalf of the Central Board that the conditions in the consent order relating to sulphuric acid and super phosphate plants are not being observed. But, if the Central Board finds at any time that the conditions in the consent order relating to the power plant are not being complied with and the particulate matter emitted by the stacks of the boilers is more than 150 mg/Nm., 3 it will be open to the Central Board to take whatever action is appropriate under the law.[1]

Under sub-section (1) of Sec. 21, subject to the provisions of this Section, no person shall, without the previous consent of the State Board, establish or operate any industrial plant in an air pollution control area. Sub-section (1) of Sec. 21 deals with those industrial units which came into existence after the commencement of the Act. But there may be industrial units which were in existence at the time of commencement of the Act. Proviso to sub-section (1) of Sec. 21 states that in the case of a person operating any industrial plant in an air pollution control area immediately before the date of declaration of such area as an air pollution control area, the period so specified for compliance with the conditions mentioned in sub-section (1) of Sec. 21 shall be not less than 3 months.[2]

2. **Scope and object of the Act.**—The Act is designed to prevent, control and abatement of air pollution, the provisions relate to preservation of quality of air and control of pollution. Keeping in view these objects the Act has provided for measures, which are preventive in nature, in the cases of industries to be established; and in the case of industries already established, they are remedial. In the case of established industries, it insists on obtaining consent of Board, making the industry amenable to the administrative control of the Board. Once a consent is given, the Board can issue orders, directions, etc., which are to be complied with by the industry. Precisely for this reason, the industry, which has been given consent is required to comply with certain conditions, enumerated in sub-section (5) of Sec. 21. Non compliance of these conditions is made punishable under Sec. 37. The primary responsibility of controlling the air pollution is on the Board. Sub-section (2) of Sec. 23 casts a duty on the Board to cause such remedial measures as are necessary to mitigate the emission of air pollutants, and the expenses that are incurred can be recovered from the person concerned as arrears of land revenue. Viewed in this background the direction to close down the factory, solely because it has not obtained consent of the Board is clearly illegal. If the Board thinks that the petitioner has failed to comply with its order it may take action under Sec. 37, as proposed in the show cause notice but that would not justify the

---

[1] M.C. Mehta *v.* Union of India, 1986 S.C.C. (Cr.) 122 at p. 141 : (1986) 2 S.C.C. 176.

[2] Mahabir Coke Industry *v.* Pollution Control Board, Assam, 1996 (III) G.L.T. 296 at p. 303.

passing of a probability order which apart from causing loss to the owner has a serious consequence of paralysing the industry affecting the livelihood of employed persons, the consequences may be more hazardous than the air pollution. Therefore, the "remedial measures" contemplated must be understood as such measures which mitigate the emission of air pollutants. Therefore, the harsh step of prohibiting the working of the factory is neither warranted not has it the legal santity.[1]

3. **Discrimination and violation of Art. 14 of the Constitution.**—It has now to be considered as to whether the petitioner has been discriminated against by refusing its permission to manufacture hydrated lime when another concern Vijay Lime Industries just across the road, has been granted permission and has been manufacturing hydrated lime From he document produced, it appears that Vijay Lime Industries started manufacturing hydrated lime opposite the plots of the petitioner since 1983, or so unauthorisedly. This is also the petitioner's case that Vijay Lime Industries is illegally functioning since, 1983, which is also clear from the letter of the Special Area Development Authority dated 11th April, 1985, showing that on payment of composition fee of Rs. 500 by Vijay Lime Industries the Special Area Development Authority has no objection for working of the lime kiln. The Pollution Board granted No Objection Certificate to it only on 11th February, 1987, i.e., 9 months before the Board granted such a certificate to the petitioner. This is not denied by the respondents but according to them Vijay Lime Industries has been told and it has granted to shift its factory on getting alternative site. Its licence has not been renewed. Permission has been refused to it to start its second unit on 31st May, 1988. In any case, the existing unit of Vijay Lime Industries commenced. production since 1983 before Korba was declared air pollution control area and No Objection Certificate was required from the Pollution Board for manufacturing hydrated lime The respondents have also stated that steps are being taken to close Vijay Lime Industries. It was hoped and expected that Vijay Lime Industries will be closed down soon and shifted elsewhere. Simply because one industry which is causing pollution is already in the industrial area that does not make out a case for allowing the petitioner to further pollute the area No permission was taken by Vijay Lime Industries for manufacturing hydrated lime. The petitioner was asked by the Special Area Development Authority to stop further construction on 3rd February, 1986 but he petitioner rushed to the Court and obtained stay on 26th May, 1986, and thereafter completed the construction hurriedly on 27th September, 1986, instead of waiting for a decision. By preventing the petitioner from further polluting the area, public interest is being served in preference to individual interest and as such, there is no question of any discrimination.[2]

4. **Guilt not established—Accused rightly acquitted.**— The appellant has virtually failed to prove that the respondents were running "Industrial Plants" that would come within the purview of the schedule appended to the Notification; *secondly*, Sec. 37 of the Act, is a penal provision in built in the Act is not applicable to the violation of Sec. 21 (2) of the Act; *thirdly*, the proviso to the above section does not provide any criminal liability on the respondents and above all, the evidence of PW 1 does not render any help or assistance in establishing the guilt and complicity of the respondents; as has been clearly and categorically held by the learned trial Magistrate. After having gone

---

1. Chaitanaya Pulvarising Industry *v.* Karnataka State Pollution Control Board, A.I.R. 1987 Kant. 82 at p. 86 : 1987 (1) Kant. L.J. 134 at pp. 139, 140.
2. Chhatisgarh Hydrade Lime Industries, Bilaspur *v.* Special Area Development Authority, Bilaspur A.I.R. 1989 M.P. 82 at pp. 91, 92.

through the various findings recorded by the learned Magistrate, his Lordship is satisfied to hold that he has appreciated the tendered evidence, both oral and documentary in their correct legal perspective and has arrived at a proper conclusion on his part with the law and procedure and has rightly acquitted all the respondents.[1]

5. **Violation of the provisions of the Section-in-case of.**— Punjab State Pollution Control Board, Patiala, has filed this complaint under Sec. 37 read with Sec. 40 of the Air (Prevention and Control of Pollution) Act, 1981 against the petitioners for violating the provisions of Sec. 21 of the Act. The trial Magistrate, passed the impugned order dated 1st February, 1991, summoning the petitioners in this complaint. The petitioners have now filed the petitioner under Sec. 482 of the Code of Criminal Procedure for quashing the complaint Annexure P-1 and the summoning order dated 1st February, 1991, Annexure P-2 and the consequent proceedings. The trial Magistrate, has passed the summoning order, without applying his mind on the merits of the case and has proceeded to summon the petitioners for 4th August, 1991, in a routine manner. The summoning order dated 1st February, 1991 has been passed by the trial Magistrate, in this case, in routine manner without applying its mind. This does not satisfy the provisions of Sec. 204 of the Code of Criminal Procedure which provide that if in the opinion of the Magistrate, taking the cognizance of an offence, there is sufficient ground for proceeding and the case appears to be a summon case, he shall issue summons for the attendance of the accused or if the case appears to be a warrant case, he may issue warrant etc. The impugned summoning order does not at all show whether the trial Court applied its mind to the facts mentioned in the complaint. Therefore, the order does not fulfil the mandatory provisions of Sec. 204 of the Code of Criminal Procedure. For the reasons recorded above, the petition is partly allowed to the extent that the impugned summoning order passed by the Magistrate, is quashed.[2]

22. Persons carrying on industry, etc., not to allow emission of air pollutants in excess of the standards laid down by State Board.—*No person* [3][***] *operating any industrial plant, in any air pollution control area shall discharge or cause or permit to be discharged the emission of any air pollutant in excess of the standards laid down by the State Board under Cl. (g) of sub-section (1) of Sec. 17.*

SYNOPSIS

1 Removal of the factory — Justification of ... 387
2. Emission of air pollutant cannot exceed standard prescribed by the Board ... 389

1. **Removal of the factory—Justification of.**—It is not the intent of law that the community as a whole or a large number of complainants come forward to lodge their complaint or protest against the nuisance, that does not require any particular number of complainants. A mere reading of Sec. 133 (1), Cr. P.C. would go to show that the jurisdiction of the Sub-Divisional Magistrate can be invoked on receiving a report of police officer or other information, and on taking such evidence if any, as he thinks fit. These words are important. Even on information received the Sub-Divisional Magistrate is empowered to take action in this behalf for either removal or regularising a

[2] New Masco Industries *v.* Punjab State Pollution Control Board, 1992(3) Crimes 1068 at pp. 1068, 1069 (P. & H.).

[3] The words "carrying on any industry specified in the Schedule or" omitted by Act 47 of 1988, Sec. 10 (w.e.f. 1st April ,1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

public nuisance. In this case, the action was initiated on the basis of a police report also which is on record. The complaint received was sent to the P.S. Palasia and on that basis on 18th September, 1982, a report was filed under Sec. 133, Cr. P.C., by the Station Officer, P.S. Palasisa followed by show-cause notice. Thus, there is no factual basis even for advancing such an argument. It is also pertinent to note that the witnesses examined in this case and the evidence adduced in support of the police report unfailingly point to the nature of the nuisance, the emission of smoke from the boiler and its deleterious effect on he community, is amply borne out from the evidence on record. In such circumstances the requirement of Sec. 133 Cr. P.C., is fully satisfied. When a complaint was made to the Joint Director against the starting of factories of factories in residential locality like Manoramaganj, the Joint Director in reply to the application dated 23rd August, 1976, informed that the application of M/s. Auto Agro-Industries for establishing a workshop was rejected. This rejection so far as M/s. Auto Agro-Industry is concerned was quite in accordance with law but the same authority permitted the running of Caplic. This clearly goes to show that there was collusion of the Authority concerned with the petitioner and it was at the cost of public health of hazards. The action deserves to be concerned in no uncertain terms. The complainant has placed on record complaints made to the Joint Director even before the grant of permission to the present petitioner for running a factory. There is yet another letter on record issued by the Joint Director on 8th March, 1979, informing one resident of Manoramaganj that the present petitioner, a factory manufacturing medicines, was permitted to start the factory as it was according to the rules and regulations. There can be no blatant lie than this letter. In case of M/s. Auto Agro-Industries a workshop is refused but Caplic manufacturing medicine is permitted and it is claimed that the permission was in accordance with rules. It is nothing but a collusion on the part of the authorities who in disregard of their duty and sacrificing the larger interest of the community permitted installation of a boiler for a factory in a residential locality merely for their selfish aims. With these facts on record duly proved when the very installation of the factory is itself contrary to law, their could be no ground for its being granted permission with an undertaking to remove the same, collusion and callous disregard is writ large in the whole affair. Pollutants discharged from the "chimney" knows no frontiers of localities and very often they lead to damage not only to the locality or the particular area where pollution originates but also to the neighbouring localities and adjacent areas. Breathing itself becomes a problem in cases of air pollution and the officers who are entrusted with the task to see that air pollution is not permitted in residential localities as the facts of this case have revealed can keep the law at bay and it is this callous disregard to the laws which at times has resulted in a sort of paralysis due to the corporate crime wave. It is travesty that such corporate crime wave and criminal behaviour on the part of such authorities has not been made such a crime as to be punished with deterrent punishment. Unfortunately wilful and knowing violations of laws resulting in air pollution caused by auto-exhaust radiation and gas pipeline safety standards are not considered crimes under the relevant statues even if lives are lost as a result. Such crimes require courage, not routine duty, by officials to enforce the laws against such outrages and the Sub-Divisional Magistrate undoubtedly deserves a word of kudos. It should be remembered that environmental crimes dwarf other crimes to safety and property but the position of law as it stands in the matter of sentencing such environmental crimes is rather comfortable. A vagrant committing a petty theft is punished for years of imprisonment while a billion dollar price fixing executive or a partner in a concern as such the petitioner comfortably escapes the consequences of his environmental crime. The society is shocked when a single murder takes place but air, water and atmospheric pollution is merely read as news without slightest purturbance till people take ill, go blind or die in distress on account of pollutants that too resulting in the filling of pockets of a few. Some form of air pollution may be more pervasive subtle and cumulative in effects. But that which most immediately obtrudes itself on the eyes, the nose and the ears of the average citizen is exhaust smoke from motor vehicles. It has been calculated on the basis of a survey that more than half of these on the roads inadequately consume the hydrocarbons of their fuel which both wastes scarce petrol or diesel and allows lethal gases notably carbon monoxide to escape. Auto-exhaust is a great cause of environmental pollution is a common site at times the riders relish the noise to the distress and damage of others but no action as such is taken against such owners or riders of motor vehicles., studies have revealed that these automobile emissions alone account for 70 per cent of carbon monoxide, 50 per cent. of hydrocarbons, 35 per cent of particulars and oxides of nitrogen in the atmosphere but air pollution in the environment caused by industrial emissions is yet another contributor. If environmental pollution is to be expirated firstly, it should not be permitted, must be prevented and if at all it takes place should be sternly dealt with. Chemical fertilisers are doubly injurious and violate nature. It is a sorry state of affairs that the Joint Director has permitted the installation and running of a factory in a residential locality the record which was directed to be produced by the High Court and eventually produced goes to show that our Town Planners have merely passion for files and papers and not the people otherwise it is inconceivable that such a factory-manufacturing medicine could have been permitted in a residential locality. he Sub-Divisional Magistrate while passing the order directed removal of the factory as such while the Additional Sessions Judge confined removal to the boiler. This modification in the order by the Additional Sessions Judge was in fact uncalled for. The nuisance to the community at large is not by mere installation of the boiler but also by the factory itself. In such circumstances while affirming the order passed by the lower Revisional Court the original order passed by the Sub-Divisional Magistrate was modified deserves to be restored and it is accordingly restored without any modification confirming the same.[1]

2. **Emission of air pollutant cannot exceed standard prescribed by the Board.**— In Sec. 22 of the Act, it is provided that no person operating any industrial plant in any Air Pollution Control Area should discharge or cause or permit to be discharged the emission of any air pollutant in excess of the standards laid down by the Board under Sec. 17 (1) (*g*). From this Section, it is clear that there may be emission of air pollutant to certain extent, but it cannot exceed standard prescribed by the Board.[2]

[3][***22-A. Power of Board to make application to court for restraining persons from causing air pollution.***—*(1) Where it is apprehended by a Board that emission of any air pollutant, in excess of the standards laid down by the State Board under Cl. (g) of sub-section (1) of Sec. 17, is likely to occur by reason of any person operating an industrial plant or otherwise in any air pollution control area, the Board*

[3] Ins. by Act 47 of 1987, Sec. 11 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

may make an application to a court, not inferior to that of a Metropolitan Magistrate or a Judicial Magistrate of the first class for restraining such person from emitting such air pollutant.

(2) On receipt of the application under sub-section (1), the Court may make such order as it deems fit.

(3) Where under sub-section (2), the Court makes an order restraining any person from discharging or causing or permitting to be discharged the emission of any air pollutant, it may, in that order,—

(a) direct such person to desist from taking such action as is likely to cause emission ;

(b) authorise the Board, if the direction under Cl (a) is not complied with by the person to whom such direction is issued, to implement the direction in such manner as may be specified by the Court.

(4) All expenses incurred by the Board in implementing the directions of the Court under Cl. (b) of sub-section (3) shall be recoverable from the person concerned as arrears of land revenue or of public demand.]

23. *Furnishing of information to State Board and other agencies in certain cases.*—*(1) Where in any [1][***] area the emission of any air pollutant into the atmosphere in excess of the standards laid down by the State Board occurs or is apprehended to occur due to accident or other unforeseen act or event, the person in charge of the premises from where such emission occurs or is apprehended to occur shall forthwith intimate the fact of such occurrence or the apprehension of such occurrence to the State Board and to such authorities or agencies as may be prescribed.*

(2) On receipt of information with respect to the fact or the apprehension of any occurrence of the nature referred to in sub-section (1), whether through intimation under that sub-section or otherwise, the State Board and the authorities or agencies shall, as early as practicable, cause such remedial measures to be taken as are necessary to mitigate the emission of such air pollutants.

(3) Expenses, if any, incurred by the State Board, authority or agency with respect to the remedial measures referred to in sub-section (2) together with interest (at such reasonable rate, as the State Government may, by order, fix) from the date when a demand for the expenses is made until it is paid, may be recovered by that Board, authority or agency from the person concerned, as arrears of land revenue, or of public demand.

Comments

Section 31 of the Water Pollution Act, 1974 and Sec. 23 of the Air Pollution Act, 1981 deal with furnishing of information to State Board and other agencies in certain cases. Similar provision is contained in Sec. 9 of the Environment (Protection) Act, 1986.

Section 23 requires the person in charge of the premises to give information of the emission of any air pollutant into the atmosphere in excess of the standards laid down by the State Board, due to accident or other unforeseen act or event.

---

1. The words "air pollution control" omitted by Act 47 of 1987, Sec. 12 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

24. *Power of entry and inspection.*—*(1) Subject to the provisions of this section, any person empowered by a State Board in this behalf shall have a right to enter, at all reasonable times with such assistance as he considers necessary, any place—*

(a) for the purpose of performing any of the functions of the State Board entrusted to him;

(b) for the purpose of determining whether and if so in what manner, any such functions are to be performed or whether any provisions of this Act or the rules made, thereunder or any notice, order, direction or authorisation served, made, given or granted under this Act is being or has been complied with;

(c) for the purpose of examining and testing any control equipment, industrial plant, record, register, document or any other material object or for conducting a search of any place in which he has reason to believe that an offence under this Act, or the rules made thereunder has been or is being or is about to be committed and for seizing any such control equipment, industrial.plant, record, register, document or other material object if he has reasons to believe that it may furnish evidence of the commission of an offence punishable under this Act or the rules made thereunder.

(2) Every person [1][***] *operating any control equipment or any industrial plant, in an air pollution control area shall be bound to render all assistance to the person empowered by the State Board under sub-section (1) for carrying out the functions under that sub-section and if he fails to do so without any reasonable cause or excuse, he shall be guilty of an offence under this Act.*

(3) If any person wilfully delays or obstructs any person empowered by the State Board under sub-section (1) in the discharge of his duties, he shall be guilty of an offence under this Act.

(4) The provisions of the Code of Criminal Procedure, 1973 (2 of 1974), are, in relation to the State of Jammu and Kashmir, or any area in which that Code is not in force, the provisions of any corresponding law in force in that State or area, shall, so far as may be, apply to any search or seizure under this section as they apply to any search or seizure made under the authority of a warrant issued under Sec. 94 of the said Code or, as the case may be, under the corresponding provisions of the said law.

SYNOPSIS

1. "To inspect"—Meaning of ... 392
2. "Seize"—Meaning of ... 392
3. Search—Necessity of recording of reasons ... 392
4. Respectable ... 392
5. Respectable witnesses of locality ... 392
6. Search by Magistrate ... 392
7. Search of police party and search witnesses ... 393
8. Two or more witnesses ... 393
9. Search of the motor-car ... 393
10. Search by unauthorised person ... 393
11. Search of a woman ... 394

Section 23 of the Water Pollution Act, 1974 and Sec. 24 of the Air Pollution Act, 1981 relate to the powers of entry and inspection. Similar provision is provided under Sec. 10 of the Environment (Protection) Act, 1986.

---

[1] The words "carrying on any industry specified in the Schedule and every person" omitted by Act 47 of 1987, Sec. 13 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

1. **"To inspect"—Meaning of.**—*Oxford Concise Dictionary* The meaning of "search in the same dictionary is given as "look or feel or go over" (person or his face or pockets, receptacle, place, book) for what can be found or to find something of which presence is suspected, probe, look for, seek out

2. **"Seize"—Meaning of.**—The meaning of the word "seize" given in Ballantine's *Law Dictionary* is equated to taking a thing into possession. This, however, might be the meaning in particular contexts when used in the sense of the cognate Latin expression "seized" It means "take possession of contrary to the wishes of the owner of property" No doubt, in cases where a delivery is effected by an owner of the goods in pursuance of a demand under legal right, whether oral or backed by a warrant, it would certainly be a case of seizure but the idea that it is the unilateral act of the person seizing is the very essence of the concept.[1]

3. **Search—Necessity of recording of reasons.**—In *Gopi Kisan Agarwal* v *R N Sen*,[2] it has been held that the procedure prescribed under Sec. 165 (1) (new) of the Code of Criminal Procedure for search is not applicable in Sec. 105 (2) of the Customs Act inasmuch as the two sections are intended to meet totally different situations recording of reasons in writing by the Assistant Collector is not necessary.[3]

4. **Respectable.**—The word "respectable" does not connote any particular status or wealth or anything of that kind Any person is entitled to claim respectability provided he is not disreputable in any way, that is, if he is not a thief or a criminal of some kind or a person perhaps of a grossly immoral habits. To have given evidence in police prosecutions is not sufficient to deprive one of one's title to respectability.[4] A respectable person is one who would be impartial and on whom the owner or occupier of the place searched can *prima facie* rely. Men of modest means or belonging to communities which are not considered to be very high are respectable all the same.[5]

5. **Respectable witnesses of locality.**—In *Sunder Singh* v. *State of Uttar Pradesh*,[6] the witnesses who were said to have witnessed the seizure were two rickshawalas. It was held that assuming that witnesses were no respectable inhabitants of the locality the circumstances would not invalidate search. It would effect the weight of the evidence in support of the search and recovery.

6. **Search by Magistrate.**—A Magistrate competent to issue a search warrant is also competent himself to conduct the search.[7]

Section 165 (new) Cr. P.C., speaks of a search by a police officer. A Magistrate cannot conduct a search under this section, he can act only under Sec. 103 (Sec. 105, old), Cr. P.C.[8]

[7] Ganeshi, (1894) A.W.N. 213.

[8] Clarke *v.* Brojendra, I.L.R. 26 Cal. 433.

7. **Search of police party and search witnesses.**—The law lays down that persons of search witnesses and of the police party must be searched before they are allowed to enter the house so that the owner would not have reasonable ground for suspecting that one of the search party had planted something surreptitiously in the house.[1]

8. **Two or more witnesses.**—If there are more persons it is better, but the officers generally take two persons. If no such persons are available, some evidence to that effect must be given at the trial.[2] The police officers are competent witnesses and their evidence cannot be rejected merely because they are police officers. Their evidence must, however, be carefully examined and scrutinized, particularly when an allegation is made that the articles had been planted. Where, it is not possible to make a search in the presence of the *panchas* or when property is found without a search being made, or where under the law it is not obligatory to make a *panchanama*, it would be open to the Court to convict the accused, if after examining police evidence carefully the Court feels satisfied that it is true.[3] It is essential that *panch* witnesses should be independent witnesses, unbiased and without being in any way under the control of the police. Primarily it is for the Magistrate to come to the conclusion whether a *panch* witness suffers from the infirmity. He has to appreciate evidence and primarily it is for him to say whether the evidence of a particular *panch* witness should be believed or not. But the Court of Appeal must be vigilant in seeing that convictions are not based upon the evidence of *panch* witnesses whose evidence should not be accepted as suffering from the infirmity of being in a position where they might be looked upon as police agents. It is true that the mere fact that a man has acted on several occasions as a *panch* witness should not be sufficient by itself to lead to the inference that the man is a police agent.[4]

9. **Search of the motor-car.**—A motor car is not a place within the meaning of Sec. 100, Cr. P.C. (Secs. 102 and 103 of the Code, 1898). The provisions relating to searches contained in Sec. 100, Cr. P.C. (Sec. 103 of the Code, 1898), have therefore no application and in making a search of a motor vehicle, it will not be obligatory upon the police officer to comply with the requirements thereof. Even though the status does not make it obligatory, the police officers wisely carry out the search, if it is possible for them to secure the presence of respectable witnesses, in their presence. This is a healthy practice which leads to clear investigation and is a guarantee against the oft-repeated charge against police officers of planting articles.[5]

10. **Search by unauthorised person.**—Under Sec. 105 of he Customs Act, 1962, the Assistant Collector of Customs is given the power to authorize any officer of customs to search when he has reason to believe that goods

liable to confiscation are secreted in a particular place. He may himself search, or may authorize an officer of customs to search. There is no provision in the Act which allows the person authorized by the Assistant Collector to conduct search or delegate duties. Search by a person authorized under Sec. 108 of the Customs Act is illegal[1]

11. Search of a woman.—The search of a woman is to be conducted as provided for under Sec. 51 (2) (Sec 52, old), Cr P.C, which says that whenever it is necessary to cause a female to be searched, the searches shall be made by another female, with strict regard to decency.

Under the Code of 1872 the search was to be conducted with strict regard to the "habits and customs of the country". It is now to be conducted by a woman "with strict regard to decency".

If the men had actually left the hall during the search even then it will not be an extraordinary circumstance that one or all of them should have seen the currency note being taken out from under the blouse of the female accused.[2]

According to law no female can be searched except by another female. But it will not be an extraordinary circumstance that one or more male members had seen the one hundred rupee note having been taken out from the person of the woman under her blouse.[3]

25. ***Power to obtain information.***—*For the purposes of carrying out the functions entrusted to it, the State Board or any officer empowered by it in this behalf may call for any information (including information regarding the types of air pollutants emitted into the atmosphere and the level of the emission of such air pollutants) from the occupier or any other person carrying on any industry or operating any control equipment or industrial plant and for the purpose of verifying the correctness of such information, the State Board or such officer shall have the right to nspect the premises where such industry, control equipment or industrial plant is being carried on or operated.*

Comment

Section 20 of the Water Pollution Act, 1974 and Sec. 25 of the Air Pollution Act, 1981 relate to the power to obtain information. Similar provision s contained in Sec. 20 of the Environment (Protection) Act, 1986.

26. *Power to take samples of air or emission and procedure to be ollowed in connection therewith.*—*(1) A State Board or any officer empowered y it in this behalf shall have power to take, for the purpose of analysis, samples of air r emission from any chimney, flue or duct or any other outlet in such manner as ay be prescribed.*

(2) The result of any analysis of a sample of emission taken under sub-section) shall not be admissible in evidence in any legal proceeding unless the provisions of b-sections (3) and (4) are complied with.

---

1. Assistant Collector of Customs *v.* Pratap Rao Sait, (1972) 2 Cr. L.J. 1135 at p. 1140 (Ker.).
2. Kamalabai Jethamal *v.* State of Maharashtra, A.I.R. 1962 S.C. 1189 at p. 1191 : (1962) 2 Andh. L.T. 241. (1961) A.W.R. (S.C.) 497 at p. 498.
3. *Ibid.*

(3) Subject to the provisions of sub-section (4), when a sample of emission is taken for analysis under sub-section (1), the person taking the sample shall—

- *(a) serve on the occupier or his agent, a notice, then and there, in such form as may be prescribed, of his intention to have it so analysed;*
- *(b) in the presence of the occupier or his agent, collect a sample of emission for analysis ;*
- *(c) cause the sample to be placed in a container or containers which shall be marked and sealed and shall also be signed both by the person taking the sample and the occupier or his agent;*
- *(d) send, without delay, the container or containers to the laboratory established or recognised by the State Board under Sec. 17 or, if a request in that behalf is made by the occupier or his agent when the notice is served on him under Cl. (a) to the laboratory established or specified under sub-section (1) of Sec. 28.*

(4) When a sample of emission is taken for analysis under sub-section (1) and the person taking the sample serves on the occupier or his agent, a notice under Cl. (a) of sub-section (3), then—

- *(a) in a case where the occupier or his agent wilfully absents himself, the person taking the sample shall collect the sample of emission for analysis to be placed in a container or containers which shall be marked and sealed and shall also be signed by the person taking the sample, and*
- *(b) in a case where the occupier or his agent is present at the time of taking the sample but refuses to sign the marked and sealed container or containers of the sample of emission as required under Cl. (c) of sub-section (3), the marked and sealed container or containers shall be signed by the person taking the sample,*

and the container or containers shall be sent without delay by the person taking the sample for analysis to the laboratory established or specified under sub-section (1) of Sec. 28 and such person shall inform the Government Analyst appointed under sub-section (1) of Sec. 29, in writing, about the wilful absence of the occupier or his agent, or, as the case may be, his refusal to sign the container or containers.

Comments

Sub-section (3) requires the person taking sample of emission for analysis to serve a notice of his intention on the occupier of the premises or his agent then and there.

Section 21 of the Water Pollution Act, 1974 read with Sec. 26 of the Air Pollution Act, 1981 relate to the power of taking samples and procedure to be followed in connection therewith. Similar provision has been provided in Sec. 11 of the Environment (Protection) Act, 1986.

27. Reports of the result of analysis on samples taken under Sec. 26.—*(1) Where a sample of emission has been sent for analysis to the laboratory established or recognised by the State Board, the Board Analyst appointed under sub-section (2) of Sec. 29 shall analyse the sample and submit a report in the prescribed form of such analysis in triplicate to the State Board*

(2) On receipt of the report under sub-section (1), one copy of the report shall be sent by the State Board to the occupier or his agent referred to in Sec. 26, another copy shall be preserved for production before the Court in case any legal proceedings are taken against him and the other copy shall be kept by the State Board.

(3) Where a sample has been sent for analysis under Cl. (d) of sub-section (3) or sub-section (4) of Sec. 26, to any laboratory mentioned therein, the Government Analyst referred to in the said sub-section (4) shall analyse the sample and submit a report in the prescribed form of the result of the analysis in triplicate to the State Board which shall comply with the provisions of sub-section (2).

(4) Any cost incurred in getting any sample analysed at the request of the occupier or his agent as provided in Cl. (d) of sub-section (3) of Sec. 26 or when he wilfully absents himself or refuses to sign the marked and sealed container or containers of samples of emission under sub-section (4) of that section, shall be payable by such occupier or his agent and in case of default the same shall be recoverable from him as arrears of land revenue or of public demand.

Comments

According to sub-section (4) the occupier shall bear the cost incurred in the sample analysed at his request.

Section 22 of the Water Pollution Act, 1974 and Sec. 27 of the Air Pollution Act, 1981 deal with report of the analysis on samples taken. Similar provision is contained in Sec. 15 of the Environment (Protection) Act, 1986.

28. State Air Laboratory.—*(1) The State Government may, by notification in the Official Gazette,—*

- *(a) establish one or more State Air Laboratories ; or*
- *(b) specify one or more, laboratories or institutes as State Air Laboratories to carry out the functions entrusted to the State Air Laboratory under this Act.*

(2) The State Government may, after consultation with the State Board, make rules prescribing—

- *(a) the functions of the State Air Laboratory;*
- *(b) the procedure for the submission to the said laboratory of samples of air or emission for analysis or tests, the form of the Laboratory's report thereon and the fees payable in respect of such report;*
- *(c) such other matters as may be necessary or expedient to enable that laboratory to carry out its functions.*

Comment

Section 52 of the Water Pollution Act, 1974 deals with State Water Laboratory, whereas Sec. 28 relates to State Air Laboratory. Section 12 of the Environment (Protection) Act, 1986 deals with "Environmental laboratories".

*29. **Analyst.**—(1) The State Government may, by notification in the Official Gazette, appoint such persons as it thinks fit and having the prescribed qualifications to be Government analysts for the purpose of analysis of samples of air or emission sent for analysis to any laboratory established or specified under sub-section (1) of Sec. 28.*

(2) Without prejudice to the provisions of Sec. 14 the State Board may, by notification in the Official Gazette, and with the approval of the State Government, appoint such persons as it thinks fit and having the prescribed qualifications to be Board Analysts for the purpose of analysis of samples of air or emission sent for analysis to any laboratory established or recognised under Sec. 17.

Comment

Section 53 of the Water Pollution Act, 1974 and Sec. 29 of the Air Pollution Act, 1981 relate to Analysts. Section 13 of the Environment (Protection) Act, 1986 also deals with Government Analysts.

*30. **Reports of Analysts.**—Any document purporting to be a report signed by a Government Analyst or, as the case may be, a State Board Analyst may be used as evidence of the facts stated therein in any proceeding under this Act.*

Comments

This section declares the evidentiary value of the report signed by a Government Analyst.

Section 54 of he Water Pollution Act, 1974 and Sec. 30 of the Air Pollution Act, 1981 relate to report of analyst. The report of Government analysts has also been provided in Sec. 14 of the Environment (Protection) Act, 1986.

*31. **Appeals.**—(1) Any person aggrieved by an order made by the State Board under this Act may, within thirty days from the date on which the order is communicated to him, prefer an appeal to such authority (hereinafter referred to as the Appellate Authority) as the State Government may think fit to constitute :*

Provided that the Appellate Authority may entertain the appeal after the expiry of the said period of thirty days if such authority is satisfied that the appellant was prevented by sufficient cause from filing the appeal in time.

(2) The Appellate Authority shall consist of a single person or three persons as the State Government may think fit to be appointed by the State Government.

(3) The form and the manner in which an appeal may be preferred under sub-section (1), the fees payable for such appeal and the procedure to be followed by the Appellate Authority shall be such as may be prescribed.

(4) On receipt of an appeal preferred under sub-section (1), the Appellate Authority shall, after giving the appellant and the State Board an opportunity of being heard, dispose of the appeal as expeditiously as possible.

Comments

Section 28 of the Water Pollution Act, 1974 and Sec. 31 of the Air Pollution Act, 1981 provide for appeal.

Under sub-section (1) the Appellate Authority is empowered to entertain the appeal even after the expiry of the period of limitation, i.e., thirty days, on the ground of sufficient cause for not preferring the appeal in time.

[1][*31-A. **Power to give directions.**—Notwithstanding anything contained in any other law, but subject to the provisions of this Act, and to any directions that the Central Government, may give in this behalf, a Board may, in the exercise of its powers and performance of its functions under this Act, issue any directions in writing to any person, officer or authority, and such person, officer or authority shall be bound to comply with such directions.*

Explanation.—For the avoidance of doubts, it is hereby declared that the power to issue directions under this section includes the power to direct—

(a) the closure, prohibition or regulation of any industry, operation or process; or

(b) the stoppage or regulation of supply of electricity, water or any other service.]

SYNOPSIS

1. Power to issue directions ... 398
2. Directions given to .. 399
3. Exercise of power under Sec. 31-A—Direction from Central Government cannot be held to be pre-condition 400
4. The State Board is empowered to direct the closure of any industrial unit 400
5. Disposal of consent application 401

1. Power to issue directions.— Under Sec. 31-A of the Air Act, the Board may, in the exercise of its powers and performance of its functions under the Act, issue any directions in writing to any person, officer or authority, and such person, officer or authority shall be bound to comply with such directions and it is also empowered under sub-sections (*a*) and (*b*) of Sec. 31-A to direct the closure, prohibition or regulation of any industry, operation or process or the stoppage or regulation of supply of electricity, water or any other service. That has been done by the Board in the present case by issuing the impugned orders. In such a situation the aggrieved person has a remedy by way of appeal under Sec. 30 (1) of the Air Act as against the order of the Board wherein the appellate authority will dispose of such appeal in accordance with Rule 17 of the Air (Prevention and Control of Pollution) (Union Territories) Rules, 1983. Therefore, as rightly contended by the learned Standing Counsel for the Board and also other learned advocates except the learned advocate for the petitioner, it is proper for the petitioner to approach the appellate authority under Sec. 31 of the Act instead of coming up with this present petition under Art. 226 of the Constitution of India. This Court is in total agreement of such a contention and legal situation where the appellate authority, for the purpose of Sec. 31 of the Act, is empowered as per sub-clause (2) of Rule 18 of the Air Rules, 1983 to take additional evidence and call for further material from the appellant or the Board as it deems fit for the purpose of disposal of the appeal. In other words, an enquiry by the appellate authority will be full and complete and effective than an enquiry in a petition under Art. 226 of the Constitution of India to examine the factual circumstances and apply the law to the facts of the case. Therefore, in the nature of the facts established and controversies presented in A.P. High Court and the materials available on record, particularly in view of the findings of the Advocate-Commissioner's report, the Court is of the considered opinion that the petitioner should approach the appellate authority under Sec. 31 of the Air Act to challenge the impugned proceedings of the Board for disposal in accordance with the law.[1]

---

[1] Ins. by Act 47 of 1987, Sec. 14 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

2. **Directions given to.**—The necessary instructions issued in this regard by the State Government are not being strictly complied with by the concerned authorities and increase of pollution within the city of Gwalior is certainly causing health hazards to its inhabitants. There can be no doubt that the human life is more important than the vehicle and traffic. The law and the rules are framed in this respect to ensure environmental cleanliness and the authorities are under statutory obligation to maintain the atmosphere pollution free and to take necessary measures in this respect as provided under the Statutes.

Considering the relevant aspects of the matter and taking into consideration the pit falls wherever they occur in spite of the instructions given by the State Government, his Lordships issued the following directions :

(*i*) The State Government of Madhya Pradesh shall provide, at least, four smoke meters and gas analyser for measuring carbon monoxide and other pollutants emitted by automobiles for the city of Gwalior.

(*ii*) Similarly, the State Government shall provide the latest and the less time consuming instruments for checking the emission of monoxide. At Commissionary headquarters three of such instruments be provided and one instrument at every district headquarters.

(*iii*) The State Government shall also issue necessary instructions to all authorities in-charge of registration of Motor Vehicles to comply with the legislative mandate provided in Sec. 20 of the Air Pollution Act.

(*iv*) The Director General of Police of Madhya Pradesh shall issue necessary instructions to their subordinate officers to effectively carry out the functions as envisaged in Rule 116 of the Central Motor Vehicles Rules.

(*v*) The State Government shall identify the roads, which be declared one way for public vehicles in order to reduce the traffic load on such roads.

---

[1] **Kalyani Industries, Golapur (V) Hanamkonda Mandal, Warangal Dist. *v.* General Manager, District Industries Centre, Warangal Dist. and Ors., 1998 (1) A.L.D. 505 at p. 513.**

The above directions be complied with within a period of three months from today.

(vi) Learned Additional Advocate General, Gwalior shall obtain a report from the Cheif Secretary. Transport Commissioner, and Director General of Police of Madhya Pradesh after the expiry of three months in respect of the compliance of Rule 116 of the Central Motor Vehicles Rules, and shall submit the same to the Registrar of this Court.[1]

3. **Exercise of power under Sec. 31-A—Direction from Central Government cannot be held to be a pre-condition.**— The question that arises for consideration is whether in exercise of power under Sec. 31-A direction from the Central Government can be held to be a pre-condition. The answer to this question must be in the negative. Counsel for petitioner however, because of the expression "to any directions that the Central Government may give in this behalf" in Sec. 31-A contends that until and unless a direction is issued by the Central Government, the power under Sec. 31-A cannot be exercised by the State Board. Their Lordships are unable to accept this contention and Sec. 31-A is not susceptible of such a contention. The only interpretation that can be made of Sec. 31-A is that the Board can issue any directions in exercise of its functions under the Act but such direction must be subject to any directions which the Central Government may give in this behalf. Where in Central Government has not given any direction the power of the State Board is unfettered and where the Central Government has given any direction, then the direction of the State Board is subject to such direction. But by no stretch of imagination it can be said that in exercise of power under Sec. 31-A the direction of the Central Government is a pre-condition.[2]

4. **The State Board is empowered to direct the closure of any industrial unit.**— The petitioner has not complied with the requirements prescribed in Sec. 21 of the Act and has established the unit without obtaining consent of the State Board. The contention of counsel for the petitioner that the petitioner has applied for such consent and not having received the same nor any rejection order cannot for that reason be absolved of the requirements of the provisions contained in Sec. 21 of the Act. The petitioner does not have any right to establish the industrial unit without previous consent of the Board. The establishment of the Crushing Unit by the petitioner is, thus one without a valid consent. The petitioner cannot, therefore, be permitted, in public interest to continue to operate the industrial unit which has been established in contravention of Sec. 21 of the Act. The impugned order is one based under Sec. 31-A of the Act which empowers the State Board to direct the closure of any industry and stoppage of supply of electricity.[3]

In the present case, his Lordship does not propose to examine on the aspect as to whether on merits the order like the impugned one could have been justificably passed by the Board or not. It will be essentially for the

3. **Uday Kumar Crushings v. A.P. Pollution Control Board, Hyderabad, 1996 (1) A.L.D. 381 at pp. 383, 384.**

Board, after due enquiry conducted in accordance with the law, to come to a conclusion as to whether the industry should suffer an order of closure or shifting in terms of Sec. 31-A of the Act or not. But the Chairman under no circumstances, except under due delegation of powers in his favour, could have embarked upon the enquiry against the petitioner's industry and passed the impugned prejudicial order.[1]

5. **Disposal of consent application.**—It is the duty of the Board to take into consideration the facts and circumstances of the case and also to take all the measures which the Board is required to take as per the law and then dispose of the consent application afresh within a period of 3 months after complying with all the requirements of the Act and the Rules. If, however, at the time of disposal of the consent application some improvement is required to be made by the appellant firm they may be given reasonable time to take further measures for prevention of air pollution within the prescribed limit. Till the disposal of the consent application which is deemed to be pending, the appellant firm shall be entitled to run the factory.[2]

CHAPTER V

FUND, ACCOUNTS AND AUDIT

*32. **Contributions by Central Government.**—The Central Government may, after due appropriation made by Parliament by law in this behalf, make in each financial year such contributions to the State Boards as it may think necessary to enable the State Boards to perform their functions under this Act :*

Provided that nothing in this section shall apply to any [3][State Pollution Control Board] constituted under Sec. 4 of the Water (Prevention and Control of Pollution) Act, 1974 which is empowered by that Act to expend money from its fund thereunder also for performing its functions, under any law for the time being in force relating to the prevention, control or abatement of air pollution.

Comment

Section 34 of the Water Pollution Act, 1974 and Sec 32 of the Air Pollution Act, 1981 relate to be contributions by Central Government.

*33. **Fund of Board.**—(1) Every State Board shall have its own fund for the purposes of this Act and all sums which may, from time to time, be paid to it by the Central Government and all other receipts (by way of contributions, if any, from the State Government, fees, gifts, grants, donations, benefactions or otherwise) of that Board shall be carried to the fund of the Board and all payments by the Board shall be make therefrom.*

(2) Every State Board may expend such sums as it thinks fit for performing its functions under this Act and such sums shall be treated as expenditure payable out of the fund of that Board.

3. Subs. by Act 47 of 1987, Sec. 15, for the words "State Board for the Prevention and Control of Water Pollution" (date to be notified).

(3) Nothing in this section shall apply to any [1]*[State Pollution Control Board] constituted under Sec. 4 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), which is empowered by that Act to expend money from its fund thereunder also for performing its functions, under any law for the time being in force relating to the prevention, control or abatement of air pollution.*

Comments

Section 37 of the Water Pollution Act, 1974 and Sec. 33 of the Air Pollution Act, 1981 relate to the fund of State Board.

Sub-section (2) confers the discretion on the State Board to expend the sum fit for performing its functions under the Act.

[2]*[33-A.* ***Borrowing powers of Board.****—A Board may, with the consent of, or in accordance with the terms of any general or special authority given to it by, the Central Government or, as the case may be, the State Government, borrow money from any source by way of loans or issue of bonds, debentures or such other instruments, as it may deem fit, for discharging all or any of its functions under this Act.]*

34. Budget.*—The Central Board or, as the case may be, the State Board shall, during each financial year, prepare, in such form and at such time as may be prescribed, a budget in respect of the financial year next ensuing showing the estimated receipt and expenditure under this Act, and copies thereof shall be forwarded to the Central Government or, as the case may be, the State Government*

Comment

Section 38 of the Water Pollution Act, 1974 and Sec. 34 of the Air Pollution Act, 1981 relate to the Budget.

[3]*[35.* ***Annual Report.****—(1) The Central Board shall, during each financial year, prepare, in such form as may be prescribed, an annual report giving full account of its activities under this Act during the previous financial year and copies thereof shall be forwarded to the Central Government within four months from the last date of the previous financial year and that Government shall cause every such report to be laid before both Houses of Parliament within nine months of the last date of the previous financial year.*

(2) Every State Board shall, during each financial year, prepare, in such form as may be prescribed, an annual report giving full account of its activities under this Act during the previous financial year and copies thereof shall be forwarded to the State Government within four months from the last date of the previous financial year and the Government shall cause every such report to be laid before the State Legislature within a period of nine months from the last date of the previous financial year.]

---

1. Subs. by Act 47 of 1987, Sec. 15, for the words "State Board for the Prevention and Control of Water Pollution" (date to be notified).
2. Ins. by Act 47 of 1987, Sec. 16 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).
3. Subs. by Act 47 of 1987, Sec. 17 for Sec. 35 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

Comment

Section 39 of the Water Pollution Act, 1974 and Sec. 35 of the Air Pollution Act, 1981 relate to the Annual Report.

*36. **Accounts and audit.**—(1) Every Board shall, in relation to its functions under this Act, maintain proper accounts and other relevant records and prepare an annual statement of accounts in such form as may be prescribed by the Central Government or, as the case may be, the State Government.*

(2) The accounts of the Board shall be audited by an auditor duly qualified to act as an auditor of companies under Sec. 226 of the Companies Act, 1956 (1 of 1956).

(3) The said auditor shall be appointed by the Central Government or, as the case may be, the State Government on the advice of the Comptroller and Auditor-General of India.

(4) Every auditor appointed to audit the accounts of the Board under this Act shall have the right to demand the production of books, accounts, connected vouchers and other documents and papers and to inspect any of the offices of the Board.

(5) Every such auditor shall send a copy of his report together with an audited copy of the accounts to the Central Government or, as the case may be, the State Government.

(6) The Central Government shall, as soon as may be after the receipt of the audit report under sub-section (5), cause the same to be laid before both Houses of Parliament.

(7) The State Government shall, as soon as may be after the receipt of the audit report under sub-section (5), cause the same to be laid before the State Legislature.

Comment

Section 40 of the Water Pollution Act, 1974 and Sec. 36 of the Air Pollution Act, 1981 relate to "accounts and audit".

CHAPTER VI

PENALTIES AND PROCEDURE

[1][37. ***Failure to comply with the provisions of Sec. 21 or Sec. 22 or with the directions issued under Sec. 31-A.***—*(1) Whoever fails to comply with the provisions of Sec. 21 or Sec. 22 or directions issued under Sec. 31-A, shall, in respect of each such failure, be punishable with imprisonment for a term which shall not be less than one year and six months but which may extend to six years and with fine, and in case the failure continues, with an additional fine which may extend to five thousand rupees for every day during which such failure continues after the conviction for the first such failure.*

(2) If the failure referred to in sub-section (1) continues beyond a period of one year after the date of conviction, the offender shall be punishable with imprisonment

---

[1] Subs. by Act 47 of 1987, Sec. 18 for Sec. 37 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

for a term which shall not be less than two years but which may extend to seven years and with fine.]

Comments

Section 41 of the Water Pollution Act, 1974 and as Sec. 37 of the Air Pollution Act, 1981 are the penal provision and are based on the same footing. The provision relating to penalty has been provided in Sec. 15 of the Environment (Protection) Act, 1986.

To discharge the accused at the threshold of trial on a fanciful, unwarranted and technical ground is not sustained.—If the learned Magistrate was labouring under some right or wrong suspicion about the existence of the notification in question and its due publicity in two local daily newspapers than nothing certainly prevented him to direct and insist upon the complainant to produce the same on record for the purposes of satisfying his judicial conscience regarding their, in fact, existence and for doing this judicial exercise there is indeed no law which prohibits him. Accordingly, even after despite the learned Magistrate calling and insisting upon the complainant to produce the notification in question and its due publication in two daily newspapers if he still failed to produce the same, without any genuine reasonable explanation, it would certainly be open to the learned Magistrate to draw an adverse inference against him by passing the appropriate speaking order on the point. But that is altogether and entirely different thing and therefore, without calling upon the complainant to produce the notification and copy of two newspapers in question that is to say without doing this inevitable exercise at pre-trial stage, to straightway summarily discharge the accused who came to be prosecuted under no less an offence than the serious offence of air pollution, is quite unfair, apart being unjust and illegal, not only to the complainant and the persons who are victims of such air pollution but the same also in a way amount to the gross disrespect to the sovereign will of the people as reflected in Air Pollution Act and the Parliament which enacted it. The Parliament has also in Sec. 37 of the Act, prescribed the maximum as well as minimum penalty of one year and six months for the alleged breach/ contravention of provisions of the Act. This speaks volumes about the importance and the gravity and seriousness of the pollution problem and the concern and anxiety entertained by the Parliament. If for want of sufficient evidence accused are to be acquitted at the end of the trial that is entirely and altogether a different thing, but to discharge the accused at the threshold of trial on a totally fanciful, unwarranted and technical ground like the one in the instant case where in fact the complainant in terms has deposed on oath that the Government did publish the notification on 6th August, 1984 in Government Gazette which was duly published in two local daily newspapers, is simply embarrassing and shocking as such decision in all probability is capable enough in the *first instance* not only to shake the faith of people for whom such special beneficial statutes came to be enacted in potency of the Act to deliver goods and in the *second instance*, in the administration of justice but in the *third instance*, the same in a way indirectly of course also encourages disrespect to the Law of the land. The Law is like a bird, it can move and fly and reach its destination at whatever height and a even provided its two wings are property functioning. Accordingly, when the Law is a bird, the Executives and the Judiciary are its two important wings with which it can achieve and reach the desired destination, if both these wings fully and truly co-operate. But if these wings even one of them do not function properly for whatever reasons, what indeed the "Law" alone can do like the Eagle is indisputably the King of birds but even this King of birds also with all its majestic glory to its name cannot do anything either, one once of its wings are clipped and/or for whatever reasons inflicted with some disease. It is in this view of the matter, that both the Executive and the Administration of Justice have to introspect, appreciate, understand, inter-act and be fully conscious of their respective roles, activism and accountability in making "Rule of Law." a success and deliver the desired social fruits. In view of the aforesaid discussion, bearing in mind the most indiscreet manner in which the accused came to be discharged, there is indeed no alternative left with Gujarat High Court but to at once quash and set aside the impugned judgment and order and remand this case to the learned Magistrate to decide the same on merits, according to law after framing the charge.[1]

*38. **Penalties for certain acts.**—Whoever—*

(a) destroys, pulls down, removes, injures or defaces any pillar, post or stake fixed in the ground or any notice or other matter put up, inscribed or placed, by or under the authority of the Board, or

(b) obstructs any person acting under the orders or directions of the Board from exercising his powers and performing his functions under his Act, or

(c) damages any works or property belonging to the Board, or

(d) fails to furnish to the Board or any officer or other employee of the Board any information required by the Board or such officer or other employee for the purpose of this Act, or

(e) fails to intimate the occurrence of the emission of air pollutants into the atmosphere in excess of the standards laid down by the State Board or the apprehension of such occurrence, to the State Board and other prescribed authorities or agencies as required under sub-section (1) of Sec. 23, or

(f) in giving any information which he is required to give under this Act, makes a statement which is false in any material particular, or

(g) for the purpose of obtaining any consent under Sec. 21, makes a statement which is false in any material particular,

shall be punishable with imprisonment for a term which extend to three months or with fine which may extend to [2][ten thousand rupees] or with both.

Comment

Section 42 of the Water Pollution Act, 1974 and Sec. 38 of the Air Pollution Act, 1981 provide penalty for certain acts.

*[3][39. **Penalty for contravention of certain provisions of this Act.**—Whoever contravenes any of the provisions of this Act or any order or direction*

---

[1] Gujarat Pollution Control Board *v.* Rushabh Industries, 1996 (1) Crimes 364 at pp. 367 to 369 (Guj.).

[2] Subs. by Act 47 of 1987, Sec. 19, for "five hundred rupees" (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

[3] Subs. by Act 47 of 1987, Sec. 20, for Sec. 39 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

issued thereunder, for which no penalty has been elsewhere provided in this Act, shall be punishable with imprisonment for a term which may extend to three months or with fine which may extend to ten thousand rupees or with both, and in the case of continuing contravention, with an additional fine which may extend to five thousand rupees for every day during which such contravention continues after conviction for the first such contravention.]

40. Offences by companies.—*(1) Where an offence under this Act has been committed by a company, every person who, at the time the offence was committed, was directly in charge of, and was responsible to, the company for the conduct of the business of the company, as well as the company, shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :*

Provided that nothing contained in this sub-section shall render any such person liable to any punishment provided in this Act, if he proves that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offence.

(2) Notwithstanding anything contained in sub-section (1), where an offence under this Act has been committed by a company and it is proved that the offence has been committed with consent or connivance of, or is attributable to any neglect on the part of any director, manager, secretary or other officer of the company, such director, manager, secretary or other officer shall also be deemed to be guilty of that offence and shall be liable to be proceeded against and punished accordingly.

Explanation.—For the purpose of this section,—

- *(a) "company" means any body corporate, and includes a firm or other association of individuals; and*
- *(b) "director" in relation to a firm, means a partner in the firm*

Comments

It is imperative to prove the fact of consent or connivance of, in order to hold the director, manager or secretary guilty of offence under the Act.

Section 47 of the Water Pollution Act, 1974 and Sec. 40 of the Air Pollution Act, 1981 deal with offences by Companies. Similar provision is contained in Sec. 16 of the Environment (Protection) Act, 1986.

Contradictory evidence with regard to the port hole in chimney is concluded—Order of acquittal is sustained.— Chapter IV of the Gujarat Air (Prevention and Control) of Pollution Rules, 1983 provides for prevention and control of air pollution. Rule 8 relates to manner of declaration of an area as air pollution control area. The said rule reads as under :- "Manner of declaration of an area as an air pollution control area.— Any area or areas declared as a pollution control area or areas under Sec. 19 shall be so declared by a reference to a map or by reference to any district or partly by one method and partly by the other and shall be published in the Official Gazette and at least in two local newspapers for wide publicity. Admittedly, there is no compliance by the complainant Board in respect of publication of a declaration either in the Official Gazette and in two local newspapers for wide publicity. Merely because the Law Officer who lodged the complaint on behal of the complainant-Board stated in his evidence that there was such declaration in the Gazette and the newspapers, and in absence of production of either th Gazette or any of the newspapers, would not bring home the charge unde

Secs. 39 and 40 of the Air Act, 1981. Accordingly, despite the learned Magistrate calling and insisting upon the complainant to produce the notification in question and its due publication in two daily newspapers, it still failed to produce them, without any genuine reasonable explanation, it would certainly be open to the learned Magistrate to draw any adverse inference against it. But without calling upon the complainant to produce the copy of the notification in question, such an inevitable exercise at pre-trial stage and to summarily discharge the accused would be unjust and illegal. In the instant case, Mr. Gupta has not produced the copy of the Gazette or any of the two local newspapers and the notification of declaring Ahmedabad as a pollution controlled area, along with the memo of appeal, nor was he in a position to produce any such document of the time of hearing of the appeal. Besides, this is not a case wherein the accused has been discharged, as was the case in *Gujarat Pollution Control Board, Gandhinagar* v. *Rushabh Industries, Ahmedabad.*[1] In the present case, the respondent-accused has been acquitted after full trial, Therefore, in His Lordship's view, the ratio laid down in the above decision of Rushabh Industries would not be applicable to the present case. The learned Magistrate found that there was contradictory evidence on basis of which the accused persons were entitled to be acquitted. The evidence is to the effect that there as chimney and that polluted air was passing throught it. It is alleged that there was no port hole in the chimney. If there was emission of polluted air from the chimney, there must be some hole in the chimney, and in the absence thereof there could not be any emission of polluted air from the chimney. The learned Magistrate has, therefore, rightly concluded that the evidence on behalf of the complainant-Board was contradictory. As regards acquittal appeal, it is settled legal position that the High Court should not normally interfere with the order of acquittal, unless material irregularity or manifest error or illegality is pointed out. When two views are possible, the view adopted by the Trial Court should normally be accepted and that the order of acquittal should not be disturbed lightly. In any view of the matter, no material illegality and manifest error have been pointed out by the appellant. There is no merit in the appeals.[2]

41. Offences by Government Departments.—*(1) Where an offence under this Act has been committed by any Department of Government, the Head of the Department shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :*

Provided that nothing contained in this section shall render such Head of the Department liable to any punishment if he proves that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offence.

(2) Notwithstanding anything contained in sub-section (1), where an offence under this Act has been committed by a Department of Government and it is proved that the offence has been committed with the consent or connivance of, or is attributable to any neglect on the part of any officer, other than the Head of the Department, such officer shall also be deemed to be guilty of that offence and shall be liable to be proceeded against and punished accordingly.

---

[1] 1995 (2) G.L.R. 1082.

[2] D.K. Solanki *v.* N.J. Industries, 1996 Cr. L.J. 2787 at pp. 2788, 2789 (Guj.).

Comment

Section 48 of the Water Pollution Act, 1974 and Sec. 41 of the Air Pollution Act, 1981 deal with offences by Government Departments. It has also been provided in Sec. 17 of the Environment (Protection) Act, 1986.

*42. **Protection of action taken in good faith.**—No suit, prosecution or other legal proceeding shall lie against the Government or any officer of the Government or any member or any officer or other employee of the Board in respect of anything which is done or intended to be done in good faith in pursuance of this Act or the rules made thereunder.*

Comments

Section 59 of the Water Pollution Act, 1974 and Sec. 42 of the Air Pollution Act, 1981, provides protection of action taken in good faith. Section 18 of the Environment (Protection) Act, 1986 also provides the same protection.

This section seeks to grant exemption to the Government, officers of the Government, the members and employees of the Board from the legal proceedings in respect of the actions taken in good faith.

[1]*[43. **Cognizance of offences.**— (1) No Court shall take cognizance of any offence under this Act except on a complaint made by—*

- *(a) a Board or any officer authorised in this behalf by it; or*
- *(b) any person who has given notice of not less than sixty days, in the manner prescribed, of the alleged offence and of his intention to make a complaint to the Board or officer authorised as aforesaid,*

and no Court inferior to that of a Metropolitan Magistrate or a Judicial Magistrate of the first class shall try any offence punishable under this Act.

(2) Where a complaint has been made under Cl. (b) of sub-section (1), the Board shall, on demand by such person, make available the relevant reports in its possession to that person :

Provided that the Board may refuse to make any such report available to such person if the same is, in its opinion, against the public interest.]

Comment

Section 49 of the Water Pollution Act, 1974 and Sec. 43 of the Air Pollution Act, 1981 deal with cognizance of offences. It is also provided in Sec. 19 of the Environment (Protection) Act, 1986.

It is the Board alone which is empowered to grant sanction.— The object of the Act is to avoid frivolous prosecutions. That is why the statutory Board has been given the authority to grant sanction. The Board is expected to consider the materials placed before it and take a decision as to who are to be prosecuted. It is not an empty formality. The Board has a statutory duty to consider the material placed before it by the investigation agency and then decide whether prosecution is necessary and if so who will are to be prosecuted. It cannot be left to the whims and fancy of the Investingating

---

[1] Subs. by Act 47 of 1987, Sec. 21, for Sec. 43 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

Officer or Inspector or Air Pollution Officer to file complaint against anybody he chooses, from the directors and officers of the company. It is the Board alone, which has to take a decision as to who amongst the directors of the company and who amongst the officers of the company are responsible for the alleged violation under the Act.[1]

44. ***Members, officers and employees of Board to be public servants.***— *All the members and all officers and other employees of a Board when acting or purporting to act in pursuance of any of the provisions of this Act or the rules made thereunder shall be deemed to be public servant within the meaning of Sec. 21 of the Indian Penal Code (45 of 1860).*

Comment

Section 50 of the Water Pollution Act, 1974 and Sec. 44 of the Air Pollution Act, 1981 provide that members, officers of the Board to be public servants within the meaning of Sec. 21 of the Indian Penal Code. Section 21 of the Environment (Protection) Act, 1986 is based on the above two Acts.

45. ***Reports and returns.***— *The Central Board shall, in relation to its functions under this Act, furnish to the Central Government, and a State Board shall, in relation to its functions under this Act, furnish to the State Government and to the Central Board such reports, returns, statistics, accounts and other information as that Government, or, as the case may be, the Central Board may, from time to time, require.*

46. ***Bar of jurisdiction.***— *No civil court shall have jurisdiction to entertain any suit or proceeding in respect of any matter which an Appellate Authority constituted under this Act is empowered by or under this Act to determine, and no injunction shall be granted by any court or other authority in respect of any action taken or to be taken in pursuance of any power conferred by or under this Act.*

Comment

Section 58 of the Water Pollution Act, 1974 and Sec. 46 of the Air Pollution Act, 1981 bars the jurisdiction of Civil Court relating to pollution cases. Sec. 22 of the Environment (Protection) Act, 1986 also bars the jurisdiction of Civil Court.

CHAPTER VII

MISCELLANEOUS

47. ***Power of State Government to supersede State Board.***—*(1) If at any time the State Government is of opinion—*

(a) that a State Board constituted under this Act has persistently made default in the performance of the functions imposed on it by or under this Act, or

(b) that circumstances exist which render it necessary in the public interest so to do,

the State Government may, by notification in the Official Gazette, supersede the State Board for such period, not exceeding six months, as may be specified in the notification :

---

[1] S.M. Dubash *v.* M. Bhosale, 1996 Cri. L.J. 2136 at p. 2138, (Bom.).

Provided that before issuing a notification under this sub-section for the reasons mentioned in Cl. (a), the State Government shall give a reasonable opportunity to the State Board to show cause why it should not be superseded and shall consider the explanations and objections if any, of the State Board.

(2) Upon the publication of a notification under sub-section (1) superseding the State Board—

- *(a) all the members shall, as from the date of supersession, vacate their offices as such;*
- *(b) all the powers, functions and duties which may, by or under this Act, be exercised, performed or discharged by the State Board shall, until the State Board is reconstituted under sub-section (3), be exercised, performed or discharged by such person or persons as the State Government may direct;*
- *(c) all property owned or controlled by the State Board shall, until the Board is reconstituted under sub-section (3), vest in the State Government.*

(3) On the expiration of the period of supersession specified in the notification issued under sub-section (1), the State Government may—

- *(a) extend the period of supersession for such further term, not exceeding six months, as it may consider necessary ; or*
- *(b) reconstitute the State Board by a fresh nomination or appointment, as the case may be, and in such case any person who vacated his office under Cl. (a) of sub-section (2) shall also be eligible for nomination or appointment :*

Provided that the State Government may at any time before the expiration of the period of supersession, whether originally specified under sub-section (1) or as extended under this sub-section, take action under Cl. (b) of this sub-section.

Comments

Section 62 of the Water Pollution Act, 1974 and Sec. 47 of the Air Pollution Act, 1981 empower the State Government to supersede the State Board in certain cases.

The total period of supersession of the State Board by the State Government should not exceed one year.

The Chairman of the Board not entitled to continue in the service after the supersession of the Board.— The definition of 'member' includes the 'chairman' and in view of Sec. 62 (2) read with Sec. 61 (2) and (3) of 1974 Act and Sec. 47 (2) and (3) of 1981 Act, the petitioner will be deemed to have vacated the office of Chairman of the Board.[1]

48. Special provision in the case of suppression of the Central Board or the State Boards constituted under the Water (Prevention and Control of Pollution) Act, 1974.—*Where the Central Board or any State Board constituted under the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), is superseded by the Central Government or the State Government, as the case may be,*

---

[1] **G.S. Oberoi *v.* State of Punjab, A.I.R. 1998 P. & H. 67 at p. 76.**

under that Act, all the powers, functions and duties of the Central Board or such State Board under this Act shall be exercised, performed or discharged during the period of such supersession by the person or persons, exercising, performing or discharging the powers, functions and duties of the Central Board or such State Board under the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), during such period.

Comment

Section 61 of the Water Pollution Act, 1974 and Sec. 48 of the Air Pollution Act, 1981 empowers the Central Government to supersede the Central Board or the State Board in certain cases.

*49. **Dissolution of State Boards constituted under the Act.**—(1) As and when the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), comes into force in any State and the State Government constitutes a [1][State Pollution Control Board] under that Act, the State Board constituted by the State Government under this Act shall stand dissolved and the Board first-mentioned shall exercise the powers and perform the functions of the Board second-mentioned in that State.*

(2) On the dissolution of the State Board constituted under this Act,—

(a) all the members shall vacate their offices as such;

(b) all moneys and other property of whatever kind (including the fund of the State Board) owned by, or vested in the State Board, immediately before such dissolution, shall stand transferred to and vest in the [1][State Pollution Control Board];

(c) every officer and other employee serving under the State Board immediately before such dissolution shall be transferred to and become an officer or other employee of the [1][State Pollution Control Board] and hold office by the same tenure and at the same remuneration and on the same terms and conditions of service as he would have held the same if the State Board constituted under this Act had not been dissolved and shall continue to do so unless and until such tenure, remuneration and conditions of service are duly altered by the [1][State Pollution Control Board] :

Provided that the tenure, remuneration and terms and conditions of service of any such officer or other employee shall not be altered to his disadvantage without the previous sanction of the State Government :

(d) all liabilities and obligations of the State Board of whatever kind immediately before such dissolution, shall be deemed to be the liabilities or obligations, as the case may be, of the [1][State Pollution Control Board] and any proceeding or cause of action, pending or existing immediately before such dissolution by or against the State Board constituted under this Act in relation to such liability or obligation may be continued and enforced by or against the [1][State Pollution Control Board].

50. [2][***].

---

[1] Subs. by Act 47 of 1987, Sec. 15, for the words "State Board for the Prevention and Control of Water Pollution" (date to be notified).

[2] Section 50 omitted by Act 47 of 1987, Sec. 22 (w.e.f. 1st April, 1988 *vide* G.S.R. 382(E), dated 28th March, 1988).

*51. **Maintenance of register.**—(1) Every State Board shall maintain a register containing particulars of the persons to whom consent has been granted under Sec. 21, the standards for emission laid down by it in relation to each such consent and such other particulars as may be prescribed.*

(2) The register maintained under sub-section (1) shall be open to inspection at all reasonable hours by any person interested in or affected by such standards for emission or by any other person authorised by such person in this behalf.

*52. **Effect of other laws.**—Save as otherwise provided by or under the Atomic Energy Act, 1962 (33 of 1962), in relation to radioactive air pollution the provision of this Act shall have effect notwithstanding anything inconsistent therewith contained in any enactment other than this Act.*

SYNOPSIS

1 No inconsistency with Sec. 133, Cr. P.C., provisions compared ... 412
2 Power of Magistrate not affected .. 412
3. Public nuisance described . . 413

Section 60 of the Water Pollution Act, 1974 and Sec. 52 of the Air Pollution Act, 1981 deal with overriding effects of the Act. Section 24 of the Environment (Protection) Act, 1986 also provides the effect of other laws.

1. No inconsistency with Sec. 133 Cr. P.C., provisions compared.—In relation to public nuisance by air pollution, the provisions of the Code of Criminal Procedure, 1973 are wider in application and more effective and are intended primarily to remove public nuisances and prevent its recurrence The Air (Prevention and Control of Pollution) Act, 1981 is limited in its operation to certain areas and to certain kinds of pollutants, and is primarily intended to control on scientific lines,. certain types of air pollution and penalise the offender. There is no inconsistency or repugnancy between the two legislations so as to be infer an implied repeal of the relevant provisions of the Code by virtue of the overriding provision contained in Sec. 52 of the Air Act. The two legislations are complementary to each other, and are intended to function side by side in their own parallel channels. They do not even overlap. The provisions of Chapter X-B of the Code relating to public nuisance arising out of air pollution cannot be taken to be impliedly repealed by the Air (Prevention and Control of Pollution) Act, 1981.[1]

2. Power of Magistrate not affected.—The argument that the Pollution Control Board alone has got the right and the Sub-Divisional Magistrate has no power relating to air and water pollution cannot be entertained. It is only the Sub-Divisional Magistrate that is entitled to take action under Sec. 133, Cr. P.C., in case of removal of nuisance, if any, brought to his notice either by a report from any police officer or any other information. It is also contended that the Sub-Divisional Magistrate has no power to ask for the production of the appreciation certificate. The Magistrate is certainly empowered to take in evidence any other particulars that required for passing of the final order in the same shape or in the modified form, after giving an opportunity to the party concerned. In this case, admittedly, an opportunity was given and the petitioner was asked to produce the appreciation certificate and when he failed to do so, the final order was passed. The order passed under Sec. 136, Cr. P.C. does not suffer from any infirmity whatsoever as pointed out by the petitioner. The Superintending Engineer of the Board submitted in clear terms that the discharge of effluents affect the health of public and cattle. If what has been stated by the petitioner that the preventive steps and other methods have been taken is correct, then definitely he would have obtained the appreciation certificate. The appreciation certificate has to be obtained from the Pollution Control Board and the Board, if all the conditions are satisfied, will not hesitate in issuing the certificate. The non-production of the certificate strengthens the view was taken by the Sub-Divisional Magistrate in passing the final order under Sec. 136, Cr. P.C. The conditions laid down by the Sub-Divisional Magistrate in requiring the party concerned to produce the certificate cannot be said to be without jurisdiction or that the Magistrate exceeded his juridiction.[1]

---

[1] N. Ramasamy *v.* Sub-Divisional Magistrate, Coimbatore, 1988(1) Com. L.J. 169 at pp. 176, 177 : 1988 (15)I.J. Reports 15. 497 at pp. 15. 502, 503 (Mad.) ; *see* also Abdul Hamid *v.* Gwalior Rayon Silk Mfg. (Wvg.) Co. Ltd, 1989 Cr. L.J. 2013 at p. 2015 (M.P.).

3. **Public nuisance described.**—Sections 133 to 143 of the Code of Criminal Procedure, 1973 (2 of 1974), relate to public nuisances as distinguished from private nuisances. Public nuisance is defined in Sec 268, I.P.C. It is clear from a perusal of Sec. 133, Cr. P.C. that in other to attract its applicability there must be a imminent danger to the health or the physical comfort of the community in the locality in which the trade or occupation is conducted. Without such imminent danger jurisdiction under this section cannot be exercised. The danger should be such that if the Magistrate does not take immediate action and directs the public to take ordinary recourses of law, irreparable damage would ensure. In conformity with the principle of natural justice regarding hearing before an adverse order, the section, at the initial stages contemplates only conditional order.[2]

*53. **Power of Central Government to make rules**—(1) The Central Government may, in consultation with the Central Board, by notification in the Official Gazette make rules in respect of the following matters, namely :—*

- *(a) the intervals and the time and place at which meetings of the Central Board or any committee thereof shall be held and the procedure to be followed at such meetings, including the quorum necessary for the transaction of business thereat, under sub-section (1) of Sec. 10 and under sub-section (2) of Sec. 11;*
- *(b) the fees and allowances to be paid to the members of a committee of the Central Board, not being members of the Board, under sub-section (3) of Sec. 11;*
- *(c) the manner in which and the purposes for which persons may be associated with the Central Board under sub-section (1) of Sec. 12;*
- *(d) the fees and allowances to be paid under sub-section (3) of Sec. 12 to persons associated with the Central Board under sub-section (1) of Sec. 12;*
- *(e) the functions to be performed by the Central Board under Cl. (j) of sub-section (2) of Sec. 16;*
- [3]*[(f) the form in which and the time within which the budget of the Central Board may be prepared and forwarded to the Central Government under Sec. 34 ;*

[3] Subs. by Act 47 of 1987, Sec. 23 for Cl. *(f)* (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

(ff) the form in which the annual report of the Central Board may be prepared under Sec. 35;]

(g) the form in which the accounts of the Central Board may be maintained under sub-section (1) of Sec. 36.

(2) Every rule made by the Central Government under this Act shall be laid, as soon as may be after it is made, before each House of Parliament, while it is in session, for a total period of thirty days which may be comprised in one session or in two or more successive sessions, and if, before the expiry of the session immediately following the session or the successive sessions aforesaid, both Houses agree in making any modification in the rule or both Houses agree that the rule should not be made, the rule shall thereafter have effect only in such modified form or be of no effect, as the case may be; so however, that any such modification or annulment shall be without prejudice to the validity of anything previously done under that rule.

Comment

Section 63 of the Water Pollution Act, 1974 and Sec. 53 of the Air Pollution Act, 1981 empowers the Central Government to make rules. Section 25 of the Environment (Protection) Act, 1986 also provides the same power to Central Government.

54. ***Power of State Government to make rules.***—*(1) Subject to the provisions of sub-section (3), the State Government may, by notification in the Official Gazette, make rules to carry out the purposes of this Act in respect of matter not falling within the purview of Sec. 53.*

(2) In particular, and without prejudice to the generality of the foregoing power, such rules may provide for all or any of the following matters, namely :—

[1]*[(a) the qualifications, knowledge and experience of scientific engineering or management aspects of pollution control required for appointment as member-secretary of a State Board constituted under the Act;]*

[2]*[(aa)] the terms and conditions of service of the Chairman and other members (other than the member-secretary) of the State Board constituted under this Act under sub-section (7) of Sec. 7;*

(b) the intervals and the time and place at which meetings of the State Board or any committee thereof shall be held and the procedure to be followed at such meetings, including the quorum necessary for the transaction of business thereat, under sub-section (1) of Sec. 10 and under sub-section (2) of Sec. 11;

(c) the fees and allowances of be paid to the members of a committee of the State Board, not being members of the Board under sub-section (3) of Sec. 11;

(d) the manner in which and the purposes for which persons may be associated with the State Board under sub-section (1) of Sec. 12;

(e) the fees and allowances to be paid under sub-section (3) of Sec. 12 to persons associated with the State Board under sub-section (1) of Sec. 12;

---

[2] Cl. (*a*) renumbered as Cl. (*aa*) by Act 47 of 1987, Sec. 24 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

(f) *the terms and conditions of service of the member-secretary of a State Board constituted under this Act under sub-section (1) of Sec 14;*

(g) *the powers and duties to the exercised and discharged by the member-secretary of a State Board under sub-section (2) of Sec. 14;*

(h) *the conditions subject to which a State Board may appoint such officers and other employees as it considers necessary for the efficient performance of its functions under sub-section (3) of Sec. 14;*

(i) *the conditions subject to which a State Board may appoint a consultant under sub-section (5) of Sec. 14;*

(j) *the functions to be performed by the State Board under Cl (i) of sub-section (1) of Sec. 17;*

(k) *the manner in which any area or areas may be declared as air pollution control area or areas under sub-section (1) of Sec. 19;*

(l) *the form of application for the consent of the State Board, the fees payable therefor, the period within which such application shall be made and the particulars it may contain under sub-section (2) of Sec. 21;*

(m) *the procedure to be followed in respect of an inquiry under sub-section (3) of Sec. 21;*

(n) *the authorities or agencies to whom information under sub-section (1) of Sec. 23 shall be furnished;*

(o) *the manner in which samples of air or emission may be taken under sub-section (1) of Sec. 26;*

(p) *the form of the notice referred to in sub-section (3) of Sec. 26;*

(q) *the form of the report of the State Board Analyst under sub-section (1) of Sec. 27;*

(r) *the form of the report of the Government Analyst under sub-section (3) of Sec. 27;*

(s) *the functions of the State Air Laboratory, the procedure for the submission to the said Laboratory of samples of air or emission for analysis or tests, the form of laboratory's report thereon, the fees payable in respect of such report and other matters as may be necessary or expedient to enable that laboratory to carry out its functions, under sub-section (2) of Sec. 28;*

(t) *the qualifications required for Government Analysts under sub-section (1) of Sec. 29;*

(u) *the qualifications required for State Board Analysts under sub-section (2) of Sec. 29;*

(v) *the form and the manner in which appeals may be preferred, the fees payable in respect of such appeals and the procedure to be followed by the Appellate Authority in disposing of the appeals under sub-section (3) of Sec. 31;*

[1][(*w*) *the form in which and the time within which the budget of the State Board may be prepared and forwarded to the State Government under Sec. 34;*

(*ww*) *the form in which the annual report of the State Board may be prepared under Sec. 35;]*

(*x*) *the form in which the accounts of the State Board may be maintained under sub-section (1) of Sec. 36;*

[2][(*xx*) *the manner in which notice of intention to make a complaint shall be given under Sec. 43;]*

(*y*) *the particulars which the register maintained under Sec. 51 may contain;*

(*z*) *any other matter which has to be, or may be, prescribed.*

(3) After the first constitution of the State Board, no rule with respect to any of the matters referred to in sub-section (2) other than those referred to [3][*in* Cl. *(aa) thereof], shall be made, varied, amended or repealed without consulting that Board.*

Comment

Section 64 of the Water Pollution Act, 1974 and Sec. 54 of the Air Pollution Act, 1981 empower the State Government to make rules.

[4][THE SCHEDULE***]

---

1. Subs. by Act 47 of 1987, Sec. 24 for Cl. (*w*) (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).
2. Ins. by Act 47 of 1987, Sec. 24 (w.e.f 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).
3. Subs. by Act 47 of 1987, Sec. 24, for "in Cl. (*a*)" (w.e.f. 1st April,, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).
4. Omitted by Act 47 of 1987, Sec. 25 (w.e.f. 1st April, 1988 *vide* G.S.R. 382 (E), dated 28th March, 1988).

PART II-B

THE AIR (PREVENTION AND CONTROL OF POLLUTION) RULES, 1982[1]

G.S.R. 712 (E), dated the 18th November, 1982.— In exercise of the powers conferred by Sec. 53 of the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981), the Central Government in consultation with the Central Board for the Prevention and Control of Water Pollution hereby makes the following rules, namely :

CHAPTER I

PRELIMINARY

1. ***Short title and commencement.***— *(1) These rules may be called the Air (Prevention and Control of Pollution) Rules, 1982.*

(2) They shall come into force on the date of their publication in the Official Gazette.

2. ***Definitions.***—*In these rules unless the context otherwise requires,—*

- *(a) "Act" means the Air (Prevention and Control of Pollution) Act, 1981;*
- *(b) "Chairman" means the Chairman of the Central Board;*
- *(c) "form" means a form set out in the Schedules ;*
- *(d) "meeting" means a meeting of the Central Board or a meeting of Committee constituted by the Central Board ;*
- *(e) "Member-Secretary" means the Member Secretary of the Central Board ;*
- *(f) "Schedule" means a Schedule appended to these rules ;*
- *(g) "section" means a section of this Act ;*
- *(h) "year" means the financial year commencing on the 1st day of April;*
- *(i) words and expressions not defined in these rules but defined in the Act shall have the meaning assigned to them in the Act.*

Comment

General principle of construction.— There is one principle on which there is complete unanimity of all the courts in the world this is that where the words or the language used in a statute are clear and cloudless, plain, simple and explicit, unclouded and unobscured, intelligible and pointed so as to admit of no ambiguity, vagueness, uncertainty or equivocation, there is absolutely no room for deriving support from external aids. In such cases, the statute should be interpreted on the face of the language itself without adding, subtracting or omitting words therefrom. Where the language is plain, and unambiguous, the Court is not entitled to go behind the language so as to add or supply omission and thus play the role of a political reformer or of a wise counsel to the Legislature.[2]

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 18th November, 1982.

[2] S.P. Gupta *v.* President of India, A.I.R. 1982 S.C. 148 at pp. 304, 314.

CHAPTER II

PROCEDURE FOR TRANSACTION OF BUSINESS OF THE BOARD AND ITS COMMITTEES

3. *Notice for meetings.— (1) Meeting of the Central Board shall be held on such dates as may be fixed by the Chairman.*

(2) The Chairman shall, upon a written request of not less than five members of the Central Board or upon a direction of the Central Government call a special meeting of the Central Board.

(3) Fifteen clear days' notice of an ordinary meeting and three days' notice of a special meeting specifying the time and the place at which such meeting is to be held and an agenda of the business to be transacted thereat, shall be given by the Member-Secretary of Chairman to the members or any other officers of the Board.

(4) Notice of the meeting may be given to the members by delivering the same by messenger or sending it by registered post to his last known place of residence or business or in such other manner as the Chairman may, in the circumstances of the case, think fit.

(5) No member shall be entitled to bring forward for the consideration of a meeting any matter of which he has not given ten clear days' notice to the Member-Secretary unless the Chairman, in his discretion, permits him to do so.

(6) If the Chairman or presiding officer adjourns a meeting from day to day or any particular day he shall give reason thereof an no fresh notice shall be required for such an adjourned meeting.

Comment

The word "may" should not be read as "shall". The word "shall" does not make the section permissible.[1]

4. ***Presiding Officers.***— *Every meeting shall be presided over by the Chairman and in his absence, by a presiding officer to be elected by the members present from amongst themselves.*

5. ***All questions to be decided by majority.***— *(1) All questions at a meeting shall be decided by a majority of votes of members present and voting shall be by raising of hands in favour of the proposal.*

(2) In case of an equality of votes, the Chairman or presiding officer shall have a second or casting vote.

Comment

Sub-rule (2) enables the Chairman or presiding officer to have a second or casting vote in case of an equality of votes.

6. ***Quorum.***— *(1) Five members shall form the quorum for the meeting.*

(2) If at any time fixed for any meeting or during the course of any meeting a quorum is not present, the Chairman or presiding officer shall adjourn the meeting and if a quorum is not present after the expiration of fifteen minutes from such adjournment, the presiding officer shall adjourn the meeting to such time on the following or on such other future date as he may fix.

(3) If the meeting is adjourned to some future date due to lack of quorum, fresh notice will be given to the absentee members as to the date and time on which the next meeting will be held.

---

[1] Union of India *v.* Ganpatrai Sagarmull, A.I.R. 1983 Cal. 14 at p. 20.

(4) No matter which had not been on the agenda of the original meeting shall be discussed at such adjourned meeting.

*7. **Minutes.**— (1) Record of the proceedings of every meeting along-with the names of members who attended the meeting shall be kept by the member-secretary in a book maintained by him exclusively for the purpose.*

(2) The minutes of the previous meeting shall be read at the beginning of every succeeding meeting and shall be confirmed and signed by the Chairman or presiding officer at such meeting.

(3) The proceedings shall be open to inspection by any member at the office of the Central Board during office hours.

*8. **Maintaining order at meetings.**— The Chairman or presiding officer shall preserve order at a meeting.*

*9. **Business to be transacted at a meeting.**— (1) No business shall be transacted in the meeting without quorum.*

(2) Except with the permission of the Chairman or presiding officer, no business which is not entered in the agenda or of which notice has not been given by a member under sub-rule (5) of the rule 3, shall be transacted at any meeting.

*10. **Order of business.**— (1) At any meeting business shall be transacted in the order in which it entered in the agenda circulated to the members under sub-rule (3) or rule 3.*

(2) Either at the beginning of the meeting or after the conclusion of the debate on a motion during the meeting, the Chairman or presiding officer or a member may suggest a change in the order of business as entered in the agenda and if the majority of the members present agree, the Chairman or presiding officer shall agree to such a change.

*11. **Procedure for transaction of business of committees constituted by the Board under sub-section (1) of Sec. 11.**—(1) The time and place of the meeting of committee constituted by the Central Board under sub-section (1) of Sec. 11 shall be as specified by the Chairman of the committee.*

(2) Provisions of Chapter 2 of these rules shall as far as practicable, apply to the meetings of the committees constituted under Sec. 11.

CHAPTER III

12. A member of a committee other than a member of the Board shall be paid an allowance of rupees fifty if he is a resident of Delhi and rupees seventy-five (inclusive of daily allowance) and also travelling allowance at such rate as is admissible to a grade I officer of the Central Government in the case of non-resident, for each day of the actual meeting of the committee which he attends. Provided that in case of a member of Parliament who is also a member of the Central Board, the said daily and travelling allowances will be admissible when the Parliament is not in session and on production of a certificate by the member that he has not drawn any such allowance for the same journey and halts from any other Government source.

CHAPTER IV

TEMPORARY ASSOCIATION OF PERSONS WITH THE CENTRAL BOARD

*13. **Manner and purpose of association of persons with the Central Board under sub-section (1) of Sec. 12.**— The Central Board may invite any person whose assistance or advice is considered useful in performing any of its functions, to participate in the deliberations of any of its meetings or the meetings of a committee formed by it.*

*14. **Fees and allowances to be paid to such temporary association of persons under sub-section (3) of Sec. 12.**— (1) If the person associated with the Board under rule 13 happens to be a non-official resident in Delhi, he shall be entitled to get an allowance of rupees fifty per day for each day of actual meeting of the Central Board in which he is so associated.*

(2) If such person is non-resident of Delhi, he shall be entitled to get an allowance of rupees seventy-five per day (inclusive of daily allowance) for each day of actual meeting of the Central Board when he is so associated and also to travelling allowance at such rates as is admissible to a grade I Officer of the Central Government.

(3) Notwithstanding anything in sub-rules (1) and (2) if such person is a Government servant or an employee in a Government undertaking, he shall be entitled to travelling and daily allowances only at the rates admissible under the relevant rules applicable to him :

Provided that in case of a member of Parliament who is also a member of the Central Board, the said daily and travelling allowances will be admissible when the Parliament is not in session and on production of a certificate by the member that he has not drawn any such allowance for the same journey and halts from any other Government source.

CHAPTER V

BUDGET OF THE CENTRAL BOARD

*15. **Form of budget estimates under Sec. 34.**— The form in which and time within which the budget may be prepared and forwarded to the Government shall be as provided in forms I, II, III and IV of Schedule I.*

(2) The estimated receipts and expenditure shall be accompanied by the revised budget estimates for the current year.

(3) The budget shall as far as may be, based on the account heads specified in Sch. II.

Comment

Sub-rule (3) requires the budget to be based on the account heads specified in Sch. II.

CHAPTER VI

ANNUAL REPORT OF THE CENTRAL BOARD

*16. **Form of Annual Report under Sec. 35.**— The annual report in respect of the year last ended giving a true and full account of the activities of the Central Board during the previous financial year shall contain the particulars specified in Sch. III and shall be submitted to the Central Government before 15 May of each year.*

CHAPTER VII

ACCOUNT OF THE CENTRAL BOARD

*17. **Form of annual statement of accounts of the Central Board under Sec. 36.**— The annual statement of accounts of the Central Board shall be in Forms V to IX.*

Comment

This rule requires that the annual statement of accounts of the Central Board should be given in Forms V to IX.

Central Pollution Control Board Annual Report for the Financial Year

April 1, 19......... to March 31, 19 ....

CHAPTER

" 1. Introduction.

" 2. Constitution of the Board including changes therein.

" 3. Meeting of the Board with major decisions taken therein.

" 4. Committees constituted by the Board and their activities.

" 5. Monitoring Network for air, water and soil quality.

" 6. Present state of environment, environmental problems and counter-measures

" 7. Environmental Research.

" 8. Environmental Training.

" 9. Environmental Awareness and Public Participation.

" 10. Environmental Standards including time schedule for their enforcement

" 11.1 Prosecutions launched and convictions secured for environmental pollution control.

" 11.2. Directions given for closure of polluting industrial units.

" 12. Finance and accounts of the Board.

" 13. Annual Plan of the following year.

" 14. Any other important matter dealt with by the Central Board.

ANNEXURES

1. Members of the Board.
2. Organisation Chart.
3. Staff Strength including recruitment.
4. Publications.
5. Training Courses/Seminars/Workshops organised or attended.
6. Consents to establish industries, operations processes—issued/refused.
7. Consents to operate industries operations and processes—issued/refused.]

NOTIFICATIONS

NATIONAL AMBIENT AIR QUALITY STANDARD

S.O. 384 (E), dated 11th April, 1994.[1]—The Central Pollution Control Board in exercise of its powers conferred under Sec. 16(2)(*h*) of the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981) hereby notify the National Ambient Air Quality Standards with immediate effect.

SCHEDULE-I

Pollutant	Time weighted average	Concentration in ambient air			Method of measurement
		Industrial Area	Residentrial, Rural & other areas	Sensitive Area	
1	2	3	4	5	6
Sulpher Dioxide (SO_2)	Annual Average*	80 µg/m^3	60 µg/m^3	15 µg/m^3	1. Improved West and Gaeke method
	24 hours**	120 µg/m^3	80 µg/m^3	30 µg/m^3	2. Ultraviolet fluorescence
Oxides of Nitrogen as NO_2	Annual Average*	80 µg/m^3	60 µg/m^3	15 µg/m^3	1. Jacob & Hochheiser modified (Na-Arsenite) method
	24 hours**	120 µg/m^3	80 µg/m^3	30 µg/m^3	2. — Gas Phase Chemiluminescence
Suspended Particulate Matter (SPM)	Annual Average*	360 µg/m^3	140 µg/m^3	70 µg/m^3	— High Volume sampling, (Average flow rate not less than 1 1 m^3/minute)
	24 hours**	500 µg/m^3	200 µg/m^3	100 µg/m^3	
Respirable Particulate Matter (size less than 10 um) (RPM)	Annual Average*	120 µg/m^3	60 µg/m^3	50 µg/m^3	Respirable particulate matter sampler
	24 hours **	150 µg/m^3	100 µg/m^3	75 µg/m^3	
Lead (Pb)	Annual Average*	1.0 µg/m^3	0.75 µg/m^3	0.50 µg/m^3	— AAS Method after sampling using EPM 2000 or equivalent filter paper
	24 hours**	1.5 µg/m^3	1.00 µg/m^3	0.75 µg/m^3	
Carbon Monoxide (CO)	8 hours**	5.0 mg/m^3	2.0 mg/m^3	1.0 mg/m^3	— Non dispersive infrared spectroscopy
	1 hour	10.0 mg/m^3	4.0 mg/m^3	2.0 mg/m^3	

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 20th May, 1994.

* Annual Arithmetic mean of minimum 104 measurements in a year taken twice a week 24 hourly at uniform interval.

** 24 hourly/8 hourly values should be met 98% of the time in a year. However, 2% of the time, it may exceed but not on two consecutive days.

Note :

1. National Ambient Air Quality Standard . The levels of air quality necessary with an adequate margin of safety, to protect the public health, vegetation and property
2. Whenever and wherever two consecutive values exceeds the limit specified above for the respective category, it would be considered adequate reason to institute regular/continuous monitoring and further investigations.
3. The State Government/State Board shall notify the sensitive and other areas in the respective states within a period of six months from the date of Notification of National Ambient Air Quality Standards.

* * *

S.O. 935 (E), dated 14th October, 1998.[1]—The Central Pollution Control Board in exercise of its power conferred under Sec. 16 (2) (*h*) of the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981) hereby notify the Ambient Air Quality Standard for Ammonia (NH_3) with immediate effect, as under :

Ambient Air Quality Standard for Ammonia

Daily average (Sample duration 24 hrs.)	.	0.4 mg/m^3 (400 µg/m^3)
Annual average of 104 samples (2 samples drawn every week)	.	0.1 mg/m^3 (100 µg/m^3)

* * *

Central Pollution Control Board and Schedule of Fees for Analysis

S.O. 389 (E), dated 23rd September, 1994.— In exercise of the power vested under sub-section (3) of Sec. 16 and sub-section (2) of Sec. 17 read with Sec. 6 of the Air (Prevention and Control of Pollution) Act, 1981 (Act 14 of 1981), the Central Pollution Control Board established the Laboratories located at :

(*i*) Delhi – 'Parvesh Bhawan', East Arjun Nagar, Shahdara, Delhi- 110 032

(*ii*) Calcutta— Zonal Office (East), 61, Prince Anwar Shah Road, Calcutta-700 033

(*iii*) Vadodara — Zonal Office (West), Chokshi Chamber, Priya Laxmi Mill Road, Vadodara-390 003.

(*iv*) Kanpur— Zonal Office (Central), 1st Floor, 117/51-Q Block, Sharda Nagar, Gurdeo Place, Kanpur-208 025

The fees payable to these laboratories in respect of each report of the analysis for various analytical parameters for air samples of source monitoring and for air samples of ambient and implant, shall be as per the rates given in schedule

The rates shall come into force from the date of issue of the notification

Schedule of Fee for Analysis of various Analytical Parameters in CPCB Laboratories for Air Samples of Source Monitoring.

Sl. No	Parameters	Charge in Rs
1.	Sampling/measurement of velocity, flow rate, temperature and composition of gas	2000
2.	Particulate matter	300
3.	Sulphur dioxide	300
4.	Oxides of nitrogen	300
5.	Acid mist	300
6.	Ammonia	300
7	Carbon monoxide	300
8.	Chlorine	300
9.	Fluoride (gaseous)	300
10.	Fluoride (particulate)	300
11.	Hydrogen sulphide	300
12.	Hydrogen chloride	300
13.	PAH (Particulate) each compound	500

For monitoring of only specific parameter, sampling charges have also to be paid.

For subsequent samples from the same source sampling charges will be Rs. 1000 per sample.

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 2 (*i*), dated 16th October, 1998.

For reliability 2 to 3 samples are necessary for source measurement.

Note : Transportation charges on actual.

Fee for analysis of various analytical parameters in CPCB Laboratories for Air Samples of Ambient and Inplant.

Sl. No.	Parameters	Charge in Rs.
1	2	3
I. Air Monitoring		
A.	Sampling (up to 8 hours) and suspended particulate matter	1000
B.	For every additional parameter additional charges	
1	2	3
1.	SO_2	300
2.	NO_2	300
3.	Ammonia	300
4.	PAH in particulate (or each PAH)	500
5	Chlorine	300
6	Phenol	300
7.	Cyanide	300
8.	Mercapton	300
9	Acid mist	300
10.	Lead and other metals (per metal)	150
11	Analysis using dragger tubes (per tube)	200
II. Noise Monitoring		
1.	First monitoring	2000
2.	Each subsequent monitoring within the same premises	1000

Note : Transportation charges on actual.

PART II-C

THE AIR (PREVENTION AND CONTROL OF POLLUTION) (UNION TERRITORIES) RULES, 1983

G.S.R. 6 (E), the 21st December, 1983.[1]—In exercise of the powers conferred by Sec. 54 of the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981), the Central Government, in consultation with the Central Board for the Prevention and Control of Pollution, hereby makes the following rules, namely :—

CHAPTER I

PRELIMINARY

1. ***Short title, application and commencement.***— *(1) These Rules may be called the Air (Prevention and Control of Pollution) (Union Territories) Rules, 1983.*

(2) They shall apply to the Union Territories of Delhi, Pondicherry, Goa, Daman and Diu, Dadra and Nagar Haveli, Lakshadweep, Mizoram, Andaman and Nicobar Island, Arunachal Pradesh and Chandigarh.

(3) They shall come into force on the date of their publication in the Official Gazette.

2. ***Definitions.***—*In these rules, unless the context otherwise requires :—*

- *(a) "Act" means the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981);*
- *(b) "appellant" means any person aggrieved by and appealing against an order made by the Board;*
- *(c) "Appellate Authority" means an Appellate Authority constituted by the Central Government under sub-section (1) of Sec. 31 of the Act;*
- *(d) "Board" means the Central Board for the Prevention and Control of Water Pollution constituted under Sec. 3 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974);*
- *(e) "Chairman" means a Chairman of the Board;*
- *(f) "consultant" means any person appointed as such under sub-section (5) of Sec. 14;*
- *(g) "Form" means a form appended to these rules;*
- *(h) "premises" means any building structure or load used for industrial or commercial purposes where pollution occurs;*
- *(i) "State Air Laboratory", in relation to a Union Territory, means a laboratory established or specified as such by the Central Government under sub-section (1) of Sec. 28;*
- *(j) "section" means any section of the Act;*
- *(k) "Board Laboratory" means a laboratory established or recognised as such under sub-section (2) of Sec. 17;*

words and expressions used but not defined in these rules and defined in the Act shall have the meaning respectively assigned to them in the Act.

---

[1] Published in the *Gazette of India (Extraordinary)*, Pt. II, Sec. 3 (*i*,) dated 3rd February, 1984.

CHAPTER II

CONSULTANTS

3. ***Appointment of consultants.***—*For the purpose of assisting the Board in the performance of its functions, the Chairman may appoint any qualified person to be consultant for a specific period not exceeding six months :*

Provided that the Chairman may, with the prior approval of the Board extend the period of the appointment from time to time upto one year :

Provided further that the Chairman may, with the prior approval of the Board and the Central Government, appoint a consultant for a period beyond one year.

4. ***Power to terminate appointment.***—*Notwithstanding anything contained in rule 3, the Board shall have the right to terminate the appointment of the consultant before the expiry of the specific period of which he is appointed, if in the opinion of the Board, the consultant is not discharging his duties properly or to the satisfaction of the Board, or such a course of action is necessary in the public interest :*

Provided that in cases where a consultant has been appointed with the prior approval of the Central Government, the termination of his appointment will be made only with the approval of the Central Government.

5. ***Emoluments of consultant.***—*The Board may pay the consultants suitable emoluments or fees depending on the nature of work and the qualification and experience of the Consultant :*

[1]*[Provided, that the Chairman shall not appoint any person as Consultant without the prior approval of the Central Government if the Board recommends that the total emoluments or fee payable exceeds rupees five thousand per month :*

Provided further that if a retired Government Officer is appointed as Consultant his emoluments or fee shall be regulated in accordance with the instructions/orders issued by the Central Government in the Ministry of Personnel, Public Grievances and pensions (Department of Personnel and Training) from time to time.]

6. ***Tours by consultant.***—*The consultant may with the prior approval of the Chairman undertake tours within the country for the performance of the duties entrusted to him by the Board and in respect of such tours he shall be entitled to travelling and daily allowances at the rate payable to a Grade I officer of the Central Government.*

7. ***Consultant not to disclose information.***—*The consultant shall not, without the written permission of the Board, disclose any information either given by the Board or obtained during the performance of the duties assigned to him either by the Board or otherwise to any person other than the Board.*

CHAPTER III

NOTIFICATION OF AIR POLLUTION CONTROL AREA

8. ***Manner of declaration of Air pollution control area.***—*(1) Every notification under sub-section (1) of Sec. 19, declaring any area within any Union territory as air pollution control areas, shall specify :—*

(a) the boundaries of the Area if the area is not a whole district or the whole Union territory;

(b) the date on which such declaration shall come into force.

---

[1] Subs. by Rule 2 of the Air (Prevention and Control of Pollution) (Union Territories) Amendment Rules, 1994, *vide* G.S.R. 569 (E), dated 5th July, 1994.

(2) A notification referred to in sub-rule (1) shall be published in the Official Gazette and at least in one English and one vernacular daily newspapers having a circulation not less than five thousand in the Union territories.

CHAPTER IV

APPLICATION FOR CONSENT

*9. **Form of application for consent and fees.**—(1) Every application for consent under sub-section (2) of Sec. 21 shall be made in Form I and shall be accompanied by fees as specified below :—*

Industries having paid up capital	*Fees Rs.*
(i) not exceeding Rs. 5,00,000	*250*
(ii) exceeding Rs. 5,00,000 but not exceeding Rs. 20,00,000	*500*
(iii) exceeding Rs. 20,00,000 but not exceeding Rs. 1 crore	*1000*
(iv) exceeding Rs. 1 crore	*2000*

(2) Every application for consent under the provision to sub-section (2) of Sec. 21 shall be made within four months from the date of declaration of any area as air pollution control area.

*10. **Procedure for making enquiry on application seeking consent.**—(1) On receipt of an application for consent, the Board may depute any of its officers, accompanied by as many assistants as may be necessary, to visit and inspect any place or premises under the control of the applicant or the occupier, for verifying the correctness or otherwise of the particulars furnished in the application or for obtaining such further particulars or information, which in the opinion of such officer are essential. Such officer, for that purpose, may inspect any place or premises where solid, liquid or gaseous emission from the chimney or fugitive emissions from any location within the premises are discharged, such officer may require the applicant or the occupier to furnish to him any plans, specifications or other data relating to control equipment or systems or any part thereof that he considers necessary.*

(2) The officer referred to in sub-rule (1) shall, before visiting any of the premises of the applicant, give notice to the applicant of his intention to do so in Form II. The applicant shall furnish to such officer all information and provide all facilities for inspection.

(3) The officer may, before or after carrying out the inspection under sub-rule (1), require the applicant to furnish him orally or in writing such additional information or clarification or to produce before him such document as he may consider necessary for the purpose of investigation of the application and may for that purpose summon the applicant or his authorised agent to the office of the Board.

CHAPTER V

AUTHORITY TO WHOM INFORMATION IS TO BE FURNISHED

*11. **Furnishing of information by the occupier.**—The authorities referred to in sub-section (1) of Sec. 23 shall be the Collector of the District, the Revenue Divisional Officer, the Health Officer, the Executive Authority of the municipal or local body concerned and the nearest police station.*

CHAPTER VI

MANNER OF TAKING SAMPLES

12. ***Manner of taking samples.***—*The person in-charge of the premises shall provide port-holes, platforms conveniently located, for easy access and all other facilities required for taking sample of air or emission from any chimney, flue or duct, plant or vessel or any other sources and outlets, stationary or mobile as may be required by the Board or any officer empowered by the Board in this behalf.*

(2) The procedure for taking samples shall be such as may be felt necessary by the Board or any officer empowered by the Board in this behalf to suit the situation.

13. ***Form of notice.***—*Every notice under sub-section (3) of Sec. 36 shall be in Form III.*

CHAPTER VII

REPORT OF ANALYSIS

14. ***Form of report of the Board analyst and Government analyst.***—*(1) When a sample of any air or emission has been sent for analysis to the Board laboratory, the Board analyst shall analyse such sample and submit to the Board a report of the result of such analysis in Form IV in triplicate.*

(2) When a sample of any air or emission has been sent for analysis to the State Air Laboratory, the Government analyst shall analyse such samples and submit to the Board a report of the result of such analysis in Form V in triplicate.

CHAPTER VIII

STATE AIR LABORATORY

15. ***Functions of the State Air Laboratory and fee for report.***—*The State Air Laboratory established by the Central Government for a Union territory shall cause to be analysed by the Government analyst any sample of air or emission received by it from any officer authorised by the Board for the purpose and shall be entitled to collect a fee for Rs. 200 for each of the report.*

16. ***Qualification of the Government Analyst or Board Analyst.***—*A person to be appointed as Government Analyst or Board Analyst shall hold at least a Second Class Masters Degree in Basic Science or Life Science and 3 years experience in environmental quality management.*

17. ***Form of appeal and manner of preference.***—*(1) Every appeal under Sec. 31 against an order passed by the Board shall be filled by the appellant in Form VII.*

(2) Every appellant shall prefer appeal separately in his own name and no joint appeal made on behalf of more than one appellant shall be entertained by the Appellate Authority.

(3) (a) Every appeal shall—

- *(i) be in writing,*
- *(ii) specify the name and address of the appellant and the date of the order appealed against,*
- *(iii) specify the date on which the order appealed against was communicated to the appellant,*
- *(iv) contain a statement of facts of the case and grounds relied upon by the appellant in support of the appeal,*

(v) state the relief prayed for, and

(vi) be signed and varified by the appellant or an agent duly authorised by him in writing in his behalf,

(b) Every appeal shall be accompanied by :—

(i) an authenticated copy of the order against which appeal is made,

(ii) a copy of the application made under Sec. 21,

(iii) any document relating to the appeal, and

(iv) a satisfactory proof of the payment of fees specified in Cl. (c).

(c) A fee of Rs. 50 shall be deposited by every appellant in the office of the Appellate Authority and an authenticated copy of the receipt obtained thereof shall be annexed to every appeal.

(d) Every appeal shall be submitted in quadruplicate to the Appellate Authority by the appellant or his authorised agent in person or sent to such Authority by registered post. When the Appeal is presented by an agent duly authorised by the appellant, it shall be accompanied by a letter of authority written on a stamped paper of the value as required by law, appointing him as such an agent.

(e) On receipt of the appeal, the Appellate Authority shall endorse thereon the date of its presentation or receipt by post and the name of the appellant or his duly authorised agent presenting it, as the case may be.

18. Procedure to be followed by the Appellate Authority in dealing with and disposal of the appeal.—*(1) The Appellate Authority shall, as soon as may be after the appeal is filed before it, fix a date for hearing of the appeal and give notice of the same to the applicant and the Board in Form VIII. While giving such notice to the Board, a copy of the appeal, together with its enclosures, shall also be sent to the Board and he shall be called upon to send to the Appellate Authority, all the relevant records connected with the Appeal.*

(2) Where the material on record is insufficient to enable the Appellate Authority to come to a definite decision, it may take additional evidence and call for such further material from the appellant or the Board as it deems fit. Such material shall form part of the record only after the party other than that from whom such record has been received, has been given an opportunity to persue the same.

(3) Where on the date fixed for hearing or any date to which the hearing of the appeal may be adjourned, the appellant or his duly authorised agent does not appear when the appeal is called for hearing, the appeal shall be liable to be dismissed.

(4) When an appeal is dismissed under sub-rule (3), the applicant may, within thirty days from the dismissal, apply to the Appellate Authority for the restoration of the appeal and if it is shown to the satisfaction of the Appellate Authority that the appellant had not received intimation of the date of hearing appeal or was prevented by any cause, sufficient in the opinion of the Appellate Authority, from appearing when the appeal was called for hearing, the Appellate Authority may restore the appeal on such terms as it thinks fit.

(5) The order passed by the Appellate Authority on the appeal shall be in writing bearing the seal of the Appellate Authority and shall state the points before it for determination, the decision thereon, and the reasons for the decision.

(6) A copy of the order passed in appeal shall be supplied by the Appellate Authority free of cost to the appellant and a copy thereof shall also be sent to the Board.

19. Consent register.—*The Board shall maintain a register in Form VI containing particulars of industrial plants to which consent have been granted under Sec. 21.*

20. Functions to be performed by the Board.—*In addition to the functions specified in sub-section (1) of Sec. 17, the Board shall conduct—*

(a) research and development work on the effect of air pollution on the environment, living and non-living,

(b) performance studies on pollution control equipment to improve their efficiency for the purpose of enhancement of air quality, and

(c) studies to determine the effect of air pollution on the health of the people.

[1][CHAPTER IX

20-A. Directions.—*(1) Any direction issued under Sec. 31-A shall be in writing.*

(2) The direction shall specify the nature of action to be taken and the time within which it shall be complied with by the person, officer or the authority to whom such direction is given.

(3) The person, officer or an authority to whom any direction is sought to be issued shall be served with a copy of the proposed direction, and shall be given an opportunity of not less than 15 days from the date of service of a notice to file with an officer designated in this behalf the objections, if any, to the issue of the proposed direction.

(4) Where the proposed direction is for the stoppage or regulation of electricity or water or any other service affecting the carrying on of any industry, operation or process and is sought to be issued to an officer or an authority, a copy of proposed direction shall also be endorsed to the occupier of the industry, operation or process as the case may be, and objections if any, filed by the occupier with an officer designated now in this behalf shall be dealt with in accordance with the procedure under sub-rule (3) and (5) of this rule.

(5) The Central Pollution Control Board shall within a period of 45 days from the date of receipt of the objections, if any, or from the date up to which an opportunity is given to the person, officer or authority to file objections, whichever is earlier, after considering the objections, if any received from the person, officer or authority sought to be directed and for reasons to be recorded in writing, confirm, modify or decide not to issue the proposed direction.

(6) In a case where the Central Pollution Control Board is of the opinion that in view of the likelihood of a grave injury to the environment it is not expedient to provide an opportunity to file objections against the proposed direction, it may for reasons to be recorded in writing, issue directions without providing such an opportunity.

(7) Every notice of direction required to be issued under this rule shall be deemed to be duly served—

---

[1] Ins. by Rule 2 of The Air (Prevention and Control of Pollution) (Union Territories) Amendment Rules, 1989, published in *Gazette* notification G.S.R. 350 (E), dated 9th March, 1989.

(a) Where the person to be served is a Company, if the document is addressed in the name of the Company at its registered office or at its principal office or place of business and is either—

(i) sent by registered post or

(ii) delivered at its registered office or at the principal office or place of business;

(b) Where the person to be served is an officer serving Government, if the document is addressed to the person and a copy thereof is endorsed to the Head of the Department and also to the Secretary to the Government, as the case may be, in-charge of the Department in which, for the time being, the business relating to the Department in which the officer is employed as transacted, and is either—

(i) sent by registered post or

(ii) as given or tendered to him;

(c) In any other case, if the document is addressed to the person to be served and—

(i) is given or tendered to him, or

(ii) if such person cannot be found, is affixed on some conspicuous part of his last known place of residence or business or is given or tendered to some adult member of his family or is affixed on some conspicuous part of the land, or building, if any to which it relates, or

(iii) is sent by registered post to the person.

Explanation.—For the purpose of this sub-rule—

(a) "company" means any body corporate and includes a firm or other association of individuals;

(b) "a servant" is not a member of the family.

20-B. Manner of giving notice.—The manner of giving notice under Cl. (b) of sub-section (1) of Sec. 48 shall be as follows, namely :—

(i) The notice shall be in writing in Form IX.

(ii) The person giving notice may send it to—

(a) Board and (b) Ministry of Environment and Forests (represented by the Secretary, Government of India).

(iii) Notice shall be sent by registered post acknowledgment due; and

(iv) Period of sixty days mentioned in Cl. (b) of sub-section (1) of Sec. 43 shall be reckoned from the date of its first receipt by one of the authorities mentioned above.]

21. Repeal and Saving.—All rules corresponding to these rules and in force in a Union territory immediately before the commencement of these rules are hereby repealed :

Provided that any order made or action taken under the rules so repealed shall be deemed to have been made or taken under the corresponding provision of these rules.

Application for Consent for emission/continuation of emission under Sec. 21 of the Air (Prevention and Control of Pollution) Act, 1981.

From :............. ....
. ...
. ...

To

The Member Secretary,
Central Pollution Control Board,

....
....
....

Sir,

I/We hereby apply for CONSENT/RENEWAL OF CONSENT under Sec. 21 of the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981) to bring into use a new/altered *stack for the discharge of emission/to begin to make new discharge of emission/to continue to discharge emission* from stack in industry owned by ....

FOR OFFICE USE ONLY

1. Code No .

2 Whether the unit is situated in a critically polluted area as identified by Ministry of Environment & Forests .

TO BE FILLED IN BY APPLICANT

PART A—GENERAL

3. (a) Name of Owner/Occupier :
 (b) Name and address of the unit and location :
4. (a) Whether the unit is generating hazardous waste as defined in the Hazardous Wastes (Management and Handing) Rules, 1989 :
 (b) If so the category No. :
5. (a) Total capital invested on the project .
 (b) Year of commencement of production :
 (c) Whether the industry works general/ 2 shifts/round the clock :
6. (a) List and quantum of products and bye-products :
7. Furnish a flow diagram of manufacturing process showing input

---

[1] Subs. by Rule 2 of the Air (Pollution and Control of Pollution) (Union Territories Amendment Rules, 1992 published in the *Gazette* notification No. G.S.R. 379(E), dated 31s March, 1992.

and output in terms of products and waste generated including for captive power generation and demineralised water :

PART B—Pertaining to sewage and trade effluent

8. Quantity and source of water for : :

(a) Cooling m^3/d

(b) Process m^3/d

(c) Domestic use m^3/d

(d) Others m^3/d

9. Sewage and trade effluent discharge

(a) Quantum of discharge m^3/d :

(b) Is there any effluent treatment plant :

(c) If yes, a brief description of unit operations with capacity :

(d) Characteristics of final effluent pH :

Suspended solids

Dissolved solids

Chemical Oxygen Demand (COD)

Biochemical Oxygen Demand (BOD)

Oil and grease 20° C

(Additional parameters as specified by the concerned Pollution Control Board)

(e) Mode of disposal and final discharge point (enclose map showing discharge point)

(f) Parameters and Frequency of self-monitoring

PART C—Pertaining to stack and vent emissions

10. (a) Number of stacks and vents with height and dia (m)

(b) Quality and quantity of stack emission from each of the above stacks—particulate matter and Sulphur Dioxide (SO_2) (Additional parameters as specified by the concerned Pollution Control Board) :

(c) A brief account of the air pollution control unit to deal with the emission :

(d) Parameters and Frequency of self monitoring :

PART D—Pertaining to hazardous waste and hazardous chemicals.

11. Solid wastes :

    (a) Total quantum of generation :

    (b) Quantum of hazardous waste generated and its nature, as defined under the Environment (Protection) Act, 1986. (See the Hazardous Wastes Management and Handling Rules, 1989). :

    (c) Mode of storage within the plant, method of disposal and any other information sought by the concerned Pollution Control Board :

12. (a) Hazardous Chemicals as defined under Environment (Protection) Act, 1986 (See the Manufacture, Storage and Import of Hazardous Chemicals Rules, 1989) :

    (b) Whether any isolated storage is involved if yes, attach details

    Yes/No

    (c) Whether emergency plans are prepared for taking

    —on site measures Yes/No

    —off-site measures Yes/No

I/We enclose herewith Receipt No........ .... Bank Draft No. .... Dated .... for Rs............................ (Rupees.............................) in favour of the Central Pollution Control Board, New Delhi towards the fees payable under Sec. 25 of the Act.

Yours faithfully,
Name and Signature of applicant

Note : 1. Any applicant knowingly giving incorrect information or suppressing any information pertaining thereto shall be liable to be punished under the Act.

2. *Strike out which is not relevant.]

* * *

S.O. 1032 (E), dated 12th December, 1989.—In exercise of the powers conferred by sub-section (1) of Sec. 31 read with sub-section (2) of the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981), and in suppression of the notification of the Government of India in the Ministry of Environment and Forests (Department of Environment, Forests and Wild-life) No S O 147 (E) dated 8th February, 1988, the Central Government hereby constitutes Appellate Authority for the Union Territories and appoints the Joint secretary incharge of pollution control in the Ministry of Environment and Forests as the said authority

G.S.R. 778 (E) dated 31st December, 1998.[2]—Whereas with a view to protecting and improving the quality of the environment and preventing, controlling and abating environment pollution in the National Capital Territory of Delhi, it is expedient and necessary to take measures relating to the supply, distribution, buying and selling of 2-T oil (lubricating oil),

Now, therefore, in exercise of the powers conferred by sub-secs. (1) and (2) of Sec. 3 of the Environment (Protection Act, 1986 (29 of 1986), the Central Government hereby makes the following Order, namely —

1. Short title, extent and commencement.—(1) This order may be called the 2-T Oil (Regulation of Supply and Distribution) Order, 1998.

(2) It extends to the whole of the National Capital Territory of Delhi.

(3) It shall come into force on the date of its publication in the Official Gazette.

2. Definitions.—In this Order, unless the context otherwise requires—

(*a*) "2-T Oil" means lubricating oil, meeting API-TAC (American Petroleum Institute-TC) or JASO (Japanese Automobile Standards Organisation) specification, used in 2-stroke petrol vehicle engines;

(*b*) "container" means a sealed package containing pre-packed 2-T oil in declared quantity;

(*c*) "loose 2-T oil" means 2-T oil which is not contained in a sealed container;

(*d*) "National Capital Territory of Delhi" means the National Capital Territory of Delhi as defined in the Government of National Capital Territory of Delhi Act, 1991 (1 of 1992).

3. Restriction on sale and purchase of loose 2-T oil :—(1) No person shall sell or agree to sell or otherwise dispose of loose 2-T oil in a service garage for use in 2-Stroke engine vehicle of any make.

(2) In petrol stations, 2-T oil shall be sold only pre-mixed wit petrol through nozzle :

Provided that the above restriction shall not apply to the 2-stroke engine vehicles having separate sump for 2-T oil provided by the manufacturer in containers for use in the engine of such vehicle through such sumps.

PART III-1

THE ENVIRONMENT (PROTECTION) ACT, 1986

(ACT NO. 29 OF 1986)[1]

[23rd May, 1986]

An Act to provide for the protection and improvement of environment and for matters connected therewith.

WHEREAS decisions were taken at the United Nations Conference on the Human Environment held at Stockholm in June 1972, in which India participated, to take appropriate steps for the protection and improvement of human environment;

AND WHEREAS it is considered necessary further to implement the decisions aforesaid in so far as they relate to the protection and improvement of environment and the prevention of hazards to human beings, other living creatures, plants and property;

BE it enacted by Parliament in the Thirty-seventh Year of the Republic of India as follows :—

STATEMENT OF OBJECTS AND REASONS

Concern over the state of environment has grown, the world over since the sixties. The decline in environmental quality has been evidenced by increasing pollution, loss of vegetal cover and biological diversity, excessive concentrations of harmful chemicals in the ambient atmosphere and in food chains, growing risks of environmental accidents and threats to life support systems. The world communities resolve to protect and enhance the environmental quality found expression in the decisions taken at the United Nations Conference on the Human Environment held in Stockholm in June, 1972. Government of India participated in the Conference and strongly voiced the environmental concerns. While several measures have been taken for environmental protection both before and after the Conference, the need for a general legislation further to implement the decisions of the Conference has become increasingly evident.

Although there are existing laws dealing directly or indirectly, with several environmental matters, it is necessary to have a general legislation for environmental protection. Existing laws generally focus on specific types of pollution or on specific categories of hazardous substances. Some major areas of environmental hazards are not covered. There also exists uncovered gaps in areas of major environmental hazards. There are inadequate linkages in handling matters of industrial and environmental safety. Control mechanisms to guard against slow, insidious build up of hazardous substances, especially new chemicals, in the environment are weak. Because of a multiplicity of regulatory agencies, there is need for an authority which can assume the lead role for studying, planning and implementing long-term requirements of environmental safety and to give direction to, and co-ordinate a system of speedy and adequate response to emergency situations threatening environment.

---

1. Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 1, dated the 26th May, 1986.

In view of what has been stated above, there is urgent need for the enactment of a general legislation on environmental protection which, *inter alia*, should enable co-ordination of activities of the various regulatory agencies, creation of an authority or authorities with adequate powers for environmental protection, regulation of discharge of environmental pollutants and handling of hazardous substances, speedy response in the event of accidents, threatening environment and deterrent punishment to those who endanger human environment, safety and health.

Comments

It is well settled that when the language of the statute is clear and admits of no ambiguity, recourse to the statement of objects and reasons for the purpose of construing a statutory provision in not permissible.[1]

The Court must strive to so interpret the statute as to protect and advance the object and purpose of that enactment. Any narrow or technical interpretation of the provisions would defeat the legislative policy. The Court must, therefore, keep the legislative policy in mind in applying the provisions of the Act to the facts of the case.[2]

Interpretation of statutes.—Statements of objects and reasons can be useful for the purpose of ascertaining the circumstances which led to the introduction of the Bill. In the view of the matter for finding out the true interpretation thereof the statement of objects and reasons cannot be taken as an aid. It is true that for the purpose of ascertaining the intention of the Legislature other provisions of the Act can be considered.[3]

CHAPTER I

PRELIMINARY

***1. Short title, extent and commencement.**—(1) This Act may be called the Environment (Protection) Act, 1986.*

(2) It extends to the whole of India.

(3) It shall come into force on such date,[4] as the Central Government may, by notification in the Official Gazette, appoint and different dates may be appointed for different provisions of this Act and for different areas.

SYNOPSIS

1. Introduction ... 460
2. *Generallia specialibus non-derogant.* ... 461
3. Establishment of Environmental Courts—Need of 461

1. Introduction.—Section 1 deals with the short title, extent and commencement of the legislation. The legislation will come into force on the date notified by the Central Government and different dates may be notified for different provisions and for different areas.

[3] Parle Beverages *v.* Thakore Pratapji Kacharaji, 1988 (1) XXIX (1) Guj. L.R. 183 at p. 186.

[4] Enforced w.e.f. 19th November, 1986, *vide* G.S.R. 1198 (E), dated 12th November, 1986, published in the *Gazette of India*, dated 12th November, 1986.

The Water (Prevention and Control of Pollution) Act, 1974 and the Air (Prevention and Control of Pollution) Act, 1981, have been enacted for the establishment of Central and State Boards for Prevention and Control of Water and Air Pollution.

Now in 1986 the Parliament has enacted the Environment (Protection) Act, 1986 (29 of 1986), to cover the third uncovered area for which decisions were taken at the United Nations Conference on the Human Environment held at Stockholm in June, 1972, in which India participated to take appropriate steps for the protection, improvement of human environment and the prevention of hazards to human beings, other living creatures, plants and property.

2. *Generallia specialibus non-derogant.*—It is well known proposition of law that when a matter falls under any specific provision, then it must be governed by that provision and not by the general provision (*Generallia specialibus non-derogant).*[1]

3. **Establishment of Environmental Courts—Need of.**—The experience shows that the prosecutions launched in ordinary Criminal Courts under the provisions of the Water Act, Air Act and Environment Act never reach their conclusion either because of the work-load in those Courts or because there is no proper appreciation of the significance of the environment matters on the part of those in-charge of conducting of those cases. Moreover, any orders passed by the authorities under Water and Air Acts and the Environment Act are immediately questioned by the industries in Courts. Those proceedings take years and years to reach conclusion. Very often, interim orders are granted meanwhile which effectively disable the authorities from ensuring the implementation of their orders. All this points to the need for creating environment Courts which alone should be empowered to deal with all matters, civil and criminal, relating to environment. These Courts should be manned by legally trained persons/judicial officers and should be allowed to adopt summary procedures. This issue, no doubt, requires to be studied and examined indepth from all angles before taking any action. The Central Government may also consider the advisability of strengthening the environment protection machinery both at the Centre and the States and provide them more teeth. The head of several units and agencies should be made personally accountable for any lapses and/or negligence on the part of their units and agencies. The idea, of an environmental audit by specialist bodies created on a permanent basis with power to inspect, check and take necessary action not only against erring industries but also against erring officers may be considered. The idea of an environmental audit conducted periodically and certified annually, by specialists in the field, duly recognised can also be considered. The ultimate idea is to integrate and balance the concern for environment with the need for industrialisation and technological progress.[2]

2. *Definitions.—In this Act, unless the context otherwise requires,—*

(a) "environment" includes water, air and land and the inter-relationship which exists among and between water, air and land, and human beings, other living creatures, plants, micro-organisms and property;

[2] Indian Council for Enviro-Legal Action *v.* Union of India, A.I.R. 1996 S.C. 1446 at p. 1469.

(b) *"environmental pollutant" means any solid, liquid or gaseous substance present in such concentration as may be, or tend to be, injurious to environment ;*

(c) *"environmental pollution" means the presence in the environment of any environmental pollutant ;*

(d) *"handling", in relation to any substance, means the manufacture, processing, treatment, package, storage, transportation, use collection, destruction, conversion, offering for sale, transfer or the like of such substance;*

(e) *"hazardous substance" means any substance or preparation which, by reason for its chemical or physico-chemical properties or handling, is liable to cause harm to human beings, other living creatures, plants, micro-organism, property or the environment ;*

(f) *"occupier", in relation to any factory or premises, means a person who has control over the affairs of the factory or the premises and includes, in relation to any substance, the person in possession of the substance ;*

(g) *"prescribed" means prescribed by rules made under this Act.*

SYNOPSIS

1. Destruction of forests is a serious offence affecting environment ... 462
2. Ambiguous expression ... 462
3. Interpretation of Section ... 462
4. Pollution Control Board—Directions to ... 462

Section 2 defines the various words and expressions used in the Act.

1. Destruction of forests is a serious offence affecting environment.—Industrial pollution and destruction of nature upsetting ecological balance have turned to be frightening menaces. Industrial effluents and fumes have polluted air. The high seas of the world have become global dumping grounds. An industrial society progressing by leaps and bounds to material wealth has mindlessly hurt environment almost to a point of no return. It has to be restored to its pristine purity, if life on the planet should prevail. The Forest Act is a piece of legislation in this direction and it makes destruction of forests, a serious offence. The legislative perception must be enforced with seriousness of purpose. So viewed, sentence is not harsh at all.[1]

2. Ambiguous expression.—Courts must find out the literal meaning of the expression in the task of construction. In doing so if the expressions are ambiguous then the construction that fulfils the object of the legislation must provide the key to the meaning. Courts must not make mockery of legislation and should take a constructive approach to fulfil the purpose and for that purpose, if necessary, iron out the creases.[2]

3. Interpretation of Section.—The Court can merely interpret the section; it cannot re-write, re-cast or re-design the section.[3]

4. Pollution Control Board—Directions to.—Definition of environment pollutants has been defined in Sec. 2 (*b*) of the Environment (Protection) Act,

1986, which means "any solid, liquid or gaseous substance present in the atmosphere in such concentration as may be or tends to be injurious to environment".

Excessive noise is certainly a pollution in the society. In India, no effective and elaborate law has been made for controlling the noise creator. But under Art. 19 (1) (*a*), read with Art. 21 of the Constitution of India, the citizens have a right of a decent environment and they have a right to live peacefully, right to sleep at night and to have a right to leisure which are all necessary ingredients of the right to life guaranted under Art. 21 of the Constitution. There are various other sources where the noise is created or generated but which offend citizens' right guaranteed under Art. 19 (1) (*a*) and 21 of the Constitution.

Accordingly, their Lordships direct the West Bengal Pollution Control Board with the expert committee already appointed, to take a decision on this question after considering all the aspects of the matter including the suggestions and recommendations made by National Committee on Noise Level Control and after giving hearing to the applicants namely, Mohan Fire Works and the Burrabazar Fire Works Dealers Association and also after considering the view of the experts and the views of Dr. Abirlal Mukherjee, shall pass an order fixing the sound level of the fire works in the State of West Bengal and in view of territorial jurisdiction of the High Court neither this Court can direct the order effective to the outside West Bengal and accordingly, the Pollution Control Board's decision shall only confine to the State of West Bengal.[1]

CHAPTER II

GENERAL POWERS OF THE CENTRAL GOVERNMENT

*3. **Power of Central Government to take measures to protect and improve environment.**— (1) Subject to the provisions of this Act, the Central Governments shall have the power to take all such measures as it deems necessary or expedient for the purpose of protecting and improving the quality of the environment and improving the quality of the environment and preventing, controlling and abating environmental pollution.*

(2) In particular, and without prejudice to the generality of the provisions of sub-section (1), such measures may include measures with respect to all or any of the following matters, namely :

- *(i) co-ordination of actions by the State Governments, officers and other authorities—*
  - *(a) under this Act, or the rules made thereunder ; or*
  - *(b) under any other law for the time being in force which is relatable to the objects of this Act ;*
- *(ii) planning and execution of a nation-wide programme for the prevention, control and abatement of environmental pollution ;*

---

[1] **Burrabazar Fire Works Dealers Association *v*. Commr. of Police, Calcutta, A.I.R. 1998 Cal. 121 at pp. 125, 136.**

(iii) *laying down standards for the quality of environment in its various aspects ;*

(iv) *laying down standards for emission or discharge of environmental pollutants from various sources whatsoever :*

Provided that different standards for emission or discharge may be laid down under this clause from different sources having regard to the quality or composition of the emission or discharge of environmental pollutants from such sources ;

(v) *restriction of areas in which any industries, operations, or processes, or class of industries, operations or processes shall not be carried out or shall be carried out subject to certain safeguards ;*

(vi) *laying down procedures and safeguards for the prevention of accidents which may cause environmental pollution and remedial measures for such accidents ;*

(vii) *laying down procedures and safeguards for the handling of hazardous substances ;*

(viii) *examination of such manufacturing processes, materials and substances as are likely to cause environmental pollution ;*

(ix) *carrying out and sponsoring investigations and research relating to problems of environmental pollution ;*

(x) *inspection of any premises, plant, equipment, machinery, manufacturing or other processes, materials or substances and giving, by order, of such directions to such authorities, officers or persons as it may consider necessary to take steps for the prevention, control and abatement of environmental pollution ;*

(xi) *establishment or recognition of environmental laboratories and institutes to carry out the functions entrusted to such environmental laboratories and institutes under this Act ;*

(xii) *collection and dissemination of information in respect of matters relating to environmental pollution ;*

(xiii) *prevention of manuals, codes or guides relating to the prevention, control and abatement of environmental pollution ;*

(xiv) *such other matters as the Central Government deems necessary or expedient for the purpose of securing the effective implementation of the provisions of this Act.*

(3) The Central Government may, if it considers it necessary or expedient so to do for the purposes of this Act, by order, published in the Official Gazette, constitute an authority or authorities by such name or names as may be specified in the order for the purpose of exercising and performing such of the powers and functions (including the power to issue directions under Sec. 5 of the Central Government under this Act and for taking measures with respect to such of the matters referred to in sub-section (2) as may be mentioned in the order and subject to the supervision and control of the Central Government and the provisions of such order, such authority or authorities may exercise the powers or perform the functions or take the measures so mentioned in the order as if such authority or authorities had been empowered by this Act to exercise those powers or perform those functions or take such measures.

5. Directions—Disobedience of ... 467
6. Central Government—Power of—Petitions—Not maintainable .. 467
7 Direction for stoppage of mining operations within 2 kms. radius — Report of expert body — Considered ... 468
8. The prohibition relating to land reclamation intended to cover only such land reclamation as would disturb the natural course of sea water. .. 468
9 Development should not be at the cost of environment and *vice-versa* .. 468
10 Court can levy cost upon the pollutor . 469
11 Central Government is empowered to constitute an authority to take measures to protect the environment ... 469
12. Environment and Ecology—Maintainance of ... 471
13. Environmental degrdation Control of ... 471
14. Eco-System is to be preserved ... 472
15. The old concept that development and ecology cannot go together is no longer acceptable . 472
16. Preservation of forest land from deforestation to maintain ecology and to prevent environment or degradation and hazardous effect on right to life 473
17 Restraint in erection of residential buildings around chemical industries .. 473

Section 3 vests power in the Central Government to take all such measures as are necessary or expedient for the purpose of protecting and improving the quality of environment and preventing, controlling or abating environmental pollution. The section also enumerates some of such measures. This section further empowers the Central Government to constitute an authority or authorities for the purpose of the legislation.

1. Intention of legislation.—The construction which promotes the objective for which the enactment is intended must be adopted.[1]

2. Scope and objects explained.—Realizing the importance of the prevention and control of pollution of water for human existence, Parliament has passed the Water (Prevention and Control of Pollution) Act, 1974 (Act 6 of 1974), to provide for the prevention and control of water pollution and the maintaining or restoring of wholesomeness of water, for the establishment, with a view to carrying out the purposes aforesaid, of Boards for the prevention and control of water pollution, for conferring on and assigning to such Boards powers and functions relating thereto and for matters connected therewith. In addition to the above Act, Parliament has also passed the Environment (Protection) Act, 1986 (29 of 1986), which has been brought into force throughout India with effect from 19th November, 1986. Section 3 of this Act confers power on the Central Government to take all such measures, as it deems necessary or expedient for the purpose of protecting and improving the quality of the environment and preventing, controlling and abating environmental pollution. "Environmental" includes water, air and land and the inter-relationship which exists among and between water, air and land and human beings, other living creatures, plants, micro-organism, and property, [*vide* Sec. 2 (*a*) of the Environment (Protection) Act, 1986]. Under Sec. 3(2) (*iv*) of the said Act, the Central Government may lay down standards for emission or discharge of environmental pollutants from various sources whatsoever. Notwithstanding anything contained in any other law, but subject to the provisions of the Environment (Protection) Act, 1986, the Central Government may under Sec. 5 of the Act, in the exercise of its powers and performance of its functions under that Act, issue directions in writing to any person, officer or authority, and such authority is bound to comply with such directions. The power to issue directions under the said section includes the power to direct the closure, prohibition or regulation of any industry, operation or process or stoppage or regulation of the supply of electricity or water or any other service. Section 9 of the said Act imposed a duty on every person to take steps to prevent or mitigate the environmental pollution. Section 15 of the said Act contains provisions relating to penalties that may be imposed for the contravention of any of the provisions of the said Act or directions issued thereunder.[1]

---

[1] Ashok Ambu Parmar *v.* Commissioner of Police, Vadodara City, A.I.R. 1987 Guj. 147 at p. 153.

3. Precautionary Principle.—The "Precautionary Principle" has been accepted as a part of the law of the land. Articles 21, 47, 48-A and 51-A (*g*) of the Constitution of India give a clear mandate to the State to protect and improve the environment and to safeguard the forests and wildlife of the country. It is the duty of every citizen of India to protect and improve the natural environment including forests, lakes, rivers and wildlife and to have compassion for living creatures. The "Precautionary Principle" makes it mandatory for the State Government to anticipate, prevent and attack the causes of environmental degradation. Their Lordships have no hesitation in holding that in order to protect the two lakes from environmental degradation, it is necessary to limit the construction activity in the close vicinity of the lakes.[2]

4. The authority—Constitution of.—It is also necessary to take note of the fact that the constitution of a Committee as above with comprehensive authority to deal with the entire matter relating to environmental pollution in the National Capital Region and the continuance of any other authority with concurrent jurisdictionin any area within the entire sphere of environmental pollution in the National Capital Region is bound to create an embarrassing situation because of conflict of jurisdiction of the two authorities within the common sphere. Such a result would not be conductive to proper administration and implementation of the programme of preventing and controlling environmental pollution in the National Capital Region. It is, therefore, necessary to make an appropriate order which would avoid any conflict of jurisdiction between the two authorities. In courts opinion, the only appropriate course to adopt is to permit the Government of India to supersede the earlier notification constituting the authority headed by Mr. Justice R.K. Shukla pursuant to the order dated 13th September, 1996 passed in IA No. 18 in Writ petition (C) No. 4677 of 1985, to be effective from the date of constitution of the above authority headed by Sh. Bhure Lal. Their Lordships direct accordingly and the earlier order dated 13th September, 1996 shall stand modified to this extent.[1]

[2] **M.C. Mehta *v.* Union of India, (1997) 3 S.C.C. 715 at p. 720.**

Setting up Hot Mix Plants—Vicinity of Airports—Guidelines.

The Apex Court held that resurfacing of Airport Runways is a work of national importance which has to be carried out so that the Indira Gandhi International Airport is operational and does not cause any operational hazard at the time of landing or take off. The environmental problem has to be balanced with the necessity of running an international Airport in the Capital of India. The Airports Authority of India has already called for global tenders for the job in question in which one of the eligibility criteria is that the firm must possess adquate capacity environment friendly Hot Mix Plant, electronically computerised paver finisher, pneumatic and conventional rollers and tools and tackles.[2]

5. Directions—Disobedience of.—Now Kerala State is declared as an air pollution control area. So, fifth respondent has to get consent as per the Air (Prevention and Control) Act, 1981 also. Immediately after complying with the directions mentioned in the report submitted by the Pollution Control Board and after getting necessary consent from the Pollution Control Board and after getting necessary consent from the Pollution Control Board fifth respondent can restart the factory. In other words, operation of the fifth respondent factory can continue only after complying with the directions of the fourth respondent as contained in the report filed before the Court as early on 21.6.1993. Respondents 1 to 4 hould ensure that fifth respondent should carry out the relevant provisions of the statutes mentioned earlier.[3]

6. Central Government—Power of—Petitions—Not maintainable.—Individual notices were given and also widest possible publicity was given about this case. The persons affected were directed to appear in Court to place their case. Public Notices were also issued in large number of newspapers all over India in English and also in local language informing the Aqua Farms about the pendency of the litigation and the date of next hearing i.e., on 17.10.1995. In view of these facts, it is difficult to believe that the writ petitioners did not receive any notice or were unaware of the pendency of the case of Jagannath[4] before the Supreme Court or that the Aqua Farms were actually involved in that case. Because of all these reasons their Lordships are of the view that now that the judgment has been pronounced, these writ petitions are not maintainable.[5]

[2] **M.C. Mehta *v.* Union of India, A.I.R 1999 S.C. 2367 at pp. 2373, 2374.**

[3] **M.R. Pillai *v.* Executive Officer, Pathiyoor Panchayat, A.I.R. 1997 Ker. 162 at pp. 164, 165.**

[4] 1997 A.I.R. S.C.W. 635.

[5] **Gopi Aqua Farms *v.* Union of India, A.I.R. 1997 S.C. 3519 at pp. 3520, 3521.**

7. Direction for the stoppage of mining operations within 2 kms. radius—Report of expert body—Considered.—In order to preserve environment and control pollution within the vicinity of the two tourist resorts it is necessary to stop mining in the areas. The question, however, for consideration is what should be the extent of the said area ? N.E.E.R.I. in its report has recommended that 200 metres green belts be developed at 1 km. radius all around the boundaries of the two lakes. It is, thus, obvious that twelve hundred metres are required for the green belts. Leaving another 800 metres as a cushion to absorb the air and noise pollution generated by the mining operations, their Lordships are of the view that it would be reasonable to direct the stoppage of mining activity within two kms. radius of the tourist resorts of Badkal and Surajkund.[1]

8. The prohibition relating to land reclamation is intended to cover only such land reclamation as would disturb the natural course of sea water.—Sea water in the Arabian Sea is different from brackish water in Backwaters. Only such land reclamation as would disturb the natural course of sea water would fall within the area of prohibition. The prohibition relating to land reclamation is intended to cover only such land reclamation as would disturb the natural course of sea water.[2]

9. Development should not be at the cost of environment and *vice versa*— In matters relating to environment, it may not always be possible to lay down rigid or uniform standards for the entire country. While issuing the notifications like the present, the Government has to balance various interests including economic, ecological, social and cultural. While economic development should not be allowed to take place at the cost of ecology or by causing widespread environment destruction and violation at the same time, the necessity to preserve ecology and environment should not hamper economic and other developments. Both development and environment must go hand in hand, in other words, there should not be development at the cost of environment and *vice versa*, but there should be development while taking due care and ensuring the protection of environment. This is sought to be achieved by issuing notifications like the present, relating to developmental activities being carried out in such a way so that unnecessary environmental degradation does not take place. In other words, in order to prevent ecological imbalance and degradation that developmental activity is sought to be regulated.

The main notification was issued under Sec. 3 (1) and 3 (2) (*v*) of the Environment Protection Act, presumably after a lot of study had been undertaken by the Government. That such a study had taken place is evident from the bare perusal of notification itself which shows how coastal areas have been classified into different zones and the activities which are prohibited or permitted to be carried out in certain areas with a view to preserve and maintain the ecological balance.[3]

10. Court can levy cost upon the polluter.—The Environment Act contains useful provisions for controlling pollution. The main purpose of the Act is to create an authority or authorities under Sec. 3 (3) of the Environment Protection Act, with adequate powers to control pollution and protect the environment. It is a pity that till date no authority has been constituted by the Central Government. The work which is required to be done by an authority in terms of Sec. 3 (3) read with other provisions of the Act is being done by Supreme Court and the other Courts in the country. It is high time that the Central Government realises its responsibility and statutory duty to protect the degrading environment in the country. If the conditions in the five districts of Tamil Nadu, where tanneries are operating, are permitted to continue then in the near future all rivers/canals shall be polluted, underground waters contaminated, agricultural lands turned barren and the residents of the area exposed to serious disease. It is, therefore, necessary for Supreme Court to direct the Central Government to take immediate action under the provisions of the Environment Act. It is the statutory duty of the Central Government to protect the degrading environment in the country. There are more than 900 tanneries operating in the five districts of Tamil Nadu. Some of them may, by now, have installed the necessary pollution control measures; they have been polluting the environment for over a decade and in some cases even for a longer period. Supreme Court has in various orders indicated that these tanneries are liable to pay pollution fine. The polluters must compensate the affected persons and also pay the cost of restoring the damaged ecology.[1]

Execreise of Section 144 Cr P C—Not Sufficient-in use of polythene bags—

In the instant case the Court Ltd. that here is no second opinion that anything that affects 'public health', 'hygiene' and tranquility has to be abhorred. For that matter what is needed is proper study to identify those objects and to plan ahead to obliterate those possible hazards before they surface as a menance. To tide up such eventuality, necessary laws will have to be enacted. Resort to temporary oremergency powers under Section 144 of the Code of Criminal Procedure cannot be a permanent solution to those problems. Use of polythene bags containing lead (toxic element) because of dye used as an ingredient may be dealt with under Sec. 144 of the Code of Criminal Procedure for a short period, but not in perpetuity. Moreover, this is not included as one of the reasons in the impugned order. If the recycling process is undertaking by any of the manufacturers in violation of any law in force, the problem has to be dealt with under that law only.[2]

11. Central Government is empowered to constitute an authority to take measures to protect the environment.—The part of the shore which remains covered with water at the High Tide and gets uncovered and becomes visible at the Low Tide is called "foreshore". It is not possible to set up a shrimp culture farm in the said area because it would completely submerge in water at the High Tide. It is, therefore, obvious that foreshore facilities are neither directly nor indirectly needed in the setting up of a shrimp farm. So far as "water front" is concerned it is no doubt correct that a shrimp farm may have some relation to the water front in the sense that the farm is dependent on brackish water which can be drawn from the sea. The purpose of CRZ

---

1. Vellore Citizens' Welfare Forum *v.* Union of India, A.I.R. 1996 S.C 2715 at p. 2724: (1996) 5 S C.C 647 at p. 665
2. **Utpal Barbara *v.* State of Assam, A.I.R. 1999 Gau. 78 at p. 83.**

Notification is to protect the ecological fragile coastal areas and to safeguard the aesthetic qualities and uses of the sea coast. The setting up of modern shrimp aquaculture farms right on the sea coast and construction of ponds and other infra-structure thereon is *per se* hazardous and is bound to degrade the marine ecology, coastal environment and the aesthetic uses of the sea coast. Supreme Court has, therefore, no hesitation in holding that the shrimp culture industry is neither "directly related to water front" nor "directly needing foreshore facilities". The setting up of shrimp culture farms within the prohibited areas under the CRZ Notification cannot be permitted. An industry dependent on sea water cannot by itself be an industry "directly related to water front" or "directly needing foreshore facilities". The shrimp culture industry, therefore, cannot be permitted to be set up anywhere in the coastal regulation zone under the CRZ Notification. Sea coast and beaches are a gift of the nature to the mankind. The aesthetic qualities and recreational utility of the said area has to be maintained. Any activity which has the effect of degrading the environment cannot be permitted. Apart from that the right of the fishermen and farmers living in the coastal areas to eke their living by way of fishing and farming cannot be denied to them. On the basis of the assessment of socio-economic status of aquaculture in a systematic manner the N.E.E.R.I. has reached the conclusion that the damage caused to ecology and economics by the aquaculture farming is higher than the earnings from the sale of aquaculture produce. The traditional and improved traditional types of shrimp-farm technologies—defined by Alagarswami—are environmentally benign and pollution-free. Other types of technologies—extensive, modified extensive, semi-intensive and intensive—create pollution and have degrading effect on the environment and coastal ecology. Such type of shrimp farms cannot be permitted to operate. Before any shrimp industry or shrimp pond is permitted to be installed in the ecology, fragile coastal area it must pass through a strict environmental test. There had to be a high powered "Authority under the Act to scrutinise each and every case from the environmental point of view. There must be an environmental impact assessment before permission is granted to install commercial shrimp farms The conceptual framework of the assessment must be broad-based primarily concerning environmental degradation linked with shrimp farming. The assessment must also include the social impact on different pollution strata in the area. The quality of the assessment must also include the social impact on different population strata in the area. The quality of the assessment must be analytically based on superior technology. It must take into consideration the inter-generational equity and the compensation for those who are affected and prejudiced. The Central Government shall constitute an authority under Sec. 3 (3) of the Environment (Protection) Act, 1986 and shall confer on the said authority all the powers necessary to the ecologically fragile coastal areas and specially to deal with the situation created by the shrimp culture industry in the coastal States, Union Territories. The authority shall be headed by a retired Judge of a High Court. Other members preferably with expertise in the field of aquaculture, pollution control and environment protection shall be appointed by the Central Government. The Central Government shall confer on the said authority the powers to issue directions under Sec. 5 of the Act and for taking measures with respect to the matters referred to in Cls. (*v*), (*vi*), (*vii*), (*viii*), (*ix*), (*x*) and (*xii*) of sub-section (2) of Sec. 5. The Central Government shall constitute the authority before 15th January 1997. The authority so constituted by the Central Government shall implement "the Precautionary Principle" and "the Polluter

Pays" principles. The shrimp culture industry/the shrimp ponds are covered by the prohibition contained in para. 2 (1) of the CRZ Notification. No shrimp culture pond can be constructed or set up within the coastal regulation zone as defined in the CRZ notification. This shall be applicable to all seas, bays, estuaries, creeks, rivers and backwaters. This direction shall not apply to traditional and improved traditional types of technologies (as defined in Alagarswami report which are practised in the coastal low lying areas. All aquaculture industries/shrimp culture industries./shrimp culture ponds operating/set up in the coastal regulation zone as defined under the CRZ Notification shall be demolished and removed from the said area before 31st March, 1997. Supreme Court directed the Superintendent of Police/Deputy Commissioner of Police and the District Magistrate/Collector of the area to enforce this direction and close/demolish all aquaculture industries/shrimp culture industries and shrimp culture ponds on or before 31st March, 1997. A compliance report in this respect shall be filed in Supreme Court by these authorities before 15th April, 1997.[1]

12. Environment and Ecology—Maintenance of.—Even though the proliferation of wood based industries has been the main cause of degradation of forests in the North-Eastern States, considering the extent of forests (64% of the geographical area) and the dependence of the local people on the forest resources in the region it is neither feasible, nor desirable, to ban completely either the timber trade or running of the wood based industries. However, their numbers and capacities need to be regulated qua the sustainable availability of forest produce and they are also required to be refocated in specified industrial zones. Moreover, the industrial requirements have to be subordinated to the maintenance of environment and ecology as well as *bona fide* local needs.[2]

13. Environmental degradation—Control of.—After the enactment of the Water (Prevention and Control of Pollution) Act, 1974 in the State of West Bengal, tanneries of the said locality never applied for consent to the State Pollution Control Board. Only in the year 1989, more than one hundred tanneries applied for consent to the State Board after long persuasion.

Considering their practical problem, State Board issued consent under the Water (Prevention and Control of Pollution) Act, 1974, to the tanneries for six months only in the year 1989, with a condition that within the validity period of consent i.e., within 6 (six) months, the said tanneries will construct primary effluent treatment plant and submit a scheme of secondary effluent treatment plant. But unfortunately none of the tanneries situated in the said area constructed or have taken any steps for construction of effluent tretment plant.

Therefore, State Board issued legal notice to the tanneries in the year 1992. Show-cause notices were also issued by the State Board asking why their factory may not be directed to be closed for not putting up the right type of effluent treatment plant as per the order of the Hon'ble Supreme Court, dated 1-12-1992.

Subsequently more than 275 tanneries applies for consent to the State Board, but in view of the Hon'ble Supreme Court's order dated 19th February,

---

[1] **S. Jagannath *v.* Union of India, A.I.R. 1997 S.C. 811 at pp. 822-851 : (1997) 2 S.C.C. 87.**

[2] **T.N. Godavarman Thirumulpad *v.* Union of India, A.I.R. 1998 S.C. 769 at p. 770.**

1993, 'consent' was not granted to any of the tanneries. Moreover, tanneires of the said area were directed to submit an undertaking in court stamp paper that they are willing to move to any place as fixed up by the Government of West Bengal.

Accordingly, more than 280 tanneries submitted their undertaking in 'court stamp paper' that they are willing to move to any place as fixed up by the Government of West Bengal from their present location.

That, due to the existence of the tanneries without having any treatment facilities in Tangra, Tiljala and Topsia area, environmental degradation in such areas and their surroundings are extremely alarming. Virtually shifting of the tanneries from the present location to another place and construction of common effluent treatment plant, is the only practicable solution to control the environmental degradation as a whole".[1]

14. Eco-System is to be preserved.— Merely because money has been spent is no ground to degrade ecology and environment. While conforming uses in urban planning were not permitted to be compromised by the Supreme Court, when it was held that such violations were illegalities which were not curable as in *K. Ramdas Shenoy* v. *The Chief Officers, Town Municipal Council, Udipi.*[2] The violation of environment cannot continue and upsetting an ecological balance will be judged with even more strict standards. That money has been spent by the Nigam on putting prefabiticated structures and tents on the *bugiyal* was a misplaced expenditure. The *bugiyal* belongs to the people. it is an ecosystem in itself. Nature has tailored it. It is not for man to erode the sanctity of this area. It must be returned to nature to provide for whom it was meant; the sheep, the shepherd, the wild flowers, the micro-orgams and the plant and insect life below the turf and in the shrubs at that altitude. Clearly, putting a tourist lodging house on a *bugiyal* was a mistake. The Court had during the seasons 1994-95 and 1995-96 not interfere with the Nigam's occupation with this sensitive areas. As the Court has expected that by this time the Nigam would see the reality and unwind its occupation of running a camp tourist resort there. There is a danger looming on the horizon. If a State financed tourist camp has been planted on the *bugiyal*, there are other five star hotel groups waiting to encroach on this beautiful and tranquil area, nestling in the mountains. The Court is afraid that the Nigam will have to unwind its occupation of *bugiyal* next season before the end of March 1997. The Chief Conservator of Forests (Mills) will ensure that this will be done. Further, no allotment should be made in respect of occupation of the pasture lands and the meadows that are the *bugiyals*. This eco-system is to be preserved.[3]

15. The old concept that development and ecology cannot go together—Is no longer acceptable.—The Taj, apart from being a cultural heritage, is an industry by itself. More than two million tourists visit the Taj every year. It is a source of revenue for the country. The Supreme Court has monitored this petition from over three years with the sole object of preserving and protecting the Taj from deterioration and damage due to atmospheric and environmental pollution. It cannot be disputed that the use of coke/coal by the industries emits pollution in the ambient air. The objective behind this litigation is to stop the pollution while encouraging development of industry.

---

[1] **M.C. Mehta *v.* Union of India, (1997) 2 S.C.C. 411 at pp. 414, 415.**

[2] A.I.R. 1974 S.C. 2177.

[3] **Om Prakash Bhatt *v.* State of U.P., A.I.R. 1997 All. 259 at pp. 261, 262; 1997 All. L.J. 1263 at p. (1265-1266).**

The old concept that development and ecology cannot go together is no longer acceptable. Sustainable development is the answer. The development of industry is essential for the economy of the country, but at the same time the environment and the ecosystems have to be protected. The pollution created as a consequence of development must be commensurate with the carrying capacity of our ecosystems.[1]

16. Preservation of forest land from deforestation to maintain ecology and to prevent environmental degradation and hazardous effect on right to life.—The Environment (Protection) Act, 1986 (for short, the 'EP Act') was enacted to protect and improve environment and prevention of hazards to human beings, other living creatures, lands and property. Section 3 of Environment Protection Act enjoins the Central Government that it should take such measures as it deems necessary or expedient to the purpose of protecting and improving the quality of the environment and preventing, controlling and abating environmental pollution. It would, therefore, be clear that the meaning of the expression 'forest land' in the respective Acts requires extended meaning given so as to preserve forest land from deforestation to maintain ecology and to prevent environmental degradation and hazardous effect on right to life. In *Virender Gaur* v. *State of Haryana*,[2] the Supreme Court in paragraph 7 at pages 580-81 has held that environmental, ecological, air, water pollution, *etc.*, should be regarded as amounting to violation of right to life assured by Art. 21. Hygienic and environment are an integral facet of right to healthy life and it would be impossible to live with human dignity without a humane and healthy environment. Environmental protection, therefore, has now become a matter of grave concern for human existence. Promotion of environmental protection implies maintenance of ecofriendly environment as a whole comprising of man-made and the natural environment. It is, therefore, the duty of every citizen and industry to conserve, and if it becomes inevitable to disturb its existence, it is concomitant duty to reforest and add restore forestation; duty of the State to coordinate with all concerned and should ensure adequate measures to promote protect and improve both man-made, natural environment flora and fauna as well as bio-diversity.[3]

17. Restraint in erection of residential buildings around chemical industries.—The Supreme Court, therefore, directed the constitution of an Authority under Section 3 (3) of the Act by the Central Government, who shall cover all the necessary powers under the Act on the Authority, which shall be constituted within one month from the receipt of this order. The Authority shall submit its report to the Central Government within three months after examining and deciding all the relevant issues. This would be done by affording reasonable opportunity of hearingto the parties concerned. Follow-up actions shall be taken by all concerned as per the recomendations of the Authority within reasonable time.

As the constitution and deliberation of the Authority would take time, and its ultimate result cannot be foreseen at this stage, the court thought it fit to direct the Bombay Municipal Corporation to proceed further with the plans which had been submitted by the appellants, some of which also came to be sanctioned. But then, as sanctioning in some cases was about a decade back and as the scenario on thinking on the subject has since then changed a lot, so also the building bye-laws the court thought it fit to direct the Corporation to re-examine the question of grant of sanction on the basis of the existing rules

---

1. **M.C. Mehta *v.* Union of India, (1997) 2 S.C.C. 353 at p. 381.**
2. (1995) 2 S.C.C. 577.
3. **Samatha *v.* State of Andhra Pradesh, (1997) 2 S.C.J. 539 at p. 603.**

and bye-laws. The Corporation may proceed with this exercise, but it would await the result of the report of the aforesaid Authority. The court directed the Corporation to undertake this work at this stage itself because the matter has been delayed already and the Authority's deliberation would not be available for quite some time.

In the aforesaid view of the matter, the review petitions filed before the High Court by the respondents are not required to be kept alive and they would stand dismissed on withdrawal, to which effect prayer was made before the Supreme Court. The impugned directions of the High Court would automatically lapse.[1]

4. Appointment of Officers and their powers and functions.— *(1) Without prejudice to the provisions of sub-section (3) of Sec. 3, the Central Government may appoint officers with such designation as it thinks fit for the purposes of this Act and may entrust to them such of the powers and functions under this Act as it may deem fit.*

(2) The officers appointed under sub-section (1) shall be subject to the general control and direction of the Central Government or, if so directed by that Government, also of the authority or authorities, if any, constituted under sub-section (3) of Sec. 3 or of any other authority or officer.

Comment

Section 4 empowers the Central Government to appoint officers for the purpose of the legislation.

5. Power to give directions.—*Notwithstanding anything contained in any other law but subject to the provisions of this Act, the Central Government,[2] may, in the exercise of its powers and performance of its functions under this Act, issue directions in writing to any person,. officer or any authority and such person, officer or authority shall be bound to comply with such directions.[3]*

Explanation.—For the avoidance of doubts, it is hereby declared that the power to issue directions under this section includes the power to direct—

(a) the closure, prohibition or regulation of any industry, operation or process; or

(b) stoppage or regulation of the supply of electricity or water or any other service.

[3] For issuing directions *see* Rule 4 of Environment (Protection) Rules, 1986.

SYNOPSIS

1 Explanation ... 475
2 Restrictions, prohibitions regarding construction and setting up of industries—Directions to be followed meticulously by all the concerned States ... 475
3. Directions issued—To be implemented ... 475
4. The powers vested in the Central Government under the section ... 476
5. Direction for closure of the unit was made—Other facilities also stopped—Plea of reasonable opportunity of being heard—Rejected ... 476
6. Plea which defeats the purpose and object of enactment—Cannot be accepted ... 477

Section 18 of the Water Pollution Act, 1974 and Sec. 8 of the Air Pollution Act, 1981, both relate to the power of giving directions. Similar power has been given under Sec. 5 of the Environment (Protection) Act, 1986.

Section 5 empowers the Central Government, in exercise of its powers and performance of its functions under the legislation, to issue directions to any person, officer or authority.

1. **Explanation.**—It is now well settled that an explanation added to a statutory provision is not a substantive provision in any sense of the term but as the plain meaning of the word itself shows it is merely meant to explain or clarify certain ambiguities which may have crept in the statutory provision.[1]

2. **Restrictions, prohibitions regarding construction and setting up of industries—Directions to be followed meticulously by all the concerned States.**—In the instant case, their Lordships Court order dated 12th December, 1994 and directions that all the restrictions, prohibitions regarding construction and setting up of industries or for any other purpose contained in the notification dated 19th February, 1991 issued by Ministry of Environment and Forests, Government of India under Cl. *(d)* of sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986 shall be meticulously followed by all the concerned States. The activities which have been declared as prohibited within the Coastal Regulation Zone shall not be undertaken by any of the respondent-States. The regulations of permissible activities shall also be meticulously followed. The restriction imposed by the Coastal Areas Classification and Development Regulations containd in Annexure 1 to the above said notification shall also be strictly followed by the respondent-State.[2]

3. **Directions issued—To be implemented.**—In the instant case their Lordships may hasten to add that the valuable reports and the recommendations made after a detailed study and survey should be effectively implemented and carried out. In that view of the matter their Lordships hereby direct the additional respondent No. 6 to monitor and evaluate the performance of the industries and also the Corporation of Cochin and other bodies which are responsible in containing the air pollution

---

[1] S. Sundaram Pillai *v.* V.R. Pattabiraman, A.I.R. 1985 S.C. 582 at p. 592.

[2] Indian Council for Enviro-Legal Action *v.* Union of India, A.I.R. 1995 S.C. 2252 at p. 2253.

in and around the city of Cochin and submit yearly reports on or before 31st December, of the year, of the action taken in this regard to Kerala High Court. The first such report should be filed before 31st December, 1995. Their Lordships further make it clear that the recommendations made by N.E.E.R.I. and the State Pollution Control Board are binding on all the parties. They shall implement the recommendations within a reasonable time. The yearly report to be submitted by the 6th respondent and will contain steps taken by various authorities and bodies in this regard. Their Lordships consider that adequate sets and safeguards should be taken as effective by issue of suitable orders under the Air (Prevention and Control of Pollution) Act, 1981 and the Environment (Protection) Act, 1986. In the above circumstances their Lordships issue the following directions : (1) The 6th respondent is directed to monitor the implementation of the condition imposed in the consent orders to the various industries and see the conditions are complied with before the consent orders are re-newed yearly; (2) The 6th respondent is to submit yearly reports on or before 31st December every year before Kerala High Court in this regard; (3) The 6th respondent should file interim report; if necessary in reference to the pollution if the circumstances so warrant; (4) The Commissioner, Corporation of Cochin, is directed to take immediate steps to maintain the open sewage canal and prevent the dumping of the garbage in the open sewage canal by taking effective steps; (5) The Corporation of Cochin is directed to take urgent steps to lay down underground sewage pipes; (6) The State Government is directed to take immediate steps to implement the rules regarding automobile exhaust fumes causing air pollution; (7) The State Government should implement the recommendations of N.E.E.R.I. for prevention of air pollution by providing green belt barriers between the industrial zone and residential sectors without delay.[1]

4. The powers vested in the Central Government under the section.—The powers vested in the Central Government under Sec. 5 of the said Act have been delegated to the State of Gujarat by notification dated 10th February, 1988 issued by the Government of India, Ministry of Environment and Forests, Department of Environment, Forests and Wild Life issued under the signature of the then Secretary to Government of India, Mr. T.N. Seshan. The notification was published in *Gazette of India, Extraordinary*, Part II, Sec. 3, sub-section (*ii*). In view of this notification issued in exercise of powers conferred under Sec. 23 of the said Act, delegating the powers vested in the Central Government under Sec. 5 of the said Act to the State Government, the contention of the petitioners that the impugned orders are issued by the State Government under Sec. 5 without the authority of law, has no substance.[2]

5. Direction for closure of the unit was made—Other facilities also stopped—Plea of reasonable opportunity of being heard—Rejected.—Sub-rule (3-*b*) provides that the objection, if any, filed by the occupier with an officer designated in this behalf shall be dealt with in accordance with the procedure under sub-rules (3-*a*) and (4) of this rule. Neither sub-rule (3-*a*) nor sub-rule (4) provides for opportunity of hearing. All that is provided in these sub-rules is for giving an opportunity for filing objection and for consideration of such objection while passing order direction. In the case at hand, the notice was issued to the managing partner of the firm which the industrial unit is in question. Hence, there was no necessity to send a copy of the proposed direction to the occupier. Therefore, sub-rule (3-*b*) of rule 4 was not attracted in the case. The procedures prescribed under rule 4 have been duly followed in the case. In the circumstances, their Lordships are not persuaded to accept the contention of the petitioner that the direction issued by the Central Government under Sec. 5 of the Environment (Protection) Act was vitiated on the grounds noted earlier.[1]

---

[1] V. S. Damodaran Nair *v.* State of Kerala, A.I.R. 1996 Ker. 8 at pp. 21, 22.

[2] Narula Dyeing & Printing Works, M/s. *v.* Union of India, A.I.R. 1995 Guj. 185 at p. 192.

6. Plea which defeats the purpose and object of enactment—Cannot be accepted.—If the plea of the respondents regarding acceptance of the central point of the village to measure the specified area, is accepted, the issuance of notification dated 18th December, 1992 (*sic*) would be completely frustrated. For example, the said notification provides that no stone crusher shall operate within 5 Kms. from the boundary of the metropolitan city. The acceptance of such a plea would permit the installation of stone crushers within the city of Delhi itself, the boundaries of which have admittedly been expanded by many folds. If the centre of city of Delhi is taken to be Rajghat, the private respondents can prefer claim for installation of the stone crushers near or around Connaught Circus or even Rashtrapati Bhawan. If such a plea is accepted and stone crushers are permitted to be located within 3 kilometres away from the district headquarters, the owners of the stone crushers could prefer their claims to locate such crushers within the limits of the town of the district headquarter. Such a plea which apparently defeats the purpose and object of enactment of notifications, cannot be accepted. Similarly, in case of village *Abadi*, the plea of the respondents to accept the Lal Lakir as the point from where the distance is to be measured, cannot be accepted particularly when the village has expanded with the passage of time and improved condition particularly in and around important cities.[2]

The effort of Supreme Court while dealing with public interest litigation relating to environmental issues, is to see that the executive authorities take steps for implementation and enforcement of law. As such the Court has to pass orders and give directions for the protection of the fundamental rights of the people. Passing of appropriate orders requiring the implementation of the law cannot be regarded as the Court having usurped the functions of the Legislature or the executive. The orders are passed and directions are issued by the Court in discharge of its judicial function, namely, to see that if there is a complaint by a petitioner regarding the infringement of any constitutional or other legal right, as a result of any wrong action or inaction on the part of the State, then such wrong should not be permitted to continue. It is by keeping the aforesaid principles in mind that one has to consider as to what directions should be issued to ensure, in the best possible manner, that the provisions of the main Notification which has been issued for preserving the coastal areas are not infringed.[1]

*6. **Rules to regulate environmental pollution.**—(1) The Central Government may, by notification in the Official Gazette, make rules in respect of all or any of the matters referred to in Sec. 3.*

(2) In particular, and without prejudice to the generality of the foregoing power, such rules may provide for all or any of the following matters, namely :

- *(a) the standards of quality of air, water or soil for various areas and purposes;*[2]
- *(b) the maximum allowable limits of concentration of various environmental pollutants (including noise) for different areas ;*
- *(c) the procedures and safeguards for the handling of hazardous substances;*[3]
- *(d) the prohibition and restrictions on the handling of hazardous substances in different areas;*[4]
- *(e) the prohibition and restrictions on the location of industries and the carrying on of processes and operations in different areas;*[5]
- *(f) the procedures and safeguards for the prevention of accidents which may cause environmental pollution and for providing for remedial measures for such accidents.*[6]

Comment

Section 6 empowers the Central Government to make rules to carry out the purpose of the legislation in relation to matters falling within the purview of Sec. 3. The section also enumerates some of the matters on which such rules may be made.

CHAPTER III

PREVENTION, CONTROL AND ABATEMENT OF ENVIRONMENTAL POLLUTION

7. Persons carrying on industry, operation, etc., not to allow emission or discharge of environmental pollutants in excess of the standards.—*No person carrying on any industry, operation or process shall discharge or emit or permit to be discharged or emitted any environmental pollutants in excess of such standards as may be prescribed.*[1]

SYNOPSIS

1. Marginal note ... 479
2. Provisions of ... 479
3. Environmental pollution—Directions for stone crushers .. 480

Section 7 prohibits carrying on of any industry, operation or process which discharges or emits any environmental pollution in excess of the standards laid down under the rules.

1. Marginal note.—It is now well settled that marginal note is a part of the section. It is key to open mind of the Legislature affording guidance in understanding their intendments.[2]

2. Provisions of.—The Environment Act consists of four chapters with 26 Sections therein Chapter 1 contains the definitions. Chapter II contains General power of the Central Government. Chapter III contains the prevention, control and abatement of environmental pollution, and Chapter IV contains misc. provisions. Environmental pollution has been defined in Sec. 2 (*c*) to mean the presence in the environment of any environmental pollutant. "Environmental Pollutant" has been defined in Sec. 2 (*b*) to mean any solid, liquid or gaseous substance present in such concentration as may be, or tends to be injurious to environment. Sec. 7 prohibits persons carrying on industry foremission or discharge of environmental pollutants in excess of such standards as may be prescribed. "Prescribed" has been defined in Sec. 2(*g*) means prescribed by rules made under this Act. Thus the Rules standard has to be indicated, permissible limit of emission-environmental pollutant has to be indicated. Sec. 8 deals with the embargo on handling of hazardous substance. Sec. 10 confers power on the persons empowered by the Central Government to enter and inspect any of the premises for the purposes enumerated under Clauses (*a*) to (*e*) of sub-section (1) of Sec. 10. Sec. 15 provides the penalty for contravention of the provisions of the Act and the rules made thereunder. Section 19 confers power on the Court to take congnizance of any offence on a complaint being made on that behalf. Section 24 is the overriding provisions of the Act not withstanding anything inconsistent therewith contained in any enactment. The combined reading of the aforesaid provisions indicate that there must be necessary particulars to find out whether there has been any emission of the environmental pollutant in excess of the standard fixed under the rules and it is only then the question of complaining before a Court and taking cognizance of the same would arise. If the averments in the Special Leave Petition are examined from the aforesaid point it would be seen that there is not an iota of material to come to the conclusion that on account of the mining operations conducted by the respondents there has been any emission of environmental pollutant in excess of the the standard prescribed under the Rules, nor it is possible to hold that there has been any environmental pollution on account of carrying on the mining operations. In their Lordships considered opinion, on the facts alleged it is not possible to embark upon the enquiry as to whether the grant of leases within the tribal area are in violation of the provisions of Environment Protection Act nor the leases can be annulled on that score.[1]

3. **Environmental pollution—Directions for stone crushers.**—Under the circumstances this petition is disposed of with the following directions :—(1) That all the private respondents who are owners of the stone crushers, shall close down their stone crushing business and shift them to the identified zones positively within a period of one month from the date of this judgment; (2) The State Government shall take immediate steps for closure and shifting of stone crushers to the identified zones and issue licenses only in favour of such persons who decide to shift their business of stone crusher to the identified zones; (3) That all the stone crushers located at present locations shall be deemed to have been closed after one month and shall not be permitted to carry on business of stone crusher on any ground or pretext whatsoever; (4) That the private respondents shall not purchase and the petitioner shall not sell his land, situated in identified zones for the purposes of installation of stone crusher or any other identical and ancillary purpose units; (5) That the citizens of the area are authorised to prefer their claims for grant of compensation; for those persons who are proved to have suffered due to pollution caused by stone crushers owned and managed by private respondents. Claims for such compensation may be entertained within two months after such right is notified to the inhabitants of the area. Such claims, if preferred, shall be considered and disposed of within three months and if any of the respondents-stone crushers is found to be responsible for making compensation, the same shall be paid by him within a period of two months thereafter, failing which his licence for carrying on stone crusher business shall be cancelled. It is expected that while issuing the notification inviting the claims for compensation, the respondent-State shall appoint an Authority for entertainment and adjudication of such claims for compensation.[2]

8. Persons handling hazardous substances to comply with procedural safeguards.*—No person shall handle or cause to be handled any hazardous substance except in accordance with such procedure and after complying with such safeguards as may be prescribed.*[3]

Section 8 enjoins upon persons to comply with the procedures laid down and safeguards prescribed under the rules in the handling of hazardous substances.

1. Procedural law whether applies to public interest litigation.— The writ-petitions are not inter-party disputes and have been raised by way of public interest litigation and the controversy before the Court is as to whether for social safety and for creating a hazardless environment for the people to live in, mining in the area should be permitted or stopped. One may not be taken to have said that for public interest litigations, procedural laws do not apply. At the same time it has to be remembered that every technicality in the procedural law is not available as a defence when a matter of grave public importance is for consideration before the Court. Even if it is said that there was a final order, in a dispute of this type it would be difficult to entertain the plea of *res judicata*. Undoubtedly, the Environment (Protection) Act, 1986 (29 of 1986), has come into force with effect from 19th November, 1986. Under this Act power is vested in the Central Government to take measures to protect and improve the environment. These writ petitions were filed as early as 1983 more than three years before the Act came into force. The Supreme Court appointed several Expert Committees, received their reports and on the basis of materials placed before it, made directions, partly final and partly interlocutory, in regard to certain mines in the area. Several directions from time to time have been made by Supreme Court. The several parties and their counsels have been heard for days together on different issues during the three and a quarter years of the pendency of the proceedings. The Act does not purport to and perhaps could not take away the jurisdiction of the Supreme Court to deal with a case of this type. In consideration of these facts, Supreme Court does not think that there is any justification to decline the exercise of jurisdiction at this stage. Ordinarily the Court would not entertain a dispute for the adjudication of which a special provision has been made by law but that rule is not attracted in the present situation in these cases. Besides it is a rule of practice and prudence and not one of jurisdiction.[1]

---

[1] Rural Litigation and Entitlement Kendra *v.* State of U.P., A.I.R. 1988 S.C. 2187 at p. 2195; *see* also Chhatisgarh Hydraude Lime Industries, Bilaspur *v.* Special Area Development Authority, Bilaspur, A.I.R. 1989 M.P. 82 at pp. 87-90.

2. Categorical suitability of continuance of mining operations by lime stone quarries.—This was the first case of its kind in India involving issues relating to environment and ecological balance. It related to closing down of a large number of leases of limestone quarries which were polluting the environment, causing ecological imbalance and hazard to the health of not only human beings but also of all inanimate and animate things.

In this case, the Supreme Court has set up a committee headed by D.N. Bhargava, Controller General, India Bureau of Mines, Nagpur, for the purpose of inspecting the limestone quarries mentioned in the writ petition and also in the list given by the Government of the U.P. The Committee submitted its report and divided the quarries in three groups. The limestone quarries comprised in category 'A' were those wherein the opinion of the Bhargava Committee the adverse impact of the mining operation was relatively less pronounced; Category 'B' comprised those limestone quarries wherein the opinion of Bhargava Committee the adverse impact of mining operations was relatively more pronounced and category 'C' covered those limestone quarries which had been directed to be closed down by the Bhargava Committee under the orders made by the Court on account of deficiencies regarding safety and hazards of more serious nature.

The Government of India has also appointed Working Group on Mining of Limestone under the Chairmanship of D.N. Bhargava. The Working Group in its report submitted in September 1983 made a review of limestone quarry leases for continuance or discontinuance of mining operations and after a detailed consideration of the various aspects recommended that the limestone quarries should be divided into two categories, namely category 1 and category 2, category 1 comprising limestone quarries considered suitable for continuance of mining operations and category 2 comprising limestone quarries which were considered unsuitable for further mining.[1]

3. Remedial action for emissions and effluents from plant causing hardship to the local population.—In this case, Chhetriya Pardushan Mukti Sangharsh Samiti filed the present writ petition by writing a letter to the S.C. It is alleged that the smoke emitted from chimneys of the mills and the effluents discharged from the plants is causing environmental pollution and were proving great environmental hazard. It is stated that the people were finding it difficult to eat and sleep due to smoke and foul smell and the highly polluted water. The petitioner prays for necessary directions to check the pollution.

However the apex court observes that every citizen has a fundamental right to have the enjoyment of quality of life and living as contemplated by Art. 21 of the Constitution. Anything which endangers or impairs the conuct of anybody either in violation or in derogation of laws, that quality of life and living by people is entitled to be taken recourse of Art. 32 of the Constitution. But this can be done by any person interested genuinely in the protection of the society, on behalf of the society or community, where it appears that this is only a cloak to 'feed fact ancient grudge' and enmity. This should not only be refused but strongly discouraged. While it is the duty of the Supreme

---

[1] Rural Litigation and Entitlement Kendra *v.* Union of India, A.I.R. 1985 S.C. 652.

Court to enforce fundamental rights, it is also the duty of the court to ensure that this weapon under Art. 32 should not be misused creating a bottleneck in the superior court preventing other genuine violation of fundamental right. The Supreme Court must protect the society from the so-called protectors.[1]

4. Prevention of reckless mining operations and restoration of natural balance in public interest.—The S.C. said that the Himalayan range on the Northern Boundary of India is the most recent mountain range and yet it is the tallest. It has formed the northern boundary of the country and until recent times provided an impregnable protection to the Indian subcontinent from the Northern direction.

The mountain range has been responsible to regulate the monsoons and consequently the rainfall in the Indo-Gangetic belt. The Himalayas are the source for perennial rivers and the Ganges, Yamuna and the Brahmaputra as also several other tributaries which have joined these main rivers. For thousands of years nature has displayed its splendour through the lush green trees, innumerable springs and beautiful flowers. The Himalayas has been the store house of herbs, shrubs and plants. Deep forests on the lower hills have helped to generate congenial conditions for good rain.

The Doon Valley has been an exquisite region bounded by the Himalayan and the Shivalik ranges and the Ganga and Yamuna rivers. The perennial water streams and the fertile soil have contributed not only to the growth of dense lush green forests but have helped the yield of basmati rice and leeches. Mussoorie known as the Queen of Indian hill stations, situated at a height of 5000 ft., above sea level and Dehra Dun located below the heights have turned out to be important places of tourist attraction, centres of education, research and defence complex.

At present the Valley is in danger because of erratic, irrational and uncontrolled quarrying of limestone. The landscape has been stripped bare of its verdant cover. Green cover today is about 70 percent. The limestone belt has acted as the aquifer to hold and release water perennially. All the important streams-song, Balki, Respana, Kairuli and Bhitarli orginate from this area. Reckless mining, careless disposal of mine debris and random blasting operations have disturbed the natural water system and the supply of water both for drinking and irrigation has substantially gone down. There is a growing apprehension that if mining is carried on in this process a stage will come when there would be a dearth of water in the entire belt.

The Court observed that : "We do not obligivous to the fact that natural resources have got to be tapped for the purposes of social development but one cannot forget at the same time that tapping of resources have to be done with requisite attention and care so that ecology and environment may not be affected in any serious way. There may not be any depletion of water resources and long-term planning must be undertaken to keep up the national wealth. It has always to be remembered that these are permanent assets of mankind and are not intended to be exhausted in one generation".[2]

5. Prevention of pollution of discharges from Washeries of the Tata Iron and State Co. Ltd. (TISCO).—The petitioner has alleged that the effluent in the shape of slurry in flown into the river Bokaro which is carried out by the river water to the distant places polluting the river water as a result of which the river water is not fit for drinking purposes nor it is fit for irrigation purposes. The petitioner, therefore, alleged the infringement of right to life guaranteed under Art. 21 of the Constitution in the present writ petition filed under Art. 32 of the Constitution the right to enjoyment of pollution free water and air for the full enjoyment of life. For removing the pollution of water or air which may be detrimental to the quality of life.[1]

[2] Rural Litigation and Entitlement Kendra *v.* State of U.P., A.I.R. 1987 S.C. 395.

6. Claims of victims in mass tort actions.—These review petitions under Art. 137 and writ petitions under Art. 32 of the Constitution of India raise certain fundamental issues as to the constitutionality, legal validity, propriety, fairness and settlement of the claims of the victims in mass tort action relating to what is known as Bhopal Gas Leak Disaster considered the world's worst industrial disasters, unprecedented to its nature and magnitude. The tragedy, in human terms, was a terrible one. It has taken a huge toll of innocent human lives and have left tens of thousands of citizens of Bhopal physically affected in various degrees. The action was brought up by the Union of India as parent-parties before the District Court, Bhopal pursuant to the statutory enablement on that behalf. Under the Bhopal Gas Leak Disaster (processing of claims) Act, 1985 33 million dollars as compensation. When an interlocatory matter pertaining to interim compensation came up for hearing there was a court assisted settlement to the main suit claim itself as $470 million recorded by the orders of this court dated 14th and 15th February, 1989.[2]

7. Direction to forbear release of Irish consignment of butter.—The Special Leave Petition is directed against the judgment and order of Bombay High Court dated Nov. 24, 1987, declining to issue a writ in the nature of mandamus and other appropriate writs, directions or orders under Art. 226 of the Constitution as prayed for by the petitioners to direct the respondents to forbear from releasing 7500 cartons (200 MT) of Irish butter imported into India under EEC Grants-in-Air for Operation Flood programme supplied to Greater Bombay on the ground that the butter was contaminated by nuclear fallout.

The committee after due deliberation felt that milk and other dairy products in question were safe and harmless for human consumption. In view of the report, the petition was dismissed. The court disallowed the petitioner's plea that the authorities should be compelled to indicate on the wrappers of the product that it was imported from European countries. Obviously, consumers would be dissuaded from buying such products because of the risk involved. Was it correct for the court to take the view that it was reasonable to sell what it thought fit for consumption without a warning ?[3] .

8. Payment of compensation by way of cost for the restoration of Environment and Ecology of the area.—On a careful examination of the counter affidavits by the parties and the report placed by the Board, the following important facts are established.

The lease hold area in possession of Motel is a part of the protected forest land owned by the State Govt.

The Motel has constructed 190m wire crates on the Bank of river. The dredged material is piled upon the banks of the river. The dredged and channelising of the left bank has been done on a large scale with a view to keep high intensity of flow away from motel.

The construction work was not done under expert advice.

The report indicates that no construction of any sort could be made to block the natural flow of the river. According to the report no permission was sought for the construction done by Motel. It has further stated by the Inspection team that the clause in the lease agreement for protection of land did not permit the motel to block the flow.

The forest land which have been given on lease to the Motel by the state Goats. are situated at the bank of the river Beas. Beas is a young and dynamic river. It runs through Kullu Valley between the mountain ranges of the Dhauladhan in the right bank and the Chardrakheni in the left. The river is fast flowing, carrying large boulders at the time of flood. When water velocity is not sufficient to carry the boulders, those deposited in the channel often blocking the flow of water. Under such circumstances the river stream changed its course. The right bank of the river where Motel is located mostly comes under forest and the left bank consists of plateaus, having steep-bank where fruit orchards and cereals cultivation are predominant, the area being full of scenic beauty should not have permitted to be converted into private ownership for the commercial gains.

The public trust doctrine as discussed, is a part of the law of land.

The prior approval granted by the Govt. of India, Ministry of Environment and Forest by the letter dated 24th Nov. 1993 and the lease-deed dated April 11th 1994 in favour of the Motel are quashed. The lease granted to the Motel by the said lease deed in respect of 27.16 bighas of area is cancelled and set aside. The Himachal Pradesh shall take over the area and restore it to its original natural conditions.

The pollution caused by various Constructions made by the Motel in the river bed and the banks of the river Beas had to be removed and reversed.

The Motel through its management shall show cause why pollution fine in addition be not imposed on the Motel.

The Motel shall construct a boundary wall at a distance of not more than 4 metres from the cluster of rooms towards the river basin.

The Motel shall not discharge untreated effluents into the river. The

Himachal Pradesh Pollution Control Board (HPPCB) had been directed to inspect the pollution control devices/Treatment Plants set up by the Motel. If the effluent/waste discharged by the Motel is not conforming to the prescribed standards, action in accordance with law be taken against the Motel.

H.P.P.C.B. shall not permit the discharge of untreated effluent into river Beas. The Board shall inspect all the hotel/institutions/factories in Kullu Manali area and in case any of them are discharging untreated effluents/wastes into river, the Board shall take action in accordance with the law.

The Motel shall show cause on December 18, 1996 why pollution fine and damages be not imposed as directed by us. NEERI shall send its report by December 17, 1996. The Writ peitition is disposed off except or limited purpose indicated above.[1]

9. Disposal and storage of gypsum and iron based sludge under directions for performance of statutory duties under Environment Protection Act.—The Court appreciated the efforts taken by NEERI for preparing the report. The Court ordered the Central Govt. to determine the amount required for carrying out the remedial measures for removing the sludge lying in and around the industries and the cost of normalising the affected area i.e., land, water resource and environment in and around village Bichhri (area of approx. 350 ha) within six weeks considering the NEERI report. In case of failure of the said, respondents to pay the amount and the same shall be recovered by the Central Govt. in accordance with law. The factories, plant, machinery and all immoveable assets of respondents are attached herewith.

So far as the claim for damages for the loss suffered by the villagers in the affected area, it is open to them or any organisation on their behalf to institute suits in the appropriate civil courts.

The court held that the industries should be characterised as "rogue industries" and they have forfeited all claims for any consideration by this court. RPCB and seal all these units. The re-opening of these plants shall depend upon their compliance with the directions made and obtaining all requisite permissions and consent from the relevant authorities.

The court suggested for establishment of environmental courts for speedy disposal of such cases.[2]

10. Grant of permission of conditions of treatment of effluents and to prevent air, water and soil pollution by the abattoir.—The Central Govt. did not pay any attention to the report or to the directions of Andhra Pradesh High Court. It merely forwarded the report to APPCB for appropriate action which resulted in the present appeal by the petitioner in the Supreme Court. This action of the Central Govt. in the opinion of Supreme Court Justice, was in violation of the directions made by the High Court. As per the Supreme Court, it was for the Central Govt. to consider the said report, taking into consideration the several facts and circumstances mentioned therein as also the contending views expressed by several authorities and departments referred to therein. This the Central Govt. has clearly failed to do. The Supreme Court further ruled that the slaughter house has been in operation now for the past 18 months or so, it would be possible to find out the effect of slaughter house operation on the cattle population in the area. It would also be relevant to find out, what percentage of cattle was brought from other states. The Animal Husbandry Department has taken the total cattle population of Andhra Pradesh state only whereas the slaughter house would have drawn its requirement from nearby areas in Andhra Pradesh, Maharashtra and Karnataka, since it is situated almost on the tri-junction of these states.

---

[1] M.C. Mehta *v.* Kamal Nath (1997) 1 S.C.C. 388.

[2] Indian Council for Enviro-Legal Action *v.* Union of India, (1996) 3 S.C.C. 212.

The Court, therefore, directed Central Govt. to look into all relevant aspects, as directed by High Court of Andhra Pradesh in its judgment in Nov. 1991 and recorded its opinion before final decision in the matter can be taken. The Court ordered that the Central Govt. must submit its report within four months from the date of judgment i.e., Oct. 25, 1994 and listed the appeals for further hearing after the receipt of the report from Central Govt.[1]

11. Settlement of claims of poor and illiterate victims.—In this case the validity of Bhopal Gas Disaster (Proceeding of Claims) Act, 1985 was challenged. The Supreme Court held that the Act was valid and that the State had rightly taken over the exclusive right to represent and act in place of every person entitled to make a claim. Thus, the vicitms were denied a voice in the hearing of the case and were represented by the Union of India, who had colluded with the U.C.C. all along against the interest of victims. The Supreme Court held that it was correct for Union of India to be the sole representative as all the victims were poor and illiterate. It was also proper that the victims be totally excluded from filing their own case.

The most interesting part of the decision is a reference made in clause 9 and 13 of the United National Code of Conduct for Trans National Corporations and the recommendations made in the judgment that Code should be implemented in India and perhaps the provisions made more effectively. The court, on the part of liability has, however, observed that on an appropriate reading of the relevant provision of the Act, it is apparent that the criminal liability arising out of Bhopal Gas Leak Disaster is not the subject matter of this Act and cannot be said to have been in any way affected, abridged or modified by virtue of this Act. There is no curtailment of any right with respect to any criminal liability. Criminal liability is not the subject matter of the Act. In case of any industrial disaster, like the Bhopal Gas Leak Disaster, there is right in victims to recover damages or compensation on the basis of absolute liability, then the same is not in manner abridged or curtailed. As per concerned judgment the Act talks only of the Civil liability of and the proceedings against the UCC and UCIL or others for damages caused by the gas leak but it has nothing to say about criminal liability of any of the parties involved. Therefore, the part of the settlement comprising a term requiring withdrawal of the criminal prosecution launched is outside the purview of the Act. The validity of the Act cannot be impugned on the ground that it permit and should not have permitted the withdrawal of criminal proceeding against deliquents.[1]

---

[1] **Akhil Bharti Goseva Sangh *v.* State of Andhra Pradesh, (1997) 3 S.C.C. 707.**

12. **Quantum of Compensation on the basis of injuries to victims.**—In the instant case on the issue of quantum of compesnsation the M.P. High Court clarified that in the facts and circumstances of the Bhopal Case, it would be just and proper to grant the relief of interim payment of damages only in respect of the claims arising out of the death and personal injuries under the Bhopal Act of 1985. The claims relating to the death and personal injuries have been divided into four categories. (*a*) death (*b*) total disablement resulting in permanent disability (*c*) permanent partial disablement (*d*) temporary partial disablement. Justice Seth's judgment was followed by mixed juristic response. Union Carbide Corporation as well as Union of India, felt aggrieved by above judgment Union Carbide Corporation (UCC) filed appeal in the Supreme Court against the interim compensation order. The SC pointed out that the compulsion of the need for immediate relief to tens of thousands of suffering victims could not wait till these questions are received on the due course of judicial proceedings. In the opinion of the SC the tremendous suffering of thousands of persons compelled the court to move out of the direction of immediate relief which should not be subordinated to the uncertain promises of the law. It is worth noting by adjudication.

The reasons given by the court of accepting the settlement of $470 million was pathetic and untenable. If urgent relief was necessary, it was always open to the court to grant substantial interim reliefs. Thus the settlement of $470 million was accepted by the Supreme Court in a most casual manner causing grave injustice to the victims. To make matters worse the Supreme Court in this decision criticised the social action groups saying that it was not clear who they spoke for and whither what they were saying was true or false.[2]

13. **Clearance of stench and stink caused by open drains and public excretion by slum dwellers.**—The Court observed that the Municipality cannot extricate itself from its responsibility. Its plea is not that the facts are wrong, but that the law is not right because the municipal funds, being insufficient, it cannot carry out the duties u/s 123 of the Act. This "*alibi*" made us issue notice to the State which is now represented by counsel, Shri Gambhir, before the court. The plea of the Municipality that notwithstanding the public nuisance, financial inability exonerates it from statutory liability. The Cr. P.C. operates against statutory bodies and others regardless of the case in their coffers, even as human rights under Part III of the Constitution have to be respected by the State regardless of budgetary provision likewise. Section 123 of the Act has no saving clause when the Municipal Council is penniless. Otherwise, a profligate statutory body of pachydemic governmental agency may legally defy duties under the law by urging in self-defence a self

---

[1] Charan Lal Sahu *v.* Union of India, A.I.R. 1990 S.C. 1480.

[2] Union Carbide Corporation *v.* Union of India, A.I.R. 1990 S.C. 273.

created bankruptcy or perverted expenditure budget. That cannot be public nuisance, because of pollutants being discharged by big factories to the detriment of the power sections, is a challenge to the social justice component of the rule of law. The grievous failure of local authorities, likewise, to provide the basic amenity of public conveniences, drives the miserable slum-dwellers to ease in the streets, on the sly for a time, and openly thereafter, because under Nature's pressure, bashfulness becomes luxury and dignity a difficult art. A responsible Municipal Council constituted for the precise purpose of preserving public health and providing better finances cannot run away from its principal duty by pleading financial inability Decency and dignity are non-negotiable facets of human rights and are a first charge on local self governing bodies. Similarly, providing drainage systems not pompous and attractive but in working condition and sufficient to meet the needs of the people cannot be evaded if the municipality is to justify its existence. A base study of the statutory provisions makes the position clear.

In this view, the Magistrate's approach appears to be impeccable although in places he seems to have been influenced by the fact that 'cultured and educated people live in this area and new Road, Ratlam is a very important Road and so many prosperous and eduated persons are living on this Road'. In India one man one value is the democracy of remedies and rich or poor the law will call to order where people's rights are violated. What should also have been emphasised was the neglect of the Malaria Deptt. of the State of M.P. to eliminate mosquitoes, especially with open drains, heaps of dirt, pubic excretion by humans for want of lavatories and slums nearby had created an intolerable situation for habitation.

An order to abate the nuisance by taking affirmative action on a time-bound basis is justified in the circumstances. The nature of judicial process is not purely adjudicitory nor is it functionally that of an umpire only. Affirmative action to make the remedy effective is of the essence of the right which otherwise becomes sterile. Therefore, the court, armed with the provisions of the two codes and justified by the obligation under Sec. 123 of the Act, must adventure into positive directions as it has done in the present case Sec. 133, Cr. P.C. authorises the prescription of a time limit for carrying out the order. The same provision spells out the power to give specific directives. The court sees no reason to disagree with the order of Magistrate.[1]

14. Mining in the Doon Valley area should be stopped.—Once the importance of forests is realised and as a matter of national policy and in the interests of the community, preservation of forests is accepted as the goal, nothing which would detract from that end should be permitted. Therefore, it was held that mining in the Doon Valley area should be totally stopped, the position was also made clear to different parties in course of the hearing which continued for several weeks. If any decree or order has already been obtained from any Court relating to renewal of these leases, the same shall stand vacated and similarly any appeal or other proceeding taken to obtain a renewal or against order/decrees granting renewal shall also become *non est*.[2]

[2] Rural Litigation and Entitlement Kendra *v.* State of U.P., A.I.R. 1988 S.C. 2187 at pp. 2201, 2206

15. Supreme Court's direction regarding rehabilitation of displaced mine owners.—In *Rural Litigation and Entitlement Kendra, Dehradun* v. *State of U.P.*,[1] a three Judges Bench of the Supreme Court had indicated that the mine owners who had been displaced should be rehabilitated. There is no material on record if any alternate provision has been made either by the State of Uttar Pradesh or the Union of India. On-going leases have been terminated under orders of Supreme Court without provision for compensation. Indisputably displacement has been suffered by these lessees and the sudden displacement must have up-set their activities and brought about substantial inconvenience to them. The Court has no other option but to close down the mining activity in the broad interests of the community. This, however, does not mean that the displaced mine owners should not be provided with alternative occupation. Pious observation or even a direction in that regard may not be adequate, what is necessary is a time frame functioning if rehabilitation is to be made effective. It is, therefore, necessary that a Committee should be set up to over-see the rehabilitation of the displaced mine owners. The Uttar Pradesh Government, as apprehended by many of these mine owners, by itself may not be able to meet the requirements of the situation. It may be that all the displaced mine owners may not find suitable placement within the State of Uttar Pradesh. It is, therefore, necessary to associate some other States in the programme. Unless a High Powered Committee is set up wherein Union of India is also represented, the Committee to be constituted may not be effective and there may be lack of co-ordination. There is material that lime stone quarries are available in Rajasthan and Gujarat. It is, therefore, necessary that representatives of these State Governments are also on the Committee. Therefore, the Supreme Court directed that a Committee to be set up with representatives of the Union of India, the State Governments of Uttar Pradesh, Rajasthan and Gujarat. While effecting rehabilitation by giving alternate mining sites, ecology and environment will have to be considered. It is, therefore, necessary that on such Committee, Ministry of Environment should also be represented. Apart from them there should at least be two experts.[2]

16. Direction issued by the Government—Validity of.—The provisions of rule 4 (5) are intended to safeguard the environment from any grave injury to it and in the present case it has been amply borne out that the release of the effluents by the petitioner units was resulting in pollution of the irrigation canal causing vast damage to the crops and the agricultural fields. This fact has been recorded in writing in the impugned orders dated 19th October, 1994. The petitioners did not operate effluent treatment to plant and could not be allowed to release untreated effluents resulting in damage to the fertile lands of Kheda district. The State Government was, therefore, fully justified in proceeding under rule 4 (5) of the said Rule while exercising its delegated powers for issuing direction under Sec. 5 of the Act as in the impugned orders. These petitions are, therefore, without any substance and are rejected. Rule discharged in each of these matters with no order as to costs. Ad-interim stay granted in each petition stands vacated.[3]

***9. Furnishing of information to authorities and agencies in certain cases.**—(1) Where the discharge of any environmental pollutant in excess of the*

prescribed standards occurs or is apprehended to occur due to any accident or other unforeseen act or event, the person responsible for such discharge and the person in charge of the place at which such discharge occurs or is apprehended to occur shall be bound to prevent or mitigate the environmental pollution caused as a result of such discharge and shall also forthwith—

(a) intimate the fact of such occurrence or apprehension of such occurrence ; and

(b) be bound, if called upon, to render all assistance,

to such authorities or agencies as may be prescribed.[1]

(2) On receipt of information with respect to the fact or apprehension of any occurrence of the nature referred to in sub-section (1), whether through intimation under that sub-section or otherwise, the authorities or agencies referred to in sub-section (1) shall, as early as practicable, cause such remedial measures to be taken as are necessary to prevent or mitigate the environmental pollution.

(3) The expenses, if any, incurred by any authority or agency with respect to the remedial measures referred to in sub-section (2), together with interest (at such reasonable rate as the Government may, by order, fix) from the date when a demand for the expenses is made until it is paid, may be recovered by such authority or agency from the person concerned as arrears of land revenue or of public demand.

Comments

Section 31 of the Water Pollution Act, 1974, and Sec. 23 of the Air Pollution Act, 1981, deal with furnishing of information to State Board and other agencies in certain cases. Similar provision is contained in Sec. 9 of the Environment (Protection) Act, 1986.

Section 9 enjoins upon the persons responsible to mitigate environmental pollution and also to intimate the fact of any occurrence or apprehension of any occurrence relating to environmental pollution to the prescribed authorities and further to assist those authorities in preventing or mitigating environmental pollution. The expenses, if any, incurred with respect to remedial measures shall be recoverable from the persons responsible.

*10. **Powers of entry and inspection.**—(1) Subject to the provisions of this section, any person empowered by the Central Government in this behalf*[2] *shall have a right to enter, at all reasonable times with such assistance as he considers necessary, any place—*

(a) for the purpose of performing any of the functions of the Central Government entrusted to him ;

(b) for the purpose of determining whether and if so in what manner any such functions are to be performed or whether any provisions of this Act or the rules made thereunder or any notice, order, direction or authorisation served, made, given or granted under this Act is being or has been complied with ;

---

[1] For authorities or agencies *see* Rule 12 of Environment (Protection) Rules, 1986 and Schedule II.

[2] The Central Govt. has empowered 60 persons listed in the Table (p. 651) *vide* S.O. 83 (E) published in the *Gazette of India* No. 66 dated 16th Feb., 1987 and S.O. 63 (E) published in the *Gazette of India* No. 42 dated 18th January, 1988.

(c) *for the purpose of examining and testing any equipment, industrial plant, record, register, document or any other material object or for conducting a search of any building in which he has reason to believe that an offence under this Act or the rules made thereunder has been or is being or is about to be committed and for seizing any such equipment, industrial plant, record, register, document or other material object if he has reason to believe that it may furnish evidence of the commission of an offence punishable under this Act or the rules made thereunder or that such seizure is necessary to prevent or mitigate environmental pollution.*

(2) *Every person carrying on any industry, operation or process or handling any hazardous substance shall be bound to render all assistance to the person empowered by the Central Government under sub-section (1) for carrying out the functions under that sub-section and if he fails to do so without any reasonable cause or excuse, he shall be guilty of an offence under this Act.*

(3) *If any person wilfully delays or obstructs any person empowered by the Central Government under sub-section (1) in the performance of his functions, he shall be guilty of an offence under this Act.*

(4) *The provisions of the Code of Criminal Procedure, 1973 (2 of 1974), or, in relation to the State of Jammu and Kashmir, or any area in which that Code is not in force, the provisions of any corresponding law in force in that State or area shall, so far as may be, apply to any search or seizures under this section as they apply to any search or seizure made under the authority of a warrant issued under Sec. 94 of the said Code or, as the case may be, under the corresponding provision of the said law.*

Comments

Section 23 of the Water Pollution Act, 1974 and Sec. 24 of the Air Pollution Act, 1981, relate to the powers of entry and inspection. Similar provision is provided under Sec. 10 of the Environment (Protection) Act, 1986.

Section 10 enables the officers empowered by the Central Government to enter and inspect any place for the purpose of performing any functions entrusted under the legislation. This section also enjoins upon the persons carrying on any industry, operation or process or handling any hazardous substance to render all assistance to the Central Government and its officers and any failure to wilful delay or obstruction on the part of any such person shall be punishable under the legislation.

Person.— The word "person" has been used to make it clear that in order to exercise the powers of a Controller under the Act, the statutory functionary has to be duly appointed by the Government and that he is *persona designata* or designated person.[1]

11. ***Power to take sample and procedure to be followed in connection therewith.***—*(1) The Central Government or any officer empowered by it in this behalf,*[2] *shall have power to take, for the purpose of analysis, samples of air, water,*

---

1. V.K. Joseph *v.* State of Tamil Nadu, Madras, A.I.R. 1985 Mad. 116 at p. 119.
2. In exercise of powers conferred under sub-section (*i*) of Sec. 11 the Central Government has empowered 60 officers listed in the Table (p. 655) *vide* S.O. 84 (E) published in the *Gazette* No. 66 dated and 6th February, 1987 and S.O. 63 (E) published in the *Gazette of India* No. 42 dated 18th January, 1988.

soil or other substance from any factory, premises or other place in such manner as may be prescribed.[1]

(2) The result of any analysis of a sample taken under sub-section (1) shall not be admissible in evidence in any legal proceeding unless the provisions of sub-sections (3) and (4) are complied with.

(3) Subject to the provisions of sub-section (4), the person taking the sample under sub-section (1) shall—

(a) serve on the occupier or his agent or person in charge of the place, a notice, then and there, in such form as may be prescribed, of his intention to have it so analysed;

(b) in the presence of the occupier or his agent or person, collect a sample for analysis;

(c) cause the sample to be placed in a container or containers which shall be marked and sealed and shall also be signed by the person taking the sample and the occupier or his agent or person;

(d) send without delay, the container or the containers to the laboratory established or recognised by the Central Government under Sec. 12.

(4) When a sample is taken for analysis under sub-section (1) and the person taking the sample serves on the occupier or his agent or person, a notice under Cl. (a) of sub-section (3), then—

(a) in a case where the occupier, his agent or person wilfully absents himself, the person taking the samples shall collect the sample for analysis to be placed in a container or containers which shall be marked and sealed and shall also be signed by the person taking the sample, and

(b) in a case where the occupier or his agent or person present at the time of taking the sample refuses to sign the marked and sealed container or containers of the sample as required under Cl. (c) of sub-section (3), the marked and sealed container or containers shall be signed by the person taking the samples,

and the container or containers shall be sent without delay by the person taking the sample for analysis to the laboratory established or recognized under Sec. 12 and such person shall inform the Government Analyst appointed or recognised under Sec. 13 in writing about the wilful absence of the occupier or his agent or person, or, as the case may be, his refusal to sign the container or containers.

Comments

Section 21 of the Water Pollution Act, 1974 read with Sec. 26 of the Air Pollution Act, 1981 relates to the power of taking samples and procedure to be followed in connection therewith. Similar provision has been provided in Sec. 11 of the Environment (Protection) Act, 1986.

Section 11 deals with the power of the Central Government and its officers to take samples of air, water, soil or substances and the procedure for taking of such samples.

---

[1] For procedure for taking samples *see* Rule 6 of Environment (Protection) Rule, 1986, also.

Lifting of samples.—The learned Magistrate observed that as no presence was put in on behalf of the Company, so the question of there being any request by the Company for dividing the samples into two parts did not arise. The conclusion of the learned Magistrate is not sustainable. The learned Magistrate did not deal with the matter on the basis of the allegations which are in the nature of the pleadings of the parties. In view of the finding that a legal representative of the company was duly present at the time when the sample was lifted. Further in view of the said pleadings of the parties it has to be taken that a demand was also made by the said representative to the official of the Board to divide the sample into two parts and to get the same analysed in accordance with law. But that request was not acceded. Thus the officials of the Board were not justified in getting the sample analysed from a laboratory only recognized by the Board instead of getting the same analysed from the laboratory of the Delhi Administration and without complying with the requirement of law. Consequently the impugned order is bad.[1]

12. *Environmental laboratories.*—*(1) The Central Government,[2] may, by notification in the official Gazette,—*

- *(a) establish one or more environmental laboratories ;*
- *(b) recognise one or more laboratories or institutes as environmental laboratories to carry out the functions entrusted to an environmental laboratory under this Act.*[3]

(2) The Central Government may, by notification in the Official Gazette, make rules specifying—

- *(a) the functions of the environmental laboratory;*[4]
- *(b) the procedure for the submission to the said laboratory of samples of air, water, soil or other substance for analysis or tests, the form of the laboratory report thereon and the fees payable for such report,*[5]
- *(c) such other matters as may be necessary or expedient to enable that laboratory to carry out its functions.*

Comments

Section 52 of the Water Pollution Act, 1974 deals with State Water Laboratory, whereas Sec. 28 relates to State Air Laboratory. Section 12 of the Environment (Protection) Act, 1986, deals with Environmental laboratories".

Section 12 empowers the Central Government to establish environmental laboratories or recognise any laboratory or institute as an environmental laboratory.

13. *Government Analysts.*—*The Central Government may, by notification in the Official Gazette, appoint or recognise such persons as it thinks fit and having the prescribed qualifications,[6] to be Government Analysts for the purpose of samples of*

air, water, soil or other substance sent for analysis to any environmental laboratory established or recognised under sub-section (1) of Sec 12.

Comments

Section 53 of the Water Pollution Act, 1974 and Sec. 29 of the Air Pollution Act, 1981, relates to analysts. Section 13 of the Environment (Protection) Act, 1986, also deals with Government Analysts.

Section 13 empowers the Central Government to appoint or recognise Government Analysts for the purpose of analysis of a samples of air, water, soil or any other substance.

*14. **Reports of Government Analysts.**—Any document purporting to be a report signed by a Government Analyst may be used as evidence of the facts stated therein in any proceeding under this Act.*

Comments

Section 54 of the Water Pollution Act, 1974 and Sec. 30 of the Air Pollution Act, 1981, relate to report of analysts. The report of Government Analysts has also been provided in Sec. 14 of the Environment (Protection) Act, 1986.

Section 14 lays down that any document purporting to be a report signed by the Government Analyst may be used as evidence of the facts stated therein in any proceeding under the legislation.

*15. **Penalty for contravention of the provisions of the Act and the rules, orders and directions.**—(1) Whoever fails to comply with or contravenes any of the provisions of this Act, or the rules made or orders or directions issued thereunder, shall, in respect of each such failure or contravention, be punishable with imprisonment for a term which may extend to five years or with fine which may extend to one lakh rupees, or with both, and in case the failure or contravention continues, with additional fine which may extend to five thousand rupees for every day during which such failure or contravention continues after the conviction for the first such failure or contravention.*

(2) If the failure or contravention referred to in sub-section (1) continues beyond a period of one year the date of conviction, the offender shall be punishable with imprisonment for a term which may extend to seven years.

SYNOPSIS

1. Quantum of punishment ... 496
2. Penal provision—Must be strictly construed ... 496
3. Penalty—*Mens rea* —Essential ... 496

Section 41 of the Water Pollution Act, 1974 and Sec. 37 of the Air Pollution Act, 1981, are the penal provisions and are based on the same footing. The provision relating to penalty has been provided in Sec. 15 of he Environment (Protection) Act, 1986.

Section 15 provides for the penalty for contravention of any provision of the legislation or any rules made or orders or directions issued therein. The punishment provided for the first offence may extend to five years' imprisonment or fine of one lakh rupees or both and in case of continuing contravention additional fine of rupees five thousand for every day and an enhanced sentence of imprisonment for a term which may extend to seven years where contravention continued beyond a period of one year after the date of conviction.

1. Quantum of punishment.—In *Mohammad Shabbir* v. *State of Maharashtra*,[1] the accused was a young man belonging to a respectable family and had made a very candid confession before the Court in pleading guilty, it was held by the Supreme Court that any deterrent punishment was not called for.

2. Penal provision—Must be strictly construed.—The law in its wisdom seeks to punish the guilty who commits the sin, and not an innocent. It being a penal provision in the sense that it visits the violator with punishment., it must be strictly construed.[2]

3. Penalty—*Mens rea*—Essential.—Penalty proceedings are quasi-criminal proceedings. Before penalty can be imposed it has to be ensured that *mens rea* has been established.[3]

*16. **Offences by companies.**—(1) Where any offence under this Act has been committed by a company, every person who, at the time the offence was committed, was directly in charge of, and was responsible to the company for conduct of the business of the company, as well as the company, shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :*

Provided that nothing contained in this sub-section shall render any such person liable to any punishment provided in this Act, if he proves that the offence was committed without his knowledge or that he exercised all due diligence to prevent the commission of such offence.

(2) Notwithstanding anything contained in sub-section (1), where an offence under this Act has been committed by a company and it is proved that the offence has been committed with the consent or connivance of, or is attributable to any neglect on the part of any director, manager, secretary or other officer of the company, such director, manager, secretary or other officer shall be also deemed to be guilty of that offence and shall be liable to be proceeded against and punished accordingly.

Explanation.—For the purposes of this section,—

- *(a) "company" means any body corporate and includes a firm or other association of individuals;*
- *(b) "director", in relation to a firm, means a partner in the firm.*

Comments

Section 47 of the Water Pollution Act, 1974 and Sec. 40 of the Air Pollution Act, 1981, deal with offences by Companies. Similar provision is contained in Sec. 16 of the Environment (Protection) Act, 1986.

Section 16 fixes criminal liability also on the directors and principal officers of a company where an offence is committed by a company.

Offences by firms—Liability of partners—Regarding offences by firms every person, who was incharge of the conduct of business of the firm shall be deemed to be guilty besides the firm itself. It would not be fair to convict all the partners of the firm as all of them may not even be knowing what is really going on in the firm.[4]

---

[1] A.I.R. 1979 S.C. 564 at p. 566.

[2] A.S. Sulochana *v.* C. Dharmalingam, (1987) 1 S.C.C. 180 at p. 182.

[3] Janata Traders *v.* Collector of Customs, Bombay, 1987 (13) E.C.R. 685 at p. 703.

[4] Abdul Moid *v.* State, 1977 Cr. L.J. 1325 at p. 1327.

Rule of evidence.—It is well settled that a rule of evidence or a deeming fiction of the law are not to be pleaded as such. No principle warrants that either in a complaint or in a first information report the literal words of the statute must be incorporated or what is even important is that the rule of evidence with regard to burden of proof and a deeming fiction of guilt should be quoted at the foundational stage. Therefore, to require that the complaint or the first information report must inflexibly plead consent, connivance or negligence of the officers at the threshold stage is patently fallacious. Seen broadly, the deeming fiction is primarily one of the evidence and proof and not of the literal formalities of pleading which are foreign to the criminal law. Indeed, it must be noticed that in a particular case the prosecution charge may be one of direct, deliberate and wilful commission of the offence by the company and its officials. In such a situation, to require that they should plead at the outset that it was only by way of connivance or neglect would be an absurdity and indeed destructive or contrary to the case set up.[1]

17. Offences by Government Departments.—(1) Where an offence under this Act has been committed by any Department of Government, the Head of the Department shall be deemed to be guilty of the offence and shall be liable to be proceeded against and punished accordingly :

Provided that nothing contained in this section shall render such Head of the Department liable to any punishment if he proves that the offence was committed without his knowledge or that he exercise all due diligence to prevent the commission of such offence.

(2) Notwithstanding anything contained in sub-section (1), where an offence under this Act has been committed by a Department of Government and it is proved that the offence has been committed with the consent or connivance of, or is attributable to any neglect on the part of, any officer, other than the Head of the Department, such officer shall also be deemed to be guilty of that offence and shall be liable to be proceeded against and punished accordingly.

Comments

Section 48 of the Water Pollution Act, 1974 and Sec. 41 of the Air Pollution Act, 1981, deal with offences by Government Departments. It has also been provided in Sec. 17 of the Environment (Protection) Act, 1986.

Section 17 fixes criminal liability also on the Heads of the Department of Government where an offence is committed by the concerned Department and the Head of the Department is not able to prove that the offence was committed without his knowledge or that he had exercised all due diligence to prevent the commission of such offence.

Penalty and punishment—If anonymous.—The two words "penalty" and "punishment" are interchangeable and they convey the same idea.[2]

Proviso.—A proviso is intended to limit the enacted provision so as to except something which would have otherwise been within it or in some measure to modify the enacting clause. Sometimes a proviso may be embedded in the main provision and becomes an integral part of it so as to amount to substantive provision itself.[3]

CHAPTER IV

MISCELLANEOUS

18. Protection of action taken in good faith.—*No suit, prosecution or other legal proceeding shall lie against the Government or any officer or other employee of the Government or any authority constituted under this Act or any member, officer or other employee of such authority in respect of anything which is done or intended to be done in good faith in pursuance of this Act or the rules made or orders or directions issued thereunder.*

Comments

Section 39 of the Water Pollution Act, 1974 and Sec. 42 of the Air Pollution Act, 1981, provide protection of action taken in good faith. Section 18 of the Environment (Protection) Act, 1986 also provides the same protection.

Section 18 protects the officers and the employees of the Government from prosecution or other legal proceedings for the acts done or intended to be done in good faith under the legislation or the rules made or orders or directions issued thereunder.

Principles of natural justice—Violation of.—Principles of natural justice are violated when the person against whom there are charges of corruption is not given opportunity to explain his conduct.[1]

19. Cognizance of offences.—*No Court shall take cognizance of any offence under this Act except on a complaint made by—*

(a) the Central Government or any authority or officer authorised in this behalf by that Government;[2] *or*

(b) any person who has given notice of not less than sixty days, in the manner prescribed, of the alleged offence and of his intention to make a complaint, to the Central Government or the authority or officer authorised as aforesaid.

SYNOPSIS

1. Court—Duty of .. 499
2. Intention and attempt—Distinction ... 499
3. Duty of Court in cases of protection of environment .. 499
4. Duty of Government regarding pollution—Steps indicated ... 500

Section 49 of the Water Pollution Act, 1974 and Sec. 43 of the Air Pollution Act, 1981, deal with cognizance of offences. It is also provided in Sec. 19 of the Environment (Protection) Act, 1986.

Section 19 lays down that no Court shall take cognizance of any offence under the legislation except on a complaint made by the Central Government or any authority or officers authorised in this behalf or by any person who has given notice of not less than sixty days of his intention to make a complaint, if within those sixty days the Government or officer has itself or himself not made the complaint and has not communicated to such person its or his refusal to make such a complaint.

---

[1] Parasu Ram Misra *v.* U.P. State Road Transport Corporation, 1988 (56) F.L.R. 289 at p. 293 (All.).

[2] In exercise of powers conferred under Cl. *(a)* of Sec. 19, the Central Govt. has authorised the officers and authorities listed in the Table (p. 518) *vide* S.O. 394 (E) published in the Gazette No. 185 dated 16th April, 1987, S.O. 237 (E) published in the Gazette No. 171 dated 29th March, 1989 and S.O. 656 (E) dated 21st August, 1989 published in the Gazette No. 519 dated 21st August, 1989.

1. **Court—Duty of.**—The Court should meticulously consider all facts and circumstances of the case. The Court is not bound to grant specific performance merely because it is lawful to do so. The motive behind the litigation should also enter into the judicial verdict. The Court should take care to see that it is not used as an instrument of oppression to have an unfair advantage to the plaintiff.[1]

2. **Intention and attempt—Distinction.**—It is common knowledge that there is a word of difference between the word "intention" and the word "attempt". It is well known that there are four stages in commission of an offence, (*i*) intention (*ii*) preparation (*iii*) attempt, and (*iv*) actual commission of an offence. A mere intention to commit an offence is far removed from an attempt to commit an offence. "Intention" has been defined as "the fixed direction of the mind to a particular subject or, a determination to act in a particular manner". In other words, it is a state of mind. It is still a thought in the mind.[2]

3. **Duty of Court in cases of protection of environment.**—In India, as elsewhere in the world, uncontrolled growth and the consequent environmental deterioration are fast assuming menacing proportions and all Indian cities are afflicted with this problem. The one Imperial City of Calcutta is no exception. Then question raised in the present case is whether the Government of West Bengal has shown such lack of awareness of the problem of environment in making an allotment of land for the construction of a Five Star Hotel at the expense of the Zoological garden that it warrants interference by Supreme Court ? Obviously, if the Government is alive to the various consideration requiring thought and deliberation and has arrived at a conscious decision after taking them into account, it may not be for the Supreme Court to interfere in the absence of *mala fides*. On the other hand, if relevant considerations are not borne in mind and irrelevant consideration influence the decision, the Court may interfere in order to prevent a likelihood of prejudice to the public. Whenever a problem of ecology is brought before the Court, the Court is bound to bear in mind Art. 48-A of the Constitution, the Directive Principle which enjoins that "The State shall endeavour to protect and improve the environment and to safeguard the forests and wild life of the country", and Art. 51-A (*g*) which proclaims it to be the fundamental duty of every citizen of India, "to protect and improve the natural environment including forests, lakes, rivers and wild life, and to have compassion for living creatures". When the Court is called upon to give effect to the Directive Principle and the fundamental duty, the Court is not to shrug its shoulder and say that priorities are a matter of policy and so it is a matter for the policy-making authority. The least that the Court may do so is to examine whether appropriate considerations are borne in mind and irrelevancies excluded. In appropriate cases, the Court may go further, but how much further must depend on the circumstances of the case. The Court

[1] P.V. Joseph *v.* N. Kuruvilla, A.I.R. 1987 S.C. 2328 at p. 2332.

[2] Collector of Central Excise *v.* Subhas Chandra, (1987) 30 E.L.T. 450 at pp. 453, 454 (Tribunal).

may always give necessary directions. However, the Court will not attempt to nicely balance relevant considerations. When the question involves the nice balancing of relevant considerations, the Court may feel justified in resigning itself to acceptance of the decision of the concerned authority.[1]

4. Duty of Government regarding pollution steps indicated.—Having regard to the grave consequences of the pollution of water and air and the need for protecting and improving the natural environment which is considered to be one of the fundamental duties under the Constitution [*vide* Cl. (*g*) of Art. 51-A of the Constitution] the Supreme Court held that it is the duty of the Central Government to direct all the educational institutions throughout India to teach at least for one hour in a week lessons relating to the protection and the improvement of the natural environment including forests, lakes, rivers and wild life in the first ten classes. The Central Government shall get text books written for the said purpose and distribute them to the educational institutions free of cost. Children should be taught about the need for maintaining cleanliness commencing with the cleanliness of the house, both inside and outside, and of the streets in which they live. Clean surroundings lead to healthy body and healthy mind. Training of teachers who teach this subject by the introduction of short-term courses for such training shall also be considered. This should be done throughout India.[2]

***20. Information, reports or returns.**—The Central Government may, in relation to its functions under this Act, from time to time, require any person, officer, State Government or other authority to furnish to it or any prescribed authority or officer any reports, returns, statistics, accounts and other information and such person, officer, State Government or other authority shall be bound to do so.*

Comments

Section 20 of the Water Pollution Act, 1974 and Sec. 25 of the Air Pollution Act, 1981, relate to the power to obtain information Similar provision is contained in Sec. 20 of the Environment (Protection) Act, 1986.

Section 20 empowers the Central Government to require any person, officer, State Government or other authority to furnish information reports or returns, *etc.*

***21. Members, officers and employees of the authority constituted under Sec. 3 to be public servants.**—All the members of the authority, constituted, if any, under Sec. 3 and all officers, and other employees of such authority when acting or purporting to act in pursuance of any provisions of this Act or the rules made or orders or directions issued thereunder shall be deemed to be public servants within the meaning of Sec. 21 of the Indian Penal Code.*

Comments

Section 50 of the Water Pollution Act, 1974 and Sec. 44 of the Air Pollution Act, 1981, provide that members, officers of the Board to be public servants within the meaning of Sec. 21 of the Indian Penal Code. Section 21 of the Environment (Protection) Act, 1986 is based on the above two Acts.

Section 21 lays down that the members of the authority under Sec. 3 and all officers and employees of the Government or such authority shall be public servants.

[2] M.C. Mehta *v.* Union of India, (1988) 1 Comp. L.J. 81 at p. 94 (S.C.) : 1988 (21) I.J. Reports 21. 250 at p. 21. 260 (S.C.) : 1988 S.C.C. (Cr.) 141 at p. 161.

***22. Bar of Jurisdiction.**—No civil court shall have jurisdiction to entertain any suit or proceeding in respect of anything done, action taken or order or direction issued by the Central Government or any other authority or officer in pursuance of any power conferred by or in relation to its or his functions under this Act.*

Comments

Section 58 of the Water Pollution Act, 1974 and Sec. 46 of the Air Pollution Act, 1981, bar the jurisdiction of Civil Court relating to pollution cases. Section 22 of the Environment (Protection) Act, 1986 also bars the jurisdiction of the Civil Court.

Section 22 bars the jurisdiction of Civil Courts to entertain any suit or proceeding in respect of anything done, action taken or order or direction issued by the Central Government or any other authority or officer in pursuance of any power conferred by or in relation to its or his functions under the legislation.

***23. Power to delegate.**—Without prejudice to the provisions of sub-section (3) of Sec. 3, the Central Government may, by notification in the Official Gazette, delegate, subject to such conditions and limitations as may be specified in the notifications, such of its powers and functions under this Act, [except the power to constitute an authority under sub-section (3) of Sec. 3 and to make rules under Sec. 25] as it may deem necessary or expedient, to any officer, State Government or other authority.*

Comments

Section 11-A of the Water Pollution Act, 1974 as well as Sec. 15 of the Air Pollution Act, 1981 relate to the delegation of powers. Section 23 of the Environment (Protection) Act, 1986, provides the same power.

Section 23 empowers the Central Government to delegate all or any of its powers under the legislation to any officer, State Government or authority.

***24. Effect of other laws.**—(1) Subject to the provisions of sub-section (2), the provisions of this Act and the rules or orders made therein shall have effect notwithstanding anything inconsistent therewith contained in any enactment other than this Act.*

(2) Where any act or omission constitutes an offence punishable under this Act and also under any other Act then the offender found guilty of such offence shall be liable to be punished under the other Act and not under this Act.

Comment

Section 60 of the Water Pollution Act, 1974 and Sec. 52 of the Air Pollution Act, 1981 deal with overriding effects of the Act, Sec. 24 of the Environment (Protection) Act, 1986, also provides the effect of other laws.

***25. Power to make rules.**—(1) The Central Government may, by notification in the Official Gazette, make rules for carrying out the purposes of this Act.*

(2) In particular, and without prejudice to the generality of the foregoing power, such rules may provide for all or any of the following matters, namely :

- *(a) the standards in excess of which environmental pollutants shall not be discharged or emitted under Sec. 7;*
- *(b) the procedure in accordance with and the safeguards in compliance with which hazardous substances shall be handled or caused to be handled under Sec. 8;*
- *(c) the authorities or agencies to which intimation of the fact of occurrence or apprehension of occurrence of the discharge of any environmental pollutant*

in excess of the prescribed standards shall be given and to whom all assistance shall be bound to be rendered under sub-section (1) of Sec. 9;

(d) *the manner in which samples of air, water, soil or other substance for the purpose of analysis shall be taken under sub-section (1) of Sec. 11;*[1]

(e) *the form in which notice of intention to have a sample analysed shall be served under Cl. (a) of sub-section (3) of Sec. 11;*[2]

(f) *the functions of the environmental laboratories,*[3] *the procedure for the submission to such laboratories of samples of air, water, soil and other substances for analysis or test;*[4] *the form of laboratory report ; the fees payable for such report and other matters to enable such laboratories to carry out their functions under sub-section(2) of Sec. 12;*

(g) *the qualifications of Government Analyst appointed or recognised for the purpose of analysis of samples of air, water, soil or other substances under Sec. 13;*[5]

(h) *the manner in which notice of the offence and of the intention to make a complaint to the Central Government shall be given under Cl. (b) of Sec. 19;*[6]

(i) *the authority or officer to whom any report, returns, statistics, accounts and other information shall be furnished under Sec. 20;*

(j) *any other matter which is required to be, or may be prescribed.*

Comments

Section 63 of the Water Pollution Act, 1974 and Sec. 53 of the Air Pollution Act, 1981, empower the Central Government to make rules. Section 25 of the Environment (Protection) Act, 1986, also provides the same power to Central Government.

Section 25 empowers the Central Government to make rules for carrying out the purposes of the proposed legislation.

26. ***Rules made under this Act to be laid before Parliament.***—*Every rule made under this Act shall be laid, as soon as may be after it is made, before each House of Parliament, while it is in session, for a total period of thirty days which may be comprised in one session or in two or more successive sessions, and if, before the expiry of the session immediately following the session or the successive sessions aforesaid, both Houses agree in making any modification in the rule or both Houses agree that the rule should not be made, the rule shall thereafter have effect only in such modified form or be of no effect, as the case may be; so, however, that any such modification or annulment shall be without prejudice to the validity of anything previously done under that rule.*

Comment

This section requires the rules framed under the Act to be laid before Parliament, for approval, modification or annulment.

ENVIRONMENTAL LABORATORIES AND ANALYSTS

S.O. 728 (E) dated 21st July 1987.[2]—In exercise of the powers conferred by the Cl. (*b*) of sub-section (1) of Sec. 12 and Sec. 13 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby recognises, (*a*) the laboratories specified in column (2) of the Table below as environmental laboratories to carry out the functions entrusted to the environmental laboratories under the said Act and the rules made thereunder, and (*b*) specifies the persons in column (3) of the Table to be the Government Analysts for the purposes of analysis of samples of air, water, soil or other substances sent for analysis by the Central Government or the officer empowered under Sec. 11 of the Act.

AQUACULTURE AUTHORITY IN COASTAL STATES AND UNION TERRITORIES

S.O. 88 (E) dated 6th February, 1997.—In exercise of the powers conferred by sub-section (3) of Sec. 3 of the Environment (Protection) Act, 1986 (29 of 1986) (hereinafter referred to as the said Act), the Central Government hereby constitute an authority known as Aquaculture Authority to deal with the situation created by the shrimp culture industry in the coastal States and Union Territories consisting of the following members [1][for a period of two years and six months] from the date of publication of this notification in the Official Gazette, namely —

[1][(1)	Justice G. Ramanujam, (Retired Judge of the Madras High Court)	Chairperson
(2)	Dr G.R.M Rao, Director, Central Instt of Brackishwater Aquaculture, Egmore, Chennai—Expert in the field of aquaculture.	Member
(3)	Prof R.C. Das, Retired Chairman, Orissa Pollution Control Board, Bhubaneswar—Exert in the field of pollution control.	Member
(4)	Dr Satish Chandra, Retired Director, National Instt. of Hydrology, New Delhi—Expert in the field of environment protection.	Member
(5)	Shri V. Rajagopalan, Joint Secretary, Representative of the Ministry of Environment & Forests, New Delhi.	Member
(6)	Dr. K. Gopakumar, Dy Director-General, (Fisheries), Indian Council of Agricultural Research—Representative of the Ministry of Agriculture	Member

---

1. Subs. by S.O. 80 (E), dated 5th February, 1999 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 5th February, 1999.

(7) Shri V. Venkatesan, Member
Director,
Marine Products Export Development
Authority, Kochi—Representative of
the Ministry of Commerce

(8) Dr. Y.S. Yadava Member-Secretary]
Fisheries Development Commissioner,
(Deptt. of Animal Husbandry & Dairying).

(2) The Authority shall exercise the following powers and perform the following functions, namely —

(*i*) exercise of powers under Sec. 5 of the Environment (Protection) Act, 1986 for issuing directions and for taking measures with respect to matters referred to in Cls (*v*), (*vi*), (*viii*), (*ix*) and (*xii*) of sub-section (2) of Sec. 3 of the said Act;

(*ii*) to take steps and ensure the closure, demolition and removal of all the existing aquaculture activities by the 31st March, 1997 from the Coastal Regulation zone areas as demarcated in the Coastal Zone Management Plans prepared in accordance with the Coastal Regulation Zone Notification No. S.O. 114 (E) dated the 19th February, 1991, by the concerned coastal States and union Territories and upto 1000 m in respect of Chilka lake and Pulicat lake, except the traditional and improved traditional types of technologies (as defined in Algarswami report) which are practised in the coastal low lying areas,

(*iii*) to ensure that no shrimp culture pond can be constructed or setup within the Coastal Regulation Zone and upto 1000 m of Chilka lake and Pulicat lake (including bird sanctuaries namely, yadurapattu and Nelapattu);

(*iv*) to ensure and give approval to the farmers who are operating traditional and improved traditional systems of quaculture for adoption of improved technology for increased production;

(*v*) to ensure that the agricultural lands, salt pan lands, mangroves, wetlands, forest lands, land for village common purposes and the land meant for public purposes shall not be used or converted for construction of shrimp culture ponds;

(*vi*) the Authority shall implement the "Precautionary Principle" and the "Polluter Pays Principle", by adopting the procedure described in the Supreme Court order dated 11-12-1996 passed in the Writ Petition (Civil) No. 561 of 1994,

(*vii*) the Authority shall also regulate the shrimp culture activities outside the Coastal Regulation Zone areas and beyond 1000 m from the Pulicat lake and Chilka lake and also give the necessary approvals/authorisation by the 30th April, 1997;

(*viii*) the Authority in consultation with expert bodies like National Environmental Engineering Research Institute, Central Pollution Control Board, repective State Pollution Control Boards shall frame Scheme/Schemes for reversing the damage caused to the ecology and environment by pollution in the coastal States and Union Territories;

(*ix*) the Authority shall ensure the payment of compensation to the wormen emplyed in the shrimp culture industries as per the procedure laid down in the Supreme Court Order dated 11-12-96 passed in the Writ Petition (Civil) No. 561 of 1994;

(*x*) to comply with the relevant orders issued by the concerned High Courts and Supreme Court from time to time;

(xi) to deal with any other relevant environment issues pertaining to coastal areas with respect to shrimp culture farming, including those which may be referred to it by the Central Government in the Ministry of Environment and Forests.

3. The jurisdiction of the Authority shall cover all the coastal States and Union Territories;

4. The Scheme/Schemes framed by the Authority for reversing the damage caused due to the pollution in the coastal States and Union Territories shall be executed by the respective State Governments and Union Territory Administrations under the supervision of the Central Government.

5. The Authority shall function under the administrative control of Government of india in the Ministry of Agriculture, with its headquarters at Delhi.

6. The terms and conditions of approintment of the Chairperson and Members shall be as determined by the Central Government from time to time.

CENTRAL GROUND WATER BOARD

S.O. 38(E). dated 14th January, 1997.—In exercise of the powers conferred by sub-section (3) of Sec. 3 of the Environment (Protection) Act 1986 (29 of 1986) (hereinafter referred to as the said Act), the Central Government hereby consititute the Central Ground Water Board as an Authority for the purposes of regulation and control of Ground Water management and Development for a period of [1][five years]the date of publication of this notification in the official gazette, namely :—

In exercise of the powers conferred by sub-section (3) of Sec. 3 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following amendments in the notification of the Government of India in the Ministry of Environment and Forests No. S.O. 38(E), dated the 14th January, 1997, namely :—

(1) Chairman, Central Ground Water Board —Chairperson

(2) Member (Explortory Drilling and Materials Management), Central Ground Water Board —Member

(3) Member (Sustainable Management and Liasion), Central Ground Water Board —Member

(4) Member (Survey, Assessment and Monitoring), Central Ground Water Board —Member

(5) .... —Member

(An officer not below the rank of the Joint Secretary to the Government of India to be appointed by the Central Government).

2. The Authority shall exercise the following powers and perform the following functions, namely :—

(*i*) exercise of powers under Sec. 5 of the Environment (protection) Act, 1986 for issuing directions and taking such measures in respect of all the matters referred to in sub-section (2) of Sec. 3 of the said Act,

(*ii*) to resort to the penal provisions contained in Secs 15 to 21 of the said Act,

(*iii*) to regulate indiscriminate boring and withdrawal of ground water in the country and to issue necessary regulatory directions with a view to preserve and protect the ground water

3 The jurisdiction of the authority shall be whole of India

4. The Authority shall function under the administrative control of the Government of India in the Ministry of Water Resources with its Headquarters at Delhi

ENVIRONMENT POLLUTION (PREVENTION AND CONTROL) AUTHORITY FOR NATIONAL CAPITAL REGION

S.O. 93 (E) dated 29th January, 1998.[2]—In exercise of the powers conferred by sub-sections (1) and (3) of Sec. 3 of the Environment (Protection) Act, 1986 (29 of 1986) (hereinafter referred to as the said Act), the Central Government hereby constitutes an authority to be known as the Environment Pollution (Prevention and Control) Authority for the National Capital Region (hereinafter referred to as the Authority) consisting of the following persons for a period of two years with effect from the date of publication of this Order in the official Gazette, namely :—

(1) Shri Bhurelal, Chairman
Secretary,
Central Vigilance Commission,
Jaisalmer House, Mansingh Road,
New Delhi.

---

[1] Subs. by S.O. 40 (E), dated 13th January, 1998 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 13th January, 1998.

[2] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*) dated 29th January, 1998.

(2)	Smt. Krian Dingra, Commissioner-cum-Secretary, Transport Department, Government of the National Capital Territory of Delhi, Delhi.	Member
(3)	Shri Anil Agarwal, Director, Centre for Science and Environment, 41, Tughlakabad Industrial Area, (Near Batra Hospital), New Delhi-110062.	Member
(4)	Shri Jagdish Khattar, Representative of the Automobile Manufacturers Association of India, Executive Director (Marketing and Sales), Maruti Udyog Limited, 11th Floor, Jeevan Prakash, 25, Kasturba Gandhi Marg, New Delhi-110001.	Member
(5)	Shri D.K. Biswas, Chairman, Central Pollution Control Board, Parivesh Bhawan, East Arjun nagar, Delhi-110054.	Convenor

2. The Authority shall exercise the following powers and perform the following functions for protecting and improving the quality of the environment and preventing, controlling and abating environmental pollution, namely :—

(1) Exercise the powers under Sec. 5 of the said Act for issuing directions in respect of complaints relating to the violation of an order by any authority or measure specified pertaining to—

(*i*) standards for the quality of the environment in its various aspects,

(*ii*) standards for emission or discharge of environmental pollutants from various sources,

(*iii*) restriction of areas in which any industries, operations or processes or class of industries or processes shall not be carried out or shall be carried out subject to certain safeguards,

(*iv*) procedures and safeguards for the prevention of accidents which may cause environmental pollution and remedial measures for such accidents,

(*v*) procedures and safeguards for the handling of hazardous substances.

(2) The Authority shall have the power to take up matters as mentioned above, suo-moto, or on the basis of complaints made by any individual, representative body or organization functioning in the field of environment. Such complaints may be against any individual, association, company, public undertaking or local body carrying on any industry, operation or process.

(3) The Authority shall, for controlling vehicular pollution, take all necessary steps to ensure compliance of specified emission standards by vehicles including proper calibration of the equipment for testing vehicular pollution, ensuring compliance of fuel quality standards, monitoring and coordinating action for traffic planning and management.

(4) The Authority shall, for ensuring maintenance of the specified ambient noise standards, have the power to issue directions under section 5 of the said Act, including banning or restricting any industry, process or operation emitting noise.

(5) The Authority shall deal with environmental issues pertaining to the National Capital region which may be referred to it by the Central Government.

(6) The Authority shall monitor the progress of the action plan drawn up by the Ministry of Environment and Forests on pollution in Delhi as contained in the 'White Paper on Pollutionin Delhi with an Action Pan', issued by the Central Government on 3rd December, 1997.

(7) The Authority shall exercise the powers of entry, inspection, search and seizure under Sec. 10 of the said Act, in respect of any ascton to be taken under sub-paragraph (1) of paragraph 2 of this Order.

(8) The Authority shall exercise the power to take samples under Sec. 11 of the said Act, in respect of any action to be taken under sub-paragraph (1) of paragraph 2 of this Order.

(9) The Authority shall exercise the powers under Sec. 19 of the said Act, for making complaints against offences under the said Act and for non-compliance of directions issued by it under sub-paragraph (1) of paragraph 2 of this Order

(10) The Authority shall have jurisdiction over the national Capital Region as defined in clause (*f*) of Sec. 2 of the National Capital Region Planning Board Act, 1985 (2 of 1985)

(11) The foregoing powers and functions of the Authority shall be subject to the supervision and control of the Central Government

(12) The Authority shall furnish a progress report about its activities at least once in two months to the Central Government.

(13) The Authority shall have its headquarters in the national Capital Region

(14) (1) Notification of the Government of India in the Ministry of Environment and Forests number S.O. 704(E), dated the 9th October, 1996 constituting the Environmental Impact Assessment Authority for the National Capital Region shall stand superseded (except in respect of things done or omitted to be done before such supersession) from the date of publication of this Order.

(2) Any matter which relates to the powers and functions enumerated in this Order, and pending with the Environmental Impact Assessment Authority shall stand transferred to the Environment Pollution (Prevention and Control) Authority for the National Capital Region constituted under this Order

(3) Any matter specifically not falling within the scope and jurisdiction of the Authority as so constituted, shall be dealt with by the statutory authorities concerned

* * *

LOSS OF ECOLOGY (PREVENTION AND PAYMENTS OF COMPENSATION) AUTHORITY FOR STATE OF TAMIL NADU

S.O. 671 (E) the 30th September, 1996.[1]—In exercise of the powers conferred by sub-section (3) of Sec 3 of the Environment (Protection) Act, 1980 (29 of 1986) hereinafter referred to as the said Act, the Central Government hereby constitutes the Loss of Ecology (Prevention and Payments of Compensation) Authority for the State of Tamil Nadu consisting of the following members for a period of two years on and from the date of publication of this notification in the Official Gazette, namely —

(1)	.... (A retired Judge of the High Court to be appointed by the Central Government).	—Chairperson
(2)	The Secretary, Government of Tamil Nadu Department of Environment, Chinnai	—Member
(3)	The Member Secretary, Central Pollution Control Board, Delhi.	—Member
(4)	.... (A person to be appointed by the Central Government)	—Member-Secretary

2. The Authority shall exercise the following powers and perform the following functions, namely :—

---

[1] Published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*) dated 30th September, 1996.

(i) exercise of powers under Sec. 5 of the said Act, for issuing directions and for taking measures with respect to matters referred to in Cls. *(v)*, *(vi)*, *(vii)*, *(viii)*, *(ix)*, *(x)* and *(xii)* of sub-section (2) of Sec. 3 of the said Act;

(ii) to assess the loss to the ecology and environment in the affected areas and also identify the individuals and families who have suffered because of the pollution and assess the compensation to be paid to the said individuals and families;

(iii) to determine the compensation to be recovered from the polluters as cost of reversing the damaged environment,

(iv) to lay down the procedure for actions to be taken under *(i)* to *(iii)* above,

(v) to compute the compensation under two heads, namely, for reversing the ecology and for payment to individuals;

(vi) to direct the closure of any industry or class of industries owned or managed by a polluter in case of evasion or refusal to pay the compenstion awarded against the polluter. This shall be in addition to the recovery from the polluter as arrears of land revenue,

(vii) to frame scheme or schemes for reversing the damage caused to the ecology and environment by pollution in the State of Tamil Nadu in consultation with expert bodies like National Environmental Engineering Research Institute, Central Pollution Control Board, etc These schemes shall be executed by the State Government of Tamil Nadu under the supervision of the Central Government. The expenditure shall be met from the "Environment Protection Fund" and from other sources provided by the state Government and the Central Government;

(viii) to review the cases of all the industries which are already operating in the prohibited area and direct the relocation of any of such industries;

(ix) to close the tanneries petaianently or direct their relocation, which have not provided adequate treatment facilities and not having valid certificate from the Tamil Nadu State Pollution Control Board,

(x) to comply with the order issued by the Madras High Court and the Supreme Court from time to time;

(xi) to deal with any other relevant environment issues pertaining to the State of Tamil Nadu, including those which may be referred to it by the Central Government in the Ministry of Environment and Forests

3. In exercise of its powers as defined in paragraph 2 above, the Authority shall prepare a statement showing the total amount to be recovered from the polluters mentioning therein the names of the polluters from whom the amount is to be recovered, the amount to be recovered from each polluter, the persons to whom the compensation is to be paid and the amount payable to each of them The statement shall be forwarded to the Collector/District Magistrates of the area concerned who shall recover the amount from the polluters, it necessary, as arrears of land revenue and shall disburse the compensation awarded by the Authority to the affected persons, and families

4. The Authority shall furnish a progress report about its activities atleast once in two months to the Central Government in the Ministry of Environment and Forests.

5 The Authority shall have its Headquarters at Chennai, Tamil Nadu.

6. The terms and conditions of appointment of the Chairperson and Members shall be as determined by the Central Government from time to time.

NO DEVELOPMENT ZONE IN STATE OF ASSAM

S.O. 481 (E) dated 5th July, 1996.[1]—Whereas anthropogenic activities cause air, water and land pollution thereby endangering forests, genepool reserves, vegetation and living creatures and these activities are required to be carried out at a safe distance so as to ensure that our natural reserves are not be affected adversely;

And whereas the Kaziranga National Park with Headquarter at Bokhakat in the State of Assam is the home of three fourth of the total population of Rhino and contains largest single concentration of endangered species wild animals like swamp-deer, wild-buffallo, elephants, tigers and Gangetic Dolphins and it is the only park of its kind with a viable lowland grassland ecosystem in South Asia;

And whereas M/s. IBP Co. Ltd. under the administrative control of the Central Government in the Ministry of Petroleum and Natural Gas is proposing to set-up a Petroleum Refinery at Numaligarh (East of Kaziranga) and the developmental activities for said refinery is likely to cause tremendous pressure on the natural resources and the wild-life habitat in the Kaziranga National Park and its surroundings,

And whereas it is proposed to create a "No Development Zone" within a radius of 15 km around the said refinery site except towards North West where the "No Development Zone" shall extend right up to the eastern boundary of the said park,

And whereas clause (*a*) of sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986 provides that whenever the Central Government considers that prohibition or restrictions of any industry or carrying on any processes or operation in any area should be imposed, it shall give notice of its intention to do so,

And whereas sub-rule (4) of rule 5 of the Environment (Protection) Rules, 1986 provides that, notwithstanding anything contained in sub-rule (3), whenever it appears to the Central Government that it is in public interest to do so, it may dispense with the requirement of notice under caluse (a of sub-rule (3),

And whereas in view of the magnitude and the urgency of the threat to the environment the Central Government is of the opinion that it is in public interest to dispense with the requirement of notice under clause (*a*) of sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986,

And whereas in view of the magnitude and the urgency of the threat to the environment the Central Government is of the opinion that it is in public interest to dispense with the requirement of notice under clause (*a*) of sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986;

Now, therefore, in exercise of the powers conferred by sub-section (1) and Cl. (*v*) of sub-section (2) of Sec. 3 of the Environment (Protection) Act, 1986 (29 of 1986) read with Cl (*d*) of sub-rule (3) read with sub-rule (4) of rule 5 of the Environment (Protection) Rules, 1986, the Central Government hereby directs that on and from the date of the publication of this notification the expansion of industrial area, townships, infrastructure facilities and such other activities which could lead to pollution and congestion shall not be allowed within the "No Development Zone" specified in the Appendix to this notification except with the prior approval of the Central Government.

---

RESTRICTING CERTAIN ACTVITIES IN SPECIFIED AREA OF ARAVALI RANGE CAUSING ENVIRONMENTAL DEGRADATION

S.O. 319 (E) dated 7th May, 1992.[1]—[Under Sec 3 (1) and 3 (2) (*v*) of the Environment (Protection) Act, 1986 and Rule 5 (3) (*d*) of the Environment (Protection) Rules, 1986 restricting certain activities in specified area of Aravali Range which are causing Environmental Degradation in the Region]

Whereas a Notification under Sec 3 (1) and Sec. 3 (2) (*v*) of the Environment (Protection) Act, 1986 (29 of 1986) inviting objections are causing Environmental Degradation in the Region was published in the *Gazette of India*, Part II, Sec 3, sub-section (*ii*) *vide* S O 25 (E),dated 9th January, 1992;

And whereas all objections received have been duly considered by the Central Government,

Now, therefore, in exercise of the powers conferred by sub-section (1) and Cl (*v*) of sub-section (2) of Sec 3 of the Environment (Protection) Act, 1986 (29 of 1986), read with Rule 5 of the Environment (Protection) Rules, 1986, the Central Government hereby prohibits the carrying on of the following processes and operations, except with its prior permission, in the areas specified in the Table appended to this Notification :

(*i*) Location of any new industry including expansion modernisation,

(*ii*) (*a*) All new mining operations including renewals of mining leases,

  (*b*) Existing mining leases in sancturs/national Park and areas covered under Project Tiger and/or

  (*c*) Mining is being done without permission of the competent authority ,

(*iii*) Cutting of trees,

(*iv*) Electrification (laying of new transmission lines)

2 Any person who desires to undertake any of the abovementioned processes or operations in the said areas, shall submit an application to the Secretary, Ministry of Environment and Forests, New Delhi, in the attached application form (Annexure) specifying, *inter alia*, details of the area and the proposed process or operation. he shall also furnish an Environment Impact Statement and an Environmental Management Plan along with the application and such other information as may be required by the Central Government for considering the application

3 The Central Government in the Ministry of Environment and Forests shall having regard to the guidelines issued by it from time to time for giving effect to the provisions of the said Act, grant permission within a period of three months from the date of receipt of the application or where further information has been asked for from the applicant, within a period of three months from the date of the receipt of such information, or refuse permission within the said time on the basis of the impact of the proposed process or operation on the environment in the said area.

4. For seeking permission under this Notification, an application in the prescribed form (*see* Annexure), duly filled in, may be submitted to the Secretary, Ministry of Environment and Forests, Paryavaran Bhavan, CGO Complex Lodi Road, New Delhi.

---

[1] Published in the *Gazette of India, Extraordinary* Pt. II, Sec. 3 (*ii*), dated 7th May 1992.

TABLE

Areas where carrying on of processes and operations without permission is prohibited—

(*i*) all reserved forests, protected forests or any other area shown as "forest in the land records maintained by the State Government as on the date of this notification in relation to Gurgaon district of the State of Haryana and the Alwar District of the State of Rajasthan.

(*ii*) all areas shown as :—

- (*a*) Gair Mumkin Pahar, or
- (*b*) Gair Mumkin Rada, or
- (*c*) Gair Mumkin Behed, or
- (*d*) Banjad Beed, or
- (*e*) Rundh,

in the land records maintained by the State Government as on the date of this notification in relation to Gurgaon district of the State of Haryana and the Alwar district of the State of Rajasthan,

(*iii*) all areas covered by notifications issued under Sections 4 and 5 of the Punjab Land Preservation Act, 1900, as applicable to the State of Haryana in the district of Gurgaon up to the date of this Notification,

(*iv*) all areas of Sariska National Park and Sariska Sanctuary notified under the Wildlife (Protection) Act, 1972 (53 of 1972)

ANNEXURE

Application Form

1. (*a*) Name and address of the project proposed :

(*b*) Location of the project :
Name of the Place :
District, Tehsil .
Location Map

(*c*) Alternate sites examined and the reasons for the site proposed

2 Objectives of the project

3 (*a*) Land Requirement·
Agriculture land
(Other specify)

(*b*) (*i*) Topography of the area indicating gradient, aspect and altitude

(*ii*) Eroadability classification of the proposed, land

(*c*) Pollution sources existing within 10 km radius

(*d*) Distance of the nearest National Park/Sanctuary/Biosphere Reserve/ Monuments/heritage site/Reserve Forest

(*e*) Rehabilitation plan for Quarries/borrow areas

(*f*) Green belt plan :

(*g*) compensatory afforestation plan.

4. Climate and Air Quality* :

(*a*) Windrose at site ;

(*b*) Max./Min./Mean annual temperature :

(*c*) Ambient air quality data .

(*d*) Nature and concentration of emission of SPM, Gases (CO, CO_2, SO_2, NOx etc.) from the project.

5.** (*a*) Water balance at site surface and ground water availability and demand ·

(*b*) Lean season water availability :

(*c*) Water source to be tapped with details of competing users (Rivers, lake, Ground, Public supply) :

(*d*) Water Quality :

(*e*) Changes observed in quantity and quality of water in the last 15 years and present charging and extraction details :

---

* Data may be obtained from India Mateorological Department and State Pollution Control Board.

(*f*) (*i*) Quantum of waste water to be released with treatment details :
 (*ii*) Quantum and Quality of water in the receiving water body;
 (*iii*) Quantum of waste water to be released on land and the type of land.

6 Solid Wastes :
 (*a*) Nature and quantity of solid wastes generated :
 (*b*) Solid waste disposal method.

7 Noise and vibrations :
 (*a*) Sources of noise and vibrations :
 (*b*) Ambient noise level;
 (*c*) Noise and vibration control measures proposed :
 (*d*) Subsidence problem, if any, with control measures.

8. Power requirement indicating source of supply; complete environmental details to be furnished separately, if captive power unit proposed

9. Total labour force to be deployed with details of
 — Endemic health problems in the area .
 — Health care system proposed

10. (*a*) Number of families and population to be displaced .
 (*b*) Rehabilitation Master Plan.

11 Risk assessment report

12 (*a*) Environmental Impact Assessment Report ·
 (*b*) Environmental Management Plan : Prepareds per Guidelines of MEF issued from time to time
 (*c*) Detailed Feasibility Report .
 (*d*) Proposal for diversion of Forest land under Forest (Conservation) Act, 1980 including Benefit Cost analysis

13 Recommendations of the State Pollution Control Board and/or the State Department of Environment and Forests.

Signature of the Applicant
Along with name, date and
full Postal address

N.B .

A. Item Nos. 3 (*c*), 4, 5, 6, 7, 8, 9, 10, 12 (*b*) and 12 (*c*) are not applicable to cutting of trees

B. Item Nos. 3 (*c*), 4, 7, 1 are not applicable to construction of cluster of dwelling units, farm sheds, community centre and any other activity connected with such construction including roads.

C. Item Nos, 3(*b*), 3 (*c*), 3(*e*), 3(*f*), 4, 5, 6, 7, 9, 12(*a*) and12(*b*) are not applicable to electrification

D All items to be furnished in case of mining, industry thermal power, transport projects.

E Notwithstanding the above, any item (s) considered no applicable may be so indicated along with reasons

 (*d*) NOC from the concerned State Pollution Control Board.
 (*e*) Linkages for water and power
 (*f*) Summary of project report (one copy)
 (*g*) Rehabilitation plan.

Requirement of EIA and Risk Analysis Reports can be dispensed with by the IAA in case the projects which are unlikely to cause significant environmental impacts.

The project proponent will not be required to seek environmental clearance from the IAA if the required land for the project had been acquired and all necessary approvals from the State Govt. including NOC from the State Pollution Control Boards have been obtained before 27th January, 1994.

** Ground Water Board and the Irrigation Deptt. may be contacted for data.

Industries with investment less than Rs. 1 crore which are reserved for small scale sector have been kept out of the purview of the notification.

Mainly the projects with a pollution potential having an investment of Rs. 50 crores and above will be required to take clearance.

* * *

PROHIBITION AGAINST OPEN BURNING OF WASTE OIL

S.O. 329 (E) dated 15th April, 1997.[1]—Whereas a notification of the Government of India in the Ministry of Environment and Forests under Cl. (*iii*) of sub-rule (2) of rule 13 of the Environment (Protection) Rules, 1986 was published in the *Gazette of India, Extraordinary* Part II, Sec. 3, sub-section (*ii*) dated the 16th January, 1997 *vide* S.O. 43(E) dated the 16th January, 1997 inviting objections or suggestions from the persons likely to be affected within a period of sixty days from the date of publication of the said notification in the matter of Government's intention for imposition of prohibition against open burning of waste oil,

And whereas no objections or suggestions were received within the said period by the Central Government,

And whereas the Central Government is of the opinion that open burning of waste oil is toxic and detrimental to human health and the environment and it is necessary to prohibit the open burning of waste oil,

Now, therefore, in exercise of the powers conferred by clause (*d*) of sub-section (2) of Sec. 6 of the Environment (Protection Act, 1986, read with rule 13 of the Environment (Protection) Rules, 1986, the Central Government hereby prohibits the open burning of waste oil, throughout India from the date of publication of the notification.

* * *

NOTIFICATION ON ENVIRONMENT IMPACT ASSESSMENT[2]

With the recent liberalisation of industrial policy and series of economic reforms initiated during the recent years, it has become desirable to bring the major developmental projects within the purview of environmental impact assessment with a view to have sustainable development. In view of this, a notification on environmental impact assessment of developmental projects was issued by the Ministry of Environment and Forests. Government of India on 27th January, 1994 which was, subsequently amended on 4th May, 1994 to make it more effective. Some of the salient features of the amended notification are as follows :

(*i*) Mainly large projects involving hazardous operations or projects which are having significant pollution potential are covered in this notification

(*ii*) Projects earmarked for small scale sector having an investment below Rs 1 crore have been kept out of the purview of the notification

(*iii*) Site clearance will be considered for site specific projects such as mining, pit-head thermal power stations, hydro-electric and river valley projects including flood control, ports and harbours (excluding minor ports) and exploration of major minerals in areas above 500 ha

(*iv*) Time frame not exceeding 90 days has been prescribed for environmental appraisal of the projects

(*v*) The Committee of Experts will examine the projects referred to the Ministry of Environment and Forests

(*vi*) Public hearing system has been introduced specially for the controversial projects or those likely to have significant environmental ramifications.

The following projects will come under the purview of the said notification

1. Nuclear Power and related projects such as Heavy Water Plants, nuclear fuel complex, rare earths.
2. River Valley projects including hydel power, major irrigation and their combination including flood control.
3. Ports, Harbours, Airports (except minor ports and harbours)
4. Petroleum Refineries including crude and product pipelines.
5. Chemical Fertilizers (Nitrogenous and Phosphatic other than single superphosphate).
6. Pesticides (Technical).
7. Petrochemical complexes (Both Olefinic and Aromatic) and Petro-chemical intermediates such as DMT. Caprolactam. LAB etc. and production of basic plastics such as LDPE, HDPE, PP PVC.

---

[1] Published in the *Gazette of India, Extraordinary* Pt. II, Sec. 3 (*ii*), dated 15th April, 1997.

[2] *Vide* the Hindu Survey of the Environment, 1994.

8. Bulk drugs and pharmaceuticals
9 Exploration for oil and gas and their production, transportation and storage.
10. Synthetic Rubber.
11. Asbestos and Asbestos products.
12 Hydrocyanic acid and its derivatives
13 (*a*) Primary metallurgical industries (such as production of Iron and Steel, Aluminium, Copper, Zinc, Lead and Ferro Alloys)
   (*b*) Electric arc furnaces (Mini Steel Plants)
14 Chlor-alkali industry.
15. Integrated paint complex including manufacture of resins and basic raw materials required in the manufacture of paints.
16 Viscose Staple fibre and filament yarn
17 Storage batteries integrated with manufacture of oxides of lead and lead antimony alloy
18. All tourism projects between 200 m—500 metres of High Tide Line or at locations with an elevation of more than 1000 metres with investments of more than Rs 5 crores
19 Thermal Power plants
20. Mining projects (major minerals) with leases more than 5 hectares
21 Highway Projects
22 Tarred Roads in Himalayas and/or Forest areas
23 Distilleries
24 Raw Skins and Hides
25 Pulp, paper and newsprint.
26 Dyes
27 Cement.
28 Foundries (individual).
29 Electroplating

Further, some clarifications regarding the notification are as follows

(*i*) A project proponent is required to seek environmental clearance for proposed expansion/modernisation activity if the resultant pollution load (air, water and solid) is to exceed the present levels If it is certified by the concerned State Pollution Control Board that no increase is likely to occur in the existing pollution load due to the proposed expansion or modernisation, the project proponent will not be required to seek environmental clearance from the Ministry of Environment and Forests, but a copy of such certificate issued by the Pollution Control Board will have to be submitted for information. In the Public interest, the Impact Assessment Agency (IAA) reserves the right to review such cases

(*ii*) Public hearing could be called for in case of the project involving large displacement of population or having severe environment ramification

(*iii*) Applications seeking environmental clearance should include the following ·

   (*a*) Filled-in questionnaire as prescribed by the IAA from time to time (20 copies)

   (*b*) EIA/EMP report (20 copies)

   (*c*) Risk Analysis Report (20 copies)

CONSTITUTION OF TAJ TRAPEZIUM ZONE POLLUTION (PREVENTION AND CONTROL) AUTHORITY

S.O. 350 (E), dated 17th May, 1997.[1]—In exercise of the powers conferred by sub-sections (1) and (3) of Sec. 3 of the Environment (Protection) Act, 1986 (29 of 1986) (hereinafter referred to as the said Act), the Central Government hereby constitutes an authority to be known as the Taj Trapezium Zone Pollution (Prevention and Control) Authority (herein referred to as "the Authority") consisting of the following persons for a period of two years with effect from the date of publication of this notification in the Official Gazette, namely :—

(1) Commissioner, Agra Division — Chairman
(2) Chairman, Uttar Pradesh State Pollution Control Board — Member
(3) Deputy Inspector-General of Police, Agra Range — Member

---

1. Published in the *Gazette of India, Extra.*, Pt. II, Sec. 3 (*ii*), dated 18th May, 1999.

(4) Member-Secretary, Central Pollution Control Board — Member
(5) A representative of the Ministry of Petroleum and Natural Gas — Member
(6) A representative of the Ministry of Environment and Forests — Member
(7) A representative of the Archeological Survey of India — Member
(8) Vice-Chairman, Agra Development Authority — Member-Convener

2. The authority shall, within the geographical limits of Agra Division in the Taj Trapezium Zone (*see* Annexure) in the State of Uttar Pradesh, have the power to—

(*i*) monitor progress of the implementation of various schemes for protection of the Taj Mahal and programmes for protection and improvement of the environment in the above said area;

(*ii*) exercise powers under Sec. 5 of the said Act,

(*iii*) take all necessary steps to ensure compliance with specified emission standards by motor vehicles and ensuring compliance with fuel quality standards,

(*iv*) deal with any environmental issue which may be referred to it by the Central Government or the State Government of Uttar Pradesh relating to the abovesaid area

3. The foregoing powers and functions of the Authority shall be subject to the overall supervision and control of the Central Government

4. The Authority shall be authorised to exercise the powers under Sec 19 of the said Act

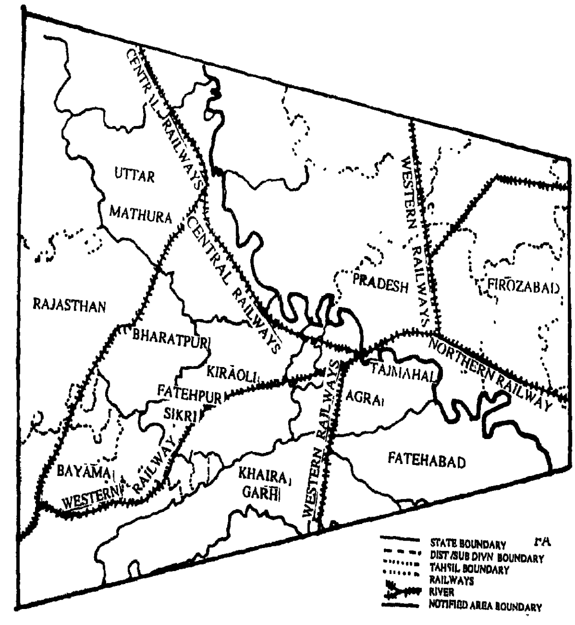
5. The geographical limits of the Taj Trapezium Zone (*see* Annexure) have been defined in the shape of a trapezoid between 26° 45' N & 77° E to 27° 45' N & 77° 15' E in the West of the Taj Mahal and in the E of the Taj Mahal between 27° 00' N & 78° 30' E to 27° 30' N & 78° 30' E

6. The Authority may co-opt experts for facilitating the work assigned to it.

7. The Authority shall furnish a report about its activities at least once in two months to the Central Government in the Ministry of Environment and Forests.

8. The Authority shall have its headquarters at Agra in the State of Uttar Pradesh

ANNEXURE



Figure—Geographical Limits of the Taj Trapezium Zone.

PART III-2

THE ENVIRONMENT (PROTECTION) RULES, 1986

S.O. 844 (E), dated the 19th November, 1986.[1]— In exercise of powers conferred by Secs. 6 and 25 of the Environment (Protection) Act, 1986 (29 of 1986), the Central Government hereby makes the following rules, namely :

Comment

It is well settled in law that every subordinate law-making authority has a power to frame subordinate legislation only provided it is reasonable and within the limits of the rules making power of that body.[2]

*1. **Short title and commencement.**— (i) These rules may be called the Environment (Protection) Rules, 1986.*

(ii) They shall come into force on the date,[3] of their publication in the Official Gazette.

Comments

The general power of framing rules for effectuating the purposes of the Act, would plainly authorize and sanctify the framing of such a rule.[4]

The Environment (Protection) Rules, 1986, has come into force with effect from 19th November, 1986.

*2. **Definitions.**— In these rules, unless the context otherwise requires,—*

(a) "Act" means the Environment (Protection) Act, 1986 (29 of 1986);

[5]*[(aa) "areas" means all areas where the hazardous substances are handled;]*

(b) "Central Board" means the Central Board for the Prevention and Control of Water Pollution constituted under Sec. 3 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974) ;

(c) "Form" means a form set forth in Appendix A to these rules ;

(d) "Government Analyst" means a person appointed or recognized as such under Sec. 13;

(e) "person" in relation to any factory or premises means a person or occupier or his agent who has control over the affairs of the factory or premises and includes in relation to any substance, the person in possession of the substance ;

[6]*[(ee) " prohibited substance" means the substance prohibited for handling;]*

(f) "recipient system" means the part of the environment such as soil, water, air or other which receives the pollutants ;

[7]*[(ff) "restricted substance" means the substance restricted for handling;]*

[6] *Ibid.*

[7] *Ibid.*

(g) *"section" means a section of the Act ;*

(h) *"Schedule" means a Schedule appended to these rules ;*

(i) *"Standards' means standards prescribed under these rules ;*

(j) *"State Board" means a State Pollution Control Board constituted under Sec. 4 of the Water (Prevention and Control of Water Pollution) Act, 1974 (6 of 1974), or a State Pollution Control Board constituted under Sec. 5 of the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981).*

Comments

Principle of interpretation of statute.— One may state the accepted principle of interpretation of a statute that every legislation is *prima facie* prospective unless it is expressly or by necessary implication made to have retrospective operation. The question whether a statute operates retrospectively or prospectively is one of legislative intent. If the terms of the statute are clear or unambiguous and it is manifest that the Legislature intended the Act to operate retrospectively, unquestionably it must be so construed. If, however, the terms of a statute do not of themselves, make an intention certain or clear, it should be presumed to operate prospectively. An Act is retrospective, if it takes away or impairs any vested right acquired under an existing law or creates a new liability or obligation in respect of transactions already past or creates a new obligation or liability in respect of past transctions.[1]

Rules of interpretation.— It is well-known rule of construction that it is not for the Court to make the law and the law should be applied even if the law does not accord with the notions of right and wrong of the Court. These are no doubt correct rules of interpretations.[2]

3. *Standards for emission or discharge of environmental pollutants.— (1) For the purpose of protecting and improving the quality of the environment and preventing and abating environmental pollution, the standards of emission or discharge of environmental pollutants from the industries, operations or processes shall be as specified in [3][Schedule I to IV].*

[4] [* * *]

(2) Notwithstanding anything contained in sub-rule (1), the Central Board or a State Board may specify more stringent standards from those provided in [5][Schedule I to IV] in respect of any specific industry, operation or process depending upon the quality of the recipient system and after recording reasons, therefor, in writing.

[6][*(3) The standards for emission or discharge of environmental pollutants specified under sub-rule (1) or sub-rule (2) shall be complied with by an industry, operation or process within a period of one year of being so specified.*]

Provided that the State Boards may specify more stringent standards for the relevant parameters with respect to specific industry or locations after recording reasons therefor in writing;

(ii) The State Board shall while enforcing the standards specified in Schedule VI follow the guidelines specified in Annexure I and II in that Schedule.]

[3][*(3B) The combined effect of emission or discharge of environmental pollutants in an area, from industries, operations, processes, automobiles and domestic sources, shall not be permitted to exceed the relevant concentration in ambient air as specified against each pollutant to columns (3) to (5) of Schedule VII.*]

(4) Notwithstanding anything contained in sub-rule (3),—

- *(a) the Central Board or a State Board, depending on the local conditions or nature of discharge of environmental pollutants, may, by order, specify a lesser period than a period specified under sub-rule (3) within which the compliance of standards shall be made by an industry, operation or process;*
- *(b) the Central Government in respect of any specific industry, operation or process, by order, may specify any period other than a period specified under sub-rule (3) within which the compliance of standards shall be made by such industry, operation or process.*

(5) Notwithstanding anything contained in sub-rule (3) the standards for emission or discharge of environmental pollutants specified under sub-rule (1) or sub-rule (2) in respect of an industry, operation or process before the commencement of the Environment (Protection) (Amendment) Rules, 1991, shall be complied by such industry, operation or process by the 31st day of December, 1991.

[4][*(6) Notwithstanding anything contained in sub-rule (3), an industry, operation or process which has commenced production on or before 16th May, 1981 and has shown adequate proof of at least commencement of physical work for establishment of facilities to meet the specified standards within a time-bound programme, to the satisfaction of the concerned State Pollution Control Board, shall comply with such standards latest by the 31st day of December, 1993.*

(7) Notwithstanding anything contained in sub-rule (3) or sub-rule (6) an industry, operation or process which has commenced production after the 16th day of May, 1991 but before the 31st day of December, 1991 and has shown adequate proof of at least commencement of physical work for establishment of facilities to meet the specified standards within a time-bound programme, to the satisfaction of the concerned State Pollution Control Board, shall comply with such standards latest by the 31st day of December, 1992].

3. Subs. by G.S.R. 7 dated 22nd December, 1998 published in the *Gazette of India, Extraordinary*, pt. II, Sec. 3(*i*), dated 2nd January, 1999.
4. Added by G.S.R. 95 (E), dated 12th February, 1992.

[1][(8) *On and from the 1st day of June, 2001, the following coal based thermal power plants shall use* [2][*raw or blended or beneficiated coal with an ash content not exceeding thirty-four per cent on an annual average basis*] *namely :—*

(a) *any thermal power plant located beyond one thousand kilometres from the pit-head; and*

(b) *any thermal power plant located in urban area or sensitive area or critically polluted area irrespective of their distance from pit-head except any pit-head power plant.*

[3][*Provided that any thermal power plant using Fluidised Bed Combustion or Circulating Fluidised Bed Combustion or Atmospheric Fluidised Bed Combustion or Pressurised Fluidised Bed Combustion or Integrated Gastification Combined Cycle technologies or any other clean technologies as may be notified by the Central Government in the Official Gazette shall be exempted from Cls. (a) and (b),*]

Explanation.—For the purpose of this rule—

(a) *'beneficiated coal' means coal containing higher calorific value but lower ash than the original ash content in the raw coal obtained through physical separation or washing process;*

(b) *'pit-head power plant' means power stations having captive transportation system for its exclusive use for transportation of coal from the loading point at the mining end up to the unloading point at the power station without using the normal public transportation system;*

(c) *'sensitive area' means an area whose ecological balance is prone to be easily disturbed;*

(d) *'critically polluted area' means the area where pollution level has reached or likely to reach to the critical level and which has been identified as such by the Central Government or Central Pollution Control Board or a State Pollution Control Board.*]

[4][(e) *'urban area' means an area limit of a city having a population of more than 1 million according to 1991 census.*]

Comment

Standards for quality of air.—It is submitted that the provisions of under Sec. 16(2)(*h*) of the Air (Prevention and Control of Pollution) Act, 1981 provided power upon the Central Pollution Control Board "lay down standards for the quality of air" and definition of environment pollutants has been defined in Sec. 2(*b*) of the Environment (Protection) Act, 1986, which means "any solid, liquid or gaseous substance present in the atmosphere in such concentration as may be or tend to be injurious to environment".[5]

4. *Directions.— (1) Any direction issued under Sec. 5 shall be in writing.*

---

1. Ins. by G.S.R. 560 (E), dated 19th September, 1997 published in the *Gazette of India, Extraordinary*, dated 19th September, 1997.
2. Subs. by G.S.R. 378 (E) dated 30th June, 1998 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*) dated 3rd July, 1998.
3. Ins. by G.S.R. 378 (E) dated 30th June, 1998 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 3rd July, 1998.
4. Ins. by G.S.R. 378 (E) dated 30th June, 1998 published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*ii*), dated 3rd July, 1998.
5. **Burrabazar Fire Works Dealers Association *v.* The Commissioner of Police, Calcutta, A.I.R. 1998 Cal. 121 at p. 125.**

(2) The direction shall specify the nature of action to be taken and the time within which it shall be complied with by the person, officer or the authority to whom such direction is given.

[1]*[(3-a)] The person, officer or authority to whom any direction is sought to be issued shall be served with a copy of the proposed direction and shall be given an opportunity of not less than fifteen days from the date of service of a notice to file with an officer designated in this behalf the objections, if any, to the issue of the proposed direction.*

[2]*[3-b) Where the proposed direction is for the stoppage or regulation of electricity or water of any other service affecting the carrying on of any industry, operation or process and is sought to be issued to an officer of an authority, a copy of the proposed direction shall also be endorsed to the occupier of the industry, operation or process, as the case may be and objections, if any filed by the occupier with an officer designated in this behalf shall be dealt with in accordance with the procedures under sub-rules (3-a) and (4) of this rule :*

Provided that no opportunity of being heard shall be given to the occupier if he had already been heard earlier and the proposed direction referred to in sub-rule (3-b) above for the stoppage or regulation of electricity or water or any other service was the resultant decision of the Central Government after such earlier hearing.]

(4) The Central Government shall within a period of 45 days from the date of receipt of the objections, if any, or from the date upto which an opportunity is given to the person, officer, or authority to file objections whichever is earlier, after considering the objections if any, received from the person, officer or authority sought to be directed and for reasons to be recorded in writing, confirm, modify or decide not to issue the proposed direction.

(5) In case where the Central Government is of the opinion that in view of the likelihood of a grave injury to the environment it is not expedient to provide an opportunity to file objections against the proposed direction, it may, for reasons to be recorded in writing, issue directions without providing such an opportunity.

(6) Every notice or direction required to be issued under this rule shall be deemed to be duly served—

- *(a) where the person to be served is a company, if the document is addressed in the name of the company at its registered office or at its principal office or place of business and is either—*
  - *(i) sent by registered post ; or*
  - *(ii) delivered at its registered office or at the principal office or place of business;*
- *(b) where the person to be served is an officer serving Government, if the document is addressed to the person and a copy thereof is endorsed to this Head of the Department and also to the Secretary to the Government, as the case may be, incharge of the Department in which for the time being the business relating to the Department in which the officer is employed is transacted and is either,—*
  - *(i) sent by registered post; or*
  - *(ii) is given or tendered to him;*

---

1. Renumbered by S.O. 64 (E), dated the 18th January, 1988 (w.e.f. 18th January, 1988), published in the *Gazette* No. 42 dated 18th January, 1988.
2. Ins. by S.O. 64(E), dated the 18th January, 1988 (w.e.f. 18th January, 1988) published in *Gazette* No. 42 dated 18th January, 1988.

(c) *in any other case, if the document is addressed to the person to be served and—*

(i) *is given or tendered to him ; or*

(ii) *if such person cannot be found, is affixed on some conspicuous part of his last known place of residence or business or is given or tendered to some adult member of his family or is affixed on some conspicuous part of the land or building, if any, to which it relates, or*

(iii) *is sent by registered post to that person*

Explanation.— For the purposes of this sub-rule,—

(a) *"company" means any body corporate and includes a firm or other association of individuals ;*

(b) *"a servant" is not a member of the family.*

Comment

Persons.— The word "person" has been used to make it clear that in order to exercise the powers of a Controller under the Act, the statutory functionary has to be duly appointed by the Government and that he is a *persona designata* or designated person.[1]

5. ***Prohibition and restriction on the location of industries and the carrying on processes and operations in different areas.***—*(1) The Central Government may take into consideration the following factors while prohibiting or restricting the location of industries and carrying on of processes and operations in different areas—*

(i) *Standards for quality of environment in its various aspects laid down for an area.*

(ii) *The maximum allowable limits of concentration of various environment pollutants (including noise) for an area.*

(iii) *The likely emission or discharge of environmental pollutants from an industry, process or operation proposed to be prohibited or restricted.*

(iv) *The topographic and climatic features of an area.*

(v) *The biological diversity of the area which, in the opinion of the Central Government, needs to be preserved.*

(vi) *Environmentally compatible land use.*

(vii) *Net adverse environmental impact likely to be caused by an industry, process or operation proposed to be prohibited or restricted.*

(viii) *Proximity to a protected area under the Ancient Monuments and Archaeological Sites and Remains Act, 1958 or a sanctuary, National Park, game reserve or closed area notified, as such under the Wild Life (Protection) Act, 1972, or places protected under any treaty, agreement or convention with any other country or countries or in pursuance of any decision made in any international conference, association or other body.*

(ix) *Proximity to human settlements.*

(x) *Any other factors as may be considered by the Central Government to be relevant to the protection of the environment in an area.*

---

[1] V.K. Joseph *v.* State of Tamil Nadu, Madras, A.I.R. 1985 Mad. 116 at p. 119.

(2) While prohibiting or restricting the location of industries and carrying on of processes and operations in an area, the Central Government shall follow the procedure hereinafter laid down.

(3) (a) Whenever it appears to the Central Government that it is expedient to impose prohibition or restrictions on the location of an industry or the carrying on of processes and operations in an area, it may by notification in the Official Gazette and in such other manner as the Central Government may deem necessary from time to time, give notice of its intention to do so.

(b) Every notification under Cl. (a) shall give a brief description of the area, the industries, operations, processes in the area about which such notification pertains and also specify that reasons for the imposition of prohibition or restrictions on the location of the industries and carrying on of processes or operations in that area.

(c) Any person interested in filing an objection against the imposition of prohibition or restriction on carrying on of processes or operations as notified under Cl. (a) may do so in writing to the Central Government within sixty days from the date of publication of the notification in the Official Gazette.

(d) The Central Government shall, within a period of one hundred and twenty days from the date of publication of the notification in the Official Gazette, consider all the objections received against such notification and may within [1][three hundred and sixty five days] from such date of publication impose prohibition or restrictions on location of such industries and the carrying on of any process or operation in an area.

[2][(4) Notwithstanding anything contained in sub-rule (3), whenever it appears to the Central Government that it is in public interest to do so, it may dispense with the requirement of notice under Cl. (a) of sub-rule (3)].

Comments

Penal provision.— Penal provision is to be construed rigidly,[3] and strictly.[4]

Ecological balance in the coastal areas—Protection of.—It should be noted that to protect the ecoogical balance in the coastal areas the Central Government has issued Notification dated 19th February, 1991. The said Notification is issued in exercise of the powers conferred by Clause (*d*) of sub-rule (3) of Rule 5 of the Environment (Protection) Rules, 1986. Rule 5 provides for prohibition and restriction on the location of industries and the carrying of processes and operation in different areas. With regard to coastal zone, it has imposed various restrictions on setting up and expansion of industrial operations or processes etc., in the Regulation Zones. Clause 2 of the Notification provides for 13 activities which are prohibited within the Coastal Regulation Zone. Clause 3 provides for regulation of permissible activities within the Coastal Regulation Zone. The 13 prohibited activities provided for in Cl. 2 of the Notification, *inter alia,* are setting up of new industries and expansion of existing industries, manufactureof handing or storage or disposal of hazardous substances, setting up and expansion of fish processing units, including warehousing, setting up and expansion of units/mechanisms for disposal of waste and effluents from industries, and such other activities mentioned therein.Even these prohibited activities provide for some exception and that would be clear from sub-clauses (*i*), (*iv*) and (*xii*) of Cl. 2 which are as under :—

---

[1] Subs. by G.S.R. 884 (E) dated 20th November 1992, published in *Gazette of India, Extraordinary*, Pt. II, Sec. 3(*i*), dated 20th November, 1992.

[2] Inserted by G.S.R. 320 (E) dated 16th March, 1994, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3(*i*), dated 16th March, 1994.

[3] Oriental Fire and General Insurance Company Ltd. *v.* Matias Burla, (1985) 60 C.L.T. 257 at p. 260.

[4] A.S. Sulochana *v.* C. Dharmalingam, (1987) 1 S.C.C. 180 at p. 182.

"(*i*) setting up of new industries and expansion of existing industries, except those directly related to water front or directly needing foreshore facilities;

(*iv*) setting up and expansion of units/mechanisms for disposal of waste and effluents, except facilities required for discharging treated effluents into the water course with approval under the Water (Provention and Control of Pollution) Act, 1974; and except for storm water drains .

(*xii*) any construction activity between the Low Tide Line and High Tide Line except facilities for carrying treated effluents and waste water discharge into the sea, facilities for carrying sea water for cooling purposes, oil, gas and similar pipelines and facilities essential for activities permitted under this Notification :" Under sub-clause (*i*), exception is provided for setting up of new industries and expansion of existing industries which are directly related to water front or directly needing foreshore facilities. If such industries construct a toilet block of few square metres, it may not be hit by these prohibitions. Sub-clause (*iv*) of Cl. 2 of the Notification specifically permits setting up and expansion of units/mechanisms for disposal of waste and effluents into water course. Similarly, sub-clause (*xii*) permits providing facilities for carrying treated effluents and waste water discharges into the sea and such other purposes"

Considering the aforesaid object of prohibiting activities mentioned in the Notification, it would be difficult for us to hold that construction of a toilet block would in any way be affected by the said Notification. Therefore, construction of few square metres for providing a toilet block by the Municipal Corporation is not hit by the prohibition in Cl. 2 of the said Notification.

This Notification provides for regulation of permissible activities within the coastal zone, Annexure-I to the said Notification provides that for regulating development activities, the coastal stretches within 500 metres of the High Tide Line of the landward side are classified into 4 categories, namely; CRZ-I, CRZ-II, CRZ-III and CRZ-IV.[1]

Restrictions imposed must be strictly followed by State.—Their lordships directed that all the restrictions, prohibitions regarding construction and setting up of industries or for any other purpose contained in the notification dated February 19, 1991 issued by Ministry of Environment and Forest, Government of India under Cl. (*d*) of sub-rule (3) of rule 5 of the Environment (Protection) Rules, 1986 shall be meticulously followed by all the concerned States. The activities which have been declared as prohibited within the Coastal Regulation Zone shall not be undertaken by any of the respondent States. The regulations of permissible activities shall also be meticulously followed. The restrictions imposed by the Coastal Areas Classification and Development Regulations contained in Annexure 1 to the above said notification shall also be strictly followed by the respondent State.[2]

[1][6. ***Procedure for taking samples.***— *The Central Government or the officer empowered to take samples under Sec. 11 shall collect the sample in sufficient quantity to be divided into two uniform parts and effectively seal and suitably mark the same and permit the person from whom the sample is taken to add his own seal or mark to all or any of the portions so sealed and marked. In case where the sample is made up in containers or small volumes and is likely to deteriorate or be otherwise damaged if exposed, the Central Government or the officer empowered shall take two of the said samples without opening the containers and suitably seal and mark the same. The Central Government or the officer empowered shall dispose of the samples so collected as follows :*

- (i) *one portion shall be handed over to the person from whom the sample is taken under acknowledgment ; and*
- (ii) *the other portion shall be sent forthwith to the environmental laboratory for analysis.]*

Comments

Rule 6 provides procedure for taking samples. It specifically provides how the samples are taken and preserved. In the old rule 6 the samples were divided into three parts, *viz.*, one for person from whom it was taken, second for environment laboratory for analysis and the third for producing before court. Now as per new rules, it is divided only in two parts, *viz.*, one for the person concerned from whom samples is taken and other for environment laboratory for analysis.

Environmental Pollution—Rules to regulate it.— The Project was given environmental clearance by the Ministry for Environment and Forests, Government of India on 10.5.1995 subject to certain conditions. A No Objection Certificate was also given by the Kerala State Pollution Control Board on 5.4.1995. Sidco Ltd., Bombay was entrusted with the designing of the bridges. The project however ran into rough weather. Several scientific bodies and environmental Scientists voiced their objections that received wide coverage in the media. Support to the project too came, but not in good measure. N.E.E.R.I., which examined the project as directed by the Supreme Court, found it to suffer from several drawbacks. The report said that it was not environmentally viable, it is bound to cause shrinkage of backwaters, affect its hydrological features, upset the acquatic ecology, and impair the life supporting systems of the most vulnerable population in the region violating the premises and pre-conditions for sustainable development.

Serious exception was taken to many of the findings and observations in the report. It was said, it did not represent a correct appraisal of all that was relevant and material. There was also an allegation that it was either misinformed or was deeply committed to canvass its own views on environmental and ecological matters, which are far off from ground realities. Their Lordships do not wish to say upon the merits or otherwise of the objections, since the report is with respect to the project as originally envisaged that has now been given up for the one that would only require reclamation of 25 hect. of land abutting the sea wall in a continuous stretch from the existing Marine Drive. The number of bridges has been reduced to three and the estimated cost also brought down to Rs. 52 crores. In other words, the project profile is sub-stantialy different from the original one that therefore it seems to be not necessary to examine the report of the N.E.E.R.I. in detail. We are however unable to agree that the project as conceived and given shape to was without the necessary indepth study of the various aspects by competent Scientists and Scientific bodies.

---

[1] Subs. by S.O. 64 (E), dated the 18th January, 1988 (w.e.f. 18th January, 1988), published in the *Gazette* No. 42, dated 18th January, 1988.

The Government and GIDA must consider and let the Court know the outcome of the discussions, which should be completed expeditously. Necessary steps will be taken in this regard by the GIDA and the Governmnt at once. In any event, the work on the project should start by first week of March and we shall have a report before that within six weeks from now. Before reclamation is proposed to be resorted to as now permitted, they should satisfy that the alternate proposals have failed to materialise not on their account, but either because they are not economically viable or otherwise unsuitable and would involve the Government in substantial financial commitments it can ill-afford to bear.[1]

*7. **Service of notice.**—The Central Government or the officer empowered shall serve on the occupier or his agent or person in charge of the place a notice then and there in Form I of his intention to have the sample analysed.*

Comment

Rule 7 provides mode of serving a notice on the occupier or his agent or person in charge of the place then and there in Form I of his intention to have the sample analysed by the Central Government or the officer empowered.

*8. **Procedure for submission of samples for analysis, and the form of laboratory report thereon.**— (1) Sample taken for analysis shall be sent by the Central Government or the officer empowered to the environmental laboratory by registered post or through special messenger along with Form II.*

(2) Another copy of Form II together with specimen impression of seals of the officer empowered to take samples along with the seals/marks, if any, of the person from whom the samples is taken shall be sent separately in a sealed cover by registered post or through a special messenger to the environmental laboratory.

(3) The findings shall be recorded in Form III in triplicate and signed by the Government analyst and sent to the officer from whom the sample is received for analysis.

(4) On receipt of the report of the findings of the Government Analyst, the officer shall send one copy of the report to the person from whom the sample was taken for analysis, the second copy shall be retained by him for his records and the third copy shall be kept by him to be produced in the Court before which proceedings, if any, are instituted.

*9. **Functions of environmental laboratories.**—The following shall be the functions of environmental laboratories:—*

(i) to evolve standardised methods for sampling and analysis of various types of environmental pollutants ;

---

[1] **Jacob Vadakkancherry *v.* State of Kerala (F.B.), A.I.R. 1998 Ker. 114 at pp. 117, 119.**

(ii) to analyse samples sent by the Central Government or the officers empowered under sub-section (1) of Sec. 11;

(iii) to carry out such investigations as may be directed by the Central Government to lay down standards for the quality of environment and discharge of environmental pollutants, to monitor and to enforce the standards laid down;

(iv) to send periodical reports regarding its activities to the Central Government ;

(v) to carry out such other functions as may be entrusted to it by the Central Government from time to time.

10. Qualifications of Government Analyst.— *A person shall not be qualified for appointment or recognised as a Government Analyst unless he is a—*

(a) graduate in science from a recognised university with five years' experience in a laboratory engaged in environmental investigations, testing or analysis ; or

(b) post-graduate in science or a graduate in engineering or a graduate in medicine or equivalent with two years' experience in a laboratory engaged in environmental investigations, testing or analysis; or

(c) post-graduate in environmental science from a recognized university with two years' experience in a laboratory engaged in environmental investigations, testing or analysis.

11. Manner of giving notice.—*The manner of giving notice under Cl. (b) of Sec. 19 shall be as follows, namely :*

(1) The notice shall be in writing in Form IV.

(2) The person giving notice may send notice to,—

(a) if the alleged offence has taken place in a Union territory :—

(A) the Central Board ; and

(B) the Ministry of Environment and Forests (represented by the Secretary to the Government of India);

(b) if the alleged offence has taken place in a State :—

(A) the State Board ; and

(B) the Government of the State (represented by the Secretary to the State Government incharge of environment); and

(C) the Ministry of Environment and Forests (represented by the Secretary to the Government of India).

(3) The notice shall be sent by registered post-acknowledgment due; and

(4) The period of sixty days mentioned in Cl. (b) of Sec. 19 of the Environment (Protection) Act, 1986, shall be reckoned from the date it is first received by one of the authorities mentioned above.

Comment

This rule provides about the manner of giving notice registered under Cl. (*b*) of Sec. 19.

[1][12. ***Furnishing of information to authorities and agencies in certain cases.***—*Where the discharge of environmental pollutant in excess of the prescribed standards occurs or is apprehended to occur due to any accident or other unforeseen act or event, the person in charge of the place at which such discharge occurs or is apprehended to occur shall forthwith intimate the fact of such occurrence or apprehension of such occurrence to all the following authorities or agencies, namely :*

(i) The officer-in-charge of emergency or disaster relief operations in a district or other region of a State or Union territory specified by whatever designation, by the Government of the said State or Union territory, and in whose jurisdiction the industry, process or operation is located.

(ii) Central Board or a State Board, as the case may be and its regional officer having local jurisdiction who have been delegated powers under Secs. 20, 21, 23 of the Water (Prevention and Control of Pollution) Act, 1974 (6 of 1974), and Sec. 24 of the Air (Prevention and Control of Pollution) Act, 1981 (14 of 1981);

(iii) The statutory authorities or agencies specified in column 3 in relation to places mentioned in column 2 against thereof of [2]*[Schedule V].*

Comment

This rules requires furnishing of information regarding discharge of any environmental pollutant in excess or prescribed standard or apprehension thereof to certain authorities or agencies in special circumstances.

[3][13. ***Prohibition and restriction on the handling of hazardous substances in different areas.***—*(1) The Central Government may take into consideration the following factors while prohibiting or restricting the handling of hazardous substances in different areas :*

(i) the hazardous nature of the substance (either in qualitative or quantitative terms as far as may be) in terms of its damage causing potential to the environment, human beings, other living creatures, plants and property;

(ii) the substances that may be or likely to be readily available as substitutes for the substances proposed to be prohibited or restricted,

(iii) the indigenous availability of the substitute, or the state of technology available in the country for developing a safe substitute ;

(iv) the gestation period that may be necessary for gradual introduction of a new substitute with a view to bringing about a total prohibition of the hazardous substance in question ; and

(v) any other factor as may be considered by the Central Government to be relevant to the protection of environment.

(2) While prohibiting or restricting the handling of hazardous substances in an area including their imports and exports the Central Government shall follow the procedure hereinafter laid down :—

(i) Whenever it appears to the Central Government that it is expedient to impose prohibition or restriction on the handling of hazardous

SCHEDULE [1][I]

(*See* rule 3)

Sl. No	Industry	Parameter	Standards	
1	2	3	4	
1.	Caustic soda industry		Concentration not to exceed, milligramme per litre (except for pH and flow)	
		Total concentration of mercury in the final effluent*	0.01	
		Mercury bearing waste-water generation (flows)	10 kilolitres/tonne of caustic soda produced	
		pH	5.5 to 9.0	
		*Final effluent is the combined effluent from (a) cell house, (b) brine plant, (c) chlorine handling, (d) hydrogen handling, (e) hydrochloric acid plant		
2	Man-made fibres (synthetic)		Concentration not to exceed, milligramme per litre (except for pH)	
		Suspended solids	100	
		[2][BOD (3 days at27°C)]	30	
		pH	5.5 to 9.0	
3	Oil-refinery industry	Concentration not to exceeded milligrammes per litre (except for pH)	Quantum, kg/100 tonnes crude processed	
		Oil and grease	10	7
		Phenol	1	0.7
		Sulphide	0.5	0.35
		[2][BOD (3 days at 27°C)]	15	10.5

---

1. Re-numbered as Sch. I by S.O. 32 (E), dated the 16th February, 1987 (w.e.f. 16th February, 1987).
2. Subs. by G.S.R. 176 (E) dated 2nd April, 1996, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3(*i*) dated 3rd April, 1996.

1	2	3	4
		Suspended solids	20 14
		pH	6 to 8.5
4	Sugar industry		Concentration not exceed, milligramme per litre.
		[1][BOD (3 days at 27°C)]	100 for disposal on land 30 for disposal in surface waters.
		Suspended solids	do
5.	Thermal power plants		Maximum limiting concentration, milligramme per litre (except for pH and temperature)
	Condenser cooling waters pH		6.5 - 8.5
	(once through temperature cooling system)		Not more than 5°C higher than the intake water temperature.
		Free available chlorine	0.5
	Boiler blowdowns	Suspended solids	100
		Oil and grease	20
		Copper (total)	1.0
		Iron (total)	1.0
	Cooling-tower blowdown	Free available chlorine	0.5
		Zinc	1.0
		Chromium (total)	0.2
		Phosphate	5.0
		Other Corrosion inhibiting material •	Limit to be established on case by case basis by Central Board in case of Union territories and State Boards in case of State
	Ash-pond effluent	pH	6.5-8.5

---

[1] Subs by G.S.R. 176 (E), dated 2nd April, 1996, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3(*i*), dated 3rd April, 1996.

1	2	3	4
		Suspended solids	100
		Oil and grease	20
6.	Cotton textile industries (composite and processing)		Concentration not to exceed, milligramme per litre (except for pH and bio-assay)
		Common	
		pH	5.5 to 9
		Suspended solid	100
		[1][BOD (3 days at 27°C)]	150
		Oil and grease	10
		Bio-assay test	90% survival of fish of after 96 hours
		Special Total chromium (as Cr)	2
		Sulphide (as S)	2
		Phenolic compounds (as C_nH_5OH)	5

The special parameters are to be stipulated by the Central Board in case of Union territories and State Boards in case of States depending upon the dye used in the industry Where the industry uses chrome dyes, sulphur dyes and/or phenolic compounds in the dyeing/printing process, the limits on chromium of 2 mg/litre, sulphides of 2 mg/litre, and phenolic compounds of 5 mg/litre, respectively shall be imposed.

Where the quality requirement of the recipient system so warrants, the limit of BOD should be lowered up to 30 according to the requirement by the State Boards for the States and the Central Board for the Union territories.

A limit on sodium absorption ratio of 26 should be imposed by the State Boards for the States and the Central Board for the Union territories if the disposal of effluent is to be made on land.

7.	Composite woollen mills		Concentration not to exceed, milligramme per litre (except for pH and bio-assay)

---

1. Subs. by G.S.R. 176 (E), dated 2nd April, 1996, published in the *Gazette of India, Extraordinary*, Pt. I, Sec. 3 (i), dated 3rd April, 1996.

1	2	3	4
	Common		
		Suspended solid	100
		pH	5.5 to 9.0
		[1][BOD (3 days at 27°C)]	00
		Oil and grease	10
		Bio-assay	90% survival of fish after 96 hours
	Special		
		Total chromium (as Cr)	2
		Sulphide (as S)	2
		Phenolic compounds (as C_6H_5 OH)	5

The special parameters to be stipulated by the Central Board in case of Union territories and State Boards in case of States depending upon the dye used in the industry Where the industry uses chrome dyes, sulphur dyes and/or phenolic compounds in the dyeing/printing process, the limits on chromium of 2 mg/litre, sulphides of 2 mg/litre, and phenolic compounds of 5 mg/ litre, respectively shall be imposed

Where the quality requirement of the recipient system so warrants, the limit of BOD should be lowered up to 30 according to the requirement by the State Boards for the States and the Central Board for the Union territories.

A limit on sodium absorption ratio of 26 should be imposed by the State Boards for the States and the Central Board for the Union territories if the disposal of effluent is to be made on land.

[2][8	Dye and Dye Intermediate Industries		Concentration not to exceed milligramme per litre (except for pH temperature and bio-assay)
		Suspended solids	100
		pH	6 to 8 5
		Temperature	Shall not exceed 5°C above the ambient temperature of the receiving body
		Mercury (as Hg)	0.01
		Hexavalent (as Cr) Chromium	0.1

---

1. Subs. by G.S.R. 176 (E) dated 2nd April 1996, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 3rd April, 1996.
2. Ins. by S.O. 393 (E), dated the 16th April, 1987 (w.e.f. 16th April, 1987)

1	2	3	4
		Total Chromium (as Cr)	2.0
		Copper (as Cu)	3.0
		Zinc (as Zn)	5.0
		Nickel (as Ni)	3.0
		Cadmium (as Cd)	2.0
		Chloride (as Cl)	1000
		Sulphate (as SO_4)	1000
		Phenolic Compounds (as C_6H_5OH)	1.0
		Oil and Grease	10
		Bio-assay Test (with 1:8 dilution of effluents)	90% survival of test animals after 96 hours

The standards of chlorides and sulphates are applicable for discharge into inland and surface watercourses. However, when discharged on land for irrigation the limit for chloride shall not be more than 600 milligrammes per litre, and the sodium absorption ratio shall not exceed 26.

1	2	3	4
9	Electroplating		Concentration not to exceed milligramme per litre (except for pH and temperature)
		pH	6.0 to 9.0
		Temperature	Shall not exceed 5°C above the ambient temperature of the receiving body
		Oil and Grease	10
		Suspended Solids	100
		Cyanides (as CN)	0.2
		Ammonical	50
		Nitrogen (as N)	
		Total Residual	1.0
		Chloride (as Cl)	
		Cadmium (as Cd)	2.0
		Nickel (as Ni)	3.0

1	2	3	4
		Zinc (as Zn)	5.0
		Hexavalent Chromium (as Cr)	0.1
		Total Chromium (as Cr)	2.0
		Copper (as Cu)	3.0
		Lead (as Pb)	0.1
		Iron (as Fe)	3.0
		Total metal	10.0
10.	Cement Plants Plant Capacity	Total dust	Not to exceed-milligrammes per normal cubic metre
	200 tonnes per day	(All sections)	400
		Total dust	
	Greater than 200 tonnes per day	(All sections)	250

The Central and State Pollution Control Boards may fix stringent standards, not exceeding 250 milligrammes per normal cubic metre for smaller plants and 150 milligrammes per normal cubic metre for larger plants if the industry is located in an area which, in their opinion, requires more stringent standards.

Where continuous monitoring integrators are provided on dust emission lines, the integrated average values over a period, to be fixed by the Central and State Boards but not exceeding 72 hours shall be considered instead of momentary dust emission values for conformity to standards]

[1][11	Stone-crushing unit	Suspended particulate matter	The suspended particulate matter measured between 3 metres and 10 metres from any process equipment of a stone-crushing unit shall not exceed 600 micro-grammes per cubic metre]
[2][12	Coke ovens		Concentration in the effluents when discharged into inland surface waters not to exceed milligramme per litre (except for pH)
		pH	5.5-9.0

1	2	3	4

Note.—*BOD may be made stringent up to 30 mg/1 if the recipient fresh water body is a source for drinking water supply. BOD shall be up to 350 mg/1 for the chilling plant effluent for applying on land provided the land is designed and operated as a secondary treatment system with suitable monitoring facilities. The drainage water from the land after secondary treatment has to satisfy a limit of 30 mg/1 of BOD and 10 mg/1 of nitrate expressed as 'N'. The net addition to the groundwater quality should not be more than 3 mg/1 of BOD and 3 mg/1 of nitrate expressed as 'N' This limit for applying on land is allowed subject to the availability of adequate land for discharge under the control of the industry, BOD value is relaxable up to 350 mg/1, provided the wastewater is discharged into a town sewer leading to secondary treatment of the sewage.

**Suspended solids limit is relaxable up to 450 mg/1, provided the wastewater is discharged into town sewer leading to secondary treatment of the sewage.

2. Subs. by G.S.R. 176 (E), dated 2nd April, 1996, published in the *Gazette of India, Extraordinary*, Pt. II, Sec. 3 (*i*), dated 3rd April, 1996.
3. Subs. by *ibid.*

1	2	3	4
		Note :	The prescribed limits for BOD and suspended solids shall be made more stringent or less stringent depending upon the conditions and local requirements as mentioned below :
		(*i*)	BOD shall be made stringent up to 30 mg/l if the recipient fresh water body is a source for drinking water supply
		(*ii*)	BOD shall be allowed up to 350 mg/l for applying on land, provided the land is designed and operated as a secondary treatment system with the requisite monitoring facilities The drainage water from the land after secondary treatment has to satisfy a limit of 30 mg/l of BOD and 10 mg/l of nitrate expressed as "N" The net addition to ground water quality should not be more than 3 mg/l of BOD and 10 mg/l of nitrate expressed as "N".
		(*iii*)	BOD shall be allowed up to 350 mg/l for discharge into a town sewer, if such sewer leads to a secondary biological treatment system
		(*iv*)	Suspended solids shall be allowed up to 450 mg/l for discharge into a town sewer, if such sewer leads to a secondary biological treatment system.
		(*v*)	In the event of bulking of sludge, the industry shall immediately appraise the respective State Pollution Control Board
64.	Beehive had coke oven	Emissions :	
	(*i*) New unit	Particulate matter (corrected to 6% CO_2)	150 mg/Nm^3
		Hydrocarbons	25 ppm
	(*ii*) Existing units	Particulate matter (corrected to 6% CO_2)	350 mg/Nm^3
		Note :	For control of emissions and proper dispensation of pollutants the following guidelines shall be followed :—
		(*i*)	Units set up after the publication of this notification shall be treated as new units.
		(*ii*)	A minimum stack height of 20 metres shall be provided by each unit.
		(*iii*)	Emissions from coke ovens shall be channelised through a tunnel and finally emitted through a

2	3	4	
		stack. Damper adjustment techniques shall be used to have optimum heat utilisation and also to control the emission of unburnt carbon particles and combustible flue gases.	
	(*iv*)	Wet scrubbing system or waste heat utilisation for power generation or byproduct recovery systems should be installed preferably to achieve the prescribed standards.	
	(*v*)	After four years from the date of this notification, all the existing units shall comply with the standards prescribed for the new units	
Briquette Industry (Coal)	Emissions :		
(*a*) Units having capacity less than 10 tonnes.		(Particulate matter (corrected to 6% CO_2)	350 mg/Nm^3
(*b*) Units having capacity 10 tonnes or more.		Particulate matter (corrected to 6% CO_2)	150 mg/Nm^3
	Note :	For control of emissions/and proper dispersal of pollutants, the following guidelines shall be followed by the industry :—	
	(*i*)	A minimum stack height of 20 metres shall be provided	
	(*ii*)	All ovens shall be modified to single chimney multi-oven systems.	
	(*iii*)	Emissions from ovens shall be channelised through in-built draft stack. Optimum heat utilisation technique shall be used.	
	(*iv*)	In case of units having capacity 10 tonnes and above, wet scrubbing system shall be provided to control air pollution	
Soft Coke Industry		Particulate matter (corrected to 6% CO_2)	350 mg/Nm3
	Note :	Wet scrubbing systems alongwith by-product recovery system shall be provided.	
		Guidelines for Emission Control to Improve Work Zone Environment (applicable for industries at Serial Numbers 64, 65 and 66) .	
	(*a*)	Water used for quenching and wet scrubbing shall be recirculated and reused through catch-pits.	
	(*b*)	Leakages in the oven shall be sealed by bentonite or by any suitable paste and by proper maintenance to avoid fugitive emission.	

2	3	4
		Guidelines for Coal Handling and Crushing Plant (applicable to industries at Serial Numbers 64, 65 and 66) :
	(*a*)	Unloading of coal trucks shall be carried out with proper care avoiding dropping of the materials from height. It is advisable to moist the material by sprinkling water while unloading.
	(*b*)	Pulversiation of coal shall be carried out in an enclosed place and water sprinkling arrangement shall be provided at coal heaps, crushing area and on land around the crushing unit
	(*c*)	Work area surrounding the plant shall be asphalted or concreted.
	(*d*)	Green belt shall be developed along the boundary of the industry.
	(*e*)	Open burning of coal to manufacturing soft coke shall be stopped.
Edible Oil and Vanaspati Industry	Effluents :	
	Temperature	Not more than 5°C above ambient temperature of the recipient waterbody
	pH	6.5-8.5
	Suspended solids	150 mg/l
	Oil and grease	20 mg/l
	BOD (3 days at 27°C)	100 mg/l
	COD	200 mg/l
	Wastewater Discharge	
	(*i*) Solvent extraction	2.0 cum/tonne of product (oil)
	(*ii*) Refinery/Vanaspati	2.0 cum/tonne of product (refined oil/Vanaspati)
	(*iii*) Integrated unit of solvent extraction and refinery/vanaspati	4.0 cum/tonne of refined oil/vanaspati produced
	(*iv*) Barometric cooling water/De-odoriser water	15.0 cum/tonne of refined oil/vanaspati
	Note :	
	(*i*)	The above standards shall be applicable to wastewater from processes and cooling.
	(*ii*)	BOD shall be made stringent up to 30 mg/l if the recipient fresh water body is source of drinking water supply.

1	2	3	4
		(iii)	The standards for boiler emissions shall be applicable as prescribed under Schedule I of these rules.
68.	Organic Chemicals manufacturing industry	Effluents :	
	(a) Compulsory parameters	pH	6.5–8.5
		BOD (3 days at 27°C)	100 mg/l
		Oil and grease	10 mg/l
		Bioassay test	Minimum 90% survival after 96 hours with fish at 100% effluent
	(b) Additional parameters		(mg/l)
		Nitrate (as N)	10
		Arsenic	0.2
		Hexavalent Chromium	0.1
		Total Chromium	1.0
		Lead	0.1
		Cyanide (as CN)	0.2
		Zinc	0.5
		Mercury	0.01
		Copper	2.0
		Nickel	2.0
		Phenolics (as C_6H_5OH)	5.0
		Sulphide	2.0
		Note :	
		(i)	No limit for COD is prescribed but it shall be monitored. If the COD in a treated effluent is persistently greater than 250 mg/l, such industrial units are required to identify chemicals causing the same. In case these are found to be toxic as defined in Hazardous Chemicals Rules, 1989 in Part I of Schedule I, the State Boards in such cases may direct the industries to install tertiary treatment system stipulating time limit. This may be done on case-to-case basis.
		(ii)	These standards are not applicable to small-scale detergent (formulating units).
		(iii,)	The standards for boiler emissions shall be applicable as per the existing emission regulations.
		(iv)	Industry covered under this group are halo-aliphatics, plasticizers, aromatics (alcohols, phenols, esters, acids and salts, aldehydes and

1	2	3	4
		ketone), substituted aromatics, aliphatic (alcohols, esters, acids, aldehydes, ketones, amines and amides) and detergents.	
69.	Flour Mills	Effluents :	
		pH	6.5-8.5
		BOD (3 days at 27°C)	100 mg/1
		Total Suspended solids	100 mg/1
		Oil and grease	10 mg/1
		Wastewater discharge	2 cubic metre per tonne of wheat processed
		Note :	
		(*i*)	BOD shall be made stringent up to 30 mg/1 if the recipient fresh water body is a source for drinking water supply.
		(*ii*)	BOD shall be allowed up to 350 mg/1 for applying on land, provided the land is designed and operated as a secondary treatment system with the requisite monitoring facilities The drainage water from the land after secondary treatment has to satisfy a limit of 30 mg/1 of BOD and 10 mg/1 of nitrate expressed as "N" The net addition to ground water quality should not be more than 3 mg/1 of BOD and 10 mg/1 of nitrate expressed as "N"
		(*iii*)	BOD shall be allowed up to 350 mg/1 for discharge into a town sewer, if such sewer leads to a secondary biological treatment system.
		(*iv*)	Suspended solids shall be allowed up to 450 mg/1 for discharge into a town sewer, if such sewer leads to a secondary biological treatment system.
70.	Boilers (Small)	Steam generation capacity (ton/hour)	Particulate Emission matter (mg/Nm^3)
		less than 2	1200*
		2 to less than 10	800*
		10 to less than 15	600*
		15 and above	150**

---

*To meet the respective standards, cyclone/multicyclone is recommended as control equipment with the boiler.

**to meet the standard, bag filter/ESP is recommended as control equipment with the boiler.

1	2	3	4
		Note :	
		(*i*) 12% of CO_2 correction shall be the reference value for particulate matter emission standards for all categories of boilers.	
		(*ii*) These limits shall supersede the earlier limits notified under Schedule I at Serial Number 34 of Environment (Protection) Act, 1986 *vide* notification GSR 742 (E), dated 30th August, 1990.	
		(*iii*) Stack Height for small boilers. For the small boilers using coal or liquid fuels, the required stack height with the boiler shall be calculated by using the formula $H = 14\ Q^{0.3}$ Where H—Total stack height in metres from the ground level. Q = SO_2 emission rate in kg/hr In no case the stack height shall be less than 11 metres. Where providing all stacks are not feasible using above formula the limit of 400 mg/Nm^3 for SO_2 emission shall be met by providing necessary control equipment with a minimum stack height of 11 metres.	
71.	Pesticide Industry	(*i*) Compulsory Parameters	mg/l except pH
		pH	6.5 — 8.5
		BOD (3 days at 27°C)	100
		Oil and grease	10
		Suspended solids	100
		Bioassay test :	Minimum 90% survival of fish after 96 hours with 90% effluent and 10% dilution water. Test shall be carried out as per IS : 6502-1971.
		(*ii*) Additional Parameters	mg/l
		(*a*) Heavy metal	
		Copper	1.0
		Manganese	1.0
		Zinc	1.0
		Mercury	0.01
		Tin	0.1

1	2	3	4
